Just Ready. The Only Treatise on the Subject.

THE LAW OF STRIKES, LOCKOUTS,

LABOR ORGANIZATIONS, ETC.

By THOMAS S. COGLEY, a member of the Bar of the District of Columbia, and author of Cogley's Digest.

Everybody will at once recognize the value of this book, because, notwithstanding the great importance of the subject, no attempt has heretofore been made to treat the matter exhaustively, and only fragmentary references to it are to be found in other works. This book gives all the case and statute law on the subjects of which it treats, and contains in full, or sufficiently so to answer all practical purposes, cases out of print and beyond the reach of all save those who have access to the largest libraries. It contains references to all English and American cases and statutes down to date.

COGLEY ON STRIKES AND LOCKOUTS is an attractive octavo volume of best law-book style in its make-up. Price $4.00 net by express, prepaid, on receipt of amount with order. W. H. LOWDERMILK & CO., Law-Book Publishers and Dealers, 1424-1426 F St., Washington, D. C.

To Librarians, Book-Lovers, and Booksellers.

Our NEW CATALOGUE of RARE and CHOICE BOOKS, comprising works on architecture, biography, belles-lettres, the drama, first editions, Shakespeariana, rare French Books, works of art, etc., etc., will be sent, postpaid, upon request.

☞ Attention is called to this valuable collection.

The Best Food For Children?

is worthy every parent's study; not only what they can eat, but what gives the most nourishment. No children are better, and most are worse, for eating lard-cooked food. If, however, their food is prepared with the healthful new vegetable shortening,

COTTOLENE

instead of lard, they can eat freely of the best food without danger to the digestive organs. You can easily verify this by a fair trial of Cottolene.

Sold in 3 and 5 lb. pails by all grocers.

Made only by

The Nation.

NEW YORK, THURSDAY, JANUARY 4, 1894.

The Week.

THE steady decline of the cash balance in the Treasury will force Congress to pass some kind of a bill immediately on reassembling. The balance is now less than $90,000,000, and this includes the greenback redemption fund, which has long been below the statutory requirement. There is now no export movement of gold, and no apprehension that the country will be forced to the silver basis. Hence the Treasury balance may fall considerably below the present figure without producing distrust. Yet it is not wise to incur the risk of fresh trouble. Nor is it wise to postpone Government obligations which must be paid. The secretary, in his annual report, recommended an alternative for replenishing the Treasury for the time being—namely, the issue of obligations not exceeding $50,000,000 in the aggregate, bearing interest not exceeding 3 per cent., to be paid to such creditors as will accept them, the remainder to be sold at not less than par (these obligations to be payable at the pleasure of the Government one year after date); or, investing the secretary with authority to issue five-year bonds in the ordinary form, and in denominations of $25 and upwards, bearing not more than 3 per cent. interest—the latter to be a continuing authority to protect the Government's gold reserve. These bonds would take the place of those authorized by the old laws for maintaining the greenback redemption fund, but would be available also for meeting casual deficits of revenue. In fact, under present conditions whatever accomplishes one of these ends accomplishes the other also. All the money in the United States being the equivalent of gold, any money which comes into the Treasury answers the purpose of making good the greenback redemption fund and of meeting the public expenses.

We think that both the plans suggested by the secretary ought to be adopted. That is to say, the secretary ought to have discretionary authority at all times to issue exchequer bills to meet temporary deficiencies in the revenue, and this authority ought not to be limited to $50,000,000. It ought to be equal to at least one-half of the appropriations of the Government for any fiscal year. There is no danger whatever that such authority would be abused. No administration likes to have its interest-bearing obligations increased, because such increase puts a club in the hands of the opposite party, and unless it can be shown that the increase was necessary and unavoidable, the consequences are sure to be disastrous in the ensuing elections. But there is something still more disastrous, and that is inability to meet current expenses. The Government's debts are no greater by reason of the issue of exchequer bills. They have merely taken a different form. Instead of owing contractors, pensioners, clerks, and manufacturers, who have groups dependent on themselves, and who cannot afford to wait for their money, it owes people who desire that form of investment. So everybody is satisfied. This is not saying that a Government obligation should be created because some people would like to find a safe investment for their idle money. That would be a form of socialism quite as reprehensible as any other. The rules which should govern in this case are the same as those which apply to a private corporation.

Mr. David A. Wells has in the January *Forum* an article on "The Teaching of Our Recent Economic Experiences," which supplies answers to a great many queries as to why the repeal of the silver-purchase law has not been followed at once by better times. He estimates the total loss, expressed in terms of money, which this country sustained because of its trifling with its standard of value, at one thousand millions of dollars, or more than one-third of the amount of the national debt at the close of the war, and says of it that the burden of these losses "fell most grievously and disproportionately upon that portion of the population of the United States which was least able to bear it, namely, those who depend upon each day's earnings to meet each day's needs." He goes on to show that the causes of these disastrous experiences were mainly artificial, and wholly unnecessary, being due to ignorance as to the origin, nature, and function of money and as to all other economic subjects—an ignorance which prevailed "not only among the masses, but among many who are filling important stations as legislators, editors, and educational directors and teachers."

No one will object to the Senate committee summoning before it as many men as it pleases, to tell what they saw, or failed to see, in Honolulu last January; but no grown man will expect to see the case against Stevens made any the less black thereby. That case does not rest upon what any man or men saw or said, but upon the documentary evidence furnished by Stevens himself and by President Dole, and upon the calendar and the watch. There that evidence stands, and no lawyer or full-witted civilian who studies it can doubt its conclusiveness, or admit the possibility of its being overthrown by any verbal testimony or explanations whatever. All the protests of patriotic motives and benevolent intentions that can be made do not touch the evidence. We commend to Stevens and his pious allies in overthrowing the Hawaiian Government the cold legal view of Mr. Justice Maule, who asked a man on trial for stealing a watch if he had any witnesses to call. "No one but my Maker, who knows that I am innocent," was the reply. The justice settled back for a moment, and then said: "Gentlemen of the jury, the prisoner has summoned one witness, who does not appear; on the other hand, you have heard the evidence of two witnesses who saw him steal the watch."

The House of Representatives passed on December 14 a bill of much general interest, which has attracted very little attention in the newspapers. It was reported by the joint commission of Congress to inquire into the status of laws organizing the executive departments, and it went through without any opposition. Its popular feature makes a reduction in the price of post-office money-orders, to place them on a par in this respect with the money-orders issued by the express companies, and it abolishes the postal note. The argument presented in favor of the latter change was that the postal-note furnishes no security to the sender, for if one is lost no duplicate can be obtained. Under the new law a change of fees is enacted, which permits the issue of money orders for sums not exceeding $2.50 for three cents. As money-orders are subject to endorsement, if one is received at an office that is not authorized to issue or cash them, it can be endorsed to some one who will cash it. On larger orders the rates of issue are materially reduced. The measure went through the House so rapidly that its natural opponents did not have time to get their forces in line, but it is intimated that the express companies will be on hand when the bill comes up in the Senate. These companies were in active opposition to the change in the postal laws years ago that instituted the parcels post, but the measure was so popular that Congress dared not defeat it. The same will probably be the case with this bill. Further than this, it is understood that the express companies find their money-order business so profitable that they may not care to make it a subject of public debate in Congress, as already some banking institutions are said to be thinking seriously of entering into competition for it.

Abundant evidence is furnished in a large number of letters from bankers in all parts of the South, published by the *Manufacturers' Record*, that the farmers of that section are now in a better condition than ever before. The low price of cotton for the last few years has had the good effect of forcing them to raise their own food-stuffs because they could not buy them, and this disposition was strengthened by the decision of bankers and factors not to advance money so readily as before. In this way there is beginning to be a change from the old and improvident credit system, with its reckless buying, to a cash system which requires the closest economy. This change has reduced the volume of general business, but the business which is done rests on a solider foundation than ever before, and the bankers without exception report that the farmers are less in debt now than for years. Money which formerly went North and West for provisions and grain has been retained at home, and there is every reason to believe that the South is less in debt to those sections for supplies than ever before since the end of the war.

Gov. Waite of Colorado seems to be the most hopeless case among the cranks who have been landed in high office by the political upheavals of the last few years. Some weeks ago he intimated that he was going to call an extra session of the Colorado Legislature in order to secure a restoration of the State's former prosperity. The proposition has met with nothing but opposition and protest, for public sentiment is overwhelmingly against it, and earnest appeals have been made to the Governor not to carry out his purpose. But nothing affects so conceited a fool as Waite, and he has issued his proclamation, specifying a large number of absurd plans which he wants the law-makers to carry out. There is no money in the Treasury to pay the expenses of the extra session, and although the members must obey the call of an executive who has the legal right to convene them, he cannot prevent their prompt adjournment.

Colorado—that is, all of the State except the Populist Governor—has so fully recovered from its fit of blues that the commonwealth is in better spirits this winter than ever before. The *Rocky Mountain News*, which only a few months ago prophesied absolute ruin in case the silver-repeal bill were passed, now declares that Denver is the most prosperous city and Colorado the most prosperous State between the Atlantic and the Pacific. Ex-Gov. Grant says that "Colorado is the first State to show signs of business revival," and that it will offer in the future, as in the past, "the most inviting opportunities for labor and capital of any State in the Union." At a recent gathering of business men from all over the State in Denver, the speakers admitted, to quote the words of one of them, that "this terrible importance of our silver is overdrawn," while another boasted, "We have more coal per capita than Pennsylvania, we have greater agricultural resources per capita than the States of the Mississippi valley, we lead all others in the production not only of silver but of gold." There has been a wonderful development of gold-mining during the last few months, and the new gold camp of Cripple Creek is producing marvellous supplies. Altogether it is hard to believe that this is the same State over whose impending destruction Senator Teller was shedding tears in the Senate only a few weeks ago.

The most notable passage in Gov. Flower's message is that in which he puts himself squarely upon record against the present Hill ballot law and in favor of the adoption of a genuine ballot-reform law. He says that repeated experience has shown that changes in the direction of simplicity are desirable, that the "present system leads to confusion, mistakes, and annoyance," and recommends the "adoption of a so-called blanket ballot, with the names upon it so arranged and printed that the elector can easily vote for the candidates of his choice." The Governor also favors a uniform election-inspector law, and recommends the amendment of the present corrupt-practices act in such a way as to include campaign committees and political agents in the requirement of sworn publication after election of all money received and disbursed. All these suggestions are excellent, and we are glad to learn that the Legislature will be given an opportunity to embody all of them in law.

One of the most disgraceful incidents in Tammany rule has been the attempted appointment of a certain Pentecost as assistant district attorney by Mr. Fellows, although this might have been expected from the election of Mr. Fellows himself. Pentecost is a half-cracked preacher and labor agitator, who gave up preaching for the law just one year ago, and joined Tammany Hall. He has been a Baptist minister, a Congregational minister, a Georgite lecturer, and a socialistic editor. He has, in his incendiary labor speeches, declared "there is enough money in this country to give every man $5,000 a year," and that, if he does not get it, he hoped there would be "a revolution, even though there should be a bloody one." In the *Twentieth Century*, which he edited, he came out strongly against capital punishment. That he has any knowledge of the law, or any mental capacity for acquiring it, or any fixed views on any subject, or any fidelity or loyalty to any social organization, there is no reason for supposing. As a public prosecutor he would, of course, have been ridiculous, but he was not selected to prosecute criminals. He was to draw a salary in order to please the radical and revolutionary labor element. There are encouraging features in so notoriously unfit an appointment. It is almost a maxim, in a case of outrageously bad government, such as this city rests under from Tammany, that it must reach its worst point before public opinion will so assert itself as to make reform possible. On merely debatable questions of government the masses will not stop to reason and to think. But the nomination of a Maynard, the election proceedings of a McKane, and the elevation of a Pentecost to the prosecuting office need scarcely any argument to prove their character, and they thus arouse public opinion to a realization of the course down which their affairs are drifting. In the face of this opinion Pentecost has declined the appointment.

The striking Danbury hatters have sent us a little pamphlet entitled, "Slavery Revived in the United States"—that is, by the employing Danbury hatters. We were a good deal startled by this, knowing that slavery was prohibited by the Thirteenth Amendment of the United States Constitution, and knowing also, that, under the Connecticut Constitution, no man could be deprived of his liberty except by a judicial sentence. We asked ourselves, in amazement, whether the Danbury employing hatters could be so crazy as to suppose that they could impose forced labor and the punishment of stripes on a body so respectable and numerous as the working hatters, particularly as the condition of slavery was, according to the pamphlet, to descend to their children. We, therefore, turned to the "exhibits" in the pamphlet with rising indignation, and found that the "slavery" lay in four forms of agreement which the "masters" asked the slaves to sign. In No. 1 the slave applies for work, and affirms that he does not belong to any association which will prevent his carrying out any agreement into which he has freely entered, and that in case of disagreement with the master about prices, the matter shall be referred to a committee of masters chosen by the slaves. In No. 2 the masters agree to pay wages punctually to the slaves, and have due regard for their "rights and convenience," and for their "health and comfort," to renew and readjust the wages paid twice a year, and oftener if requested, and to let any slave who wishes to run away to another master have an honorable discharge if he has been six months in possession of his last owner. The slave, on the other hand, agrees to work faithfully, to obey plantation rules, to make all

complaints first to the overseer and then to the master, to join no association which will prevent his fulfilling lawful contracts, and to pay two weeks' wages as liquidated damages in case of violation of the contract. The other agreements relate to giving instruction in the business to young slaves, and to the necessity of giving two weeks' notice of intention to run away. All we can say about this is, that what strikes us in the agreements is their extraordinary justice, fairness, and considerateness. The tribunal for deciding disputes ought to contain some slaves, but with this exception the terms are, we think, the best ever offered by masters to a servile race. As any slave is at liberty under the contract to run away on giving two weeks' notice, the system is infinitely milder than any other form of slavery ancient or modern. Even the Apostle Paul did not countenance the flight of slaves, for he returned Onesimus to his master.

There are signs that the Presbyterian heresy troubles are going to run parallel to those of the Congregational church of a few years ago, which, it will be remembered, first raged for a time among the churches in this country, and then broke out on the missionary field. A Presbyterian missionary in Siam, the Rev. E. B. McGilvary, has lately resigned on the ground that he cannot accept the doctrines of the inerrancy of Scripture or the Mosaic authorship of the Pentateuch. The General Assembly declared at Portland that any Presbyterian minister who did not accept those doctrines ought at once to leave the denomination. A few liberal ministers in this country took up the challenge and resigned, but many more fell back on the doubt whether the Assembly had a constitutional right to make any such demand, and refused to resign. Mr. McGilvary casts in his lot with those who resign. He seems to have been peculiarly well fitted for his work, having been born in Siam of a missionary father, and having pronounced scholarly tastes. He was educated at Princeton, and his defection must raise horrid doubts about the soundness of the teaching in that institution. The Board of Missions were reluctant to accept his resignation, and speak in the highest terms of his character and abilities. But, of course, it would never do to let a man keep on trying to induce people to stop sacrificing to white elephants who had any toleration for Deutero-Isaiah or the Jehovist.

The *Tribune* published on Sunday a striking letter from "a prominent American" resident in Rio de Janeiro, in which the present troubles in Brazil were intelligently discussed, and, in particular, the only concern of the United States in the squabble tersely set forth. He protests against "the pyrotechnic patriotism in which American editors are continually indulging" whenever there is a rumor that the monarchy is to be restored in Brazil, or anything done there agreeable to anybody in Europe. He denies, in the name both of Americans resident in South America and of South Americans themselves, that the United States can do any good in setting up as "the policeman of the continent," or "the stepfather of every petty republic this side of the Atlantic." With much force he points out that such an interfering protectorate has never been desired by any of the countries in question, but that, on the contrary, they have always resented it both in theory and in attempted application. When Blaine was performing his antics with Chili in 1881, and Harrison his in 1892, the result was to arouse feelings of strong hostility to the United States throughout all South America, and there was much talk of the need of a Latin-American union to resist the overbearing assumptions of the United States. Nothing else could be expected to follow any meddling of ours in Brazilian affairs at present, and our sole duty, as well as interest, is to keep scrupulously out of that quarrel altogether.

Despatches from Brazil represent stock-jobbers and other speculators as very anxious that the United States should "enforce the Monroe doctrine," and say that the news of the departure of the *New York* for Rio is received with "great satisfaction," presumably on the ground that the aforesaid doctrine will be enforced by the big ship. This throws needed light on the modern conception of the Monroe doctrine. What it means historically, and how it fits into the general body of international law, it would be vain to inquire of those who drag it out as a sort of fetish on occasion of disturbances like those with which Brazil is now torn; and it is only by some such specific application of it as the one quoted that we see what the doctrine means, and why it is appealed to, nowadays. Evidently, according to this, the first end and aim of the doctrine is to prevent Americans engaged in speculation in South American countries from losing money. When their ventures go wrong and they see their nitrate beds and rubber concessions slipping away from them, the first thing to do is to summon the ghost of James Monroe to help them out. Then, if they find submission to local laws somewhat irksome, and would like to have some way of setting the writs of local courts at defiance, there is nothing like the Monroe doctrine, properly interpreted. We are glad to see that the Washington authorities are showing no disposition whatever to encourage this view of the duty of the United States, under the Monroe or any other theory of international bullying, and have instructed the admiral in charge of our ships at Rio to maintain the strictest neutrality.

The acquittal on Saturday of all the Frenchmen on trial for the murder of the Italians at Aigues-Mortes last August is as deplorable a miscarriage of justice as was the failure of the New Orleans grand jury even to indict for the massacre of Italians in that city in 1891. Premier Crispi is said to have exclaimed, when he heard of it, "Juries are alike in all countries!" What he meant appears to be that it is idle to expect a jury to convict one or more of their own countrymen for murdering foreigners, when the murder has grown out of race hatred. As soon expect to have men convicted of murder who kill foreigners in open warfare. It must be said, however, that the French machinery of justice did not break down so disgracefully as ours in New Orleans. The French assassins were at least brought to trial, though they were not convicted. But the New Orleans grand jury would not even indict. They handed in a long report on the wickedness of the Italians who were slaughtered in cold blood, but declared that they were not "justified" in presenting indictments, inasmuch as the massacre was the work of "the first, best, and even the most law-abiding citizens of this city."

The analogy between the two cases extends also to the payment of indemnity, or blood-money, as it might be called. President Harrison's administration disclaimed all legal or international responsibility for the assassination of the Italians in New Orleans, but begged the Italian Government to accept 125,000 francs for distribution "among the families of the victims," and as a means of "effacing all memory of the unhappy tragedy." The French Government had already, before learning of the verdict on the Aigues-Mortes assassins, intimated its readiness to pay an indemnity to the Italian Government, and something like 400,000 francs had been agreed upon. But the payment was to be on the basis of reciprocity; the Italian Government, in its turn, being expected to indemnify Frenchmen whose property had been destroyed by mobs in Genoa and Rome. It is now reported, however, that the Italians are so enraged by the acquittal of the Aigues-Mortes criminals that they will refuse to pay any indemnity. In that case they will simply lose the poor satisfaction of getting blood-money for their murdered fellow-countrymen. The jingle of the guinea, in fact, appears to be the only cure left for the hurts of international honor.

BALLOT LAWS AND ELECTION FRAUDS.

IT is a striking commentary on the evil influence of David Bennett Hill upon the political history of this State that the new Legislature will be asked to enact a genuine ballot-reform law. The agitation for ballot reform in this country was started in this city five years ago, and the first comprehensive measure (for more than municipal application) embodying the fundamental principles of the Australian system which was drawn in the United States was presented to the New York Legislature in the winter of 1888. It passed the Legislature and was vetoed by Gov. Hill. It was again presented in 1889, again passed, and again vetoed by Gov. Hill. In the meantime the agitation had reached Massachusetts, and in 1889 a law which was modelled closely upon the measure originally drawn in New York, was put upon the statute-books of that State, and Massachusetts thus obtained the honor of being the first American State to adopt the reform. Other States followed rapidly in her wake, and five years after the movement had been started no less than thirty-six States had enacted laws embodying the new system in various forms. The larger number of these followed the Massachusetts plan, which provides a single or blanket ballot, with the names of all candidates printed upon it, arranged in groups in alphabetical order under each office. Other States adopted a blanket ballot with the names of candidates arranged in party columns, with the party name at the top, and still others added to the names an emblem or symbol. Three States, New York, New Jersey, and Connecticut, all acting under the influence of Gov. Hill, adopted a compromise or makeshift system, which provides separate party ballots, and which has never had the approval of ballot-reformers. We show in the subjoined table the distribution of these laws among the States:

Whole number of laws		36
With blanket ballots		33
Blanket ballots, alphabetical order		19
These are:		
Alabama,	Nebraska,	South Dakota,
Arkansas,	Nevada,	Tennessee,
California,	New Hampshire,	Vermont,
Massachusetts,	North Dakota,	Washington,
Minnesota,	Oregon,	Wisconsin,
Mississippi,	Rhode Island,	Wyoming.
Montana,		
Blanket ballots with party group and name		7
These are:		
Illinois,	Maine,	Pennsylvania,
Iowa,	Missouri,	West Virginia.
Kansas,		
Blanket ballots with party group, name, and emblem		7
These are:		
Colorado,	Kentucky,	Michigan,
Delaware,	Maryland,	Ohio.
Indiana,		
With separate ballots		3
These are:		
Connecticut,	New Jersey,	New York.

With "paster" ballot, New York alone.

The poorest, most inconvenient, and most easily "worked" for fraudulent purposes is the New York law, which Gov. Hill invented and allowed to go upon the statute-books in 1890. The Connecticut and New Jersey laws have many of the evil features of Mr. Hill's contrivance, but they do not have the worst of them, which is the "paster." To get rid of this and of the other bad features of the law is at present the object of the City Club's special committee, which, in consultation with representatives of various political and other organizations, is now preparing a new ballot act embodying the essential principles of the Massachusetts law. Thus, five years after the beginning of the agitation which has been taken up and carried to success in three-quarters of the Union, New York is still engaged in trying to get for itself a genuiue ballot-reform law. There is, we are glad to say, excellent assurance that success will crown this winter's efforts.

The need of a better law than Gov. Hill was willing we should have was very clearly shown in the last election. The Tammany workers, not satisfied with the cheating facilities which the use of the "paster" affords them, have been studying, ever since the law was passed, to discover methods by which to "beat" it. They tried a number of these methods at the recent election, and with such boldness that nearly one hundred of these gentry are now under indictment for violation of the law. What their fate will be, with Col. Fellows as their official prosecutor, remains to be seen. The methods which they operated were more audacious than ingenious. They made the provision which allows a physically disabled voter to take a friend into the booth with him to prepare his ballot, an excuse for accompanying into the booth voters whom they had bribed, having them first swear that they were either blind or prevented by palsy or lameness from preparing their ballots. Several of the blind men who had been aided in this way, incautiously picked up matches and pins from the floor after coming out of the compartments. In several instances Tammany workers, in defiance of law, placed themselves behind the booths or compartments, cut holes in the backs of them, and thus communicated with the voters on the inside, preparing their ballots for them. One Republican inspector whose attention was called to these proceedings, declared that he was not able to see them, and it was discovered subsequently that he had a glass eye, and was studiously keeping that fixed upon the Tammany operators. In other districts no pretence was made of following the regulations, and tramps and repeaters voted freely without regard to the registry list or anything else. So far was this carried that in a district in which there are not more than 7,000 voters, no less than 13,000 votes were cast.

When it came to counting, the two Tammany inspectors, assisted in many districts by the Republican inspectors, showed such zeal that in several localities in "Paddy" Divver's bailiwick not a single Republican vote was counted. In one district there were seventy-five or more ballots upon which the name of an independent candidate for the Assembly had been pasted. The inspectors were preparing to reject all these because the pasters were not placed exactly over the name of the regular candidate. When a watcher called attention to the fact that the law expressly provided that such exactness was not necessary, the Tammany chairman said, pointing to his two associate inspectors in turn: "You vote to reject, you vote to reject, and I vote to reject—we don't count 'em—see?"

These, and in fact nearly all the worst frauds of the late election, were in direct and open defiance of the law, though the use of the "paster" and the somewhat lax condition of the law generally may have contributed somewhat to make the violations more difficult to detect and punish. It is going to be difficult, however, to draft a law which will prevent an enterprising Tammany man from getting behind a booth and boring a hole in it, unless the booths be constructed of sheet-iron, and unless it be distinctly specified that inspectors with one glass eye or policemen with two, or with no eyes at all, shall not be eligible for duty on election day. The best law that human intelligence can devise will be powerless to prevent fraud if its administration is in the hands of a lot of thieves and other rascals—which was the case in many quarters of this city in November last. A step towards preventing this will be taken when the old law giving the Republicans two inspectors to every Tammany two shall have been restored. With a blanket ballot, with all "pasters" forbidden, and with an equal political division of inspectors, we shall certainly be much better off than we are at present; and these, as we understand it, are to be the leading provisions of the law which is now in preparation.

THE NAVAL ALARM IN ENGLAND.

THE alarm in England over the condition of the navy is adding seriously to the troubles of the Gladstone ministry. The revenue is declining, but an expenditure of about $50,000,000 on the navy is imperatively called for, in order to maintain its superiority to the combined forces of France and Russia. The panic is an old one. Every generation has to pass through it. It occurred under Louis Philippe, when the Prince de Joinville wrote a pamphlet showing how England might be ousted from her supremacy at sea. It occurred under Louis Napoleon when he began to build ironclads, and it has come up now again, under the republic.

The controversy is very much obscured by the lack of exact information about

the navies of both France and Russia, the Tories probably exaggerating their size and strength, and the Liberals in like manner underestimating them. There is much the same trouble about the British navy. Opinions widely vary about its strength and efficiency, but the numerous accidents which have of late overtaken it, and the poor behavior of some of the large iron-clads in bad weather, necessarily have diffused a great deal of anxiety through the community. But if the navy were ever so efficient, it is difficult to see how British commerce is to be protected in the narrow seas, where torpedo boats can dash out from a hundred ports and creeks in the dark nights and play havoc with it. This commerce is to-day enormous. It is hardly too much to say that Great Britain is in possession of the carrying-trade of the world. The ocean freight business of all other countries put together is comparatively trifling, and this is another illustration of the way in which Great Britain profits by other people's folly. She has no navigation laws, and nearly every other country has, so she takes the business away from them.

Of course, as the discussion has progressed, each side has caught at every foreign authority that came in sight. Our Capt. Mahan's 'Influence of the Sea Power' has in particular done yeoman service on the Conservative side. It is in all respects a remarkable book, and shows, in flowing and eloquent English, how from the earliest days supremacy on the sea has carried with it supremacy on land. But a good deal of its reasoning on this head has been weakened or vitiated by the invention of railways, which has considerably diminished the importance of water transportation. If Napoleon had to fight Wellington again in Spain, the possession of the sea would do vastly less for the latter. But there is no question whatever that, for the British Empire, the control of the sea is a question of life and death.

Along with Capt. Mahan, whose authority none will dispute, Lord George Hamilton, a civil lord of the admiralty in the late Government, cited our ex-Secretary Tracy as an authority concerning the number of ships Great Britain ought to have in order to hold her own against the navies of the world. We are quite sure Mr. Tracy never uttered any such opinion with the expectation that it would be quoted in Parliament as the opinion of an expert. Even a lifetime in the navy of a great power evidently is hardly a sufficient qualification for forming a judgment on this subject, for the British naval authorities differ about it considerably; and Secretary Tracy can hardly have thought that four years in the Navy Department at Washington, taken from the practice of the law, in middle life, fitted him to "give them points" on the most serious naval problem with which Englishmen have had to deal. If this were true, the training of men for the sea from youth up would be a great farce, and we should, when war broke out, readily gather up a lot of admirals from the dry-goods stores and law offices, and, above all, from the newspaper offices, of any great city.

This citation of Mr. Tracy was evidently made in great ignorance of the way in which our navy is governed. Ours is the only navy in the world, we believe, which has no naval head. All the Continental navies are governed by admirals—that is, the minister of marine, the officer answering to our secretary of the navy, is invariably an admiral. The government of the British navy is peculiar, its commanders being the lords commissioners of the admiralty. Of these there are six, but only two are civilians, the other four admirals. Then, too, it has to be borne in mind that, owing to the permanence in public life of English statesmen, the civil lords are generally men who have given a good deal of attention to the navy during long years in Parliament. This condition has been in a measure fulfilled in the case of our Mr. Herbert, for he was, before his accession to his present position, chairman of the naval committee. But as a rule our secretaries of the navy are lawyers who, before being called to preside over our military marine, hardly knew the bow from the stern of a ship; nor, as a rule, has there been the slightest pretence that they were selected with any reference to their marine experience.

As long as we made no pretence of having a navy this was perhaps a matter of small importance, but now that we are preparing to become a naval power it has a good deal of importance. We undoubtedly owe to it most of the recent mistakes in matters of discipline. It is an old and sound rule of all the military services of the world that "no man is fit to command who has not learned to obey"—that is, that every man must learn to manage subordinates in the army or navy by having himself served under orders. Accordingly, in all armies and all navies each man has to begin at the beginning, and take a long course in obedience, before he is allowed command of the lives or reputations of the soldiers or sailors. In this way, and in this way only, can he find out how much and what kind of service he can fairly exact from those who serve under him. Herein lies the value of sailors in the places of ministers of marine or lords of the admiralty. Herein, too, lies the folly of suddenly seizing a lawyer and putting him in command of the fleet. He has not the least idea how to treat officers and men; and the way in which Commanders Whitehead, Reiter, Higginson, and Admiral Stanton have been keelhauled shows the need of some reorganization of the Navy Department if we are to keep on increasing our navy.

THE EVOLUTION OF A DYNAMITER.

THE police inquiries into the antecedents of Auguste Vaillant, the aspiring youth who set about ushering in the Golden Age by trying to blow up the French Chamber, are full of instruction and warning, as they show very neatly the process by which bomb-throwers are grown. Vaillant had taken a full course in socialism, and was, in fact, as he himself declares, only acting as a consistent graduate in that discipline should when he flung his bomb. After a life of considerable irregularity, in which we see him deserting his wife and taking another man's as his mistress, he was first heard of as a public character in the guise of a founder of a "Cercle Philosophique," at Choisy. The kind of philosophy advocated in this circle may be inferred from the fact that it was soon merged in the "Revolutionary Socialistic Union" of the eighteenth arrondissement, Paris, in which well-known revolutionaries like M. Guesde gave "courses" in "social economy" and "special philosophy."

In other ways did Vaillant ally himself with the socialistic propaganda. He had for a time a connection with the *Cri du Peuple*. He was also a dabbler in local politics. For some time he was at the head of a "movement" to present a bust of Marat to the city, which was somehow expected to give a great lift to the socialist party. But finally the bust was seized by Vaillant's landlord for unpaid rent, and so that movement came to grief. He kept up his political activity, however, and several socialistic proclamations put forth by him as secretary of his "group" have been unearthed. One of them, dated 1886, called upon his fellow-citizens to join their ballots in electing a certain candidate, "while waiting for the time to come to join our rifles to fight against a reactionary society." Another one, put forth in 1887, defined the purpose of his "union" to "pursue, no matter by what means, the socialization of the means of production." This is only the common socialistic jargon, still used and defended even by the French socialists who now condemn Vaillant unsparingly.

Vaillant is to be traced for some time in various socialistic organizations—the "Parisian Agglomeration," the "Federation of Free Thought," the "Equals of Montmartre," and a dozen others. A part of his zeal in attending their meetings may have been due to the fact that he used to work off a good deal of rice and coffee at a commission on his fellow-socialists; but this resource soon failed him, and he then spent some time in South America. Returning to Paris about a year ago, he tried hard to get a nomination as deputy last August.

Had he been successful, he might have been comfortably sitting with the other socialistic deputies in the Chamber on December 9, and left it to some other advanced reformer to throw the bomb from the gallery.

Such a career is worth detailing, because it so characteristically reveals the evolution of an anarchist out of a socialist, and of a dynamiter out of an anarchist. In his own weak and vain head, Vaillant illustrates the precise and necessary operation of the socialistic philosophy upon thousands of other weak and vain heads. Is it anything strange that they should take to throwing bombs in order to hasten the destruction of a social order which, they are assured by their teachers, is one vast system of legalized robbery? A writer in the *Débats* says most truthfully on this point:

"One can easily, link by link, reconstruct the chain which joins the anarchist who throws a bomb in the Palais-Bourbon with the writer whose anti-social theories and incitements and provocations are spread abroad every day in the socialistic newspapers, or with the orator who makes their gatherings reëcho. They are sowing in brutal natures the seeds of every kind of violence and fury, and are giving weak minds the most dangerous sophisms to feed upon. They are planting germs of hatred, they are corrupting the reason and destroying the conscience; and yet, when they have been listened to attentively, when the destructive practices which they have incited have done their work, they disavow their own doing and protest that their hands are clean."

The truth of this is witnessed to in the very condemnations visited upon Vaillant's head by his former socialistic colleagues. They call him "rash" and "premature," and say that the "really responsible criminal" is "the villany of existing society." If this is so, what folly for them to denounce a man for adopting means of his own which to his mind seem more rapid and effective than theirs for putting an end to that villany! They both aim at the destruction of the present social order. Not one stone of it is to be left upon another. Why, then, quarrel about a mere detail of the destructive process? At any rate, as long as their socialistic doctrines are all the while turning out such graduates as Vaillant, it is not possible to disclaim all responsibility for him. He himself asserts that he is the most consistent of socialists, and, as a mere matter of logic, it would be hard to show that he is not. It is easy to say that he is a crack-brained creature who has no grasp of the true socialistic principle; but the world is full of just such fellows as he is, and our benevolent professors and writers who preach up the "nationalization of the means of production" may be sure that they have plenty such in their audiences, ready, like Vaillant, to put their doctrines to the practical test with dynamite.

THE POPULARIZATION OF EVIL.

M. Édouard Rod has been remarking on the predominance in current French caricature of repellent types. He shows how the progress of the art has been away from the clumsy fun of André Gill, all the rage fifteen years ago, through the more delicately conceived raillery of Grévin and Robida, down to the pitiless sarcasm and delight in human brutality which mark the style of Forain, who to-day sets the fashion. "And you must observe," says M. Rod, "that Forain's success is not an isolated fact; it harmonizes with tendencies to which the Théâtre-Libre has given striking emphasis, and which are also conspicuous in some of the recent reviews. It is always the same thing: an over-acute observation which searches after evil, which finds it and rejoices to find it, and displays it with ironic satisfaction. People wallow in all sorts of baseness and laugh at it; they appear to be well pleased to wallow in it and to laugh at it, and they seem to say, 'What a fine thing it is that men are horrible, and what should we have to amuse ourselves with if they were not!'"

Putting artistic questions aside, M. Rod asks what must be the effect of all this on the public. What about the plain people who have no resemblance to the moral monsters pictured for their entertainment, who live quiet lives and enjoy simple pleasures? Do they laugh at these cruel caricatures, and go to plays which turn on abnormal vices simply to be in style? He almost hopes that they do, but he has to admit it to be more likely that "these terrible engravings, with their terrible explanations, awaken in them, almost before they know it, dormant instincts long held in check by civilization, but to which it suddenly becomes proper to give full rein — a legacy of ancient savagery, a survival of primitive ferocity." If that is the case, says M. Rod, we can see whither we are marching, and we must learn betimes to hate the human beast most of all when it is talented.

We may still congratulate ourselves that the talented human beast has made but meagre conquests in this country. Perhaps we ought to hang our heads in shame as benighted Philistines in confessing it, but anyhow it seems to be a fact that the predominant literary and dramatic and artistic taste of Americans does not yet take kindly to those subjects which, as Harapha of Gath said of Samson, "need much washing to be touched." But how if we have a human beast without talent? If it is still true that our writers and artists find their best inspiration and reward in themes that are wholesome, have we no other agencies for the popularization of evil, comparable to those of which M. Rod deplores the bad effects in France?

It is trite enough to say that the sensational press is such an agency, but it is fair to ask if there is not a clear analogy between its harmful influence and that of the worst forms of French naturalism. Leaving entirely out of account for the present the responsibilities of newspaper proprietors and newspaper purchasers, let the simple question be put, What is bound to be the effect on its readers of the constant exploitation of crime and vice and scandal which plays so great a part in the daily press? The question may be thus isolated and asked merely as a psychological and sociological one. Say nothing about the taste and pleasure of the reader or the ethics and profits of the editor, and inquire only what effect the daily presentation of the human beast, without any glamour of literary art about him, is going to have upon the people in whose faces he is thrust every day.

To begin with the lowest class of readers, it has long been well understood by criminologists and alienists that the epidemic character which crime often seems to have in modern times is largely due to the broadcasting of all crime by the press. Let a peculiarly brutal or novel method of murder or suicide be invented in some part of the country, and it is sure to be duplicated as soon as the newspaper suggestion of it can be brought to bear on the unstable brains only waiting for some such push. Something of the same sort is clearly traceable in the plague of dynamite explosions now sweeping over Europe. The bomb in the theatre at Barcelona seems to suggest the bomb in the Chamber at Paris, and that a dozen others, until now the French police are every day arresting half-lunatic criminals perfectly crazy to throw a bomb at somebody. So, too, the passion for sending infernal-machines to prominent men seems often to go in waves of infection of which the newspapers make themselves the vehicle.

We may be sure that the psychological law which we see here so plainly operative, works also in the obscurer cases. "The fig-tree looking on the fig-tree becometh fruitful," says an Arabian proverb. Daily contemplation of the vices and meannesses and domestic unhappinesses of mankind is a dangerous test for any man to subject himself to. If he is pure-minded and high-minded, he is in danger of losing, by familiarity, that quick sense of disgust and repulsion which is his safeguard at first. If he has any diseased parts in his mental and moral make-up, they are sure to be inflamed. A man brooding over his own wrongs or misfortunes, fancied or real, will be given a perilous tilt towards executing the villany he sees spread before him. Into slow-witted natures hints of baseness and trickery will be dropped which they never could of themselves have originated. Innocence and reticence will become more and more impossible to find, and a banal sophistication on all subjects will become universal. Such results are certain to attend the popularization of evil,

and to mark the progress of the human beast, with or without talent.

THE PARLIAMENTARY YEAR IN ENGLAND.

LONDON, December 19, 1893.

ALTHOUGH the Government majority, after the general election, fell slightly short of what sanguine Liberals had anticipated, seldom did a session open with higher hopes than that which met here on the 31st of January. The Queen's speech foreshadowed the following great measures: home rule, registration reform, shortening duration of Parliament, one man one vote, employers' liability, parish councils, local veto, church suspensory bills preparatory to disestablishment for Scotland and Wales. All these have been abandoned for this session, except home rule, employers' liability, and parish councils. Besides the passage of the estimates, for which Parliament is primarily called, home rule practically occupied the entire session from February till September inclusive. After the bill had been thrown out by the Lords, we met again on the 2d of November. The parish-councils bill came up for second reading and was passed without division on the 7th. The employers'-liability bill came up from the grand committee and was passed on the 16th. It was subsequently, in the opinion of three-fourths of the Liberal party, destroyed, at least in one of its most vital provisions, by the Lords. The committee stage of the parish-councils bill was taken on the 17th of November, since when it has practically occupied Parliament. We are to have only three days' vacation at Christmas. Possibly this bill may not be carried through even in January. Only nineteen of seventy-one clauses have yet been passed. What treatment the Lords will inflict on it remains to be seen.

Such a state of affairs is without precedent. A deliberate and deep-laid plan is being carried out to block business, play into the hands of the Lords, discredit the Government, and precipitate a general election. Nor is the Opposition altogether responsible for the blocking. As Mr. Balfour pointed out the other day, the notice paper, when the bill was entered upon in committee, included no fewer than three hundred amendments by Government supporters. The interest of the Government is clearly not to dissolve until it has done effective work, and, if possible, strengthened its hold on the electorate by the passage of the registration and one-man-one-vote bills. To outsiders it may appear that the Conservatives, in thus opposing and delaying Liberal reform, and the Lords in aiding and abetting them, are undermining their own position. But the English are a peculiar people. So long as they get what they want, they do not care under what name or at whose hands it reaches them. This, perhaps, has helped to make their progress steady. They know that both parties must in the end cater for *them*. The upper classes have staved off as long as possible measures imperilling their position and impugning their interests; but they have at the same time maintained their prestige by conceding when it was inevitable, and they often manage to get the credit of passing such reforms as can no longer be withheld. The Conservatives enjoy the immense advantage of having the dead pull of vested interests always on their side. We will suppose the Conservatives are in power. Certain reforms come to be desired which they are loath to concede. Upon a thousand platforms enough enthusiasm is aroused to overcome these vested interests. The Liberals are returned, the reforms conceded. The interests reassert their power, those recently attacked thirsting for revenge. All the Liberals have now to offer is good government. The Conservatives can bid as high in this regard. The Liberals are turned out until a fresh crop of necessities arises. Ireland, meanwhile, unless when making herself a nuisance, so little affects the daily lives of Englishmen as to be likely to be left out of account; and so party succeeds party. And it is to be noted that when Conservatives see fit to take reforms in hand, they do so with the consent of the interests compromised, which realize that it is better to be disturbed by their friends than their opponents.

As yet there is no sign of real agitation against the Lords on account of their action regarding home rule or employers' liability. The middle classes gravitate more and more towards conservatism; the overwhelming preponderance of Irish Protestant opinion against home rule is being exploited with persistent ability against Mr. Gladstone. The church and liquor interests are up in arms. The Lords are generally found willing to pass any measure, however radical, proposed by a Conservative government. The Liberals have no excuse for delaying reform by whomsoever proposed. If affairs go on as they have of late years, it appears as though only a Conservative government is to be permitted to carry through extensive reforms. It must soon become apparent that there is some cause for the present deadlock beyond the presence of eighty Irish National members in the House (who, except at question time, have scarcely opened their lips for months), or the desire of the Liberal party to pass a home-rule bill. It must be evident that even if there were not an Irish Home-Ruler in Parliament, the present effort to transact the affairs, great and small, of thirty-five millions of people at home and to manage a widely extended empire abroad is breaking down under its own weight. Nay, the absurdity of the attempt would be more apparent if Ireland were not agitating for home rule, for then her four millions and a half of inhabitants would not be content without their yearly requirements of legislation in minor matters being attended to. Comparing political needs in the two islands now with what they were at the time of the Union, the difficulty of legislating intelligently for both in one assembly has been greatly increased. There is an established church in England; there is none in Ireland. Equality of institutions existed in Pitt's time. Since then have developed different land laws, a different educational system, a different police system, different marriage laws. Difference of institutions induces other differences. The tendency has been more and more towards diversity. All this is telling now on the parliamentary machine. But still more embarrassing, perhaps, has been the ever-increasing complication of law, and its application, in a manner formerly unknown, to the every-day concerns of life. There is hardly a line of this parish-councils bill that has not to be considered in relation to other legislation passed in late years. Law formerly, however rude in its construction, however rough-and-ready in application, lay like a simple open network over the land. It is now more and more closely woven, and the introduction of new threads, the passing new laws, is increasingly difficult. There is, in truth, almost as much difference between law in its complexity now and the law of sixty years ago as there is between the twin-screw triple-expansion liners which now enter the harbor of San Francisco and the brig in which Dana spent his two years before the mast. We must, besides, remember that the law is in these countries more nearly carried out, more rigid and unbending in its action, than in most countries.

Possibly, while the Opposition, by their dilatory tactics, may be undermining the cause of home rule in the present, they are unwittingly insuring its triumph in the future. Yet all still depends on the Irish people at home and abroad. Undoubtedly the state of affairs in Ireland now is very grave. The long continuance of this perhaps unavoidable contest certainly has most disastrous effects upon the country. The desire for home rule, some effective control over their own laws and institutions, is deeply rooted in the hearts of most Irishmen. In a determined and devoted band it has led to great personal sacrifices. It is retained in a sleepy sort of way by the multitude. They have no intention of abandoning the claim, but they do not care that it should seriously interfere with their daily lives and private money interests. Probably a Protestant people imbued with like desires would work more unitedly and determinedly. They might, it is true, have been on occasions fatally broken down. They might not, by bending to the storm, have preserved themselves, as the Irish often did, for better times. But under circumstances such as the present, I believe a larger proportion of a Protestant community would feel it individually incumbent on them to assert themselves. Most of those from whom the best governing class might be selected in Ireland have, unless in the north, for the present withdrawn altogether from politics. The boycotting by the upper classes of traders professing national proclivities is so severe that they are afraid to come forward. The consequence is that the cause is too often represented by men little skilled in public affairs. They are upon the whole as clean-handed as those who occupied their places in ascendancy times, but they are less experienced. And we are perhaps somewhat inclined, like the French, to prefer untried men who profess to agree with us and who make large promises, to tried men in whose career mistakes can be detected. The number of evicted and idle tenants throughout the country, the unsettlement caused by agitation, constant emigration of the heartiest and strongest, all tend to enervate the country.

Irish Castle government is such a nicely compacted machine that even men like Mr. Morley and Mr. Bryce in their administrative action have been able to make little impression upon it. The masses of the Irish people see little change. Neither the promises nor the anticipations of the general election have been realized. This tends upon the one hand to cool political ardor, and upon the other to strengthen the hands of the Parnellites, who favor a "hillside" and irreconcilable policy. Nevertheless, the real irreconcilables in Ireland will yet be found to be the Protestant and Conservative party. The Nationalists have within the last twenty-five years advanced much closer than they to a reasonable settlement. They have definitely abandoned the separation theory. Irish Conservatives and their English allies have not yet abandoned the idea of Protestant supremacy in Ireland—a theory as impossible of maintenance as that of separation would be of realization. Mr. Bryce is at present filling Mr. Morley's place as chief secretary. Even he cannot please them. I find the

following in the *Pall Mall Gazette* of yesterday: "If the object of the prime minister in selecting Mr. Bryce as the mouthpiece of the Irish government was to insult and irritate Ulstermen, he has clearly achieved an admirable success." If they are not satisfied with the government of men like Mr. Bryce, with whose government would they be satisfied? It is, in truth, for the English people to consider whether they prefer the friendship of the masses of the Irish people, who can be reconciled, or that of the Irish minority, who could be kept in good humor only upon terms impossible of maintenance in a democratic community.

Two articles regarding Ireland, signed "X," but evidently by different authors, which appeared in the *Fortnightly Review* for last month and this, have attracted considerable attention. The first attributes, to a mistaken extent, much of the economic depression in the country to railway and bank mismanagement. It dwells upon the general drawbacks, such as I have above indicated, and, while largely attributing them to the want of home rule, questions whether it is not now too late for the application of that or indeed any other remedy. The second article is devoted principally to an over-colored diatribe against the "Rhetoricians," the line of Irish patriots from Swift downwards, and against all but a small number of those who now speak in the name of Irish nationalism. It especially emphasizes present differences, not only such as existed before the "Parnell split" between Nationalists and Orangemen, and which have since widened between Nationalist and Independent, but those which from one cause or another exist among Nationalists themselves. It would be easy to explain how all these differences have arisen, as differences arise in every country and almost every party. The length of the contest, the heart-sickening of hope deferred, the sufferings endured, the demoralization of the present idle life in Parliament, are almost enough in themselves to cause bickerings.

In whatever direction we turn our gaze, the outlook is clouded and uncertain. At no period, perhaps, were there a larger number of people at home and abroad more sincerely anxious to serve Ireland, more fully prepared to spend and be spent for her regeneration. Yet everything appears for the time at cross purposes. If Irishmen at home and abroad avail themselves of present discouragements and differences as excuses for slackening in the struggle for home rule, the results will be disastrous. If, seeing beyond these complications, they support a reasonable policy, the present deadlock will prove to be only a phase in a long course of conjunctures all pointing towards one inevitable solution. D. B.

VAILLANT, SOCIALISM AND MILITARISM.

PARIS, December 22, 1893.

WHEN the new French Chamber met, it was difficult to know exactly what its character would be. One thing was certain: the monarchical group, Royalists and Bonapartists together, which numbered as much as 150 in the last Chamber, had been reduced to about fifty. But the republican majority was composed of very heterogeneous elements: it embraced the Opportunists, the more or less conservative Republicans, the more or less advanced Radicals, and with them a large number of socialists. In the first discussions which took place in the Chamber, there was a split in this republican majority. M. Dupuy resigned almost immediately after the meeting of the Chamber, and was replaced by M. Casimir-Perier, the grandson of the Perier who was a minister of Louis Philippe. M. Casimir-Perier asked for a vote of confidence, and obtained it only by the help of the Right; he became the protégé of the monarchists. He saw 200 republicans on his side, and 200 republicans (I speak in round numbers) against him.

The reason of this division was obvious: M. Dupuy, and after him M. Casimir-Perier, had declared themselves in favor of a homogeneous cabinet and against the policy which has taken the name of concentration, by which word was meant the coalition of all the republican groups, whatever their ideas and doctrines might be on the most important subjects, and the representation of all these groups in the cabinet. The policy of concentration had great defects: it rendered all serious legislative work next to impossible; but it had also great merits in the eyes of our politicians. Thirty or forty deputies had nothing to do but to form a "group," which consisted merely in naming a president and a board, in meeting and dining together, in having a paper, generally without subscribers but kept up by the aid of the class of financiers who became so conspicuous in the Panama trial. "Je marche, donc je suis," said the group, and the group helped to make and unmake cabinets, and its leader, unknown yesterday, had a good chance of obtaining a seat in case of a readjustment or a reorganization of an administration.

"Concentration" was invented by M. Thiers after the 16th of May, when he made up his electoral lists from the 363 deputies, without an exception, who were hostile to Marshal MacMahon. It continued so long as there was any danger of a restoration; it survived Gambetta, Ferry; it served against Boulanger; but when the republican form of government and the Constitution had ceased to be in question, it became very obnoxious to the country. There were no real parties in the Chamber founded on principles; the groups formed and reformed perpetually; all questions became personal questions. A sort of crusade began against this policy after the last elections. Casimir-Perier was notoriously among those who favored a new policy. His début was not fortunate; all ambitions were visibly ready to conspire against a man who would give no hope to any group, and who spoke of forming a homogeneous administration. His cabinet seemed lost as soon as it was formed; it was saved by the most unforeseen event. The bomb thrown by Vaillant in the Chamber had the effect which no reasoning, no eloquence could have had. The Chamber had hitherto been trying to understand itself; now it found itself, it became conscious. A majority, an overwhelming majority, has been found in favor of the new Administration; the groups have disappeared, at least for the present; the Chamber has obeyed the elementary law of self-preservation, "Primum vivere, deinde politicari."

The Government has asked the Chamber to furnish it with certain indispensable arms against the anarchists, and has introduced four bills, which have been voted with extraordinary haste, after hardly any discussion. All associations formed for the committal of crimes against life and property are to be unlawful; all understanding with the members of such associations will be equally punishable by law, as well as all public apology by means of newspapers or of public meetings. A large supplementary credit for the increase of the police has been placed at the disposal of the Government. Public opinion has fully endorsed all these measures; it feels that a real war has begun against all social institutions. All the reasonings in the world, all the teachings of political economy, are of no avail with people who have invented the new system of propagandism—what they call propagandism *par le fait*, by facts; that is to say, by crimes.

Socialism is no longer what it was in the days of 1848; it has completely transformed itself. Ideas are like the rays of light which take the color of the transparent medium; socialistic ideas, which in the higher classes assume sometimes a religious, sometimes a philosophical, character, become deformed when they penetrate the lowest classes of the population. We have seen in our time, especially in the past twenty years, an extraordinary development of socialism. We have in France what is called Christian socialism, preached by men like M. de Mun; we have the Tolstoian school, which began with admiration of 'War and Peace' and the other beautiful novels of the great Russian writer, and which ended in the sort of primitive Christianity which is now preached by Tolstoi, and which is the negation of personal property and of personal rights. We have read a Papal encyclical under the title of "De conditione opificum." Emperors and kings have spoken of the duties of society toward the workingman. Our politicians have made promises of all sorts to the wage-earning classes; irreligion has worked side by side with religion: those who denied to the poor a future life promised him the kingdoms of the earth.

Under all these influences, is it much to be wondered at if the workingman has conceived hopes which cannot well be satisfied? Disappointment has thrown a bridge between socialism and anarchism. In the famous monologue of Cinna, Augustus speaks of these men:

> "chargés de dettes et de crimes,
> Que pressent de mes lois les ordres légitimes,
> Et qui, désespérant de les plus éviter,
> Si tout n'est renversé, ne sauraient subsister."

Maxime Du Camp has well described this class of men, which is always found in great capitals. They were the men who made the Commune after the war of 1870; they now have taken anarchy for their cry, and they place themselves at the head of the advanced socialists.

The danger of socialism has probably been increased by the militarism which is the order of the day in Europe. In countries where military service has become an obligation, and where every man is called to his regiment first for two or three years, and afterwards from time to time for various periods till he is forty-five years of age, it is not surprising that the individual expects much from the State; the State claims from him services which it must repay. The "droit de travail" which was preached by Louis Blanc at the Luxembourg in 1848, seemed a paradox at the time; it seems now almost an axiom to the workingman. Militarism has another effect: it depletes all European nations, and in this way creates increasing poverty, and poverty is the perpetual theme of all socialists. Italy might have lived happy and contented if she had kept out of the combinations (what the Germans call the constellations) of the great powers. She entered the Triple Alliance, and condemned herself to expenses which are too large for her financial capacity; she begins now to pay the price of her ambition, and is passing through a most dangerous crisis. The great men who achieved Italian unity are gone; her parliamentary personnel is very mediocre. Crispi has again been called to power, as he is considered the

only strong man of the Parliament; he is very clever and very versatile, but one hardly sees how he can detach Italy from the bonds of the Triple Alliance; he can only ask the Italian people to pay new taxes, and taxation has already become almost intolerable in Italy.

The finances of France are not in danger, but they preoccupy all who think of the future. Certainly the resources of France are immense, but they are not inexhaustible. France has one great advantage: her debt is held almost entirely at home; she is not under the necessity of buying gold in order to pay her foreign creditors. In this respect she has a great superiority over Italy, as an immense part of the Italian debt is in French or German hands. France has another advantage: she is a producer of wine, and sells much of it in various countries; she exports, besides, many manufactured articles; as a rule she is almost, with regard to foreign nations, in the position, not of a debtor, but of a creditor. She therefore bears no losses from exchange. This said, we must add that her debt is increasing in an alarming way. M. Boulanger, a Senator, who some time ago made a report on our finances, showed that the funded debt of France alone was equal to the united funded debts of Germany, Austria-Hungary, and Russia. England, alarmed at the prospect of a combination of the Russian and the French fleets in the Mediterranean, is going to vote again large sums for the increase of her already powerful navy. The navies of Italy, of Germany, of France have absorbed enormous sums of late years. Surely, if the old maxim, "Si vis pacem, para bellum," is true, peace was never better assured; but it is difficult to imagine how the perpetuation of armaments will secure for ever the continuation of peace, and on the other hand to imagine anything more absurd than the perpetuation of armaments which are to remain useless.

HABEMUS PONTIFICEM.

ITALY, December 16, 1893.

CRISPI is again at the helm! Zanardelli was unsuccessful in forming a cabinet, owing to the diversity of opinion on the financial question. Saracco and Sonnino, members of the Centre, declined to join him, and the King naturally felt that it would be impossible to accept a ministry without a minister of finance. Then occurred another incident. Zanardelli had chosen for minister of foreign affairs Oreste Baratieri, a native of Trent, who had formed part of the expedition of the Thousand (1860), is now a general in the Italian army and governor of Eritrea. Baratieri accepted, but, on the eve of the completion of the ministry, suddenly declined. This was a singular proceeding, as the King had manifested his approval of Zanardelli's choice. It is said that the Austrian ambassador protested—this again is denied—and there will be an interpellation in the House on the subject. This was the last drop in the cup. Zanardelli informed the King that he must decline further attempts to form a ministry. The King summoned Farini, president of the Senate, who, refusing to attempt to form a ministry himself, advised the King to summon Crispi, and so he did on the day of his arrival from Naples.

Even Crispi has found immense obstacles, owing entirely to the financial difficulties, as he was resolved to allow no question of party or of persons to influence him in his choice of men whose characters and abilities might insure a strong ministry. He had interviews with Rudini, the prime minister who succeeded him in 1891, but they came to little save that Rudini gave promise of support. Then he summoned Nicotera, and all old quarrels were made up. Nicotera, who is one of the most generous and patriotic of men, promised his support to his old friend and fellow-conspirator without making any claim for the admission of his friends to the ministry. Crispi had also long interviews with Signor Colajanni, the Sicilian republican socialist, who first called the attention of the House to the banking scandals, and who has now written a really wonderful book entitled 'The Banks and the Government.' He was the most formidable opponent of Crispi during his late cabinet, but, being first of all a patriot, then a Sicilian, accepted the interview, and expounded his views on the best measures to secure the pacification of Sicily. Saracco and Sonnino accepted, the former the department of public works, the latter that of the treasury. It was hoped that Perazzi, Sella's *alter ego*, would accept the department of finance, but he did not see his way clear, so Sonnino has that also in the interim. Great difficulty was experienced in finding a minister of foreign affairs, but at last Baron Alberto Blanc accepted the office, and seems to be generally acceptable, even to France. Similar difficulties occurred in securing a fitting minister of war, and it is in the war budget that all the difficulties originate. The King deprecates any reduction in the budgets of the army and navy, whereas all the real authorities on finance maintain that, without this reduction, no real equilibrium between expenditure and income can be attained. Gen. Ricotti, in a letter to the *Opinione*, affirms that eighty millions must be found immediately, and that before burdening the country with fresh taxes, forty millions of economy must be effected in the various budgets, commencing with twenty millions in the War and Navy Department. And it is the opinion of this veteran general and ex-minister that the war budget might be reduced from 246 to 232 millions by modifying the organization of the army. "If," he writes, "we persist in maintaining twelve army corps, not only are economies impossible, but other fifteen millions must be found; and an army with ten army corps thoroughly efficient would be stronger than an army with twelve army corps which cannot be rendered efficient without the aforesaid addition to the budget." Gen. Ricotti affirms that he felt the courage to undertake the reduction and to effect the economy of fourteen millions, but that Crispi, on hearing his proposals, did not invite him to become minister of war. This letter is much commented on by the partisans of partial disarmament, whereas the champions of an "Italy powerful by land and on sea" approve Crispi for declining as a colleague a minister who "felt the courage" to reduce the number of army corps. The actual minister of war, Gen. Stanislao Mocenni, is a member of the Chamber of Deputies, and is credited with the intention of effecting economy in the war budget without reducing the corps.

Prof. Guido Baccelli is hailed with delight by the university students as minister of education. Crispi first summoned Carducci, who went to Rome and gave his opinions on the difficult questions to be resolved. He would not in any case accept office unless allowed to revolutionize the entire system of public instruction as it exists to-day, beginning with the reduction by one-half of the existing universities. This was the intention of the late minister Ferdinand Martini, but the presentation of the bill was received with such a howl of execration by the provinces to be decapitated that he shelved it at once. Carducci assuredly would not do so, but would resign instanter if prevented from carrying out all the reforms that he believed necessary. In any case it is a relief to all who admire the poet and the sturdy citizen-professor, that he is not caught in the ministerial machine, whose wheels would have lacerated brain, mind, and heart. As a Senator, he will continue to propound his ideas as to educational reform—a reform which every citizen of the United States will agree to be urgent when they consider that, with 61 per cent. of *analfabeti*, out of thirty-six millions spent for education by the State only eight millions is allotted to primary instruction, the secondary and higher absorbing the rest, and the universities alone costing the nation ten millions.

Signor Boselli, minister of public instruction under Depretis, has taken the Department of Agriculture, Industry, and Commerce. The whole country is agitating for a repeal of the late banking law passed at the imperious bidding of Signor Giolitti, which is held responsible for the numerous and heavy failures or suspensions of some of the largest banks. Among these we regret to see that of Maquay & Hooker, so long regarded by the large American and English population as "safe as the Bank of England." The stoppage of the popular Bank of Genoa is also a sad disaster. It is said that at the opening of the Chambers there will be a tail to the bank-scandal revelations. The private accounts of Tanlongo, the late director of the Roman Bank, now extinct, have been given to the public, and they certainly are not edifying reading. Letters are published of which one at least proves that when Depretis was minister, and the abolition of the compulsory circulation of paper money was the question of the day, several members of the ministry instructed Tanlongo to bring the *rente* up to a certain figure, now 91, now 92, then to *par*, promising that the Government would make good all losses. Minghetti and Sella were on intimate terms with Tanlongo, praising his efforts to "help his country," seemingly forgetful that the business of a bank director is to protect the interests of the bank and of the shareholders, with whose deposits he has no right to play ducks and drakes even for patriotic purposes. Nothing, therefore, can be gained by further touching pitch, and there is a chance that Crispi may have sufficient influence to prevent at least the time of the House being wasted in discussing matters which, at this period of the affair, can be properly sifted only in a court of justice. I refer to the matter simply to show how involved is the situation, and what courage and skill are needed to extricate the country from the rocks and shoals and quicksands on which inexpert helmsmen have allowed the frail bark to drift.

And when all these difficulties are enumerated, the greatest and most urgent remains—that is, the pacification of Sicily. Since I wrote last, two fresh rebellions have broken out in the province of Palermo. At Partinico the people protested against the intolerable taxation—the poll tax; the tax on beasts of burden; the tax on flour. Their remonstrances were unheeded, nay, scoffed at. Then they surrounded the municipality, burned the tax rolls, and committed other misdemeanors. Fortunately, the president and other members of the much calumniated *fasci* succeeded in preventing bloodshed, remonstrating with the enraged populace, reminding them that, in the municipal council, at least three members were

chosen by themselves to protect their interests; and with equal good fortune the troops did not intervene. But at Giardinelli, a little commune close to Palermo, a far more serious riot occurred. The people clamored for the abolition of certain taxes; the syndic refused to entertain the proposal. The people went in procession, a woman carrying the portrait of King Humbert at its head. Disorders were committed, as at Partinico—tax-rolls and other documents burned. But one carbineer was in the place; he summoned the military, and, how or why no one seems able to explain, without warning, without the three trumpet-blasts which would amount to reading the riot act, shots were fired and eight victims fell—first of all the woman carrying the King's portrait—while other seven were seriously wounded. The troops retreated to a tower outside the village, not one of them being injured. The lieutenant who was in command affirms that he gave the order *not* to fire. The post-mortem examination of the bodies proves that different bullets were used. Many of the spectators affirm that the first shots were fired from the private house of the syndic. Of course there is an "inquiry," but inquiries have been made after all the disorders, and, as Colajanni stated yesterday, "in eleven months, twenty-five Sicilian citizens have been killed and more than a hundred wounded, while not a single Government agent has been punished." This is an ugly record for the Giolitti ministry, and Senator Cordova's letter may pass for its epitaph:

"In October I wrote from my unhappy land to the competent authorities, praying that the white cross of Savoy might not be steeped in blood. I received thanks and promises; but what are words worth when not followed up by deeds, when affairs are allowed to take their course down the slope of Mussulman fatality that has no rival in history? Misery, neglect, suffering—these are the three garlands which encircle the brow of the victors of Palermo and of Milazzo, abandoned to the tender mercies of a communal and provincial oligarchy whose impudent peculations are safeguarded by the protectorate of the clients in high places with the complicity of the prefects?"

Yesterday it was Senator Villari, to-day Senator Cordova, who stigmatizes the conduct of the governments and of their agents. Now all the hopes of the Sicilians are centred in "Don Ciccio," as they familiarly call Crispi. Sidney Sonnino, who is at the Treasury and *pro tem.* holds the portfolio of finance, was the first exponent of the wants and woes of Sicily in 1876; and quite recently, as private deputy, presented a bill for the adjustment of contracts between proprietors and farmers. But the bill savors too much of the Irish land-bills without touching the absentee proprietors. These must be reached if agriculture and agriculturists are to be saved from utter ruin. Crispi knows that two and two make four and not five. To save the country, he must restore the people to the land, and the land to the people; he must deal with a high hand in all questions relating to the land. He must ordain an inspection of the municipal administrations, especially in the matter of *dazio consumo*. Think of a city like Palermo, where more than half the population are either without any regular calling, or who live from hand to mouth, never eating a breakfast till they have earned it, and who yet pay nine millions in taxes on food. Think of the fact that, while articles of luxury have yielded less by half a million than in former years because the administration is, to draw it mild, defective—because smuggling in the dear has yielded 35,000 lire above the average, flour being taxed at the rate of 8 per cent., besides the Government custom house tax. Think that, while the sanitary works are suspended for want of funds, 75 000 lire were voted for the theatrical company which comes to divert the wealthy classes, and these alone, as no workingman can afford a ticket for the theatres there. And now comes the municipal crisis at Palermo, precisely on account of the budget—another complication while half the communes in the island are under royal commissaries.

Of course there are not wanting numbers who assert that the resolution of the late crisis by the King was unconstitutional. This is untrue, but it was *unusual*. The King did "choose his own minister," and stands by his choice; and if Crispi should assume certain powers which will bring down on him the epithets of "dictator," of "Bismarck in miniature," the King must uphold him still, granting him power if needed to dissolve the House and appeal to the country in word and in deed; otherwise Mazzini's prophecy may be fulfilled, and Crispi may become the last minister of monarchy in Italy. J. W. M.

Correspondence.

SUUM CUIQUE.

To the Editor of The Nation:

Sir: In your last issue Senator Proctor's bill for the annexation of Utah to Nevada is mentioned with praise. The same plan was embodied in a bill introduced by Mr. Oates of Alabama in the House of Representatives very early in the extra session.

In your remarks on the vote for extra mileage, it is not fair to give the discredit of it entirely to the Democrats. It was opposed by several prominent members on that side of the House, notably Mr. Sayers of Texas, the present, and Mr. Holman of Indiana, the former, Chairman of the Committee on Appropriations. No opposition appeared from the Republican side, that party preferring to let the Democrats fight it out among themselves. What is least creditable, the opponents of the measure were refused the right to go on record by a call of the yeas and nays. Among those who voted against additional mileage in the House were Mr. Wilson of West Virginia and Mr. Powers of Vermont, among the most distinguished of their respective sides. The vote in the Senate stood 41 to 12, the opposition showing very prominent Democrats such as Mr. Mills as well as Republicans.

Yours respectfully, William Everett.

Quincy, Mass., December 31, 1893.

ANTI-ROMANIST FOLLY.

To the Editor of The Nation:

Sir: Letters in Nos. 1480 and 1482 of the *Nation* from Mr. Alexander Milne of Columbus, Ohio, suggest the idea that readers who are interested in the growth of the American Protective Association may wish to know the part that organization has been playing in recent elections in Chicago.

Before the November election for judges of the courts of Cook County, the Association issued a circular giving in parallel columns the names of the candidates of the two leading parties, with asterisks, calling attention to certain nominees termed "Romanists" in the foot note. These circulars seem to have been widely distributed in a quiet manner by the members and friends of the society. A careful study of the tabulated vote, however, reveals the fact that only a few hundred citizens were influenced by this appeal to prejudice, and that no judicial candidate owes his defeat to it—this in spite of the fact that the contest was close, one Democrat and eight Republicans being elected. The Republican who was defeated was not opposed by the A. P. A., and the Democrats who were so opposed did not run behind their colleagues to any material extent. The one Republican who was marked for defeat was successful with the rest of his ticket, with the exception noted.

The special election of December 19 for a mayor to succeed the late Carter H. Harrison gave the Association an opportunity to present a clear issue to its sympathizers. It apparently embraced the occasion, for circulars were distributed not only from hand to hand as heretofore, but even in some churches on the Sunday before the election. The following is a copy of the card:

CANDIDATES TO BE VOTED FOR DEC. 19, 1893.

Geo. B. Swift, Protestant.

John P. Hopkins, Romanist.

No one could be found who would admit having authorized this electioneering device, the campaign committees being particularly eager to disavow such action; but with many the A. P. A. received credit for the publication, and that was doubtless the source from which it emanated. The response of the people in electing Mr. Hopkins, a young man of great promise, reassures those who hope for the speedy extinction of the religious issue in American politics.

The rancorous nature of the A. P. A.'s opposition is well illustrated by the resolutions currently reported in the Western press to have been adopted by a Denver (Colorado) society upon the occasion of a recreant member appointing a Catholic to office. The resolutions conclude as follows:

"Resolved, That a likeness of said traitor, with a copy of these resolutions duly certified, be sent to each and every supreme council, supreme lodge, supreme camp, and grand commandery within the jurisdiction of the United States, as well as to each local council within the jurisdiction of the State, with the request that the same be read and that the name of 'Marion D. Van Horne, traitor and perjurer,' be proclaimed three times at each of four consecutive regular meetings of such councils.

"Resolved, further, That a photograph or likeness of said traitor be prepared bearing across the breast of said likeness a Roman cross painted thereon, surmounted by the word 'Traitor,' said likeness to be draped in black and hung in our council chamber; be it

"Resolved, further, That all communication, socially or otherwise, with said traitor and perjurer by any member of this order do now for ever cease; that in his joys or in his sorrows, in his hopes or in his disappointments, awake or asleep, in health or in sickness, at his fireside or with his fellow-men, we ask Providence to grant one faint ray of conscience to quicken his Plutonian soul so that he may see himself as others see him; be it

"Resolved, further, That when his carcass reposes in the arms of Mother Earth, in whatsoever land, an unknown committee, duly appointed, shall perform its last rite in the name of this council by marking the place so all may know: 'Here lies a traitor.'"—*Chicago Record, October 21, 1893.*

L. F. E.

Chicago, December 22, 1893.

THINGS CHINESE.

To the Editor of The Nation:

Sir: In your notice of 'Things Chinese' on page 475 of your issue of December 21 you naturally take exception to the use of this plan

of book without acknowledgment to Prof. Chamberlain, the author of 'Things Japanese.' In justice to the author of the former work it should be stated that this apparent discourtesy is probably the fault of the American publisher; for in the writer's edition, issued by Sampson Low, Marston & Co., the following occurs in the preface:

"On the appearance of 'Things Japanese' it was suggested to the author that he should prepare a book on similar lines with regard to Chinese subjects, and the present volume is the result. His thanks are due to B. H. Chamberlain, Esquire, for the courtesy and kindness which accorded a ready assent to the request that the classification and plan of arrangement used in 'Things Japanese' might be copied in 'Things Chinese' as far as was compatible with the subject-matter of the latter."

Yours, C. A. B.

Boston, December 25, 1893.

THE UNDERSTATEMENT OF "GUESS."

To the Editor of The Nation:

Sir: The remarks of "F. H.," in your last issue, on the Yankee use of the word "guess" to "imply a positive certainty," have renewed a long-standing wonder that no writer, so far as I know, not even Lowell, has mentioned a possible, and, to my mind, the most natural, explanation of that use. One of the simplest rhetorical devices, and one particularly congenial to sententious and satirical peoples like the ancient Romans and the modern Yankees, is that of ironical understatement. Thus, when a Yankee is asked a question the answer to which appears to him absurdly obvious, he naturally replies by a sarcastic affectation of ignorance. If, loaded down with bundles and looking utterly dragged out, I am greeted with a cheerful inquiry "whether I feel tired," I answer not with the courteous and reflective "I think I do," but with the ironical "I rather think I do," or, being a Yankee, "I guess I do."

The case is exactly parallel with the common use of the conditional mood, in such phrases as "I should think so!" when what is really implied is a most emphatic indicative. Why should one of these uses be branded as more of a solecism than the other? L. W. H.

December 29, 1893.

Notes.

Macmillan & Co. announce as nearly ready Mrs. J. R. Green's 'Town Life in the 15th Century,' and as in preparation 'The Dawn of Astronomy,' by J. Norman Lockyer, with numerous illustrations.

Ginn & Co. will issue next month 'First Lessons in Civil Government,' by Jesse Macy, a work for young children.

Henry S. Morais, No. 546 North Fifth Street, Philadelphia, is about to issue to subscribers 'The Jews of Philadelphia: Their History from the Earliest Settlements to the Present Time.'

The Schulte Publishing Co., Chicago, will publish in an illustrated imperial octavo volume the papers read before the recent International Congress of Anthropology.

'Heinrich Heine's Life Told in His Own Words' is the title which Mr. Arthur Dexter has given to his translation, just published by Henry Holt & Co., of Gustav Karpeles's well-known 'Heine's Autobiographie.' As Heine did not himself select the material of which this book is composed, the change of title seems very appropriate indeed. To those familiar with Heine's writings the book offers little that is new, as it consists almost exclusively of passages taken from his collected works, arranged in chronological order. To those, however, who wish to have put before them in a compact and authentic form Heine's estimate of himself, nothing could be more useful than this volume. The translation, at least of the prose part, is of a high order of excellence. As for the poetical passages, it would be hard to recognize

"Die frommen klugen Gazelln"

in

"The gazelles, in their innocent cunning";

or

"Die Kleine, die Feine, die Reine, die Eine"

in

"My pet, my darling, my dainty, my own."

But one ought not to be too harsh with one who dares to translate Heine.

It might easily be believed that an educated and travelled Spaniard would have something to say worth our while to make a note of in such a book as 'Costumbres Yankees; Viajes por la América del Norte'; but, alas! its author, José Sanchez Somoano, brought so little intellectual baggage, and owns a pair of eyes so far from achromatic, that his little book is almost barren of interest. For one thing he has a prodigious talent, and that is a laborious misunderstanding of what he has seen or read. One of his most brilliant achievements of that sort is the following account of the origin of Boston Common: "A great philanthropist, named Common, had the happy idea of presenting the children of Boston with a leafy grove of great trees" (p. 186).

A translation of Arrian's 'Anabasis of Alexander' and 'Indica,' by Edward James Chinnock, M.A., LL.D. (London: George Bell & Sons; New York: Macmillan), has just been issued in the revised series of Bohn's Library. It is a serviceable work, executed with care and following the original with sufficient closeness and accuracy. The notes, geographical and historical, furnish the intelligent reader with a guide to the itinerary of Alexander and to the chief sources of his history. Several maps add to the usefulness of a volume which, while not conceived on the scale and standard of Mr. Dakyns's 'Xenophon,' for instance, is praiseworthy in its execution. The value of the work would be greatly increased by a detailed index of names and places.

The eighth book of Thucydides, by H. C. Goodhart, professor in Edinburgh University (Macmillan), is a piece of minute and careful scholarship, especially dwelling on points of grammatical construction and interpretation, resuming the labors of preceding editors, and adding some independent studies of the manuscript authority and the historical questions connected with this part of the history. Among these is an able discussion of the relation of Thucydides's narrative of the revolution of 411 B. C. to the account given in Aristotle's 'Athenian Constitution.'

Karl Gjellerup, the Danish translator of several of Wagner's librettos and the author of a very suggestive work on the great master, has recently translated into Danish verse the sacred songs of the Older Edda, the second instalment of which has already appeared in Copenhagen. Apart from the scholarly rendering of difficult passages and the successful reproduction of the spirit of the original, this latest contribution to Eddic literature is of interest on account of the numerous illustrations by the Danish artist Lorenz Frölich, who vies with the poet in his enthusiasm for the old Northern life. A careful and sympathetic English rendering of the original with these Danish pictures would be sure of a hearty welcome both in this country and in England.

The two volumes of *St. Nicholas* for 1893 (Century Co.) afford the variety of interest for all sorts and conditions of children which has come to be associated with that magazine. The longer serials take their color from adventure, the marvellous, and from practical life; there are articles on several of the leading American cities, on ship-building and sea-fighting, ancient and modern; short tales of boating and fishing and hunting; poems in plenty, with Whittier to lead off, and an abundance of comicalities that are often very insinuating.

Harper's Young People for 1893 exhibits no change referable to the loss of its former editor, Mr. Starey. It still addresses the older children, who are generally treated very much as adults by writers (like W. Hamilton Gibson, Harriet Prescott Spofford, Lieut. Peary, etc.) whose proper audience is adult. Athletics are, as the fashion of the day goes, not unduly celebrated. The Chicago Fair and the Columbian exercises, of course, have their share of attention, and here and there one may find other reflections of what is passing in the outer world. Among the illustrations, Mr. Peter Newell's facetiæ hold the first place for originality and humor.

The principal article in the *Geographical Journal* for December is a survey, by Mr. C. R. Markham, of those regions of the earth which are still unexplored. He begins with the Polar areas as containing the most extensive unknown tracts, incidentally saying that in his opinion the argument on which Nansen's "proceedings are based is sound." In the Old World the western Sudan and southern Arabia are the largest and most important countries awaiting explorers, while in this hemisphere he asserts that over one-fourth of the Dominion of Canada is "entirely unknown," as well as an enormous tract in Colombia. In referring to the condition of our own country, he remarks that "the United States Coast Survey is a monument of rigorous accuracy." Mr. W. Astor Chanler gives a too brief account of a visit made to an interesting tribe, apparently of Somali extraction, which he calls the Rendile. Although "they had never even heard of Europeans," they were clothed in heavy American sheeting. They possess immense herds of camels and sheep, and live in villages, each ruled by a chief who is elected and holds office for life. "They never elect a rich or powerful man, but some poor peasant fellow." The expedition appears to be nearly stranded for want of pack animals and porters, and Mr. Chanler's companion, Lieut. von Höhnel, having been severely wounded by a rhinoceros, has been obliged to return to the coast. The map of the number is of the Anglo-Portuguese boundary in East Africa, constructed by the British section of the boundary commission. From the accompanying geographical notes it appears that a large part of the region through which the boundary line passes is practically uninhabited.

The *Scottish Geographical Magazine* for December contains an interesting address by Lord Roberts on India, past and present. The most striking part is that relating to the Mutiny, of which he gives some personal reminiscences, though he sheds no new light on its causes. In closing he strongly defends the present Afghan policy, arguing that, under the present circumstances, Lord Lawrence, the great advocate of "masterly inactivity," would approve of what has been and is being done on the northwestern frontier. An interesting series of historical maps show the

growth of the empire from 1760 to 1893. Another map shows the advance of Russia since 1857. In the geographical notes a strange error for a scientific journal is made in the statement that "in March last two French scientists, MM. Hermite and Besançon, ascended from Vaugirard" to a height of 52,480 feet, where the minimum temperature was —60° F., and remained several hours. The balloon, in fact, contained nothing but some automatically registering instruments.

The article of most general interest in the current number of the *Annales de Géographie* is M. Maistre's account of his expedition from the Congo to the Niger. He confirms the statement of other travellers as to the spread of Mohammedanism in this part of the Sudan and of its elevating effect upon the people. In describing a partial ascent of Ararat, M. Chantre calls attention to the remarkably rapid absorption of the water from the melting snow, and suggests the existence of a vast subterranean reservoir. Only three springs are to be found upon the mountain, and the neighboring plain is uninhabitable in summer from want of water. There are also articles upon the lakes of Jura and on Brittany, together with geographical notes and correspondence. A valuable map, with an accompanying explanatory text, shows the distribution of animals throughout the world, and a useful map of Africa gives its present political divisions. It is interesting to note that the French claim the northwestern shore of Lake Tchad.

The recent smallpox epidemic in Norway has attracted increased attention to this disease throughout the North. Of the many discussions of the subject, one of the most interesting is a series of papers in a Danish medical journal on the influence of light on the skin, with special reference to its use in the treatment of skin diseases. As long ago as 1300 the English court physician, Gaddesden (the Gatesden of Chaucer's Prologue), reported the results of his experience in surrounding the smallpox patient's bed with red curtains, adding that by following this method he cured the king's son without leaving any marks. For many hundred years this treatment was followed throughout Europe, and as late as the seventeenth century it received additional confirmation from the great Danish physician and scientist, Thomas Bartholin. Later it was contemptuously put aside by the medical men of a more enlightened age as a foolish error of the past. Its modern revival comes from Bergen, Norway, one of whose hospital physicians makes report not dissimilar in its main results to old Gaddesden's of 600 years ago.

Among the recent evidences of the progress of Western ideas in the East is the formation of the Bengal Academy. Its chief object is to develop Bengali as a prose literary language by the compilation of an authoritative dictionary, which shall define, consolidate, and purify the written dialect. It also aims to secure the "scientific criticism of Bengali style and grammatical structure, the discussion of Bengali works, and a collection of biographies of Bengali authors." The first great impulse to vernacular composition in this language was given by the movement for widow remarriage in 1854. Previous to this time its literature consisted of a few poems and ballads; now, one of its enthusiastic admirers asserts that, "apart from ephemeral and worthless productions," Bengali literature contains about 700 works. "Of these, 150 are dramas or works of fiction, 20 are histories, and 50 are philosophical or scientific treatises." The rules of the Academy, says a writer in the London *Times*, "are conceived in a practical and modest spirit." And he adds: "There is something that must appeal to scholars and men of letters of all nations in this quiet and carefully planned effort to give form and consistency to one of the new literary languages of the world."

Sir William Dawson of McGill College, Montreal, has lately published an essay on the Canadian Ice Age, which, as the author admits, may be classed with Howorth's 'Glacial Nightmare.' It is an ardent presentation of obsolescent views, in which land ice-sheets are restricted far below the extension now generally allowed them, and in which floating ice is held accountable for a great part of the glacial deposits in northeastern America. Those who are sceptical about glacial theories will take much comfort in this book, in which the learned author objects to what he calls "the rough-and-ready method employed by so many of his juniors." On the other hand, those who have slowly approached a general understanding of the conditions of glaciation by a close examination of the drift deposits of Canada and the northern United States, and who recognize great glacial extension across the international boundary, as well as a certain amount of marine and lacustrine iceberg action, will here find little to disturb their views.

Prof. J. W. Spencer, State Geologist of Georgia, has recently issued a report on the palæozoic rocks of that State under the heading of the 'Geology of the Ten Counties of Northwestern Georgia' (Atlanta, 1893). Little work of finished quality has hitherto been done in Georgia; the present volume is much more detailed in its discussion of the structure and resources of the northwestern part of the State than any heretofore issued. It opens with a general geological description of the region, which is followed by local county reports. Then come an account of the economic resources, chiefly iron and coal, and a chapter on roads, with the relation of their construction to the supply of stone or brick-making clay. The latter should attract general interest in a region where the roads are so much in need of improvement.

With the sections for Hanover, Stuttgart, and Munich the fine publication, Dr. C. Vogel's Map of the German Empire, is brought to a close (Gotha: Perthes; New York: Westermann). The fourteen parts can now be bound up together, and most subscribers will not fail to possess themselves of the index of names, which is issued separately for three marks. The work is a very valuable addition to patriotic and scholarly resources.

The Christmas number of *Light and Shade* is wholly given up to a commemoration of the Columbian Exposition in photogravures of varied tints, from many unusual points of view.

The *Photographic Times* for December 22 contains the only sort of general view of Philadelphia possible from the nature of its site, viz., from a balloon. It is very effective.

—The contents of the *Atlantic* for January are varied, though by no means of absorbing interest. Mrs. Deland begins a new novel, and Charles Egbert Craddock continues the monotonous course of "His Vanished Star"; there are biographical sketches of Admiral Howe and the late Gen. Armstrong, and ten letters which Coleridge wrote to Southey in his usual vein, just after his own return from Germany. Most worthy of discussion, however, is a single point in Prof. Shaler's somewhat too elaborate article on the transmission of learning through universities, with regard to the character of the instruction which should be given in scientific and technical schools. Just what that should be is one of the most important, though least debated, problems which modern educators have, by theory and by experiment, yet to solve. The extremely rapid growth of such schools during the few years they have been in existence shows the astonishingly large class of young men from which they draw. The greater part of *Scribner's* is a rethreshing of old straw. Mr. Crawford concludes his excellently illustrated account of Constantinople, Mr. Hamerton writes briefly on Édouard Manet, and Mr. R. C. Winthrop on Webster's reply to Hayne and the way in which Webster was accustomed to prepare his speeches for delivery and for publication. It is comforting to find at last in a popular article on the Israelites in Egypt the statement that the "monuments and papyri of Egypt, so far as at present explored, are absolutely silent about the history of the Israelites while in Egypt and about the manner in which they left it."

—The collocation of articles in the current number of the *Century* is happy in the extreme. We have Mr. Cole's engravings of Franz Hals, in continuation of his series on the Dutch masters; some masterly generalizations on the function of the poet, from one of Lowell's lectures; Mr. Brander Matthews's appreciative but reserved criticism of the work of Andrew Lang; and, to take mere articles of information, a scholarly statement of the light which Assyrian literature and archæology throw on the Bible, and an interesting account of the discovery of chloroform by Sir James Simpson in 1847. In the essay last mentioned it is worth noticing that poetry was the handmaid of science, for Dr. Simpson was continually spurred on to new and sometimes reckless experiments by remembering Shakspere's "not poppy nor mandragora, nor all the drowsy syrups of the world" and similar Elizabethan references to narcotic drugs. A curious error, by the way, is that of the sonnet on Guittone d'Arezzo, whom the author calls the "Columbus of the sonnet," and represents as gay of song and life—an opinion which no one could form who had ever waded through the platitudinous wastes of this pedantic and garrulous versifier.

—The place of honor in *Harper's* is rightly given to the opening chapters of Du Maurier's new novel "Trilby," which depicts so faithfully and charmingly the studio life of long ago in Paris that it is hard to tell whether the text or the illustrations are more delightful. In addition there are the usual articles of travel. Mr. R. H. Davis concludes his series of descriptions of English life with a somewhat ill-humored criticism of English hospitality, and Mr. Weeks continues the interesting account of his Eastern travels, which would, however, be less confusing if they were provided with a map. Besides "Trilby," the most noteworthy article in the number is Dr. Griffis's statement of the extraordinary influence which the Dutch in the Old World exerted over the future colonists of New England, and the Dutch in America over their northern and eastern neighbors. In the spirit of the late Douglas Campbell, not only much of New England's commercial prosperity, not only that fertile inventiveness which is supposed to be a Yankee's birthright, but much of what little physical or mental "sweetness and light" the poor New Englanders had, is ascribed to the practical, genial, and sensible influence of the Dutch.

—The American Psychological Association held its second meeting on December 27 and 28 at Columbia College. Papers were read on the first day by Prof. Fullerton of Philadelphia, on the "Psychological Standpoint"; by Prof. Royce of Harvard, on "The Case of John Bunyan" (an attempt to throw into the categories of modern alienism the mental perturbations of the period of insistent impulse and incipient illusion of Bunyan's early life); by Mr. H. C. Warren of Princeton, on "Experiments on Visual Memory" (showing by interesting curves the relative reliability of the memory of a large number of male and female students for simple square figures after intervals of ten, twenty, and forty minutes); by Prof. Murray of Montreal, on the question of the occurrence of tastes in dreams; and by Prof. Butler of Columbia College, on Mr. Fiske's doctrine of the "Meaning of Infancy." Prof. Cattell, Prof. Münsterberg, and Dr. Scripture gave accounts of the work done during the past year in the laboratories at Columbia, Harvard, and Yale respectively. Perhaps the most interesting item from a practical and educational point of view was the description by Prof. Münsterberg of a new device for producing stereoscopic visual effects from plane figures without any of the usual aids from mirrors or prisms. The effect is secured by throwing pictures prepared for each eye separately into the eyes in succession separately. By means of a simple rotating apparatus the ordinary zoötropic effects may be added to the stereoscopic effect. This opens up the possibility of showing by lantern slides animals, machines, etc., not only in lateral motion, but at the same time in relief, and also in motion to and from the plane of vision. This, with other of the Harvard results, as well as part of the paper of Prof. Royce on Bunyan, are to be noted in the *Psychological Review* for January. On the second day papers were read by Dr. Hyslop of Columbia, Mr. Mead of Michigan, Mr. H. R. Marshall of New York city, Dr. Scripture, Prof. Miller of Bryn Mawr, and Prof. Pace of the Catholic University at Washington. Among those who contributed to the discussions were Profs. Dewey of Michigan, James of Harvard, Strong of Chicago, and Starr of the New York College of Physicians and Surgeons. The next session is to be held during the Christmas recess 1894-95 at Princeton, with Prof. James as President and Prof. Cattell as Secretary.

—On the 5th of December the Congregation of the University of Oxford, by a majority of forty, passed a resolution in favor of establishing an honor school of English language and literature. The subject has excited a good deal of controversy in recent years as well as enthusiastic support; some elections to the Council (which alone can initiate legislation) have turned upon it, and the vote of the other day marks a change in public opinion—a minority has become a substantial majority. The broad principle now affirmed is the acceptance of English—as Modern History, Law, and Oriental Languages have previously been accepted—as a proper and adequate means for university education and training. But the supporters of the movement have not yet accomplished their end. The statute embodying the resolution has yet to be drafted, and much divergence of opinion is likely to appear as to the relative proportions of philology and literature to be required in the proposed school. It is felt, on the one hand, that a good amount of philology is essential to give the school a needful weight and to save it from being what has been described (in terms suggested by a phrase familiar at Harvard) as a "soft option," attractive mainly to the weaker students. On the other, it is urged that philologists are apt to give undue importance to their subject, to the practical exclusion of all the greatest books and writers in English since the fifteenth century. It is to be hoped that a satisfactory compromise may be arrived at, so that what is assuredly a strange omission may no longer disfigure the list of Oxford studies.

—The lively interest still felt in the Sudan is shown by the fact that 'Ten Years' Captivity in the Mahdi's Camp' (Scribners) has reached its "tenth, abridged, popular edition" in a year from its first publication. This is owing partly to the great interest of the personal narrative, but more especially to the fact that it has a unique historical value in being the only account which we have, or possibly can ever hope to have, by a European eye-witness of the Mahdi's rebellion from the beginning. Father Ohrwalder, a member of the Austrian mission to Kordofan, reached his station, about four hundred miles to the southwest of Khartum, in 1881, just at the outbreak of hostilities. A year later he was carried captive to the Mahdi's camp, and was present at the siege and fall of El Obeid. After a five years' slavery in or near this place, he was sent to Omdurman, the Dervish capital, a city of some one hundred and fifty thousand inhabitants, lying across the Nile from Khartum and built largely from its ruins. Here he was allowed some liberty, and earned his own living, at one time by soap-boiling in partnership with Lupton Bey till his death, and latterly as a ribbon-weaver. By the help of an Arab he and the two surviving Italian sisters of the mission, with a slave-girl, escaped, and, after a seven days' ride on camels, they reached the first Egyptian outpost, five hundred miles distant. In addition to the story of his own life during these eventful years, Father Ohrwalder gives a condensed history of the Mahdi movement, interspersed with pen-portraits of the principal leaders. At his first interview with the Mahdi he describes him as a "powerfully built man, of dark-brown complexion and carefully kept skin; he had a pleasant smile, which showed to advantage the curious slit between his front teeth. By constant training he had acquired a gentle manner in speaking, and with these exceptions there was nothing unusual in his appearance." The impression of him in many respects is distinctly favorable, and he seems to have treated the European captives with some consideration. Very different is his successor, the Khalifa Abdullah, whose cruel tyranny, in the father's opinion, confirmed by other testimony, would be gladly exchanged for the Egyptian rule by all his subjects except the men of his own tribe. The description of Omdurman, its government, social life, the frequent reviews and prayers at the mosque, at which sometimes one hundred thousand people are present, is very interesting. The father comments severely on Gen. Gordon's strange failure to comprehend the religious character of the revolt, and believes that his coming, from the false hopes which it raised, cost thousands of lives. His memory, however, is held in great honor in the Sudan, a common saying among the Moslems being, "Had Gordon been one of us, he would have been a perfect man." The work of translating the author's manuscript from the German has been well done by Maj. F. R. Wingate of the Egyptian army, who has also added a plan of Omdurman and a map of the eastern Sudan. A number of illustrations add to the attractiveness of this interesting, though often very painful, book.

REMBRANDT.

Rembrandt: His Life, his Work, and his Time. By Émile Michel, member of the Institute of France. From the French by Florence Simmonds. Edited by Frederick Wedmore. With 67 full-page plates and 250 text illustrations. Charles Scribner's Sons. 1894.

Saskia, the Wife of Rembrandt. By Charles Knowles Bolton. Thomas Y. Crowell & Co. 1893.

Of all the great masters of painting none is so popular to-day as Rembrandt. No one has more influence on painters, and no one is so much written about and admired by critics. The solitary old man whose fame was already so forgotten that his death was unnoticed by his contemporaries, and whose portraits, a few years later, could be bought for "sixpence apiece," is now the god of the hour. Dozens of earnest searchers rummage in musty records to glean the slightest fact connected with his life, and books and articles without end are devoted to his memory. After three hundred years his strangely original genius is appreciated, if not understood, and long-neglected pictures are brought forth from garrets and given places of honor in great museums or sold for enormous sums to American millionaires. Among the notable signs of our interest in him is the publication of the two books under review. Of the second of them we shall have little to say, but the fact is eloquent that it is thought worth while to devote a volume entirely to Saskia because she was Rembrandt's wife. The other, with its two royal octavo volumes, splendid in fine paper and clear print, its wealth of beautiful reproductions of the master's paintings, etchings, and drawings, its careful and minute research, is still more significant.

Let us say at once that the book is admirable, and, considering what it contains, astonishingly cheap: how so much can be given for so little money is a mystery. M. Michel is one of the leading authorities on Rembrandt and his works, and has written a monumental, and, we should think, nearly definitive Life. The translation seems admirably done. We have not had an opportunity to compare it with the original, but it is everywhere clear, lucid, and idiomatic, and, where we could test it (as in the quotations from Fromentin), faithful. Mr. Wedmore's editing is discreet and useful. We wish he had told us just what plates he thought it best to suppress—possibly some of the freer subjects; those which he has added are really additions and are most welcome. Hardly too much can be said in praise of the illustrations. To compare the heliogravures after paintings with even the most admirable woodcuts is to feel at once that superior authenticity of photography which has made modern criticism possible, and the reproductions of the etchings give nearly everything except that wonderful quality of the etched line which nothing can reproduce. A special feature of this publication is the number and prominence of the reproductions of drawings and sketches, those immediate records of the artist's moods and feelings, struck off at white heat, which often give surer revelation of his mind and heart than his more finished productions. We have only to suggest that in preparing these volumes for publication in this country it would have been as well to translate the prices,

which are given in florins, francs, and pounds, but never in dollars, and to lament the absence of a fuller index. There are catalogues of paintings, drawings, and etchings, a bibliography, and an index of proper names, and, of course, a table of contents and a list of illustrations, and the strict chronological order of the text makes reference fairly easy; but all this is not always sufficient. References from the text to the illustration are rare, and from the illustration to the text non-existent, and many of the illustrations are widely separated from the passage in the text that refers to them. As an instance take the "Rembrandt leaning on a stone sill." The plate is at page 211 of the second volume. The date of the etching is 1639, which would naturally bring the text referring to it somewhere in the latter part of vol. i. When the illustration was reached, we tried to turn back to the passage in the text for verification, but have not yet been able to find it.

A Life of Rembrandt reads much like a Life of Shakspere. Really next to nothing is known about it, and the elaborate investigations undertaken of late years have served more to destroy legends formerly believed than to add much of authentic information. "Possibly" and "perhaps" are the ever-recurring words, and we are more often told that he may, might, could, would, or should have done or felt this or that than that he really did so. The possibilities, too, have a strange knack of becoming probabilities, and the probabilities certainties in a few pages, and so lend themselves as bases of deduction for new possibilities, which go through the same transformations. Most of M. Michel's guessing is plausible and seems to have some foundation in the only real record of Rembrandt's life, his work, which is generally dated. The system is burlesqued in Mr. Bolton's little book on Saskia, which is an utterly superfluous work. Of Saskia nothing is known at all except her birth and parentage, the date of her marriage, the dates of the birth of her children and of her own death, and such an idea of her personal appearance as can be gathered from various portraits more or less plausibly assumed to be hers, and very different from each other in expression and even in feature. How then write a Life of her? The task is easy. Bring in the Prince of Orange and Sir Philip Sidney, Alexandre Dumas and "La Tulipe Noire," lions, monkeys, and Dr. Tulp; assume that if Rembrandt scratches an etching of a woman in bed, Saskia is failing fast, and then introduce a most robust personage as a portrait of her a year later, make her a good influence in his life, and tell how, after her death, "his hand etched pictures unworthy" of him, in the face of the fact that the worst of the "free" subjects are of the year 1640—and the thing is done. We shall give one instance in the author's own words, but with our italics, and have done. On page 2, "Rombertus van Ulenburgh, the father of Saskia, in the early autumn of the year 1578 was a student in *some* foreign university, *perhaps* at Paris or in England." On page 3, "he *must have* enjoyed his walk to the Thames to see the barge of Leicester pass, or to look upon the gray beard and knitted eyebrows of Burleigh, the great minister."

M. Michel is not so bad as this, but even M. Michel works his guesses rather hard. He objects, justly, to the "mania for identification" which has given various historic names to Rembrandt's portraits and etchings, but he seems to us not free from the malady himself. His identification of Rembrandt's father is plausible, but he makes Saskias and Hendrickjes of female figures, nude or costumed, that have slight resemblances to each other, and, once having decided that Rembrandt worked much from members of his household, will have brothers and sisters and servants at every turn. Perhaps the strangest of all is his identification of the so-called Sobiesky with Rembrandt himself, in spite of a discrepancy of ten or fifteen years between the apparent age of the model and the date of the picture. The master played strange tricks with his own features, but we find it hard to believe in this one, especially as the head seems one of the most living and real of his works. The eye and nose are not unlike Rembrandt's at a later date, but the lower part of the face is entirely different in form from that of any of his portraits.

Eliminating the conjectural in Rembrandt's life, what is left that is important can be briefly enough told. Rembrandt Harmensz, who sometimes called himself Van Ryn, was born in Leyden of a respectable lower-middle-class family on the 15th day of July, 1606-7 or 8—for the date even is uncertain, and there seems about as much documentary evidence for one of these years as for the others. "No record of Rembrandt's early youth has come down to us," we are expressly told by M. Michel, but the may-have-beens bravely fill the gap. He was enrolled in the university, but how much he studied there we can only guess. At "about" the age of fifteen he began the study of art with a bad painter, Jacob van Swanenburch, and "probably" stayed with him three years. In 1624 he went to Amsterdam to study with a painter of greater reputation, the Italianizer Pieter Lastman, but remained in his studio less than six months, when he returned to Leyden, determined "to study and practise painting alone, in his own fashion." This was in 1624, and his earliest known works, the "St. Paul in Prison" in the Schönborn collection and "The Money Changer" in the Berlin Gallery, are dated 1627, so that three years are unaccounted for. After this time he soon began to be celebrated, so much so that Gerard Dou became his pupil in 1628 and remained with him until 1631. That Dou was his pupil seems strange until one finds that Rembrandt's work at this time was much more like Dou's than like his own later productions. In 1631, when he went to settle definitely in Amsterdam, he was already a well-known painter, and was shortly the fashionable portrait-painter of the day. The next year, when he was not more than twenty-six years old, he painted the "Anatomy Lesson," which set the cap-sheaf on his glory and made him the most famous of Dutch artists.

At this time he met Saskia van Uylenborch, a young woman of a much wealthier and better family than his own, and was welcomed as an aspirant by her relatives, and married her in 1634. In 1639 he bought the house in the Breestraat that was never paid for, and filled it with the collections that figured in his inventory eighteen years later. He was fond of his wife and his work, always busy, the master of many pupils, earning much money, and spending it lavishly on his wife and on his collections. He bought paintings, engravings, and bric-à-brac at extravagant prices, and seems to have been regularly fleeced by dealers and money-lenders. Titus, the only child of his marriage that lived to maturity, was born in 1641, and Saskia died in June of the next year. In that year also he painted "The Night Watch," that puzzling picture which generations of critics have fought over, and which Capt. Cocq and his company, for whom it was painted, understood as little as the rest of the world. This was the beginning of the end. Rembrandt was becoming too original to be popular; and as time went on, and his work grew better and better, the public neglected him more and more. He shut himself up in his work, made his servant, Hendrickje Stoffels, his mistress, and let his finances take care of themselves. The crash came, and in 1657 he was declared a bankrupt, and sold up. From that time his life becomes more and more sordid and miserable. He had no money of his own, and could have none, and Hendrickje and Titus, in partnership, took charge of all his affairs, and made him an allowance. In 1661 he painted his grand picture of "The Syndics," perhaps the greatest of his masterpieces, but it does not seem to have been admired. It is likely that his eyes were beginning to fail, for his etchings cease altogether from this year, and from 1662 to 1664 there is no work at all from his hand. Hendrickje must have died about this time, though there is no record of it. Titus married and died, both in 1668, and in 1669 the old man himself followed him, an obscure pauper. He left a daughter by Hendrickje, who did not live long. In the next generation his posterity seems to have become extinct.

But if the known facts of his life may be thus briefly catalogued, it is very different with his work. In this also is he like Shakspere, that commentary and discussion on his art are endless, and that judgments on it have been passed which differ as the North from the South. One extreme is marked by the opinion of a painter of the next generation, Gerard de Lairesse, a contemporary and rival of Van der Werf, which Michel quotes as follows: "In his efforts to attain a mellow manner, Rembrandt merely achieved an effect of rottenness. The vulgar and prosaic aspects of a subject were the only ones he was capable of noting, and, with his red and yellow tones, he set the fatal example of shadows so hot they seem aglow, and colors which seem to lie like liquid mud upon the canvas." The other extreme is marked by the latter-day thick-and-thin admirers of the master, of whom M. Michel is to some extent one, who maintain that he was not only a great poet in light and shade, but a great colorist and a great draughtsman as well, and who lay all the blame of the ugliness of some of his figures upon the models. M. Michel is explicit and reiterative upon this point, and considers poor Saskia and Hendrickje responsible for the bandy legs, sprawling hands, and stumpy bodies of various Susannahs, Bathshebas, and Danaes. He expatiates on the difficulty of securing models in virtuous Holland, and explains that Rembrandt had to take what he could get. We must confess that this seems to us wilfully blind and shallow. Many of Rembrandt's portraits are as ill-proportioned as his nude studies, while the works of Terburgh and Metzu, his contemporaries, and of Ver Meer of Delft, but little younger, are there to show that there was grace and beauty and refinement in Dutch life at the time. When Rembrandt does show a sense of beauty, his worshippers cry aloud and call upon us to admire it; why should they not admit that more often he does not show it? Fromentin's remark, that Rembrandt saw nothing in life "but physical ugliness and moral beauty," still remains, as does so much else that he has written, the truest word of criticism upon that strange genius. In what else we have to say we pretend to do no more than to follow Fromentin's

illuminating critique, condensing it to suit the space at our disposal.

According to our teacher, then, Rembrandt was two men in one. On the one hand was the thoroughly trained Dutch painter of the time, the realist *par excellence*, the perfect technician, the observer, *l'homme extérieur*. Of this Rembrandt no better example could be cited than that known to all of us, "The Gilder." Here is no poetry, no idealism, no style, but a piece of work so thorough, so wonderful, so truly seen and rendered, that it rightly ranks among the masterpieces of the world. This is the Rembrandt who was the idol of the Dutch public, the man whom the compatriots of Terburgh adored. The other Rembrandt was an idealist, a dreamer of strange dreams, a worshipper of light. The "Supper at Emmaus" in the Louvre, recently recalled to us by Cole's engraving in the *Century*, and of which Michel gives a fine photogravure, is *his* work. The mysterious charm and power of such work as this is indescribable and incommunicable. For once a result seems to have been produced in art without any visible or analyzable means. Something supernatural seems before one, and one feels himself in the presence of a being who has really died and risen again. Yet in technical matters the picture is every way inferior to the portrait of "The Gilder." It is not particularly well drawn, and it is entirely without color. In its physical appearance the canvas is mean and insignificant—and its handling is timid and almost fumbling. With something to say that had never been said, how should he say it with assurance and in the current language of art?

As long as these two Rembrandts were separate, one was sure to please. But the dreamer insisted on having a hand in works where the observer only was needed, and the result was such an enigmatic picture as "The Night Watch." It is a splendid failure, and Capt. Cocq can hardly be blamed for preferring the accomplished mediocrity of Van der Helst. Again the two Rembrandts take up their different tasks, but the public confidence is shaken, and public favor is deflected upon more reliable artists who can be trusted not to dream *mal-apropos*. Shut off from public favor and public commissions, the dreamer is strengthened and the technician weakened. Strange experiments are made, violences are resorted to, methods become more and more startling and original. Late in life, once or twice only, the master-painter and the great imaginer coincide, and pictures like "The Syndics" are produced—pictures in which imagination and observation work together for the production of the perfect masterpiece; but it is too late, and the technique, perfect as it is, is no longer the smooth accomplishment of earlier days. No one comprehends and no one cares, and the great painter drops into his neglected grave.

A colorist, save once or twice, Rembrandt never was. Neither was he, properly speaking, a draughtsman. He was never sure of proportion, and had next to no sense of line. Even in his etchings he works, normally, with light and shade, and his outline, when he uses it, is never classic or intrinsically beautiful, but only picturesque and suggestive, giving the sense of light and shade even when these are entirely absent. Of chiaroscuro he is the supreme master. It is almost his only method of expression, and with it he expresses such strange things as were never, before or since, expressed in art, and makes us dimly see one of the greatest and most profoundly original minds in the world's history. Like all such minds, he had no artistic posterity, and worked almost pure harm to those who were influenced by him. Like Michelangelo, he was the ruin of his followers. The language of these solitary minds is fitted only for the expression of their own thoughts, and becomes empty verbiage in the mouths of imitators.

MOLTKE AS A WRITER.

Essays, Speeches, and Memoirs of Field-Marshal Count Helmuth von Moltke. The essays translated by Charles Flint McClumpha, Ph.D.; the speeches by Major C. Barter, D.A.A.G.; and the memoirs by Mary Herms. 2 vols. 8vo, 308, 239 pp. Harper & Bros. 1893.

MOLTKE'S reputation as a writer will always rest mainly on work which does not bear his name, on the general-staff histories of the great wars which he directed. The extent to which these books are really his may be judged from the account which Gen. von Verdy gives (in one of the volumes before us) of the preparation of the history of the Austrian war of 1866:

"As soon as a paragraph of the work was written, it was submitted to him [Moltke], and he began to revise it most carefully. In many cases the paragraph was completely remodelled by his expressing the events in his classical style, omitting what seemed to him unimportant, cancelling any repetition, summing up the most essential points in short sentences. . . . Thus changed and revised, the work went back to the same department, where it was again looked through in order that each sentence might correspond exactly with the historical truth. . . . If any cause was found for . . . criticism, the manuscript was returned again to the General, and this proceeding was continued till both parties were satisfied." (Vol. ii., p. 187.)

It is not surprising that Moltke's posthumous history of the Franco-German war proved to be merely an abridgment of the general staff history. He had done the work once, and felt no impulse to do it again on really different lines. His purpose was simply to put the facts in briefer and more popular form.

But while Moltke's miscellaneous writings will add little to his reputation either as strategist or writer, they will certainly not lessen it; and the essays, speeches, and biographical notes included in the present collection, like the volumes of letters and journals that appeared earlier, help us to know and understand the man. The most striking fact about the essays is that no one of them is devoted to the discussion of a technical military theme. They were written between the thirtieth and the forty-fifth years of his life—at an age, that is, when the nineteenth-century specialist is prone to feel that he has no time for matters outside his particular department. Moltke was certainly a specialist, and one of the most distinguished of our time; but we find that the revolutionary movements of 1830 do not impel him to publish his views on the conduct of the Dutch or the Russian campaign, but to study the political and social development of Belgium and Poland since the middle ages. The assertion made by Thiers in 1840 that the Rhine was the natural eastern boundary of France leads him to make a similar study in mediæval history and to collect the evidence against the French claim. His four years of service (1835–'39) as military adviser to the Sultan result in the publication of five short papers on the Eastern question; but here again the point of view is not that of the soldier, it is that of the economist and statesman. Economic, again, is his discussion of the choice of railway routes (1843). Costs and profits are the uppermost topics, military points of view are suggested, but briefly and in the second line.

Besides the interest which these essays possess as showing the wide range of Moltke's studies and thought, they contain occasional evidence of ideas which were to prove forces. In his paper on the Situation of the Ottoman Empire he anticipates by twenty years Bismarck's advice to Austria to transfer her centre of gravity to Pesth.

"But, unfortunately, we see the dissevered provinces and countries [of the Balkan Peninsula] under the influence of Russia, France, and England, but not under that of Germany. It is a striking fact that in Turkey we always hear of these three powers, but never of Austria; and yet the latter should be held in greater regard there, for it is Austria's sword which will some day be thrown into the scale to decide the fate of this empire." (Vol. i., p. 296.)

Again, in his paper on the Western Boundary of Germany, (1841), he speaks of the treaties of 1814–15 as follows:

"It was . . . dangerous to leave the French . . . in possession of German provinces and of so important a military-political outpost as Strasbourg. It was dangerous to make only Napoleon the scapegoat, to heap on him all the curse and to spare France itself: for history teaches that Napoleon only continued the wrong the French kings long before him had done us. Napoleon was not the first cause and France the second cause, but France was the first cause and Napoleon the second cause. Napoleon was a passing event, France was permanent. With France we had to do centuries before, and with France we shall have to do centuries to come." (Vol. i., p. 213.)

Thirty years later this was compressed into the saying of the German professor: "We are not fighting Napoleon III.; we are fighting Louis XIV."

Other opinions appear in the essays which were considerably modified in Moltke's later years. In 1841 he writes:

"We candidly confess our belief in the idea, on which so much ridicule has been cast, of a general European peace. Not that long and bloody wars are to cease from henceforth . . . —that is too much to expect; but . . . wars will become rarer and rarer because they are growing expensive beyond measure. . . . Has not the population of Prussia, under a good and wise administration, increased by a fourth in twenty-five years of peace? And are not her fifteen millions of inhabitants better fed, clothed, and instructed to-day than her eleven millions used to be? Are not such results equal to a victorious campaign or to the conquest of a province, with this great difference, that they were not gained at the expense of other nations, nor with the sacrifice of the enormous number of victims that a war demands?" (Vol. i, pp. 276, 277.)

Moltke's speeches in the Reichstag, a generation later, strike another note:

"Possibly, a later and more fortunate generation, a part of whose burdens we already bear, may hope to escape from the condition of armed peace which has already so long weighed Europe down. For us no such smiling prospect is, I fear, in store. An event so great, so historically important, as the reërection of the German Empire is scarcely to be compassed in a short space of time. That which we have wrested by force of arms in half a year we may have to protect by arms for half a century." (Vol. ii., pp. 107, 108.)

The days of cabinet wars, he says again (vol. ii., p. 136), have passed, but their place has been taken by popular wars:

"The passions of the populace, the ambition of party leaders, and public opinion led astray both in speeches and by the press—all these elements, are elements that may prove stronger than the will of those who rule. Have we not seen how even stock-exchange interests have kindled wars." (Vol. ii., p. 135.)

As early as 1841 Moltke had said that the fear "that, with the cessation of war, men

would lose their moral energy and unlearn the virtue of sacrificing their lives for an idea" was not altogether without foundation (Vol. i., p. 277). This fear seems to have taken stronger hold upon him in his later years, and perhaps his last thought was expressed in the answer which he is said to have made to the address of a Peace Society: "Gentlemen, universal peace is a dream, and not even a beautiful dream."

All the earlier essays are characterized by a directness of diction and a transparent simplicity of style which correspond to the innermost nature of the man himself. Figures are rarely used, but in a paper on the Eastern Question we find a very striking one: "The division of Turkey will be like the division of a diamond ring; the question is, who is to possess the most precious of solitaires, Constantinople?" (Vol. i., p. 273). But in the essays Moltke had not yet achieved that terseness for which he afterwards became famous, and which is so marked in his parliamentary speeches. Some of these consist of a simple sentence of two or three lines. The two longest might each have been delivered in twenty minutes. Their relative length is explained by the fact that he was speaking on important bills, that he was arguing against a probable adverse majority, and that he had many independent points to make. But, in spite of the brevity of these speeches, Moltke's meaning is always unmistakable, and his arguments are so fully developed that we feel, in reading, that the addition of more words would only weaken them.

Scarcely less remarkable is the infrequency of his speeches. Moltke sat for twenty-four years in the Reichstag and for nineteen years in the upper house of the Prussian Diet. He spoke but forty-one times in the former body and but three times in the latter. He never spoke simply because of his interest in the subject under debate; he certainly never spoke to win applause. He spoke only when it seemed necessary. Among his papers were found two different drafts of a speech which was prepared for the Customs Parliament in 1868. It was—or would have been—an admirable speech. It was never delivered; apparently because he was convinced that the motion which he intended to oppose would be defeated (as, in fact, it was) without any speech from him. If it be added that none of his speeches shows the slightest tinge of personal or party feeling; that he always assumed (without saying it, of course) that his hearers were open-minded and fair; that his effort was solely to make them see things which they had seemingly overlooked or to remove from their minds misconceptions due to error—we cannot wonder that his rare speeches were received by a house almost breathlessly silent, and that he was judged to be the most *effective* orator (in the literal sense of the word) in the German Parliament.

The speeches, with introduction and notes, occupy the first half of the second volume. The second half is chiefly made up of reminiscences of Moltke, furnished by relatives, friends, and colleagues. These are of very unequal value: they range from collections of nearly pointless anecdotes to really important contributions to a memoir of Moltke and to the history of his time. To the latter class belongs the following episode, narrated by Count Bethusy-Huc:

"In the spring of 1867 we sat in the Constituent Reichstag; the Luxemburg affair had come up again, and Bennigsen's motion was on the order of the day for the next day but one. . . . Gen. von Moltke, in a conversation with me in [one of] the ante-rooms . . . spoke as follows: 'After a war such as we have just had, no one can really feel a desire to have another, and no one can be farther from cherishing such a desire than I am. And yet I cannot but wish that the occasion given for a war with France were taken advantage of. Unhappily I regard this war as absolutely unavoidable within the next five years, and within this period the now indisputable superiority of our organization and weapons will be equalled by France. . . . The sooner, therefore, we come to blows the better. The present occasion is good. It has a national character, and ought therefore to be taken advantage of.'"

After a consultation with his political friends, Bethusy-Huc reported Moltke's words to Bismarck.

"Count Bismarck recognized the justice of Moltke's remarks, both from the political and military point of view, but declared that he could never bear the responsibility of bringing the misery of a war upon his country unless [it was] necessary (as in the case of the Austrian war), in defence of its vital interests and its honor. The personal conviction of a ruler or statesman, however well founded, that war would eventually break out, could not justify its promotion. Unforeseen events might alter the situation and avert what seemed inevitable.

"When I told the General this, next day, he answered: 'Bismarck's standpoint is unassailable, but it will cost us many human lives one day.'" (Vol. ii., pp. 204, 205.)

The translators of these volumes have done their work faithfully, but with different degrees of success. The rendering of the speeches is excellent; that of the reminiscences ("memoirs" gives a false impression) is good; but the English of the essays is often deplorable.

William Jay and the Constitutional Movement for the Abolition of Slavery. By Bayard Tuckerman. With a preface by John Jay. Dodd, Mead & Co. 1893.

A STUDY of Judge Jay in a single phase of his career was well worth making. Something more than this, though less than a full life, is to be found in Mr. Tuckerman's narrative and Mr. John Jay's summary; but in the main we have to do with the relations of the subject of this memoir to the abolition societies and the political anti-slavery parties. Great stress is laid upon his insistence on the incompetency of Congress under the Constitution to abolish slavery in the States, and no doubt his concern on this point led to the explicit acknowledgment embodied in the constitution of the American Anti-Slavery Society at Philadelphia in 1833. In the practice and aims, however, of those who formed that Society, there was nothing to make them hesitate to adopt Judge Jay's view. They had confined their political efforts, as he had done, to the abolition of slavery in the District of Columbia and other United States territory, and to preventing the further extension of slavery. A year before, Garrison had denounced the Constitution for the immunity it gave to slavery in the States, and afterwards held himself and induced his followers to hold themselves disfranchised because unable to take oath to support such a constitution. Still, Judge Jay undoubtedly did good service by helping to make the lawfulness of the society's methods plain and unmistakable; and when it was attempted, in 1838, by a new adherent, Alvan Stewart, to revoke the article in question, he saved the day, to Garrison's satisfaction among others.

Judge Jay had scruples about the expediency of a national anti-slavery society, but, once founded, he lent it the great weight of his name and high character, and became the president of the auxiliary New York State Society. He manifested the conservatism of his profession by discountenancing appeals to the courts, as against the pro-slavery violations of the mail in New York, Charleston and at the South generally; and by deprecating the practice of passing "resolutions" which the shifting aspects and incidents of the agitation forced upon the various abolition bodies. One such casual resolution, which did no more than recommend testing the constitutionality of slavery by petition to Congress or in the Supreme Court, he curiously considered equivalent to asking Congress "to commit perjury" and to interfere with slavery in the States. So strong a feeling that the Constitution opened no way for general emancipation tended to keep Judge Jay at one with the Garrisonian wing of the abolitionists, who resisted the proposal "to change," in Jay's language, "the anti-slavery enterprise from a religious into a political one." "I doubt," he said in July, 1840, "the practicability of forming such a party; and I moreover question whether such a party would be consistent with our obligation as citizens." He objected to the singleness of its aim, in neglect of questions of "trade, the finances, internal improvements, foreign affairs, or the military power of the nation"; and he advanced many other valid considerations against it.

On the other hand, his conservatism was shocked by the free expression of opinion on subjects not directly associated with the anti-slavery cause by its chief promoter, and especially by the stand taken for the equal share of women in the labors and direction of the cause. Hence he joined the seceders in 1840, and became one of the managers of the really personal organization of Mr. Lewis Tappan calling itself the American and Foreign Anti-Slavery Society. To this he fondly looked "as a refuge for such abolitionists as had been expelled from the [American A. S.] Society by the faithlessness of those who had converted it into an instrument for spreading other than anti-slavery doctrines." The new society, by its constitution, stood pledged "carefully to abstain from all the machinery of party political arrangements in effecting [its] objects," but the very next year this pledge was almost unanimously stricken out in favor of "the maxim now promulgated in certain quarters, that the friends of immediate emancipation should labor to secure for themselves all the loaves and fishes in the gift of the republic—the power and emoluments *of every office*."

Meantime, Alvan Stewart had, more than almost any other man, drawn the "new organization" abolitionists into the Liberty party, and Judge Jay found himself voting for Birney in 1844. The second refuge proved no safer than the first, for, in 1845, he wrote to Henry B. Stanton complaining "of the strenuous efforts now making to change its character, and to convert it from an anti-slavery party into one for matters and things in general," beginning with Stewart's old heresy "that the Federal Government has the constitutional power to abolish slavery in the States," and ending with the later heresy "that women should exercise the right of suffrage and be eligible to office." In 1846 Jay wrote: "I shall leave the Liberty party whenever it makes abolition a pack-horse to carry favorite measures unconnected with slavery, whether those measures are of Whig or Democratic origin." The party was, however, already moribund if not dead, and Jay's standing for Senator in its name in 1845 appears to have been his last identification with any party, though he did not abate his consistent anti-slavery endeavor. We should have been glad of some light on his attitude towards

the doctrine imposed upon Free-Soilers and Republicans by the logic of the disunion abolitionists, viz., that the Constitution was an anti-slavery instrument; but in lieu of that we have his very courteous letter (in marked contrast to that of prominent Republican politicians) to T. W. Higginson and his fellow-disunionists of 1857. After pronouncing the Union a curse to the people of the slave and the free States alike, as well as to the unhappy bondmen whose chains it riveted, he said: "While I believe you are doomed to disappointment, I nevertheless rejoice in every exposure of the demoralizing influence of the Union. When the people of the North cease to idolize the Union, they will cease to offer on its altar their rights and their duties. . . . When all this happens the North will continue its Union with the South, and you yourselves will have no wish to see that Union severed."

Judge Jay retained, throughout, his connection with the Episcopal Church, whose unfaithfulness to the slave's cause he knew and persistently combated—in some minor issues with success. No abolition utterances on the awful shortcomings of the ecclesiastical bodies of the land exceeded some here cited from his pen, which may be summed up in two: "The church of the living God"—he means the self-styled church—"is the great buttress of slavery and caste in the United States" (the bulwark, in Birney's phraseology); "Our pro-slavery clergy, our negro-hating clergy, our slave-catching clergy are the most successful apostles of infidelity in the country." It was in accordance with Jay's sweet temper that while he could not imitate those (the so-called "come-outers") who refused to sit under such a clergy, and while he deplored the spiritual dangers of their course, he never indulged in abuse of them.

This blameless and most estimable man deserved the larger work contemplated by his son, whose ill-health vetoed the undertaking. What we get from Mr. Tuckerman lacks the accuracy and the grasp which we should exact of a veteran of the anti-slavery days. So far as Jay is allowed to speak in his own words, the book is a substantial addition to the sources of anti-slavery history; how much more so might it have been made if the store of MS. material implied on pp. 158-159 as available had been printed even without link or comment.

A Colony of Mercy; or, Social Christianity at Work. By Julie Sutter. Dodd, Mead & Co. 1893.

MANY persons, we fear, will be repelled from this book by the almost hysterical key in which it is pitched. A large part of it is taken up with ecstatic exclamations and pious rhapsodies, and, after the subject has been properly completed, a wild screed is added upon the agrarian question in Great Britain. But if we omit this digression upon a topic with which the writer is wholly incompetent to deal, and skip some of the sincere but inept religious effusions, we shall find matter which is well deserving of attention. In fact, as the beautiful story of the results attained by wise and devoted benevolence is revealed, we are moved to look upon the writer's lack of restraint with forgiving eyes; and although we could wish the facts presented in more systematic manner, we are glad to have them upon any terms.

The "Colony of Mercy," or Bethel, is in the immediate vicinity of Bielefeld in Westphalia, lying at the foot of the Sparrenburg, a stronghold of the counts of Lippe in former years. From the hill upon which the castle is placed, views are obtained over the ranges of the Teutoburger forest and the Weser mountains, the intervening country being the principality of Lippe-Detmold. Here in 1867 an institution for epileptics was founded by private benevolence, which has not only greatly increased but has gradually developed at its side a house for the training of deaconesses, from which 600 nurses have been sent out, a similar house for the training of deacons or brothers, a labor colony, and a workman's-home association. A farm-house was first acquired and four epileptic sufferers were provided with a home; but the work grew at once, and, under Pastor Bodelschwingh, who was called in 1872, it has assumed its present dimensions. There are now more than one hundred houses in which the epileptic sufferers are grouped in families, and the different enterprises now occupy one hundred and fifty houses in all. It is hardly necessary to say that useful work, physical or mental, is provided for all who are able to do it, and the trades of the carpenter, the mason, the tailor, the printer, the bookbinder, the basket-maker, the baker, etc., are actively prosecuted. An immense labor has been undertaken in reclaiming a barren waste in the neighborhood—a sandy surface underlaid at the depth of three or four feet with an impervious stratum which requires to be broken up before vegetation can flourish. To a remarkable extent this colony of epileptics has been self-supporting, but there has never been any lack of revenue from charitable offerings. Its success has led to the establishment of many similar institutions in Germany, and its methods deserve the study of all to whom the condition of a peculiarly helpless class appeals.

It is impossible to do justice, in our space, to the spiritual influences that have made this colony what it is. Even more than the insane the epileptic are repulsive and helpless. Their seizures are so distressing that mercy to themselves as well as to others requires them to live apart, and the hope of recovery is in most cases so small as to make it seem almost cruel to endeavor to protract lives of increasing suffering. Without love and sympathy no one can undertake the care of such sufferers, and love and sympathy are not to be had for wages. As we understand Miss Sutter, all service in this cause is without pay. Teachers, managers, nurses, patients, all live together as a great family, all receiving food, clothing, shelter, and provision for true wants, but none receiving pecuniary compensation, and none giving it except those who are able. In spite of the incessant manifestations of disease and the constant deaths, if we may trust this account, an atmosphere of cheerfulness, even of happiness, prevails, music is constantly heard, and an unquestioning faith in the mercy of God causes death to be regarded less as the natural end of their suffering lives than as the beginning of a more blessed state. Altogether Miss Sutter's picture is affecting in the extreme, and few can read of such cheerful self sacrifice as has been displayed here, and its beneficent results, without being strengthened in all kindly feeling.

We can barely hint at the extraordinary variety of collateral enterprises that have grown out of this home for epileptics. Among them are a retreat for the mildly insane and others for the incurable, a hospital for consumptive infants, a home for idiots, a refuge for fallen women, an orphan asylum, a reformatory for drunkards, and others literally too numerous to mention. But the "Labor Colony" and its complements, the relief-station and the wayfarer's home, deserve special mention on account of the distress now prevailing among the poor of our own country. Somewhat more than a dozen years ago Germany was suffering from a collapse of business, and the country swarmed with tramps. They were always fed and clad by Pastor von Bodelschwingh, but the results of this indiscriminate charity were so pernicious that he determined to take radical measures for treating the evil. He obtained a grant of funds from the province and founded an industrial colony, devoted principally to the reclamation of the barren waste already referred to. Thenceforth applicants for relief received it as wages, not as alms. The policy was not to give a breakfast for an hour's work, but to renovate the tramp externally, and, so far as possible, internally, by making him work until he had earned what he had received. The "colonist," in fact, is made to sign a contract to work for his board, although after a time ten cents a day is allowed him as a gratuity. But this is the limit, except for piece-work, and even these modest savings are paid over in such a way as not to be squandered. The aim is not to provide permanent occupation, but to prevent men out of work from being driven by despair to beggary and crime, and to put them in the way of getting remunerative employment. In spite of the fact that the colony is not self-supporting, the saving from the diminution of vagrancy more than outweighs the apparent loss. Labor-colonies upon this model now number some twenty-five in Germany, and their effectiveness is greatly increased by the fact that they are directed chiefly by private persons; and it is also increased by coöperation. In this way the antecedents of nearly every applicant for relief are investigated, and provision is made that his future movements shall be recorded. This is partly done through the relief-stations, of which we condense Miss Sutter's account.

Along the great high roads, she writes—north, south, east, and west—there are *Natural-Verpflegungs-Stationen*, at a distance from one another of half a day's march. The man in search of work, having obtained a kind of passport which is regularly *visé*, starts forth, perhaps from a labor-colony, and reaches his station at mid-day. There he gets a dinner, works all the afternoon, generally at wood-cutting, has his supper and a bed, and in the morning—unless it is Sunday—after getting breakfast resumes his travels. His destination being fixed, he may not deviate from the course prescribed in his ticket without forfeiting his claim to entertainment. These stations are employment-agencies, and if a man reaches the end of his course without finding work, he may be committed as a vagrant, or, if deserving, receive another certificate and resume his search. These relief-stations are maintained by law, and although it is scarcely ten years since the first was established, they number 2,000, and shelter on the average about 8,000 tramps every night. A grade above them are the *Herbergen zur Heimath*, or wayfarers' homes, where, for a trifling sum, any decent artisan is accommodated while wandering in search of employment. There are some 400 of these sustained by private benevolence, with accommodations for 13,000 guests, and they are said to be always full.

We state these details not because this book contains the most accurate account of the German system of poor relief, but because many will read a book of this kind who will not look at official publications, and there is enough here to suggest solutions for our own problems. It may be laid down as an axiom that our people are too kind-hearted to refuse to

feed tramps and give to beggars, unless it is demonstrable that proper relief for urgent wants is regularly provided. Their theories may be economically sound, but when they fear that a fellow-creature may starve or freeze to death if turned away, they are unwilling to take any chances. They would rather that ninety-nine guilty tramps should be fed than that one innocent one should go hungry. But the relief of tramps by private persons is not only an expensive but a dangerous exercise of charity. It directly increases vagrancy, and it results in an increase of crimes, frequently of the most revolting character. The losses suffered through incendiary fires have been so severe that many farmers do not dare to refuse a beggar for fear of having their buildings burned. The injury to railroad property through these vagabonds is enormous. Scarcely an accident occurs to a freight-train which does not kill some tramps who were "stealing a ride," and their other stealings are in the aggregate very large. Better regulation of this evil is a crying want of our country, and the German system seems to cover the ground. It is as impossible as it would be unjust to prevent men out of work from going forth to search for it; but it is neither unjust nor impossible to require those who need help to be identified and to submit to regulation. When this is done, and the money now spent in maintaining vagabonds is systematically applied, we can enforce prohibitions of begging. The evil will then be reduced to manageable dimensions.

An Old Master, and Other Political Essays. By Woodrow Wilson, Professor of Jurisprudence in Princeton University. Charles Scribner's Sons. 1893.

Prof. Woodrow Wilson gives us, in a small volume, five essays, four of which have already appeared in the pages of the *Atlantic* and *New Princeton Review*. The first of these lends its name to the volume, 'An Old Master,' and the Old Master is Adam Smith. This essay is a most appreciative and agreeable study of a great, brave, modest man, whose simplicity and unassuming reticence in his daily intercourse with his fellow-men seem strangely at variance with his boldness—his almost audacity—of conception and design whenever he took his pen in his hand. At this day, when Adam Smith is little more than a name, though still a respected and renowned name, this sketch is most acceptable.

On other subjects, "The Study of Politics," "Political Sovereignty," "Character of Democracy in the United States," "Government under the Constitution," Prof. Wilson writes with a facile pen—a too facile pen, many people may think, for there are subjects that demand a cautious pen which will record only guarded utterances. Prof. Wilson talks with his pen: it runs in a clear, fluent, unhesitating manner, and it throws off unguarded expressions as if they came in the warmth of animated conversation. It is an easy thing for him to write that "the English have transformed their Crown into a Ministry," and "have kept a strong executive without abating either the power or the independence of the representative chamber," while we, "*being under the spell of the Constitution*, have been unable to see the facts which written documents can neither establish nor change"; or that "the old, blunt, antagonistic veto is no longer needed" in England, yet "is needed here, however, to preserve the Presidency from the insignificance of merely administrative functions"; that the veto is "neither revisory nor corrective"; that it "is merely obstructive," "a simple blunt negation." But such seed, planted in the minds of many who will accept his conclusions as superior to their own knowledge, may bear very undesirable fruit.

Prof. Wilson knows, though many of his readers do not know, that the veto of the Crown has been obsolete for more than two centuries, and that there is no power that can revise or disapprove an act of Parliament. Yet he says:

> "In England the veto of the Crown has not passed out of use, as is commonly said. It has simply changed its form. It does not exist as an imperative, obstructive 'No' uttered by the sovereign. It has passed over into the privilege of the ministers to throw their party weight, reinforced by their power to dissolve Parliament, against measures of which they disapprove. It is a much-tempered instrument, but for that reason all the more flexible and useful."

Now, "the privilege of the ministers to throw their party weight"—whatever that may mean—"reinforced by their power to dissolve Parliament, against measures of which they disapprove," has not one element of the veto power. That the Opposition can frame a political measure and carry it through Parliament against the will of the existing Government is an impossibility. There never was a case where a ministry dissolved Parliament to prevent the passage of a bill of which they disapproved. The veto power is a supervision of legislative action lodged in some one who is outside of the law-making or (if it be preferred) the bill-making machinery of government; and a disapproval by the President is not "a simple, blunt negation," "merely obstructive," for the very plain reasons that the President is required to set forth his objections for the consideration of Congress, and if those objections are not deemed well taken, Congress can immediately pass the bill over the veto, the only restriction being that there must be a decisive majority in favor of the measure. A prime minister, on the contrary, is neither a President nor a King, but a person who is an integral part of the legislative machinery, and who has undertaken to carry on the government agreeably to the will of Parliament. When he fails to do so, the bargain is at an end, and out he goes. Such were the agreed terms of his employment. Occasionally he may say to Parliament, "You employed me to carry through this and that measure, or to manage the government on such and such lines of policy, and I have done so and am willing to continue to do so—it is not I, but you who have broken the compact; I appeal to the country"; and then, as the representative of the sovereign, he dissolves Parliament and orders a general election.

This "flexible and useful" veto power of an English ministry, which appears so superior to our own in the eyes of persons who are not "under the spell of the Constitution," then amounts to this: If the legislative power is not of the premier's way of thinking, he can influence and bully and intimidate members by threatening them with the pains and penalties of a new election; if, notwithstanding his threats, a sufficient number stand firmly by their convictions and refuse to pass one of his measures of which they disapprove, he can smash the existing government, legislative and executive, and plunge the country into the turmoil of one of our Presidential elections. That any intelligent person, American or English, can characterize such a *quasi* revolution, constitutional though it be, which may be precipitated on a country at any moment and by the will of one man, as "flexible and useful," and that he can regard it as superior to the quiet and orderly proceeding of the American veto, would be inconceivable if it were not in print. Such comments on constitutional systems will not affect the judgment of any man who has given the matter thoughtful attention, but they form most unfortunate seed to be sown in the minds of young American citizens.

The Diary of Col. Peter Hawker. With an introduction by Sir Ralph Payne-Gallwey, Bart. In two volumes with illustrations. Longmans, Green & Co.

Col. Peter Hawker was one of the most noted sportsmen and brilliant shots of his time. Moreover, he possessed the faculty of imparting a rare interest to all that he wrote, not only concerning the sports of the field, but in relation to his personal experiences in a wider sphere of action. Unlike most Englishmen of his epoch, he did not indulge in fox-hunting. He confined himself exclusively to the pursuit of upland game and of wild-fowl. Col. Hawker was a soldier who had served under Wellington. A wound in the thigh incapacitating him for active service, he devoted most of his leisure to fishing and shooting. He was a man of large wealth and the owner of a beautiful and extensive property. Thus equipped, and endowed with an inventive and ingenious mind, a tireless patience and perseverance, and a gluttony for slaughter, he attained to that apogee of some Englishmen's ambition of being the foremost gunner of his time.

In his forays against the wild life of the fields and waters, he proceeded upon military principles. He made careful maps of the territory over which he proposed to shoot. To his retainers, of whom he employed many, and to his brother gunners, he assigned positions carefully indicated upon his charts. All prepared, with markers in the tallest trees and his beaters in advance and on his flanks, he swept the country in his front. A dead shot and a remorseless one, nothing escaped him. On one occasion he determined to ravage the land of a certain Parson Bond. This theologian, having got wind of the proposed attack, carefully planted his territory with traps for the discomfiture of man and dog. The Colonel, however, was not to be caught napping. He made a personal reconnoissance, and, having ascertained the sites of all of the machines, marked them upon a map of the property which he had already constructed. A facsimile of this chart is reproduced in the first volume of his diary. Thus fortified, with his beaters, markers, and dogs he descended upon the parson and cleared the land of its game. Colonel Hawker's account of his subsequent controversy with this gentleman, who from a convenient perch had witnessed the triumphant march of the gunners, is most amusing.

Those portions of Col. Hawker's diary which relate to the sports of the field are by no means the most interesting. They are somewhat prolix and monotonous, and too much space is given to technical details and statistical notes. Where he is the more entertaining is in his account of travels at home and abroad. He has a keen sense of humor and a blunt, vigorous style of narrative which imparts a most delightful piquancy to all that he relates. His relations of a visit to Scotland and one to France immediately following the fall of Napoleon have, within their limitations, rarely been excelled. On his way to Scotland he halted at Gretna Green, where he had an interview with Joe Parsley, the blacksmith (so called) who united

eloping couples. This practitioner on occasions received fees of from $200 to $500 for tying the knot. He was, however, an intolerable drunkard, and had no sooner received his pay than he hastened to the grog-shop, where he remained until every penny was expended. Joe Parsley was not a blacksmith, as is commonly supposed, but a tobacconist.

On his visit to France, Col. Hawker was accompanied by Mrs. Hawker. Upon landing at Cherbourg they were met by the hospitable inhabitants with a volley of paving-stones; although they managed to escape the fury of the mob, the captain of the boat was seriously injured. This experience at Cherbourg was duplicated at many other points in France. The journey was a continual battle with sullen foes and wrangles with hotel-keepers, postillions, and officers of justice. The Colonel's narrative is a most vivid picture of the demoralized condition of the French at the time.

The egotism of Col. Hawker is on occasion very much in evidence; but this is lost sight of by the reader in the admiration which his absolute contempt for danger under any conditions inspires. His savage greed for killing game is lamentable, but this was before the days when any protest was made against the wanton slaughter of the wild life of the woods and waters. Apart from this, Col. Hawker was a man of much refinement. He was a musician of no little ability, and published a book of 'Instruction for the Best Position on the Piano-forte.' He was also author of 'The Journal of a Regimental Officer during the Recent Campaign in Portugal and Spain' (1810). Moreover, he was the inventor of several devices of value. His great popularity was owing to his 'Book of Instructions to Young Sportsmen.' It passed through twelve editions, and was for fifty years the recognized manual on guns and shooting, especially in that relating to wild-fowl.

Sunny Manitoba. By Alfred O. Legge. London: T. Fisher Unwin. 1893.

Mr. Legge states that his justification for writing this book is his desire to remove some of the prevailing misconceptions and convey accurate information about a much calumniated province of the British Empire. His endeavor to reëstablish Manitoba in the affections of English emigrants is based on the following favorable considerations. He believes—and there is good authority for this belief—that the yield of wheat increases as the northern limit is approached within which it can be grown at all; and he claims that Manitoba wheat excels in quality as well as in yield per acre. He praises the system of experimental farms conducted by the Government, which have been eminently successful in testing the merits and adaptability of different seeds and fertilizers, and have thereby greatly assisted the farmers. He quotes various cases which have come under his observation showing the remarkable results of a few years' farming by emigrants starting with little or no capital. And, finally, he says all that it is possible to say in favor of the climate.

Having exhausted his brief on this side of the case, he then proceeds to give some idea of the other side. He admits that the temperature runs to very high figures in the summer and very low ones in the winter, with a mean temperature for the year of about 32°, which seems to harmonize but coldly with the title of his book. He further confesses to a very deficient water supply, which renders a large part of southwestern Manitoba unfit for settlement, and is more or less felt in other sections. His remedy for this is an extensive system of forestry, to be carried on both by the Government and by individuals, with a view to increasing the rainfall—a plan from which, at best, results cannot be expected for many years. His general conclusion is, that those who see their way to a tolerable livelihood in England had better not emigrate to Manitoba, "because of the sacrifices involved." This is rather a lame and impotent conclusion, and will hardly be received with enthusiasm by our "much calumniated" friends across the border. In the present condition of agricultural and other pursuits open to young men in England, it is probably more difficult than ever before to make a tolerable livelihood, and it may be safely assumed that Englishmen will continue to cross the Atlantic, whether they settle permanently in Manitoba, or whether they follow a common Canadian custom—very annoying to Mr. Legge's patriotic feelings—and drift over the border into the Dakotas.

Mr. Legge has something to say about missionaries, and he finds that they meet with the same difficulties among the Canadian Indians as in other parts of the world. The Indian argument against Christianity has a familiar sort of sound: "If your Bible is true, why are the white men worse than the Indians? It is they who have taught us our worst vices."

The book has a number of excellent illustrations and a map of the province on a liberal scale. It is fairly well written, although Mr. Legge is fond of unusual words and peculiar spelling. A startling instance of the latter is the man "whose ambition *sores* above the log shanty"!

An Unknown Heroine: An Historical Episode of the War Between the States. By L. E. Chittenden. Richmond, Croscup & Co.

In comparison with the numerous important biographies, personal recollections, and still weightier historical documents that have grown out of the war, Mr. Chittenden's latest volume has a modest but yet significant part to play. As it deals almost entirely with private history, it is happily removed from the field of party controversy, and as it is the admiring and appreciative testimony of a former Union soldier to the bravery and humanity of a Southern woman, it displays a spirit of dispassionate generosity which carries the reader's feelings along with it. Clearer circumstantial evidence, indeed, to the inherent soundness of the "human heart by which we live," under whatever political creed it happens to have been nourished, it would not be easy to find between the covers of a book. Into the details of Mrs. Van Metre's sturdy heroism in her rescue from death of a wounded and abandoned Union officer, near Harper's Ferry, it is needless to go; the account of the Vermont officer's steadfast gratitude, and of his assistance to Mrs. Van Metre in finding her Confederate husband in a Northern prison, may also be left to the reader's curiosity. The letter to Mrs. Van Metre from Gen. Hitchcock, informing her of Secretary Stanton's order of release for her husband, in return for the preserved life of an enemy, offers, as here quoted, one of those pleasant incidents now and then to be met with which seem to prove for the nonce that poetic justice is not a fiction of the imagination, but a homely dweller among the stern realities of life.

The value of a book of this kind is quite independent of questions of literary form or finish. Its use is to give permanence and notoriety to an episode similar to many that must survive in the memories of persons still living on the borderland of North and South, the knowledge of which is unfortunately passing away with the lives of those who witnessed them. Whenever such a record does appear, it is highly desirable that it should be disseminated in all quarters where sectional feeling is still in vogue, or wherever there are individuals to be found with unreconstructed opinions upon the subject of the war. Carefully read, it may, in a quiet and unobtrusive way, do much towards making felt the oneness of our national life, and can hardly fail in helping to neutralize the efforts of the sham patriotism which seeks to make political capital by dragging forth the issues of a dead and buried strife.

Utility of Quaternions in Physics. By A. McAulay, Lecturer in Mathematics and Physics in the University of Tasmania. Macmillan & Co. 1893.

When a man has acquired a considerable reputation for intellectual force and attainments, he begins to find people hanging upon his lips and adopting every proposition he may lay down; and, thereupon, being human, he straightway begins to talk about things concerning which he is not qualified to form an opinion. In that way, Maxwell, in his 'Electricity and Magnetism' (§10) said: "I am convinced that the introduction of the ideas, as distinguished from the operations and methods, of Quaternions will be of great use to us in all parts of our subject"; which is as much as to say that he would adopt the addition-process of multiple algebra, without its multiplication-process; and it is amazing what an influence this dictum has had in preventing men from studying quaternions. Yet in truth Maxwell was not enough versed in the subject to know what the ideas of quaternions are. Everybody who has ever exhibited any mastery of quaternions has, we believe without a single exception, pronounced Maxwell's opinion frivolous and superficial. Mr. McAulay writes to demonstrate that it is so, and to convince mathematicians of the high value of quaternions as the *calculus* which it essentially is, and not merely as involving a good idea, and especially of the high value of this calculus in the study of physical problems. We hold this thesis to be sound; but we are sorry to say we fear this book will do little to bring men into the way of truth. There is a sort of an egotistic spirit, an arbitrary self-will, displayed in it that is far from the quality best adapted to the purpose of persuasion. Its innovations in notation are confusing and quite inadmissible. Worse still, the reasoning is in many places decidedly obscure, and often quite needlessly intricate. We can but agree with Prof. Tait, the first of living quaternionists, that some sections of the book are veritable models of "how not to do it." Moreover, Mr. McAulay does not seem to be as familiar with the works of Hamilton as it behooves an apostle of quaternions to be.

Yet, with all these serious faults, the work is not useless, and as it has probably not stood in the way of the publication of any other, we are glad to get it. Though it will not convert the scoffer, it here and there offers suggestions which disciples of Hamilton will receive with satisfaction.

BOOKS OF THE WEEK.

A Standard Dictionary of the English Language. Vol. I. Funk & Wagnalls Co. $12.

Atwood, G. E. Complete Graded Arithmetic. Part I. 45 cents. Part II. 85c. Boston: D. C. Heath & Co.

Baden Powell, B. H. Land Revenue and its Administration in British India. Oxford: Clarendon Press; New York: Macmillan.
Broughton, L. Estoppel by Matter of Record in Civil Suits in India. Oxford: Clarendon Press: New York: Macmillan.
Bussing, C. F. Canned Foods. Retail Grocers' Publishing Co.
Cheney, J. V. Ninette: A Redwoods Idyl. San Francisco: William Doxey.
Dixon, W. M. English Poetry from Blake to Browning. London: Methuen & Co.
Franqueville, Le Cte. de. Le Système Judiciaire de la Grande Bretagne. 2 vols. Paris: J. Rothschild.
Gray, W. C. Camp Fire Musings: Life and Good Times in the Woods. Randolph.
Hooker, J. D., and Jackson, B. D. Index Kewensis. Part II. Oxford: Clarendon Press; New York: Macmillan.
Huxley, Prof. T. H. Science and Education: Essays. Appletons. $1.25.

GENERAL LITERATURE.

The Works of William Shakespeare. *Ariel Edition.* Each Play in a separate volume, pocket size, large type, complete and accurate text, illustrated with the celebrated designs of Frank Howard, and bound in flexible morocco. *Sold separately,* per volume, 75 cents.
This edition will include all of the Plays, twenty-one of which have thus far been published, viz.: *The Tempest, A Midsummer Night's Dream, The Merchant of Venice, As You Like It, Much Ado About Nothing, Twelfth Night, The Winter's Tale, King John, Richard the Second, Richard the Third, Henry the Fourth* (First Part), *Henry the Fourth* (Second Part), *Henry the Fifth, Henry the Eighth, Hamlet, Macbeth, Othello, King Lear, Romeo and Juliet, Julius Cæsar, Antony and Cleopatra.*
Subscriptions are invited for the entire set, to be delivered as published, and orders will be received for any volume or volumes.

Authors and Their Public in Ancient TIMES. A sketch of literary conditions, and of the relations with the public of literary producers, from the earliest times to the invention of printing in 1450. By GEO. HAVEN PUTNAM, author of "The Question of Copyright," etc. 12mo, $1.50.

A History of English Dress, from the Saxon Period to the Present Day. By GEORGIANNA HILL. 2 vols., 8vo, with 14 steel plates, $7.50.

The Pottery and Porcelain of the United STATES. An Historical Review of the Ceramic Art in America, from the Earliest Times to the Present Day. By EDWIN A. BARBER, A.M., Honorary Curator of the Department of American Pottery and Porcelain in the Pennsylvania Museum. Cloth, 8vo, with over 200 illustrations, $5.00.

Comparative Administrative Law. An Analysis of the Administrative System, National and Local, of the United States, England, France, and Germany. By F. J. GOODNOW, Professor of Administrative Law in Columbia College. 2 vols, 8vo, each $2.50.

Literary Gems. 32mo, with frontispiece, morocco, gilt tops. Each 75 cts.
Fifth Series: 1. *Ideas of Truth.* By Ruskin. 2. *The House of Life.* By Rossetti. 3. *Conversation—An Essay.* By De Quincey. 4. *The Eve of St. Agnes.* By Keats. 5. *The Study of Poetry.* By Arnold. 6. *She Stoops to Conquer.* By Goldsmith.

Knickerbocker Nuggets. New Volumes. WHIST NUGGETS. Papers about Whist and Whist-Players. Compiled by W. G. MCGUCKIN. $1.00.

The Iliads of Homer. Translated from the Greek, by GEORGE CHAPMAN. With illustrations from Flaxman's designs and from Greek vases. 3 vols., $3.75.

Studies by a Recluse. In Cloister, Town, and Country. By AUGUSTUS JESSOPP, D.D. Frontispiece. 8vo, $1.75.

An Agnostic's Apology. By LESLIE STEPHEN, author of "Hours in a Library," etc., etc. 8vo, $2.00.

The Shrubs of Northeastern America. By CHAS. S. NEWHALL, author of "The Trees of Northeastern America," etc, 8vo, illustrated, $2.50.

Princeton Sketches. The Story of Nassau Hall. By GEORGE R. WALLACE. With introduction by Prof. Andrew F. West. Illustrated. 8vo, $2.00.

Pictures from Greek Life and Story. By Rev. ALFRED J. CHURCH, author of "Three Greek Children," etc. 12mo, illustrated, $1.50.

Songs of the Orchard. By NORMAN R. GALE, author of "A June Romance," etc. 12mo, $1.25.

A Country Muse. Second Series, cloth, $1.25.

The Making of a Newspaper. Experiences of Certain Representative American Journalists Related by Themselves, and Edited by Melville Phillips. 12mo, $1.25.

The Genesis of Art Form. An Essay in Comparative Aesthetics. By GEO. S. RAYMOND, author of "Poetry as a Representative Art." Illustrated, 8vo, $2.25.

Ruminations: The Ideal American Lady, and Other Essays. By ALBERT MATHEWS (Paul Siegvolk), author of "A Bundle of Papers," etc. 12mo, $1.50.

ECONOMIC SCIENCE.

An Introduction to English Economic HISTORY AND THEORY. By W. J. ASHLEY, M.A. Part II. Bringing the work down to the end of the Middle Ages. 12mo, $3.00.

American Railroads as Investments. By S. F. VAN OSS. With seven maps, printed in colors, showing competitive lines of Railway in different parts of the United States. About 850 pages. 8vo, $4.00.

The Silver Situation in the United STATES. By Prof. F. W. TAUSSIG, author of "The Tariff History of the United States." ("Questions of the Day" Series," No. 74.) Third edition. 8vo, 75 cts.

A Brief History of Panics, and Their Periodical Occurrence in the United States. By CLEMENT JUGLAR. Englished by DeCourcy W. Thom. With Explanatory Fables. ("Questions of the Day" Series, No. 74.) 8vo, $1.00.

The Social Contract; or, The Principles of Political Rights. By JEAN-JACQUES ROUSSEAU. Translated by Rose M. Harrington, with Introduction and Notes by Edward L. Walter. 8vo, $1.50.

Prisoners and Paupers. A Study of the Abnormal Increase of Criminals and the Public Burden of Pauperism in the United States; with a Consideration of the Causes and the Remedies. By HENRY M. BOIES, M.A., 8vo, with illustrations, $1.50.

Holiday Number of "Notes on New Books," a quarterly bulletin, illustrated Catalogue of Books for Young People, Prospectuses of the Story and Heroes of the Nations Series, sent on application.

MACMILLAN & CO.'S NEW BOOKS

And Books Announced for Immediate Publication.

THE LOVER'S LEXICON.

A Handbook for Novelists, Playwrights, Philosophers and Minor Poets; but especially for the Enamoured. By FREDERICK GREENWOOD. Crown 8vo, $1.50

"It is unique in its treatment, delightful in its diction, quiet in its humor, and altogether satisfactory."—*New York Herald.*

Fourth Edition Just Ready.

The United States:

AN OUTLINE OF POLITICAL HISTORY, 1492-1871.

By GOLDWIN SMITH, D.C L., author of "Canada and the Canadian Question," etc. With Map. 12mo, cloth. Price, $2.00.

"It is a marvel of condensation and lucidity. In no other book is the same field covered so succinctly and well."—*New York Sun.*

Third Edition Just Ready.

The Life and Art of Edwin Booth.

By WILLIAM WINTER, author of "Shakespeare's England," "Shadows of the Stage," etc. With 12 full-page portraits in character, reproduced by E. Bierstadt, and other Illustrations. Crown 8vo, cloth, gilt top. Price, $2 25.

"Destined to take high rank in the long catalogue of important biographies." *Boston Journal.*

Second Edition Just Ready.

Seventy Years of Irish Life.

Being the recollections of W. R. LE FANU. One vol., crown 8vo, cloth, gilt top, $1.75.

"This delightful book. . . . It is long since we have seen a book so full of entertaining matter as the 'Seventy Years of Irish Life,' by W. R. Le Fanu This volume is stuffed as full of anecdotes as a Christmas pudding is with plums." —*The Sun.*

Just Published. Vol. III. New Edition.

The Diary of Samuel Pepys.

With Lord BRAYBROOKE'S Notes. Edited, with additions, by HENRY B WHEATLEY. F.S.A. 12mo, cloth, Vol. III., $1.50. Vols I. and II. also ready. Price, $1.50 each.

*** *Also an edition on large paper, limited to 100 copies, sold only in sets, $5.00 per volume.*

THE DAWN OF ASTRONOMY:

A STUDY OF THE ASTRONOMY AND TEMPLE WORSHIP OF THE ANCIENT EGYPTIANS.

With numerous Illustrations and full-page Plates. By J. NORMAN LOCKYER, F.R.S., author of "The Meteoritic Hypothesis," "The Chemistry of the Sun," etc. Royal 8vo. *Just Ready.*

Anatomy and Physiology for Nurses.

By DIANA C KIMBER, Assistant Superintendent of Training School for Nurses, Blackwell's Island, and LOUISE DARCHE. With numerous Illustrations. 8vo. *Just Ready.*

Mental Development in the Child and the Race.

By J. MARK BALDWIN, Ph.D., Stuart Professor of Experimental Psychology in the College of New Jersey, author of "Handbook of Psychology." Crown 8vo *Just Ready.*

Chronological Outlines of American Literature.

By SELDEN L WHITCOMB, A M. With a Preface by BRANDER MATTHEWS, Professor of Literature in Columbia College. Uniform with "Chronological Outlines of English Literature." 12mo. *Just Ready.*

THE EVANSTON COLLOQUIUM

Lectures on Mathematics.

Delivered before Members of the Congress of Mathematics he d in connection with the World's Fair in Chicago, at Northwestern University, Evanston, Ill., by FELIX KLEIN. Reported by Professor ZWIET of the University of Michigan. 8vo. *Just Ready.*

Town Life in the Fifteenth Century.

By Mrs. JOHN RICHARD GREEN, author of "Henry the Second" (Twelve Eng ish Statesmen Series.) Two vols , 8vo. *Just Ready.*

A Commentary on the Writings of Henrik Ibsen.

By H H. BOYESEN, Professor of Germanic Languages aud Literature at Columbia College, author of "Goethe and Schiller," "Essays on German Literature," etc. Crown 8vo. $2.00.

NEW NOVELS.

THE KING OF SCHNORRERS. Grotesques and Fantasies.

By I. ZANGWILL, author of "Children of the Ghetto," etc. With Illustrations. 12mo. *Just Ready.*

The Raiders.

Being Some Passages in the Life of the Faa Lord, and Earl of Little Egypt. By S. R. CROCKETT, author of "The Stickit Minister, and Some Common Men." 12mo. *Just Ready.*

Catherine Furze.

By MARK RUTHERFORD.

Edited by his friend, REUBEN SHAPCOTT. 12mo, $1.00.

Periodicals.

THE PSYCHOLOGICAL REVIEW.

A new Bi-Monthly Publication under the Editorship of Professors BALDWIN (Princeton University) and CATTELL (Columbia College). First number to be issued in January. Single copies, 75 cents; annual subscription, $4.00.

The Physical Review.

A Journal of Experimental and Theoretical Physics. Conducted by EDWARD L NICHOLS and ERNEST MERRITT. Published bi monthly for Cornell University. Single copies, 50 cents; annual subscription, $3.00

The Portfolio.

An Artistic Periodical. Edited by P. G HAMERTON. Single copies, 75 cents; annual subscription, $7 50

*** With the January number the *Portfolio* assumes a new and improved form, calculated to render it more attractive.

MACMILLAN & CO., 66 Fifth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 11, 1894.

The Week.

THE tariff debate has begun at last. Mr. Wilson's opening speech is of a very high order. He begins by showing what has become of the vast surplus left in the Treasury by the first Cleveland Administration. The cash balance in the Treasury at that time was $185,000,000. This was the amount that Secretary Windom acknowledged to have received from Secretary Fairchild. Where is it now? What has become of an *annual* surplus of $105,000,000? Why is the Government confronting a deficit of $28,000,000, or $50,000,000, or some other unknown amount, notwithstanding the fact that the sinking-fund appropriation, amounting to nearly $50,000,000, has been dropped from the public accounts? Mr. Wilson does not indulge in any railing accusations on this subject, but points out the undeniable fact that the present strained condition of the Treasury is not due to the party or the policy that he represents. He shows, too, that the arrangement of the national finances under the Republican régime of the past four years has been such as not only to deplete the Treasury but to increase the taxes on the mass of the people, and to create bounties and privileges to particular classes.

Looking at these particular interests, and especially at those of wool, coal, and iron ore, Mr. Wilson makes an unanswerable argument in favor of putting all of these articles on the free list and of reducing correspondingly the duties on the articles into which they enter. The great merit of Mr. Wilson's speech is the fearlessness with which he attacks these intrenched shams. He shows how they have grown bolder and more impudent with the lapse of time, until everybody who is protected at all thinks that he ought to have a prohibitory duty, so that the consumer shall not buy anything except at his shop. It is upon this beautiful theory that a duty on coal is still demanded. Nobody considers coal-mining an infant industry. Nobody pretends that coal can be mined more cheaply in Nova Scotia than in this country. Yet we are asked for a duty on coal that will enable railroads to carry it from the western slope of the Alleghanies to the eastern boundary of Maine, and this in the name of protection. This is only one of the monstrosities of the present system which Mr. Wilson has struck in the face. The value of his speech consists more in its spirit than in its detailed analysis. It assures us that the bill which he has presented is to be passed without unnecessary delay, and in spite of the new non-voting tactics adopted by the Republicans. There is some danger of the latter making themselves ridiculous. If they persistently efface themselves from the list of yeas and nays, the public may forget that there is any such party in the House.

The letter of Mr. Andrew Carnegie on tariff reform which the *Tribune* published on Monday, is something like the report of the Tariff Commission of 1882-1883. That report was in part the work of H. W. Oliver, jr., Mr. Carnegie's fellow-laborer and capitalist in the iron and steel trade, and almost as distinguished as he. Mr. Carnegie now stands where Mr. Oliver stood ten years ago. Both maintain that it is not a mere blind, unreasoning outcry that leads to the political movement for lower duties, but that there is a sound conservative sentiment at the bottom of it which ought to be respected. They agree also in thinking that American industry, even from the protectionist standpoint, has more to gain than to lose by acquiescing in a moderate measure like the Wilson bill or the Tariff-Commission bill of 1883 than in an unceasing battle and the uncertainty which attends it. Upon this point Mr. Carnegie is very strong. The Democrats, he says, if allowed to pass their bill, would not attack their own tariff. Some years of peace would be secured, and that would be worth far more than a temporary victory to be followed by a new agitation. Of course the *Tribune* is greatly disturbed by this view, because it wants a tariff for politics only.

It has already been announced that the Carnegie iron and steel works have taken the place formerly held by the Britishers as bugaboos to the American manufacturers. In other words, the Carnegies have so far outstripped all their domestic competitors in the completeness and perfection of their machinery that the latter need protection against Carnegie rather than against John Bull. This is especially true in Pittsburgh, where we are told that the condition of the poor and of the unemployed is rendered worse every day by the continued operation of the Carnegie rolling-mills. The reason is that he does work at such low rates that other mills cannot make any money. This may be true, but the tariff supplies no remedy for such a condition. It is a condition which has its parallel in many other places and trades. Confining our present view of it to the iron and steel trade, there is no room for doubt that this country can hold its own with Great Britain or any other nation on terms of equality as regards the principal products, and that the tariff no longer has any protective element in it except as to a few specialties. Nobody who has to compete with Carnegie need fear competition with anybody in England.

The latest Hawaiian news leaves our annexationists with their thirst for blood still unslaked. Minister Willis's quiet "Good-day, gentlemen," at the close of his conference with the provisional government, was an indescribably base betrayal of those who had their gory headlines and their articles of impeachment all ready. In his statement he regretted the delay which had marked the action of the United States, but truthfully said that it had been unavoidable. If the decision which he communicated to the provisional government on December 19 could have been made on March 19, or even on April 19 or May 19, there is no doubt that it would have been speedily acquiesced in. At that time the attitude of all parties in Hawaii was that of awaiting the finding of the President of the United States as arbitrator. But the lapse of time necessary for the President's full and patient investigation left opportunity for the provisional government to strengthen itself so that it is not surprising that it should now decline to relinquish power. On what grounds it bases this refusal will not be known, apparently, until President Dole's answer reaches Washington. Meanwhile, Minister Thurston, who left this country with the expressed determination to set up an independent Hawaiian republic, now announces that nothing of the kind will be attempted. The present "semi-American government" will be continued. That is a good phrase. The "American" part of the government consists in owning the land and being on the official pay-rolls, and the "semi" part consists in denying the right of suffrage, in taxing the majority without allowing them representation, and in setting up an oligarchy by the aid of a standing army and calling it a republican form of government.

We take pleasure in noting the *Outlook's* denial that it holds to "one code of ethics for individuals and another for nations." It now tells us that "the analogy between the nation and the individual is perfect," in the sense that "if the nation has done a wrong, it ought to be ready to rectify that wrong." But it goes on to say that the analogy is unsound both in logic and in morals in the Hawaiian business, "because

the nation gave Mr. Cleveland no authority to determine whether the wrong had been perpetrated, or to set it right." What this means, unless it be that the Hawaiian revolution of January, 1893, was not an issue in the Presidential election of November, 1892, we confess we cannot see. There is no question that the nation gave Mr. Cleveland the Presidency, and with it the constitutional right and duty to initiate or withdraw treaties, appoint and receive ministers, and in general direct our foreign and diplomatic policy. The *Outlook* does not specify, and cannot, a single particular in which the President has gone beyond the powers given him by the Constitution, yet it talks as glibly as the partisan press of his "usurpation of power." That appears to us to be unsound both in logic and in morals.

The Rev. C. M. Hyde of Honolulu, "the only resident missionary of the A. B. C. F. M.," whose treatment of Father Damien brought down on him the scathing comments of Robert Louis Stevenson, says, in his letter to Mr. Blount, that his instructions are, "to induce in the Hawaiians more of the sentiments of personal independence and self-reliance, and to develop that strength of character which shall enable them to withstand the unfavorable influences which have hitherto depressed them, and still exist, from their contact with so large a foreign population." He has been salaried for this work ever since 1877 by the A. B. C. F. M. It is a work which, we need hardly say, would require infinite tact, deep sympathy with the people, thorough comprehension of their character on its best side, and a style of living which would be an assurance of disinterestedness. All these qualifications are apparently wanting in Mr. Hyde's case. He lives in a large and comfortable house, which, as Mr. Stevenson says, is "a cause of mocking in the streets of Honolulu." This house, too, he admits, was supplied by the capitalistic class of foreigners, or the "missionary element," which the native Hawaiians regard as their enemies and despoilers.

That there must be some foundation for this prejudice, we judge from the fact that while Americans and Europeans own 1,052,492 acres of the land of the country, the natives own only 257,457, and the 861,800 acres left to the Government is mostly of poor quality. The monthly pay-roll of the provisional government, too, before they began to weed out, showed that exactly the same sum was paid to American officials as to twice that number of native Hawaiian officials. Such facts as these may be accounted for on grounds not discreditable to the foreigners—although the experience of mankind is against this view—but they naturally keep alive a deep distrust, in the native mind, of the "missionary element." Under these circumstances what are we to think of the policy of sending, at the expense of American Congregationalists, "to induce in the Hawaiians more of the sentiments of personal independence and self-reliance," etc., a man who lives among and makes common cause with those whom they regard as their enemies, and—this is the worst of it—who abuses publicly the people he is sent to evangelize, denounces their manners and morals, and belittles their intellectual capacity? It may be well to have this done, but think of its being done by a salari d missionary. That he has succeeded in retaining his place so long under such conditions shows how much the machinery of the American Board needs overhauling. The Board settled, or rather agreed to leave unsettled, the question of the future of the heathen in the next world. We think it would be well now to examine the mental attitude of the living heathen towards its agents.

The Rev. W. L. Sheldon sent out 500 letters to employers of labor in St. Louis, asking them the following questions.

"(1.) What has been the average number of your employees in ordinary times at this season of the year?

"(2.) How many have you in your employ now?

"(3.) How much of a reduction in wages has been made in your line of business?

"(4.) What percentage of your employees do you think have been accustomed to save something from their wages for a future emergency?

"(5.) Do you think conditions are growing better or worse?"

To these letters he received 254 answers, from every kind of trade and business. To the first two questions the answer was 47,049, and the decrease in this number owing to the financial crisis or anything else was 6,938. Five establishments only reported themselves as having "shut down." In the great majority there had been no reduction in wages. About 11,000 to 12,000 out of 40,000 are supposed to save something out of their wages. This is the kind of work which ought to have been done here long ago by somebody. We dare not say that the condition of St. Louis is a fair specimen of that of other cities, but if it be, it will be readily seen that the situation is not as bad as it has seemed.

Judge Dean of the Supreme Court of Pennsylvania rendered an interesting decision last week on the question of boycotting. There was a memorable strike of the building trades of Pittsburgh in 1891, which brought building operations there to a practical standstill for two months over the question of nine hours' wages for eight hours' work. Most of the local dealers in building materials entered into an agreement not to sell materials to contractors who gave employment to strikers. One contractor thus deprived of supplies brought suit to test the question whether such an agreement constituted an illegal boycott. In the lower court he secured a verdict of $1,500. This the Supreme Court reverses. Judge Dean points out that, while the strike of the laborers referred to, and their efforts to prevent men from working, would have been an indictable offence under the common law in Pennsylvania, acts passed by the Legislature in 1869, '72, '76, and '91 gave the men a right to strike, and to prevent others from working except by the use of force. The court reasons thus:

"The moment the Legislature relieved one class, and by far the larger number of citizens of the commonwealth, from the common-law prohibitions against combinations to raise the price of labor and by a combination the price was raised, down went the foundation on which common-law conspiracy was based as to that particular subject."

Furthermore, the deduction is made that "however unchanged may be the law as to combinations of employers to interfere with wages where such combinations take the initiative, they certainly do not depress a market when they combine to resist a combination to artificially advance price." The meaning of all this in simple words is, that it is a poor rule that will not work both ways, and that when labor organizations appeal to the law-makers for some special provision in their interest, they must not complain if the courts extend the same protection to employers.

The latest action of the striking Danbury hatters, who recently expressed their mortal dread of being forced into slavery if they went back to work, is to pass resolutions against any of their weaker members who may be induced to desert their ranks. Their threat "not to speak to nor associate with any such persons" might be endured with Christian resignation, one would think, but they go further and declare:

"That, while living within and not breaking any of the laws of the State or of the United States, we will endeavor by all proper means to make the lives of such persons in this town so unpleasant that they will seek their abode elsewhere, in a place filled with their own kind."

This seems indiscreet in those who are appealing to the public to prevent them from falling into slavery. They never, no, never, will be slaves, but they have no objection whatever to being slave-drivers and cracking their whips over those whose one offence is that they want to support themselves by honest and free labor.

In discussing last week the ballot laws which have been enacted in thirty-six States of the Union, we said that in nineteen of them the Massachusetts method of arranging the names of candidates in

alphabetical order in groups under each office had been followed. As the laws were originally passed this was the case, but within the past year or more in five of these laws the alphabetical order has been abandoned, and the party-column order adopted in its place. The States making this change are Vermont, Wisconsin, Washington, North Dakota, and South Dakota. The list of States should stand, therefore, as concerns the blanket ballot, as follows: With alphabetical order, 14; with party column, 19. Of the three remaining States with ballot laws, New York, New Jersey, and Connecticut, all of which have separate party ballots, the two former are likely to change to the blanket ballot this year —whether to alphabetical order or party column remains to be seen.

Municipal elections were held in the province of Ontario last week, and at the same time a plébiscite was taken on the question of prohibition. The vote was not on the adoption of any form of law, but for the purpose of determining whether the people desire the Legislature to enact a prohibitory statute. The result was an overwhelming majority in favor of prohibition, estimated as high as 100,000 in the whole province. Not only country villages but cities voted in the affirmative, the majority in Toronto being more than 2,000. In these elections, for the first time in the history of the province, women possessing certain property qualifications had the privilege of voting on the liquor question, but only a small minority of those thus qualified—1,136 out of about 5,000 in Toronto—went to the polls. The majority for prohibition throughout the province was so great that the Legislature can hardly fail to enact it.

Despatches from New Zealand give the details of the first parliamentary elections within the British empire held on a mixed (male and female) franchise. The New Zealand women, as a new addition to the electorate, have, as a body, confirmed the political opinions of the men by whom they had hitherto been represented, and to this extent their vote may be called conservative. While the data at hand make it impossible to discern minor influences due to the fresh body of voters, there is no trace whatever of the reactionary effects which, it is commonly assumed, women will import into politics. The New Zealand Government which has just received endorsement is the most radical that the colony has had for many years; the ministry were returned with fifty-four members in a House of seventy-four, of whom four are Maoris, or native members; thirty-three of the old members failed of reëlection, and this modification of the lists suggests that the new electors have taken their duties seriously, and exercised judgment in the selection of candidates. Among the issues of the election were secular education and local option, but even on the liquor question the women have shown much less partisanship than was expected, as but twenty-four of the fifty-four Government members are known to be in favor of a direct veto on licenses by a majority vote of the local electors. It is worth mention also that but one prominent member of the Opposition failed to retain his seat. To quote the London *Times:* "The result decisively scatters any fears of a sex vote, and testifies to the discrimination and wholesome division of opinion of the new electorate."

The wrath of the anarchists in Europe is being made to work for international amity and peace in unexpected ways. When the President of the French Chamber was able to read despatches of sympathy, on the occasion of the bomb-throwing, from the Speaker of the House of Commons and from Government officials in Italy and Austria and Switzerland, while Emperor William's unofficial expression of horror at the crime was in the newspapers, the general applause witnessed to a spirit of concord between the nations quite unwonted. Already there is talk of an international movement or agreement for the suppression of dynamiters, though it is doubtful if this will come to anything more than a better understanding in regard to the speedy extradition of persons charged with anarchistic crimes against life and property. The important thing is, the growing consciousness that the whole social order upon which modern civilization rests is involved, and that this rises in importance far above any international feuds or jealousies. The anarchists themselves cannot complain of this result, as one of their tenets is the folly of war. They have, in fact, brought upon themselves much obloquy, as men "without a country," because they have argued that the reconstitution of society after their ideas was more important than anything that passed by the name of patriotism, and because their "catechisms," specially prepared for distribution in the barracks, have advocated the refusal to obey orders calling upon the soldiers of one country to attack those of another.

Although Mr. Gladstone's age makes him now one of the wonders of the century, there is no question that it is the main cause of the slow progress of legislation in England. It is generally acknowledged that if he were dead or disabled, the Liberal party would undergo at least a temporary eclipse, and probably a permanent division. The Radicals and Labor party would split off from the old Whigs and the "gentlemen," and the Tories would have execution of them for at least one Parliament. It is very questionable whether the English Radicals care greatly about home rule, but they cannot dispense with the eighty Irish votes, and they are overawed by the Premier into believing home rule to be a necessary Radical measure. How long they would continue to believe it after Mr. Gladstone's withdrawal, is a question not easily answered. The Conservatives see all this, of course, clearly enough, and probably exaggerate Mr. Gladstone's importance to his party, and they have, therefore, ever since 1886 made delay and obstruction the keystone of their policy. They kept the last Parliament sitting almost to the last moment, obstructed the home-rule bill on pretence that they wished longer time to debate it, and are now obstructing the parish-councils bill, undoubtedly with the expectation that any day may bring the news of the premier's death or break-down. The bill is really not a contentious measure. Although Lord Salisbury has thrown some ridicule on it, the bulk of the Conservatives are actually well content to let it pass. The power it gives to the villages is now a matter of comparative indifference to the landholders, who have already lost most of their influence in the country through the ballot and the county-councils bill, and above all through the decline in the value of land.

Their persistent opposition to the bill is, therefore, aimed in reality at the home-rule bill, which may be introduced in the spring if this is put out of the way. Or if the home-rule bill is not introduced in the spring, there may be a dissolution in the early summer, and the Grand Old Man may go to the country with such feathers in his cap as the employers'-liability bill, just defeated by the Lords, and the parish-councils bill. Should he, with these two bills and the home-rule bill before the country, win another election, the passage of the home-rule bill would be almost a certainty, because the chief argument against it—that the country had not considered it—would be no longer available. It is not to be wondered at, then, that the Conservatives should be "playing against an old man's life," as Mr. Gladstone has more than once said they were. His own knowledge of this fact makes more astonishing than ever his strength of nerve. To sit night after night opposite to a large body of men who are watching eagerly for the slightest symptom of weakness or infirmity, and to whom his death would be the most welcome news they could receive, must be an ordeal from which youth and perfect health might well shrink. To face it successfully at eighty-four, with the cares of an empire resting on his shoulders, is probably the most wonderful display of vitality recorded in history.

THE NATIONAL FINANCES.

THE comparative statement of receipts and expenditures of the United States during the month of December and also during the half year is as follows:

	1892.	1893.
RECEIPTS.		
December	$33,[illegible]963	[illegible]22,512,027
Half year	194,251,040	157,[illegible]5,444
EXPENDITURES.		
December	$33,157,999	$30,058,260
Half year	190,102,830	184,379,773

This shows a shortage in revenue, as compared with last year, of nearly $11,000,000 for the month, and of more than $42,000,000 for the half year, while expenditures have varied less than $1,000,000 in the half year.

The public-debt statement, issued simultaneously, shows a net cash balance of $90,375,555, all of which, except $9,483,955, is the remains of the greenback redemption fund, which was accumulated by a special sale of bonds in 1877–8 for a particular purpose. In other words, the Government is now meeting its daily expenses in part with money borrowed at 4 per cent. interest. No sophistry can disguise this fact, nor can anybody pretend or imagine that new taxes can be put in working order in time to relieve the Treasury or to stop this shrinkage of the gold reserve. On the contrary, there is every reason to believe that the deficit of revenue for the full year will reach $76,000,000, and that the gold reserve will be reduced to $35,000,000 on the 30th day of June, unless remedial measures are taken meanwhile. Fortunately there is no outflow of gold at the present time, and, therefore, little danger of alarm in the public mind. If there should be such an outward movement, it would be necessary for Congress to act at once to replenish the Treasury by some form of borrowing, and, indeed, that resort, in our opinion, cannot be long delayed.

The facts were presented to Congress by Secretary Carlisle on the 19th of December. There was not time to do anything before the holiday recess, yet the interval might have been well employed by the committee on ways and means in coming to some decision on the points presented in the secretary's report. Instead of this a majority of the Democratic members have voted in favor of an income tax of 2 per cent. on individual incomes above $4,000, and also for a tax on the income of corporations and an increase of the tax on cigarettes, the estimated receipts of all of which are about $42,000,000. Shall this internal tax bill be attached to the tariff bill, or be left to make its own way on its own merits—to stand or fall by itself? Upon this point we have the very decided opinion that if it is patched upon the tariff bill, it will pull that measure down and defeat both. Internal-revenue bills and tariff bills have in almost every instance been passed separately, yet there are precedents for tying them together. The tariff bill of 1883 was one of the latter kind, but it became so, not by the choice of the two houses, but through a parliamentary tangle. If the committee should attempt to carry an income tax on the back of a tariff bill now, it is probable that a number of Democrats would deem themselves absolved from any party obligation to support a measure thus weighted, and would vote against the whole, in obedience to the demands of their constituents. This would disintegrate the party even if it did not defeat the bill, whereas if it should defeat the bill altogether, it would kill the party. The people would say that the Democrats had been preaching tariff reform for twenty years, and had succeeded in making it the distinctive if not the sole issue in politics, and had finally carried the country on that issue, but were not able, even with the House, Senate, and Executive in their hands, to carry their ideas into effect. What else could follow but the trampling of such a party under foot?

Since the Government really has no money of its own at present, but is living on the greenback redemption fund, the first step to be taken would seem to be some provision for raising a loan in an honorable way. Upon this point our esteemed contemporary the Cincinnati *Southwest* thinks that there would be danger in the plan of giving the secretary of the treasury power to issue exchequer bills, or interest-bearing Treasury notes, at any time, to meet shortages of revenue. It says:

> "During Mr. Cleveland's first administration it was a surplus of a hundred millions, and now it is a deficit of similar magnitude that we have to cope with. For almost a generation our Congresses have never cared a straw whether our revenues balanced our expenditures. With the almost irresistible energy which every Congressman develops in the direction of extravagant appropriations for his 'deestrict,' we fear that it would be bad policy to make running into debt so easy."

We think that all experience since the close of the war shows that the danger lies in the existence of a surplus, not in the power to borrow money. It was the great surplus left by Mr. Cleveland's first administration that incited the pension-agents and contractors for public buildings and internal improvements and everybody else to "go for it." They did go for it and they made short work with it. They emptied the treasury in short order. Now, does anybody suppose that this looting would have taken place if there had been nothing to loot? Would the Billion-Dollar Congress have dared to pass those bills if it had been necessary to borrow the money to pay the appropriations? Assuredly not. There is nothing that the American people are so much averse to as borrowing, and there is nothing that they give so little heed to as spending a surplus.

THE GRAVER EVILS OF THE INCOME TAX.

THE discussion of the proposal to levy an income tax on all incomes above $4,000 has mostly proceeded on the lines of expediency, fiscal and partisan. Looked at solely from that point of view, the proposed tax cannot be defended, as it is perfectly certain to prove inquisitorial in operation and wasteful and diminishing in collection, while nothing can be clearer than that it would be fatal to any party making itself responsible for it. But there are other aspects of the matter which are far more important to those who watch our social and political development with anxiety, and which, to them, are decisive of the case.

That it would be a piece of unblushing class legislation even its advocates do not deny. Indeed, that very fact is what commends the tax to them. They want to get at a class of men who, they say, do not contribute to the Government in proportion to their means, and to put the screws on them. They assert that the tax would be highly "popular," and thereby, as Congressman Cockran has truly said, confess that it is unjust. It could be popular only because it appeared to the masses to relieve them and to make a comparatively few citizens sweat. That is class legislation of the most vicious sort. Beside it the bounty and protective laws which we already have, and which the present Congress was elected to abolish, are innocence and equity personified. The Democratic party floated into power on the wave of indignation which the favoritism of Republican legislation had aroused, and if it now proceeds to give us laws of which the little finger is thicker than the loins of tariff and bounties, it will find, unlike the poet, that there are many who fear the wagging of an ass's ears, and will have neither part nor lot with it.

The ever-increasing demands of the protected classes would be nothing compared to the accelerating evils of such socialistic legislation. To set off by themselves a class of citizens who may be considered fair game for demagogues, would be an experiment of which the issue could only be disastrous. If the people having an income above $4,000 can be spoliated to the extent of 2 per cent., why not 5 or 10 or 50? What check would there be on national extravagance when the wealth of the entire country could be drawn upon without limit? And, conversely, if the Democratic party has suffered and our politics been corrupted by the large money contributions of the protected manufacturers to campaign funds, what an orgy of vote-buying and legislature-purchasing would be sure to result when all the large property-owners of the country were driven to lavish political outlay in order to protect themselves from spoliation! What could ballot-reform or corrupt-practices acts

do to prevent the demoralizing irruption of the moneyed classes into politics, who would always be ready to spend one-quarter of their all in order to save half of it?

It is said the rich largely escape taxation under customs laws and internal-revenue statutes. This is by no means so clear as is often assumed, though it may be admitted that, under the ingenious arrangements of McKinley, the poorer classes are disproportionately taxed. But federal taxation is not the only kind, is not the most important kind, of taxation in this country. State and municipal taxation surpasses it in amount many times over. Who pays this tax, and who escapes it? Everybody knows that it is the large estates and the middle classes upon which this burden mostly falls, and that the poor are almost entirely freed from it. Here is another powerful argument against the income tax, that it tends to exalt the national government over the local government, to extend the mischievous idea that the federal government and federal politics are the only things for the citizen to concern himself about, and that all legislation must more and more be confided to a great central power which insensibly shades off into the all-wise and benevolent State of the socialists.

Finally, it is said that, even if all this is true, the aggregation of wealth in private hands is so great a danger that it must be attacked at all hazards and by any means. This is a thoroughly Populist position, theoretically, and, practically, it completely overlooks the means by which wealth and its blessings are, in the long run, invariably diffused through the community. If a rich man is a niggard, the chances are ten to one that his sons will be spendthrifts, and a hundred to one that his grandsons will be, if the family lasts so long as the third generation. The devil, or Providence, as one chooses to consider it, has a fateful way of breaking up great properties in this country, so that, looking merely at the typical miserly rich man whom the Populist is aching to get his taxing hands upon, it is certain that, all in good time, "distribution will undo excess and each man have enough."

On the other hand, the philanthropic rich and the effect on them of laws aimed at their property are altogether left out of the Populist account. Yet it is certain that they give up every year of their wealth for the public good; if not for wasteful legislation and for socialistic schemes of state industries, sums of money far vaster than any system of taxation could possibly extort for them. Take Mr. Rockefeller, for instance. He is a man for whom, personally, we have no particular admiration. But he is precisely the kind of man, growing rich out of public franchises, whom the Populists have in mind as fit subjects for spoliation. Yet to Chicago University alone he has given, since its foundation, upwards of $3,500,000, while his other charities during the same time must bring the total up to $5,000,000. Could any such sums have been wrung from him by any conceivable system of taxation? On the other hand, if he and men like him were singled out for special and onerous taxes, would not the certain effect be to dry up the streams of their public benefactions? It ought to be clearly understood that if the wealthy classes are to be set off by themselves as subjects of burdensome and increasing taxation, the result will be sure to be, partly through diminishing their ability and more by diminishing their good will, to cut off the support of hospitals and libraries and museums and colleges and churches, for which now such large and constant demands are made upon their generosity.

THE REPORT AGAINST MR. HORNBLOWER.

It is unfortunate for Mr. Hornblower and for the country that his rejection by the Senate committee should have political importance, but such importance it has. The professional objections to him have never been serious. To say that he is young for the place is to disregard many precedents and to err grossly about human maturity. A man who at forty-two is not fit for any place calling for judgment, knowledge, and discretion is sure never to be fit at all. The cases are, indeed, rare in which any advancement based on merit comes to a man after that age. It is literally the meridian of life. He may subsequently have a larger practice, but he cannot deserve it more. We should be indeed fortunate if we could get all our federal judges at that age, so that we should have a fair prospect of thirty years of service from them on the bench. The objections to him touching the nature and amount of his practice, have been equally trivial. They have been urged in the main by two obscure lawyers whose enmity he has excited in the course of his practice, and who have gone to heavy expense in printing and travelling in order to vilify him. The opinion of the bar of this city and State has been unmistakably on his side. We believe that a vote of Mr. Hornblower's own profession would place him among the *dignissimi*. Moreover, he will lose nothing by comparison with all the appointments to the Supreme bench hitherto made by either Mr. Cleveland or Mr. Harrison, and this we say while admitting that Mr. Harrison's appointments were exceptionally good.

What, then, has led to his rejection? A combination of causes. It cannot be forgotten that he was one of two lawyers whose presence on the committee of the Bar Association which investigated the election frauds of last year, Maynard specially asked for. It was, therefore, a deep mortification to Maynard and his partisans, familiarly known as "the Hill crowd," when these two lawyers joined in the anti-Maynard report. It is a cardinal rule of the corrupt politics in which Hill and his people revel, that not only should an agent never be deserted, but that an enemy should never be forgiven. They were, therefore, bound by the constitution of their ring not only to nominate Maynard for the Court of Appeals, but to slaughter any of his judges on whom they could lay hands. Their opportunities of revenge are few, for, we believe, no member of the committee is in politics, or is, or is likely to become, a candidate for any political office. It was, however, Mr. Hornblower's evil fate to be selected for a place which brought him within the range of Senator Hill's malice. The "courtesy of the Senate," which assumes that the greatest rascal who gets into that body will consider the public good in passing on nominations made from his own State, doubtless powerfully aided in staving off confirmation or defeating it.

But there were other causes, perhaps just as powerful, which it would be foolish to ignore. One is the absolute lack of public spirit in the Senate on both sides. The great men of other days are gone out of it. The men who fill it are all engaged in the smallest kind of partisan politics. Even Senator Hoar, who is supposed to be the last heir of the great traditions of the body, is probably occupied just now far more with stirring up strife in the Democratic party than in providing good judges for the Supreme bench. In other words, the tariff, being regarded by so many men as a question of property, produces a bitterness and unscrupulousness in everybody who has an interest in it, which destroys all real regard for any function of the government which does not propose to fill his pockets. There is nothing sacred for a high-tariff man when brought to bay. "I will beat Wells if I have to mortgage the mill," said a Connecticut manufacturer, and doubtless many a Senator would help put a Maynard in the Supreme Court if he were sure it would embarrass the President or increase the number of his enemies. It is a notorious fact that a large number of them to-day occupy themselves in trying to find out what he wants in order to prevent his getting it. He has not grown in the affections of political men since his election. On the contrary, the hatred which led them to scout the idea of his nomination and caused them to witness his election with dismay, has been greatly aggravated by his reappearance in the presidential chair.

We should like to stop here, but it is due to the history of our time to say that the President has done little or nothing either to disarm hostility or to increase the number of his friends. He is not "magnetic," and if we said he had winning manners, we should depart widely from the truth. Ever since he came into office, he has almost studiously ignored his chief supporters of 1884, 1888, and 1892. He has not sought their counsel, and he has apparently tried to forget that they ever served him. His allusions to the civil-service reformers in his message to Congress and in his letter to Mr. Van Alen were very unfortunate coming from a gentleman who owed them so much. The notion, too, which at times has seemed to possess him, that he could in any way consistent with his character and principles conciliate his enemies in this State, showed a surprising simplicity in a gentleman who had lived among them so long. Either he or they would have to undergo a complete change of heart in order to live together in amity or to work in concert. A very small experience of them, together with a very small modicum of worldly wisdom, would seem to have prescribed to him, when he took office, the propriety of fostering the devotion of those who compelled his nomination and secured his election. They were what is best in the Democratic party as well as in this community, and the only men who can give the Democratic party any future after Mr. Cleveland's career is closed. The notion that Hill and Murphy and their kind can ever commend that party to national favor or acceptance is surely a great hallucination. It must live, if it is to live, by the presence in it of such men as Mr. Cleveland and his anti-snappers, who alone saved it from total wreck at the last election. Everybody else in it was totally discredited with the country at large.

NEWSPAPER SOCIETY.

An evening journal in this city received the following by special messenger a few days ago:

"Sir: In publishing names of attendants at the Charity will you kindly mention Mr. and Mrs. ——! If you mention costumes, Mrs. —— in pink and Nile novelty satin 'décolleté,' old lace, diamond ornaments. We were late and missed the newspaper men. If there is any charge, kindly let me know by bearer, and greatly oblige.

"Signed by Mr. ——."

What is interesting about this is the belief it reveals that some portion of the public carefully peruses the lists of people at charity and other public balls, notes who was there, and makes a mental image of the costumes. But this again is based on a still profounder faith, that by getting into the newspapers you get into "society." If the public only knew the extent to which the givers of teas, receptions, and little gatherings of all sorts coöperate with the reporters in getting an account of these festivities into the "society column" of the morning papers, it would read that column with renewed zest. "Society" in New York really means nothing except a collection, more or less large, of people who invite other people to their houses, either to dinners or to dances or to parties of some kind. It connotes nothing as to manners, or education, or birth. As soon as a man or woman begins to do this, he or she is on the way to society. By persistently issuing invitations to entertainments for two or three years people at last begin to accept them, and the aspirant is "in society," and becomes a "society man," or "society woman," or "society girl," as the case may be. But it stands to reason that no such rapid progress would be possible without the aid of the press. Being a candidate for society would be a very tedious business if nobody knew it but the people who get your invitations. So the reporters are called in, and through them it is given to the world that on a certain afternoon Mrs. A gave a tea, which was attended by Mrs. B, Mrs. C, and Mrs. D, and Miss G, and so on.

Now the effect of this on the outside world is very curious. The great body of the readers believe that there was at Mrs. A's a very brilliant gathering, and that she and her company are, so to speak, "in it" up to their eyes. If it were not so, why should it be in the newspapers? And once Mrs. A's social doings get into the newspapers, they really never get out of them as long as money lasts. Teas, receptions, and dinners succeed each other in rapid succession, and at the close of the season the "newspaper man" follows Mrs. A to Bar Harbor and Newport, still keeping up the popular excitement about her doings, until her triumph is assured. Publicity, in other words, carries the day. To the outside world the "society column" is paradise, where the men and women live in silks and satins and drink champagne all day long, and are eagerly watched by mankind. In reality it is a region of very hard work and some anxiety. Mrs. A has to get as much space as Mrs. B, and "newspaper men" are notoriously slippery customers and have to be cajoled and "placated." Then it is very hard to make them get the costume right without giving it to them yourself in writing, and once you do this you are in the creature's power for ever, and he can trample on you as he pleases.

No account of the troubles of newspaper society, however, would be adequate which said nothing of the snares set for it by enterprising press speculators. Of course this passion for publicity is well known to the great army of publishers of one sort or other who try to make a living out of the weaknesses of their fellow-men. These gentry are naturally constantly occupied with the invention of modes of extracting "honest dollars" out of people's anxiety to be thought members of the world of fashion. Their activity has been greatly increased since a foolish and ridiculous man set down the number of New Yorkers who could be said to belong to "society" at 400, but without giving any list of names. This exact definition of the number was all the speculators wanted, and they at once set to work printing lists of their own, and of course they could not be expected to put anybody on the list for nothing, and they were sure of a sale of four hundred copies of the work to those who knew they were in it, four hundred more to those who hoped to be in it, and at least four hundred to those who wanted to see who were in it. Other speculators, of course, got up lists of their own, and the "Four Hundred" became a newspaper synonym for aristocracy. The aristocracy of New York then underwent more mutations in a month than that of France or Venice in a thousand years. The way estimable citizens, male and female, were kicked in and out of the Four Hundred by rival newspaper men was a sight which ought to have moved the sternest to tears.

There is even now a speculation under way, carried on by a body of unknown persons, doubtless live journalists, calling themselves the "Historical Company," which we think will tickle "society people" terribly. The company sends you a circular, acknowledging that you are a conspicuous member of "the Four Hundred." You are touched by this. You feel that these fellows evidently know who's who, and you read on. You find that the biographies of the Four Hundred are going to be published, and for this purpose you are asked for particulars about your birth, parentage, education, and situation in life, and about your ancestors for three degrees, fuller than any French *juge d'instruction* would require in a murder case. If you do not answer, this list of the Four Hundred will probably appear without you, and there you are. If you do answer, you probably will have to lie freely in order to make your antecedents respectable. If you do not lie, and your antecedents are not respectable, how will you ever show your face at the teas? The rascals who have got up these dilemmas of course care nothing about your feelings. They simply want to make a little money, and they will probably make it.

ITALY AND THE TRIPLE ALLIANCE.

Rome, December 26, 1893.

It suits France to assume that the Triple Alliance is the cause of the Italian financial embarrassment, and it pleases the republicans and radicals of Italy to repeat it, but in point of fact the Alliance, by means of the military confederation, enables Italy to provide for her

security from attack by land with a much diminished army. The Italian army at this moment is only about 160,000 men under arms, hardly enough for all the garrison duties and the public security, and this number includes the carabinieri, who are more policemen than soldiers. It is perfectly well known, and I have the highest official assurance of the fact, that the treaty of the Triple Alliance imposes no conditions as to the force to be kept under arms by either of the allies; but as the enemy against whom all the members of it had to provide was chiefly France, and in the alternative Russia, and the only desire of the central powers was peace and a successful defence if war came, the confederation of the central powers enabled each to diminish its force, and I know that the strength of the army is really much less than it would be considered prudent to leave it if Italy were isolated. It is now less than that of the English army. The great gain of the two northern powers by the alliance was the security of Austria against an attack on the south in case she should be engaged with Russia, and an aggressive part in a possible campaign has never been expected of Italy.

The total cost of her army this year is less than $50,000,000, and when we consider that the army is the great school of the nation, the most efficient means of reducing it to unity and homogeneity, that the total budget of the kingdom is a milliard and a half of lire, more or less, of which the army takes about the sixth, it cannot be said that the military expenses are the ruin of Italy. The fact is, and the recent outbreaks in Sicily show it, that the army is not large enough to secure order and legality in the kingdom. The present Government of Italy is gathering the fruits of ages of misgovernment as well as of extravagance during the past thirty years. State property to the amount of three milliards of lire, or six hundred millions of dollars, has been wasted in various ways, but mainly with the purpose of avoiding the necessity of taxing the nation to carry on the business of the state; and now, when the patrimony is exhausted and taxation is necessary, it is found that the Government demands sacrifices. Three milliards and a half have been expended in the construction or purchase of railways, of which not a single network pays its expenses and the interest on its cost—partly owing to their construction having been conducted on electoral principles, to conciliate the voters of the provinces served, and partly owing to their bad and wasteful management, so that the railways alone make a deficit in the national accounts of about one hundred millions a year, exclusive of the interest on the bonds for their construction. The army of *impiegati*, the public servants in the vast and complicated machinery of the state, is in most departments double what is required, and diminution is rendered impossible by the number of votes they would influence. Their number is probably much more in excess of the actual needs of the country than that of the army, even if the ranks were full.

The present distress of the country is due to the commercial crisis, due in its turn to the immense inflation of all kinds of business, and especially building, and real-estate operations connected therewith, beginning about ten years ago, and connected more or less with the absurd megalomania consequent on the acquisition of Rome as the capital of the nation and the idea of the third Imperial Rome (offspring, by the way, of Quintino Sella, the pride of Italian finance, not of Crispi, who only came in for the promises and debts which Sella & Co. had made). As long as loans were easy and the income sufficed to pay the interest, all went on smoothly, and it was only when the commercial crisis diminished income that the public began to realize that spending meant, sooner or later, paying. But extravagant expenditure in all directions had become so the rule of the state and the commune that it was impossible to arrest it at once. Rome and Naples became bankrupt, and the Royal Government had to take up their obligations as it had done those of Florence ten years before. Rome alone had sunk 700 millions of lire in works either useless or totally unremunerative, and the state has had to undertake the completion of all the public works. Under various laws, from 1879 to 1885, there were appropriated for public works at the charge of the state 1,610 millions of lire, and for 19 railways voted in the first of those years the expense exceeded the appropriation by 200 millions. All these have had to be paid for in the subsequent years.

As if it were not enough to have overloaded the finances of the state with debts for posterity to pay, the ministries from 1880 to 1885 abolished taxes which at a moderate estimate would now produce 150 millions a year, among them being the grist tax, which would alone now give an income of over 100 millions a year, and the abolition of which has not affected the price of bread in the least or really benefited the lower classes, but which cannot be reimposed. The salt tax, which could be depended on for about 25 millions, was another of the abolished taxes which cannot be restored. This is the way in which the prosperous days of the Italian existence were provided, to be paid for by a mortgaged future, become an almost bankrupt present. But this was not enough. The earlier governments, which earned cheap glory by the contraction of debts for the present, also left it the *corso forzoso* (legal tender, we called it), though they had contracted a debt of 600 millions to abolish it; and what was infinitely worse, they left the finances of the state and the issue of the currency the monopoly of joint-stock banks, arranged in such a way that the banks would get all the profits, if any, and the country all the losses. These banks are now practically bankrupt. They lent their capital during the great crisis of four or five years ago on real estate and other securities which they were legally forbidden to lend on, and they have now a circulation of about 1,000 millions out, and cannot realize on the securities they hold to redeem it if presented, and the presentation is prevented only by the legal-tender provision of the law. The natural result is that the premium on gold is such as to cripple enterprise and add enormously to all the losses and embarrassments of commerce, already almost paralyzed by the bursting of the great speculation bubble.

What share, then, has the military expenditure of less than two hundred and fifty millions a year, and the naval of about one hundred, in the present state of things? Would the withdrawal of Italy from the Triple Alliance enable her to dismiss an army when what she has is not enough to keep order in the state? Could a nation which is one of the most active of the European nations on the sea, be without a navy? Would not exclusion from any alliance, and isolation in Europe, with the risk of a war on the north and another on the west, to say nothing about the accidents which all civilized nations have to risk, compel her to have a larger rather than a smaller army and navy? Even Belgium, protected by treaties in her neutrality, is now obliged to strengthen her army to avert the violation of her frontiers in the impending collision between the greater powers, and Switzerland is busy fortifying her frontiers and putting her armory in order; what chance has Italy, then, to keep out of the broil?

Then we have Massowah, which costs another fifty millions and returns no profit beyond the chance of now and then showing, as just now at Agordat, how well the Italian military organization works and what gallant fellows their officers are, and this we all knew long ago. But this too has nothing to do with the Triple Alliance. Nor has any one of the chief causes of financial embarrassment which now afflicts Italy, except the single fact that she does not sell so much of her wines to France as she used to. And that the exclusivist and protectionist measures now adopted against Italy would have been adopted in any case by the protectionists is made more than probable by their application to Switzerland, which is not in the Alliance. The outbreak of war in Europe, even if Italy were not directly involved in it, would cost her far more than the present system of coöperation in a league the object and up-to-date effect of which has been and is to keep the peace in Europe. It is only through French spectacles that the Triple Alliance is seen as the prime cause of any financial or political trouble to Italy. But the French want war, and mean war, and Italy in the Alliance is another obstacle to this intention. They talk peace, but, as an ex-officer of the war of 1870 said to me last summer: "We want it after we have got back Alsace and Lorraine." And that is what it really means.

W. J. Stillman.

THE SPANIARDS AT MELILLA.

Algiers, December 20, 1893.

No one out of the peninsula during the past few months of hostilities between Spain and the Moors of the Riff tribes can have formed any idea of the prevailing excitement on account of this event. The Spanish newspapers have devoted pages of every issue to the "campaign in the Riff country"—pages of headlines and of glorification of Spain and her soldiers. The calling out of the first army reserves has flooded every city with half-uniformed levies, and every movement of troops has drawn animated crowds to the railway stations. Every railroad and every harbor in southern Spain has been strained to transport soldiers and supplies to the scene of action, and a cabinet crisis almost occurred because the war minister could barely be dissuaded from resigning his portfolio and placing himself at the head of the glorious expedition. All this has furnished plenty of excuse for a display of blatant patriotism and national vanity which, to an American, has in some of its aspects a familiar Blaine or Jingo air. Nevertheless, this "campaign" has been a great boon to the gossips of the cafés and a stimulus to promotion in the army, and as it has brought Spain into prominence among the European powers holding African possessions, of course little consideration is paid to the fact that the expense thus far has exceeded fifteen millions, and has greatly added to the existing financial troubles of the Government.

Melilla itself, as seen at sunrise from the roadstead, presents a wonderfully picturesque appearance, being situated upon and around a high rock jutting out into the Mediterranean. The old-fashioned fortifications, with here and

there a threatening cannon, the crowded little Spanish houses, with an occasional new barrack; the tents of the soldiers, and the outlying forts on the hills beyond; the heavily laden transports and the grim men-of-war floating on the blue water—all this makes an enchanting spectacle. Indeed, it is not until the crimson rays have faded away into white, and the many clear-voiced bugles have ceased their musical calls to reveillé and to breakfast that one realizes that the curtain has not risen on a new opera, and that the interest of the place lies not in its picturesqueness, but in the purposes and actions of the armed men it contains.

Viewed in broad daylight, Melilla is a surprisingly small place, with next to no attractive houses. Its streets are very narrow and very steep, and it is evident at a glance that the town has not the slightest value except as affording Spain a foothold in Africa and the advantages of an open roadstead for her ships. On the 14th of December, the day of my visit to Melilla, hostilities were still suspended pending the negotiations for peace, so that inspection of the camps was everywhere permitted and there were not even sentries at the landing-place to question a visitor's purpose. The faces of two or three Jewish traders, who looked sadly through the barred windows of the small cell which forms the guard-house, proved, however, that the commander-in-chief, Marshal Martínez Campos, is in earnest in his efforts to check any traffic in guns or ammunition with the enemy. In that portion of the town which lies at the foot of the rock there was a pitiful attempt at a market; stores were few and far between, but there were a number of booths of the usual camp-followers, most of them for the sale of liquors. In an Anglo-Saxon camp of corresponding size, this sale would be suppressed; but a drunken Spanish soldier is a rare sight anywhere. The only building in the least worthy of the name of a hotel was a shockingly dirty place, but so extensive was its business that the privilege of occupying a chair cost five pesetas (about one dollar) a night! So few women and children were to be seen that it was evident that numbers of the inhabitants had withdrawn during the hostilities. One met with quite a number of friendly Moors, and at the landing-place a most interesting crowd of soldiers, sailors, boatmen, Moors, negroes, gendarmes, and civilian laborers could be studied.

From a military standpoint, there is much to find fault with in Melilla. Perhaps the most striking thing in the whole town is the lack of the simplest sanitary arrangements and precautions. With the exception of the tiny square in front of the chief military office building, the streets are very foul. Even in the camps outside the walls there are no evidences of systematic policing, and useful materials are thrown about in an inexcusably careless way, while nowhere is there that neatness ever to be expected of good soldiers. The fortifications are antiquated, and, with the exception of four Krupp pieces, the heavy guns are still more so, dating back to 1850, and in the case of the mortars to 1780, suggesting at once in their appearance the old trophies at West Point. The marshal himself says that the outlying forts are badly located and not well built. They have to be reprovisioned once every eight days, and that at a serious cost of life if warfare be going on. From the electric search-light tower the walls of the new fort were visible, which have since collapsed, owing to the rains. It was the construction of this fort, together with the extension of the neutral zone, which brought about the whole trouble.

At present there are some 30,000 troops in Melilla, and these are commanded by 26 line generals. Throughout, the number of officers in proportion to the soldiers is very large. The regiments are generally small, but have been more or less recruited. One artillery regiment at home had but 300 men to some 35 to 40 officers, I was informed; but this may have been an exceptional case, and doubtless those at the front are considerably larger. At Melilla the light artillery guns were parked in the open air without breech coverings, whereas mules and horses looked well taken care of. The soldiers themselves wore the fatigue working suits, originally of some coarse linen, but they were so campaign-worn it was hard to tell what they had been. The men were in the best of spirits, and, as far as could be judged, made light of their hardships and enjoyed their rations of wine and the *puchero* doled out to them. This latter dish, a sort of soup of peas and other vegetables, forms a large part of the diet of the Spanish soldiers, as well as of the peasants, but it seemed a scanty fare. The English soldiers at Gibraltar spoke of it with an amusing mixture of horror and disgust, combined with a good deal of pity for their Spanish brothers-in-arms, but the latter seemed to relish it, and I saw nothing of the dissatisfaction which, according to French despatches, is universal. A large detachment of men carrying heavy burdens of flour joked and larked as though it was very good fun, and they went, in fact, almost too far with their noise. The soldiers appeared to have a great deal of liberty about town, and in consequence there was considerable wrecking of traders' booths, for which, as an example, one poor fellow was sentenced to be shot. As a whole, the Spanish soldiers are under-sized and under-aged, nor have they a very strong physique. The officers are neat and very soldierly looking.

In the afternoon of the 14th there was a division drill along the beach, across the river, and upon the hills, which are the spurs of a mountain 3,000 feet high, by no means a blot on the landscape. The men marched quickly, executed the skirmish-drill movements well, and, from a distance, appeared to be carefully and ably handled, which was a distinct surprise after what I had seen in Spain. As though to add realism to the picture, blank-cartridge firing was indulged in, and as the manœuvres were executed near the neutral line, small bodies of Moors appeared to watch the spectacle, which was put an end to by a heavy rain. The town of Melilla itself is not well situated, and the opinion has more than once been expressed that it is defensible only against the Moors. It certainly seems as though some modern cannon on the neighboring mountain would speedily render it untenable.

At anchor in the roadstead lay the fleet which recently created such havoc among the Moors by firing upon them suddenly at night by aid of the powerful search-lights. There were six ships in all, ranging from an old vessel with tall spars very much resembling Farragut's *Hartford* to more modern ships. The flagship *Alfonso XII.* added to the martial picture of the afternoon by practice-firing from a bow gun. There were no foreign men-of-war in harbor. On the 18th a gale drove ashore a Spanish vessel which the Moors promptly attacked. The nearest forts replied, but the affair soon ended and the Moors have humbly apologized. In fact, as the expensive fort has fallen to pieces and the Sultan has promised to disarm the belligerent tribes, we shall soon see Spain once more pacific, and doubtless well satisfied at having added another glorious triumph to the many feats of Spanish arms. O. G. V.

Correspondence.

AN OLD-WORLD LESSON.

To the Editor of The Nation:

Sir: It is not only German professors of philology who were in some way moved by their experience at the World's Fair to sympathize with women in their desire to get access to German universities. Prof. Klein was so well convinced of the fitness of an American woman to become an attendant upon his lectures (what he discourages most aspiring American men-students of mathematics from undertaking) that he brought his powerful influence to bear upon the Prussian Cultusminister upon her account, and has thus caused the doors of the ancient University of Göttingen to open enough to let exceptional women in. It is to be hoped that, when the next world's fair is held, at Berlin, the Harvard College authorities may be sent thither, and may there discover that, even under Old World customs, it is possible for women to listen to great professors in the same room with men with a very high degree of safety to them both. X.

THE ADMISSION OF UTAH.

To the Editor of The Nation:

Sir: You say that "because we have several States which ought to be Territories is no reason for making another mistake of the same sort." Most true indeed is this; but, conversely, is that a reason for refusing statehood to a Territory that in an eminent degree possesses all the qualifications heretofore deemed essential in a new State, and especially those of prime importance—population and wealth? The population of Utah in 1890 was 207,905, while the aggregate population of Idaho, Nevada, and Wyoming was 190,851, a difference in Utah's favor of 17,054. The assessed valuation of property in Utah for 1893 (a year of extreme business depression, when values of all kinds were greatly depressed) was $115,114,842; total Territorial debt, $700,000; value of public property, $1,175,459.76.

As to Congressman Harter's objection—"that we do not want any more States until we can civilize Kansas"—that is most unfair to Utah, for it may be that Kansas never can be civilized; and let it be remembered that Kansas, "bleeding Kansas," got its form of civilization from the New England Emigrant Aid Society, and not from the West.

You commend Senator Proctor's bill for annexing Utah to Nevada, and say it is an "ideal solution of a problem which otherwise must apparently always remain on our hands." That problem is Nevada's, not Utah's. It may be answered, it probably will be answered, that Congress and Nevada will decide the question, and that the people of Utah will have to abide that decision. But would not the imposition of the Constitution of Nevada on the people of this Territory, willy-nilly, be an outrage on them and a gross violation of the best traditions regarding the admission of new States? And the further question arises, may it not be unconstitutional? It is safe to say that to-day Utah's population is six times greater than Nevada's, and to annex us to her against our aspirations and will would surely

be to make the tail wag the dog; and a bob-tail at that. I am sure the *Nation* is wrong when it intimates that opposition to the proposed annexation would come from office-seekers mainly. It would come from the entire people, irrespective of politics.

In Utah we have had a long struggle for the vindication and supremacy of the nation's laws, and to-day they command the respect and obedience of all. The past is past, and all are looking forward to a happy, prosperous, and honorable future as a State of the Union. We in Utah are pleased to think that we have, in the language of Prof. Bryce, a share of that "reserve of force and patriotism more than sufficient to sweep away all the evils which are now tolerated, and to make the politics of the country worthy of its material grandeur and of the private virtues of its inhabitants."

If Utah is not fitted for statehood let her remain a Territory, but we do ask not to be annexed to the pocket borough of Nevada.

Yours very respectfully,

ALFALES YOUNG.

SALT LAKE CITY, January 2, 1894.

[We cannot let our correspondent's historical inaccuracy pass uncorrected. So far from Kansas civilization being a product of New England, the original settlers from that district and New York together were outnumbered by those from Indiana alone, to say nothing of Illinois and Iowa (whence Kansas derived its some-time appellafion of the State of the three I's). The problem of civilizing Kansas is still a Western, not an Eastern one.—ED. NATION.]

OUR FOREFATHERS ON FOOTBALL.

TO THE EDITOR OF THE NATION:

SIR: Apropos of your crusade against football and of what is said for this college pastime (is not a college, sir, a place where they play football—or is this the description of a university?), I send you some old comments on the sport, from which your readers may draw their own conclusions. In Sir Thomas Elyot's 'Boke named the Governour' (1531), after describing various games profitable for exercise, he says:

"Verily as for two the laste be to be utterly abjected of al noble men, in like wise foote balle wherin is no-thinge but beastly furie and extreme violence; wherof procedeth hurte, and consequently rancour and malice do remaine with them that be wounded; wherfore it is to be put in perpetuall silence" (I., p. 295).

In Croft's edition of the 'Governour,' from which the above is taken, occur some interesting notes on the same subject. For example, King James I., in commending athletic exercises to his son, says, in the 'Basilikon Doron':

"I debarre all rough and violent exercise, as the foot ball, meeter for laming than making able the users thereof."

Carew, in his 'Survey of Cornwall' (1602), describes "Hurling," which seems to be the modern football, as "a play verily both rude and rough." He adds:

"The ball in this play may be compared to an infernal spirit, for whosoever catcheth it, fareth straightways like a madman, struggling and fighting with those who go about to hold him. . . . I cannot well resolve whether I should more commend this game for the manhood and exercise, or condemn it for the boisterousness and harm which it begetteth; for as on the one side it makes their bodies strong, hard, nimble, and puts a courage into their hearts to meet an enemy in the face, so on the other part it is accompanied with many dangers, some of which do ever fall on the players' share; for proof whereof, when the Hurling is ended, you shall see them retiring home as from a pitched battle, with bloody pates, bones broken and out of joint, and such bruises as serve to shorten their days; yet all in good play, and never attorney nor coroner troubled for the matter." N. M.

NEW YORK.

TWO RARE EDITIONS OF GASS.

TO THE EDITOR OF THE NATION:

SIR: (1.) The catch-title of a certain German publication relating to the travels of Lewis and Clark has haunted bibliography for many years. I first noticed it in 1876, but have been until very recently unable to identify the book to which it refers. As given by Kayser, it reads: "(Lewis und Clarke.) Tagebuch e. Entdeckungsreise durch Nord. Amerika in d. Jahren 1804–6, Aus d. Engl. v. Weyland. Mit. 1 Karte." It is described as gr. 8vo, Weimar, 1815, and as forming Band I. of the "Neue Bibliothek der wichtigsten Beschreibungen," etc. I remarked in my edition of Lewis and Clark that this might be a Gass; and such appears to be the fact, for I have just received, through the attentions of Mr. Francis P. Harper of New York, a German Gass which enables me to lay the ghost in question. Following is the full title:

Tagebuch | einer | Entdeckungs - Reise | durch | Nord - America, | von | der Muendung des Missuri an bis zum Einfluss der | Columbia in den stillen Ocean, | gemacht | in den Jahren 1804, 1805 und 1806, | auf | Befehl der Regierung der Vereinigten Staaten, | von | den beiden Capitaens Lewis und Clarke. | — | Uebersetzt | von | Ph. Ch. Weyland. | — | Mit einer Charte. | — | Weimar, | im Verlage des H. S. privil. Landes-Industrie-Comptoirs. | 1814.

One vol. 8vo, pp. i–x, 1–362, with one map. Title, verso blank, pp. i, ii; Jefferson's message to Congress, pp. iii–v; translator's preface, pp. vi–viii; contents, pp. ix–x; bastard title, verso blank, pp. 1, 2; main text, pp. 3–345; two letters of Clark, pp. 346–362; map at end, 9⅜ inches high by 7⅝ wide.

This is a genuine Gass, with which I have compared it carefully. The translation is a very free one, and undoubtedly was made from the French version of Lallemant (8vo, Paris, 1810), though Weyland may easily have also had an edition in English before him. But that he followed Lallemant appears from the facts (1) that the Jefferson message is prefixed and Clark's two letters are suffixed, as in Lallemant; (2) the twenty-five chapters are each headed with the dates of the Journal which they respectively cover, as in Lallemant; (3) the French translator's notes are rendered in German; and (4) the map is lettered in French, and legended "Carte pour Servir au Voyage des Capᵉˢ Lewis et Clarke, à l'Océan Pacifique." I cannot see that the German editor has added anything at all, except the new "Vorbericht des Uebersetzers." In this preface Weyland calls the doughty sergeant "Sir Patrick Gass," and explains that inasmuch as the full history of the expedition had not yet appeared, or at any rate had not reached Europe, the Journal of Gass would answer a purpose for the time being, etc.

I have no doubt whatever that this book is the one Kayser cites. The difference in date (1815 instead of 1814) probably means no more than that the next year another issue, or some of the copies of 1814, were taken up into vol. i. of the "Neue Bibliothek der wichtigsten Beschreibungen." The unwarrantable omission of Gass's name from the title-page has caused the trouble and long delay in identifying the publication. It is to the last degree improbable that any German version of the genuine Lewis and Clark appeared in 1814 or 1815, as the original was not published till February 20, 1814 (see *Nation*, No. 1437). There is no question that the German editor did his work in good faith; this is a Gass complete, though the appearance of Jefferson's message and Clark's letters gives the book the air of one of the apocrypha, and though what Gass's geography, ethnology, and natural history became in passing through French into German is best left to the terrified imagination.

(2.) I lately handled in the library of Minneapolis a Gass which was quite new to me, though Sabin cites it in his Bibliography. It is entitled as follows:

Lewis and Clarke's | Journal | to the | Rocky Mountains | In the years 1804,–1805,–6: | as related by | Patrick Gass, | one of the officers in the Expedition. | — | New Edition with Numerous Engravings. | Dayton, | published by Ells, Claflin, & Co. | 1847.

One vol., sm. 8vo (size of a 12mo, but 8 leaves to a signature), pp. i.-viii., 9-238 + 1 leaf advts., with many full-page illust., all of which count for pagination—thus pp. i., ii. are frontisp., p. iii. is title, pp. iv.-viii. are preface (dated Mar. 26, 1807), pp. 9, 10 are portrait of Lewis, pp. 11, 12 are portrait of Clark, each verso blank; Journal begins p. 13, ends p. 238.

This is likewise a genuine Gass. It is a fair and full reprint of the original of 1807, without any extraneous text, though the illustrations are all interpolations. These are all, no doubt, the same as those which Ells got up for the spurious Lewis and Clark which he published at Dayton in 1840. I recognize the two portraits as being the same, but have not had an opportunity of comparing the rest. I am glad to find it an honest book—whether Ells wanted to make amends for his misdeed of 1840, or wanted to prescribe good medicine for disorders incident to the "Oregon fever" of 1842. ELLIOTT COUES.

SMITHSONIAN INSTITUTION, December 31, 1893.

JUPITER'S SATELLITES IN 1664.

TO THE EDITOR OF THE NATION:

SIR: I have brought to the notice of three astronomers an interesting letter of John Winthrop (the second of that name), written in 1664 to Sir Robert Moray, in which Winthrop declares that, "having looked upon Jupiter with a telescope," August 6, 1663 (old style), he "saw five satellites very distinctly about that planet." He reports the observation with natural distrust, lest it should be "a mistaken novelty." As the letter (which is printed in the Proceedings of the Massachusetts Historical Society for June, 1878, p. 220) had never been noticed by the three astronomers above mentioned, I make the following extract from it for the entertainment of other scientific antiquaries among your readers. If any one knows what has become of Winthrop's astronomical "tube," perhaps he will inform you.—Yours respectfully, D. C. GILMAN.

JOHNS HOPKINS UNIVERSITY,
BALTIMORE, MD., December 22, 1893.

JOHN WINTHROP TO SIR ROBERT MORAY.

HARTFORD, Jan: 27: 1664.

In my former I gave your honor an account of the favor I had of your letter by the Hon. Colonell Richard Nicolls. I then omitted to acquaint your honor what now I will be bold to

add: that havinge looked upon Jupiter with a Telescope, upon the 6th of August last, I saw 5 (?) Satellites very distinctly about that Planet: I observed it with the best curiosity I could, taking very distinct notice of the number of them, by severall aspects with some convenient tyme of intermission; & though I was not with out some consideration whether that fifth might not be some fixt star with which Jupiter might at that tyme be in neare conjunction, yet that consideration made me the more carefully to take notice whether I could discerne any such difference of one of them from the other foure, that might by the more twinckling light of it or any other appearance give ground to believe that it might be a fixed starr, but I could discerne nothing of that nature: and I consider that the tube with which I looked upon them, though so good as to shew very clearely the Satellytes, yet was but of 3 foote and halfe with a concave ey-glasse; and I question whether by a farre better tube a fixt star can be discerned so near the body of that planet when in the ever bright activity of its light, for, if so, why are there not often if not alwayes seene with the best tubes the like or more. Is not Jupiter often in neere conjunction with them, especiallv *in via lactea?* I have been in much doubt whether I should mention this, which would possibly be taken from a single affirmation but a mistaken novelty: but I thought I would rather beare such sensure than omit the notice of it to such worthy friends as might from the hint of it take occasion to cause more frequent observations to be made upon that planet, & at least this will at length be cleared, whether the light of Jupiter doth not take away the appearance of fixed starrs so neere in conjunction with it, as that they should appear within the periphery of that single *intuitus* by a tube which taketh in the body of Jupiter and that at the same unmoved aspect: and I am bold the rather to mention this as an inquiry whether any such number of Satellites or moons hath beene seene by your honor or Mr. Rooke or any mathematitians or other gentlemen that have good tubes and often have the curiosity to view the planet, for possibly it may be new to me which hath beene more usually knowne by others, though the notion of such a thinge is not new to my selfe, for I remember I mett with the like narration many years since in a little booke intituled Philosophia Naturalis per Joh. Phociliden, though then I thought that was but a mistake of some fixed starrs."

TO SPELL FOR, 'TO INTIMATE A WISH FOR,' 'TO SCHEME TO OBTAIN.'

To the Editor of The Nation:

Sir: This expression, which I lately ventured in a letter, is one which has been very little investigated. So far as I have discovered, the only lexicographer that notices it is Mr. F. K. Robinson, in whose *Glossary of Words used in the Neighbourhood of Whitby* it is defined, 'to try to obtain by address.' This, substantially, is the sense which it bears in the following quotations:

"Was it not, to every intent and purpose but the technical form of words, a promise? Was it natural, in such a case, for the one party to superadd, or possible for the other to require, a formal promise; or, consistently with the smallest particle of gratitude or delicacy, to *spell for* such a thing in the most distant manner, or to conceive that it would superadd anything to his security?" Jeremy Bentham (1790), *Works* (1838-43), vol. x., p 230.

"Before I had given him anything, he began to *spell for* something." Cardinal Newman (1840), *Letters* (1891), vol. i., p. 429.

"It will be observed, too, in the foregoing letters, that he '*spelled*' *for* the curacy and suggested the idea to me." *Id.* (1860), *ibid.*, vol. ii., p. 105.

Besides that everybody hereabouts employs *to spell for* after the manner of Bentham and Cardinal Newman, I have long and often heard the phrase, alike from gentle and simple, in many parts of England. Is it known in the United States? As being terse, and at the same time free from all tang of vulgarity, why does it not deserve a higher rank than that of colloquialism? The guesses concerning its origin which have occurred to me, since they will readily occur to others, may go unmentioned.

That the *spell for* here considered is in any way connected with *spoil for*, seen in the Irishisms "*to spoil for* a fight," "*to spoil for* an argument," etc., phrases familiar to Americans, seems far from likely. F. H.

Marlesford, England, December 10, 1893.

Notes.

A work in twelve volumes, each distinct, is contemplated (and partly executed) by Mr. Charles S. Peirce, member of the National Academy of Sciences. Its full title reads: 'The Principles of Philosophy; or, Logic, Physics, and Psychics, considered as a Unity, in the light of the Nineteenth Century.' The first volume, which is ready for the press, will be 'A Review of the Leading Ideas of the Nineteenth Century.' Mr. Peirce also issues a prospectus of a limited edition, now in course of printing, in two colors on hand-made paper, at the De Vinne Press, of 'The Epistle of Pierre Pelerin de Maricourt to Sygur de Foucaucourt, Soldier, On the Lodestone.' The original treatise dates from 1269, and "occupies a unique position in the history of the human mind, being without exception the earliest work of experimental science that has come down to us." The transcript of Peter Peregrinus's text has been made afresh from a contemporary MS. in the Paris Library, and is reproduced in black-letter together with a translation and notes. Subscriptions for either work should be addressed to Mr. Peirce at Milford, Pa.

Joel Munsell's Sons, Albany, announce 'The Pioneers of New France in New England,' or the French incitement of the Indians against the English settlements, with documentary French evidence and illustrations. The author, Mr. James Phinney Baxter, is president of the Maine Historical Society.

Mr. A. D. Weld-French of Boston purposes issuing in an edition of 300 copies his 'Notes on the Surnames of Francus, Franceis, French, etc., in Scotland,' with an account of the Frenches of Thorndykes and a discussion of the family connection with the Stuart kings.

D. Appleton & Co. will publish shortly 'Germany and the Germans,' by William Harbutt Dawson, a writer on German socialism; and 'The Greater Glory,' a new novel by Maarten Maartens.

Prof. Boyesen's commentary on Ibsen's plays is nearly ready to be brought out by Macmillan & Co.

From the Scribners we may expect R. E. Prothero's 'Life and Correspondence of Dean Stanley,' in two volumes, 'Psychology, Descriptive and Explanatory,' by Prof. George T. Ladd of Yale, 'The Philosophy of Reality,' by Dr. James McCosh, 'Essays about Men, Women, and Books,' by Augustine Birrell, and a 'Chess Pocket-Manual,' by C. H. D. Gossip.

Thomas Whittaker issues this week 'The Ascent of Faith; or, Grounds of Certainty in Science and Religion,' by Alexander J. Harrison, and 'The Son of Man among the Sons of Men,' by the Bishop of Ripon.

Roberts Bros. will soon bring out 'The Aim of Life: Plain Talks to Young Men and Women,' by the Rev. Philip Stafford Moxom; 'Allegretto,' a volume of poems by Gertrude Hall; and Balzac's 'Memoirs of Two Young Married Women,' translated by Miss Wormeley.

Lee & Shepard have in press 'The Political Economy of Natural Law,' by Henry Wood.

The third volume of Mr. Wheatley's definitive edition of Pepys's Diary (London: George Bell & Sons; New York: Macmillan) ends with the year 1663, and has for its two illustrations a photogravure after Sir Peter Lely's portrait of the diarist in the hall of Magdalene College, Cambridge, and a likeness of Sir Samuel Moreland, from a drawing in the Pepys collection.

We notice elsewhere at length the first volume in the collective edition of Huxley's works. Two other volumes of his essays are now at hand, 'Darwiniana' and 'Science and Education' (Appletons). The former contains the brief obituary of Darwin contributed to *Nature*, and the much longer one from the Proceedings of the Royal Society. The latter volume embalms the little skit "Emancipation —Black and White," published on the heels of our Federal triumph in the civil war, which, beginning with some patronizing and slightly contemptuous remarks about the freedmen racially considered, playfully tosses aside the woman suffragists in order to make a serious and just plea for the higher education of women—"Emancipate the girls."

In making designs for Macmillan's edition of Irving's 'Rip Van Winkle' and 'The Legend of Sleepy Hollow,' in one volume, Mr. George H. Boughton must have felt the pleasure of repatriation. His preface recalls his delight, in his cis-Atlantic days, in sketching and roaming along the shores of the Hudson, and his pencil must here have worked *con amore*. We do not find these pictures proof of a special aptitude for book-illustration, or superior to their predecessors. Some are out of scale with the size of the book, and the most successful are vignettes; invention and imagination are sparingly to be detected. Outwardly the book is very pretty.

'Hazell's Annual for 1894' (London: Hazell, Watson & Viney; New York: Scribners), though an alphabetical lexicon of current biography and history—"a cyclopædic record of men and topics of the day"—has much enlarged its classificatory "key to the contents," and furnishes at least one brand-new innovation of plain, uncolored maps of out-of-the-way countries, scenes of international contention. Some of the fresh topics are the African transcontinental telegraph now building from Cape Town northward, the cholera epidemic of last year, the Liberator frauds, the Bering Sea question, and the World's Fair. We wish the editor might distinguish his work above all others by giving lists of the members of the French, German, and Italian Parliaments in addition to that of the British. The value of this excellent compendium must not be judged by errors like these in the article on Grover Cleveland, all carried over from last year: "born *at* New Jersey," "Judge Foulger" (for Folger), "*Agnes* Folsom" (for Frances).

'The Year's Art for 1894' (London: J. S. Virtue & Co.) attains its fifteenth annual issue. The name of Marcus B. Huish is replaced by that of his former associate, A. C. R. Carter, as editor, but the scheme is unchanged and could hardly have been improved upon. There are the usual photographic memoranda of pictures exhibited, but, in lieu of the portraits of artists hitherto inserted in classes, we have a good number of faces of editors or art directors of periodicals devoted wholly to art, or eminent for their illustrations, as, for example, Mr. Hamerton of the *Portfolio* and Mr. Gilder of the *Century*. In

the rear comes the indispensable directory of artists.

The illustrated magazines bid us review them in their bound volumes—for the half year (*Century*), for a year (*Scribner's*). They have the World's Fair in common, together with papers on Florida, on art in Japan, etc. Two books have emerged from the *Century*, Janvier's 'Embassy to Provence' and Salvini's Autobiography, and two from *Scribner's*, Mrs. Burnett's 'The One I Knew the Best of All' and Robert Grant's 'Opinions of a Philosopher.' In point of illustrations, *Scribner's* is the innovator with its colored plates; and all signs point to the multiplication of these hereafter in all the magazines. The California Midwinter International Exposition connects with the foregoing, in a way, vol. xxii. of the *Overland Monthly*, but it also marks the predominant Pacific-Coast character of this magazine, in which we find examples of famous paintings owned on the coast, an account of the longest jetty in the world—viz., at the mouth of the Columbia River—with papers on camping-out in Mendocino, the Thlinkets of Alaska, the California fish patrol, the Chinese registering under the Geary act (with a profane photograph of General Grant actually seated at the same table with the heathen Li Hung Chang), a penological reform movement in California, etc. Without exception, perhaps, the cuts are process work, but they are aids to understanding. The illustrations of the *Green Bag* (Boston Book Co.) are wholly personal, and now that the series of this legal periodical has reached a fifth volume, the professional portrait gallery is probably the most extensive and valuable (at least for the American bench and bar) in existence. The character of this periodical, both in the serious and the lighter vein, has been well maintained, and such verse as Mr. Stafford's "A Contrast," on p. 523, does not often find its way into our literary magazines.

Babyhood is a magazine whose name explains its interests. Its medical editor, Dr. Leroy M. Yale, has extracted from the files several hundred letters and his replies, and these the Contemporary Publishing Company of Philadelphia have printed in convenient book form as 'Nursery Problems.' The problems are such as constantly confront young parents, and their solution by Dr. Yale shows competent knowledge and excellent judgment.

An admirable illustration of what is euphemistically termed British conservatism is the persistence with which the identity of typhus and typhoid fevers was held by their physicians. Louis and Gerhard, in the thirties, had satisfied all students in France and America that they were distinct diseases, and physicians at large in both countries accepted this as a matter of fact and acted accordingly. In the British Islands as well as elsewhere they had always been grouped as continued fever, and the suggested differentiation was a novelty not to be countenanced. In 1844 a leading medical quarterly, discussing this very question, held "there is but one kind of idiopathic fever," and it was not until 1849-'50 that the young Dr. (now Sir) William Jenner demonstrated by the closest scrutiny of the conditions before and after death that they were as distinct as measles and scarlet fever, another brace of formerly confused types. His argument was too convincing to be ignored, and inasmuch as British subjects (in both the legal and the anatomical sense) furnished the material, British medicine, about twenty years after its neighbors, fell into line with them in this respect. Notwithstanding the work had already been done abroad, Dr. Jenner's unanswerable essay, which is a masterpiece of scientific observation and analysis, is what gave light to his compatriots; and although the medical profession has long since moved past the epoch it created for his countrymen, it deserves study as a type of argument built entirely upon fact. For his countrymen he broke up continued fever into four varieties, of which those two are the principal. In 'Lectures and Essays on Fevers and Diphtheria, 1849 to 1879,' Macmillan & Co. have reproduced, in a well-indexed octavo that should become a classic, this and other papers on the same general topics, all marked by the same lucidity.

'The Vital Equation of the Colored Race, and its Future in the United States,' by Dr. E. R. Corson of Savannah, a reprint from the 'Wilder Quarter-Century Book,' is an essay whose conclusion is that the future of that race will be inability to maintain itself as a race, and that the world has reached a point where everything must give way to the Caucasian. This has been derived from contemplating the high infantile death-rate, the impaired vitality of the mixed strains, and the low scale of life of the Southern negro, especially in the larger towns. Vitality doubtless is influenced by race distinction, but the figures and the area are neither definite nor large enough to furnish positive deductions. The lesson that seems to us nearest the surface in this paper is the necessity for strong, kindly, persistent action in lifting the blacks by instruction, by sanitary injunction, and by organized charity. This last should stimulate, not pauperize.

We have received the completing section of the fifth edition of Kluge's 'Etymologisches Wörterbuch der Deutschen Sprache' (Strassburg: Trübner). The book has grown by 40 pages, 15 of which are taken up by valuable chronological groupings of the German wordstock, made by Dr. F. Mentz. The new articles contain mostly foreign and dialect words, such as *grassieren*, *Grippe*, *Grog*, *Grosz*, under G. Additions have been made in the chronology and in the geographical distribution of words. Such a dictionary is a growth, and is never made by one man alone, so Prof. Kluge enjoys and acknowledges the continued help of persons known and unknown to him who give valuable hints and make actual contributions. We are surprised that under *Geist* the new edition repeats the statement that Engl. *aghast* means *zornig*, *aufgeregt*. This word is not a cognate of *Geist*, 'ghost,' anyway. Under *Zettel*, *verzetteln*, English to *ted*, meaning to scatter, might have been mentioned. Compare the U. S. 'hay-tedder.' English *flintlock*, again, is overlooked under *Flinte*. Often the author gives only Anglo-Saxon cognates when the later English would be more welcome: *e. g.*, *dight*, *wont* are omitted under *dichten* and *wohnen* respectively.

The first part of the fourth volume of Prof. D'Ancona's 'Manuale della Letteratura Italiana' has recently appeared, bringing the work down to the end of the eighteenth century. It is pleasant to notice, in the general bibliography and in several of the special ones, repeated and laudatory references to an Italian translation of the well-known treatise of an Englishwoman, Miss Violet Paget ("Vernon Lee"), on the life and literature of a century of which the Italians themselves find it hard to give a satisfactory account.

Count Passerini, the editor of that rather dull periodical, the *Giornale Dantesco*, has undertaken, in connection with the printing-house of S. Lapi in Città di Castello, a series of small works concerning Dante hitherto inedited or rare. The volumes are to appear every month, at a price of less than a lira, and are to contain each more than a hundred pages. The first work published is a collection of notes to the 'Divine Comedy' ('Postille alla Divina Commedia') made by the late Salvatore Betti, and registered as number 666 in De Batines's list of inedited comments. The idea of the series is not a bad one, but there is little to commend in Betti's notes, which are for the most part exceedingly commonplace and fill three of the little volumes.

Early in the lists of 1894 of Successori Le Monnier (Florence) is a careful study of Cardinal Innocenzo Cybo by Dr. Luigi Staffetti. The book is rich in original documents, and gives in sharply defined if rather hard outlines an interesting picture of interesting times. Dr. Staffetti shows up Cybo as a man almost but not quite after Machiavelli's heart, fox and lion united; but in Cybo's case somewhat disproportionately fox. As grandson of a pope, as the most brilliant cardinal of his day, as three times aspirant and once by an accident only not elected to God's vicarship on earth, as long the practical ruler of the states of both Bologna and Florence, as the familiar and trusted friend of Charles V., Cybo appears on the other hand in strange contrast as probable poisoner of the poet Berni and persecutor of the patriot Filippo Strozzi, traitor to his friend Duke Cosimo, and open paramour of his own brother's wife, herself probably the most brilliant woman of her time—and the worst. Dr. Staffetti's work is neither ingeniously apologetic nor frankly indignant, but rather coldly impersonal.

"The Internal Work of the Wind," or the want of uniformity and consistency in the movement of the wind stream, its gusty and intermittent character, and its consequent utilization by birds in soaring to maintain themselves without exertion of the wings, was the subject of a paper by Prof. S. P. Langley, read at Chicago before the International Conference on Aerial Navigation in August last. It was perhaps as original and important as any delivered in all the series of congresses, and one may now read it in the January issue of *Aeronautics*, the "annex" of the *American Engineer and Railroad Journal* of this city. In connection with it should also be read the illustrated account of Mr. Maxim's air-ship in the current number of *McClure's Magazine*, and the (also illustrated) account of a German's experiments in man-flying (or, better, soaring) in *Nature* for December 14, 1893. As the last writer well says, here is promise of fine and tolerably safe sport.

Mr. Waters's "Genealogical Gleanings in England," in the January number of the *New England Historical and Genealogical Register*, introduce wills of the Boylston and Sewall connections, the Blands of Virginia, of Sir John Davie, one of Sibley's 'Harvard Graduates,' and of William, son of Mary Dyer, the Quakeress who was hanged for her religion on Boston Common in 1660. These in especial; but a great many other families are illustrated in Mr. Waters's skilful groups of testaments.

We printed not long since a communication from a correspondent respecting La Salle's station of Starved Rock on the Illinois River. A slight article on this romantic spot and neighborhood by the Rev. Frank J. O'Reilly, in the *Catholic World* for January, deserves mention chiefly on account of the views which accompany it.

—The 'Biography of the English Language,' by Arthur MacArthur, LL.D. (Washington:

W. H. Lowdermilk & Co.), has for its object to popularize the investigations of scholars by giving a brief account of the progress of the language from its earliest forms to the present day; but the author overlooks the fact that a certain amount of knowledge at first hand, especially of the older periods, is necessary for this purpose. When we find in the table of contents 'Ancren Riwle' translated "Ancient Rule," and this repeated in the text, it arouses our suspicions, which are more than confirmed by the perusal of the first few chapters. The author has not the most remote conception of the structure of the Old English (Anglo-Saxon) language, speaking of it as "a compound of all the idioms spoken by the warlike invaders," and remarking: "There were four declensions for nouns, adjectives, and adverbs [*sic*], and even the article was declined with the strangest vagaries of inflection"—with much more of the same sort. King Alfred is placed 150 years after Cædmon, Egbert is given to him for a father, and the year of his birth is stated as that in which the Danes "drove him into concealment." The author has dipped into Sir Frederic Madden's edition of Layamon's 'Brut,' but without understanding its language, and there are numerous mistakes in the quotations from it. Errors of the press abound, and in fact there are more errors of all sorts to the square inch than in any work we have ever read. The brief account of the 'Beowulf' (pp. 16, 17) is a caricature, and Geoffrey (not Geoffroy) of Monmouth's Chronicle is spoken of more than once as a "poem." The 'Ormulum' is sandwiched between the "Genesis and Exodus" and "the Ayenbite of Inwit [Inwyt], which means *Again-bite of Conscience*, or Remorse," although the work is professedly historical. Orm is said to use "two consonants in the beginning and end of a word, and some writers have supposed they were placed at the end of a word to denote a short syllable or a long one, but it is not very clear which" (!). His work "is very singularly composed in a Northern dialect," and "of all his contemporaries he is the least regarded as an authority upon the state of the tongue at the time he wrote." After a summary of pronominal forms in the 'Ayenbite' (p. 90): "It will be observed from this summary," the author remarks, "that the adverbs are declined like nouns, and that the numbers and genders of pronouns in the oblique cases cannot be determined by their form, but must be traced back to their substantives." A short course in Old and Middle English would have prevented all this.

—The 'Choephori of Æschylus,' by Dr. A. W. Verrall (Macmillan), is a continuation of that series, the earlier volumes of which by the same editor, the 'Seven against Thebes' and the 'Agamemnon,' have already been noticed in these columns. In completeness of apparatus and in literary ability this edition is almost a counterpart of Prof. Jebb's 'Sophocles,' while in scholarship and in sobriety of judgment it suggests contrasts as well as comparisons with that great work. Dr. Verrall takes his own view of every question, and writes with an ingenuity and *élan* which are interesting even where they do not carry conviction. The chief novelty of the present volume is Dr. Verrall's explanation of the recognition scene, wherein *Electra*, visiting her father's tomb for the purpose of offering oblations, discovers there *Orestes's* dedicatory lock of hair, and recognizes the owner by some magic process of inference which was ridiculed by the rising generation of Athenian critics, apparently, and which has been something of a stumbling-block to classical scholars ever since. A maiden who was separated from her brother in early childhood divines his presence, after many years, on the evidence of a lock of hair and the conformation of footprints which bear some resemblance to her own. Euripides makes much of this apparent absurdity, and ridicules it expressly in a passage of his "Electra," which has been berated by the anti-Euripideans from Schlegel down. Euripides hints that it is a slip of old age; yet this same old age begat the "Agamemnon." The lovers of Æschylus have regarded it as a trivial or pardonable lapse; to our mind it seems that the emotion of the situation—and a good actor—would carry it off successfully before an audience which was not hypercritical.

—Dr. Verrall will not listen to this. He maintains ingeniously, at great length, that the recognition is based on a fact known to Æschylus, viz., that Pelops and his immediate descendants, being from Asia Minor, had some racial peculiarity in the shape of the foot and the skull, something marked in the color and texture of the hair, which distinguished them from the Achaian race among whom they had settled. This is felicitous if true, but for its truth Dr. Verrall produces no sort of warrant. This peculiarity, he next assumes, was a well-known tradition to the audience before whom the play was acted. Lastly, he assumes that this tradition, perfectly familiar to the theatre goers in A. C. 458, had vanished temporarily forty years later—vanished so completely that Euripides, a professional playwright, and tolerably conversant with the stock-in-trade of his craft, had no notion of its existence. This is a large assumption with reference to a poet who gives us those quaint survivals of naïve tradition that are embedded in the "Bacchae" and the "Iphigeneia among the Taurians"; but the assumption becomes comic when we reflect that, at the representation of the "Choephori," Euripides was, in all probability, himself an alert and interested spectator, a young man of about twenty-two, and was therefore, *ex-hypothesi*, one of the audience on whose perfect familiarity with the peculiarities of the Pelopid family Æschylus had implicitly relied. In short, Dr. Verrall's flight of imagination reminds one of the bird of paradise: it is fascinatingly brilliant to look at, but it does not condescend to touch the vulgar ground of facts, and it does not appear to have a leg to stand on.

—The current number of the *Bulletin de Correspondance Hellénique* is occupied chiefly with the raw material of archæology—a collection of Phrygian inscriptions, partly anticipated by Mr. Ramsay, which are settling by degrees moot points in the geography of Asia Minor; and a descriptive list of hitherto inedited vases in the museum of the Louvre, which M. E. Pottier contributes towards a complete catalogue. The paper of most general interest is M. Kambanis's research as to the construction and period of the great works which drained Lake Copais in Bœotia. The system consisted of two parts, a network of canals and embankments connected with the natural outlets, or rock-tunnels, called "Katavothræ"; secondly, a supplementary subterranean tunnel, descending Mount Kephalári, and following its water-courses, connecting and discharging a series of sixteen shafts or wells, sunk at such intervals as to secure drainage of the mountain streams. The depth of the shafts varies from 18 to 63 metres; the length of the artificial tunnel is not less than 2,400 metres. The former system makes use of the natural outlets, is carried out with more boldness than science, and displays in the stone-work of supporting walls a primitive style which resembles that of Mycenæ and of the island of Gha close by. Hence M. Kambanis refers this workmanship, grandiose yet naïve, to the Minyans, with whom Greek tradition associated it. But the tunnel with its shafts, so precisely arranged and so accurately executed, is the calculated conception of a man of science and the work of experienced hands. It may be compared with a subterranean aqueduct about a mile long, pierced by Eupalinus through a mountain in Samos about the sixth century B. C.—a piece of work not less astonishing than the pyramids of Egypt; here, again, however, we find less science and accuracy than in the work at Kephalári. For these reasons, M. Kambanis assigns this latter undertaking to Crates, an engineer contemporary with Aristotle and Alexander the Great, who in fact is mentioned by Strabo as a "mining-engineer," a native of Chalcis, engaged by the Bœotians to clean out and repair the channels which had become choked and exposed the neighborhood to inundation. M. Kambanis expresses the highest admiration for the science, the workmanlike skill, energy, and perseverance which could pierce a tunnel so extensive through the hard rock of this region, with the primitive means which the ancients had at their disposal.

—Criticism of missionaries and missionary methods on foreign soil is not usually received with gratitude or frequently acted upon, however rational, when the strictures are from "men of the world." In the *Japan Evangelist*, the first number of which is just issued at Yokohama, we find some uncommonly good sense, and severe but needed criticism, by a veteran American missionary. The facts he states are eloquent in showing that of the six hundred missionaries, male and female, now in Japan, a good many of the older ones—"perhaps a majority of cases"—have made "a mistake that has narrowed the missionary's field of usefulness, and has marred his life-work." This mistake has been in not thoroughly learning the Japanese language, or in acquiring a vocabulary fitted for conversation and public discourse on religious subjects only. In a country where universal politeness is the national characteristic and the slow growth of a millennium, but few, comparatively, of the missionaries are able to talk in private or make a public address on subjects most vital and timely to the Japanese. Unfortunately, this neglect of mastery of the language extends to pen and ink also, for even when Japanese is written it is transliterated into Roman characters. The causes of this radically wrong procedure lay in the visionary hopes, held out by no less a personage than the late Arinori Mori, that the vernacular would be either almost Anglicised or wholly abolished, and also in the eagerness of the natives to learn English. So far from its being a sin to spend time in study of Japanese, so immensely enriched in vocabulary during the past quarter of a century as to be almost a new language, Dr. De Forest recommends the newer missionaries—one-half of the total having come to Japan during the last five years—to spend three years in the exclusive study of this profoundly interesting tongue, using both script and speech. "A nation of 40,000,000, with a history and traditions that inspire deepest reverence for the past, cannot be made to break from its language." Dr. De Forest claims that

only those able to master the vernacular should be sent out as missionaries. He deplores the fact that there are too many in the field "who, though they stay here a century, will not be able to use the language with accuracy or grace." The *Romaji Zasshi* (Roman-Letter Magazine), though once enjoying a circulation of over 6,000 copies, "has died a lingering death." The *Japan Evangelist* also contains a translation of a powerful article on "The Good and Evil Effects of Buddhism on [Japanese] History," from the *Kokumin no Tomo* (The Nation's Friend), the Liberal daily newspaper of Tokio.

ADAMS'S MASSACHUSETTS AND ITS HISTORIANS.

Massachusetts, Its Historians and Its History: An Object-Lesson. By Charles Francis Adams. Boston: Houghton, Mifflin & Co. 1893. Pp. iv, 110.

THOUGH easily read through at a sitting, this little brochure of Mr. Adams's is likely to cause more discussion than many a volume of more bulky dimensions. In the form of lectures, the substance of which was delivered before the students of Harvard University in April, 1893, Mr. Adams has elaborated views of the history of Massachusetts in regard to religious liberty, and of the treatment of that theme by Massachusetts historians, already indicated in his 'Three Episodes,' published in 1892, and in the spirit of Mr. Brooks Adams's 'Emancipation of Massachusetts.' It is needless to say that Mr. Adams has put his thoughts in a form that is telling and brilliant, and that holds the interest of the reader as it must have held the attention of the Harvard undergraduates.

To the author's thinking, the value of the history of Massachusetts, as of any other land, is in its relation to the great human drama, "The Emancipation of Man from Superstition and Caste." In regard to the latter of the two phases of this world-wide struggle, Mr. Adams declares: "The record of no community seems to me to be more creditable, more consistent, nor, indeed, more important," than that of Massachusetts. But "as respects Religious Toleration, . . . her record as a whole, and until a comparatively recent period, has been scarcely even creditable."

That this story has been defended in its essential features by a great school of writers whom Mr. Adams designates as the "filio-pietistic," and of whom Palfrey may serve as a type, is due, in the author's estimate, to a provincial neglect of the principle that, "in the study of history, there should be but one law for all. Patriotism, piety, and filial duty have nothing to do with it; they are, indeed, mere snares and sources of delusion." In reality, Mr. Adams holds, Massachusetts, in the person of her ministers and magistrates, "missed a great destiny" by rejecting Roger Williams, and Sir Harry Vane, and the Antinomians; and gave herself up to an intolerance as unworthy as that of Philip II. or Louis XIV., and even more indefensible, since the Puritans, unlike the sovereigns of Spain and France, sinned against better knowledge, refusing "to see a light which they had seen clearly enough in England."

This wilful and inexcusable intolerance, becoming the fixed policy of the commonwealth by the time of the Antinomian synod of 1637, led to a "theologico-glacial" period, lasting till 1761, during which, under the chilling influence of enforced uniformity, mental activity dwindled, and which has left as its typical products the works of Cotton Mather and Jonathan Edwards—"huge literary boulders deposited by the receding ice." The religious system of Edwards—of which the only feature, apparently, which impresses Mr. Adams is his overwrought picturings of future suffering—is the characteristic "outcome of his environment." The system of reasoning on which the theology of this glacial period was built up, "by putting a final stop to any intellectual movement, created a universal paralysis—this system had to be slowly outgrown." These "Calvinistic, orthodox tenets of the seventeenth and eighteenth centuries constituted nothing more nor less than an outrage on human nature productive in all probability of no beneficial results whatever." On the contrary, they led to "phases of acute mania," of which the witchcraft delusion of 1691-92 and the "Great Awakening" of 1734-44 were the natural manifestation.

In all this period, Mr. Adams holds, the redeeming feature was "that political activity which in Massachusetts had from the very beginning flowed as a stream of living water beneath the thick ice-crust of theology." It was the dominance of this characteristic that gave distinction to the next period, 1761-1787, of which Mr. Adams conceives Benjamin Franklin and Samuel and John Adams to have been "more than any other typical of the environment." And this epoch passed over, after the suppression of Shays's rebellion, into the "scientific, or florescent," period, extending from 1788 to 1865. To this latter age alone Massachusetts letters belong, for

> "From Cotton Mather to Nathaniel Hawthorne is a long stride, but in Massachusetts literature there is no intermediate stepping-stone. The *Magnalia* was published in 1702; *Twice-Told Tales* in 1837, that year of profuse germination: and, between the two, so different and yet both distinct and unmistakable products of the Massachusetts mind, the one a boulder and the other a flower—between them there is—nothing."

This sweeping statement Mr. Adams qualifies with a reference to Franklin's autobiography as a "possible exception," and a recognition, in a note, that "Thanatopsis" appeared in 1817.

Now there can be no doubt that Mr. Adams's principle that history should be written without "filio-pietistic" bias is correct, and has been often sinned against by American historians. It is true, also, that effort has been made by the school which Mr. Adams in many ways justly criticises to gloss over and defend that which is not always defensible. Mr. Adams has spoken justly in saying elsewhere ('Three Episodes,' p. 575) that, in this matter of religious tolerance, "the Puritan exiles to New England showed that they were not in advance of their times. That they were not, was again an element of their strength; for they were essentially practical men, and not idealists." Nevertheless it seems clear that in his eagerness to make what is largely a valid criticism, Mr. Adams has gone to an extreme almost as excessive as that which he opposes.

The repressive policy of New England was one partly of political defence, partly of religious persecution, at least in its earlier manifestations. Massachusetts historians have usually made one phase or the other of this two-fold motive exclusively prominent. They have either, like Palfrey, largely ignored the conspicuous element of intolerance based on purely religious considerations, and excused almost everything on the plea of political necessity, or, like Mr. Adams, they have fixed attention only on the element of religious persecution, and have practically counted as nothing the exigencies of the political situation. But the repressive measures adopted against Roger Williams, the so-called Antinomians, and Robert Child with his associates, had a two-fold aim. In part they were designed to prevent any interference with the established religious system, and, as such, were religious persecutions worthy of Mr. Adams's condemnation; but in part, also, they were the product of a sincere political dread lest turmoil in the colony, or appeals to a hostile government at home, should cause the loss of Massachusetts independence. New England was not in the position of the Spain of Philip II. or the France of Louis XIV., where no real ground for political fear existed in the presence of a few dissenters from the national faith; it was not in the position of Holland, where actual war led to the toleration of all who would aid in the national defence (though the story of the Arminians shows how even Hollanders could persecute); it was a little land, sturdily trying to maintain its own conception of life and government in the face of a power able to crush it should disturbances at home or appeals to King or Parliament provoke English interference. And, in so far as its actions were based on political considerations, they do not deserve to be placed quite on a level with Spanish intolerance.

Nor is Mr. Adams's description of the character and effects of the "theologico-glacial epoch" without serious exaggeration. Compared with what has succeeded, it was undoubtedly narrow, repressive, one-sided. But, as compared with what had gone before in England, it was, when the people as a whole are taken into consideration, a period of intellectual training. Of all bodies of clergymen, Protestant or Catholic, the New England ministry was that most identified with the people and least jealous of lay interference. By the call of laymen the minister had his title to office, by the votes of laymen the affairs of the church were conducted, and early New England synods had as a rule a majority of laymen in their membership. New England was often majority-ridden, but priest-ridden it was never. And of all bodies of clergymen of the seventeenth century that of New England was the most rationalistic. It believed implicitly in the authoritative character of a divine revelation; but the interpretation of that revelation was entirely the work of the ordinary processes of the human mind. Reason, not tradition, or former councils, or established creeds, was from the first the only New England test. It was largely because Mrs. Hutchinson and the Quakers claimed another source of certainty on religious matters that they were so obnoxious to the Puritan. Now not only was this principle one which led inevitably, if slowly, to an intelligent religious freedom; it made the New England pulpit intellectual and argumentative, and it taught every Puritan congregation to think—for there was no insight into religious truth claimed by the ministry which was not held to be attainable through precisely the same processes by the unclerical man. As Mr. Adams has elsewhere pointed out ('Three Episodes,' p. 574), the Antinomian movement had nothing better to offer. One may venture further and hold that if this movement, from the repression of which Mr. Adams dates the Massachusetts ice age, had triumphed, it would, by substituting mysticism for reason, have substituted a worse principle for a better.

Mr. Adams fails also to make due allowance

for the practical teachings of the New England ministry and for the value of their work as a moral force. One feature of that instruction, certainly open to severe criticism, has attracted his notice; but picturings of future woe, however prevalent, formed only a fragment of New England religious teaching. An examination of the sermons of Edwards, for example, shows that the large majority were on themes recognized by religious teachers of all ages as of the highest practical importance. The excesses of the "Great Awakening" were, what one finds no hint of in Mr. Adams's pages, local and exceptional; the more fanatic aspects of the movement were combated by the faculties of Harvard and Yale and by leading ministers of Massachusetts and Connecticut. The preaching of the Rev. James Davenport, which he quotes, was no more typical of the pulpit of the colony of Connecticut, whose General Court sent him home, than that of William Miller of the New England of 1843.

Mr. Adams has designated the last of his periods as "florescent." The epithet is apt, for it describes its relationship to the epoch which he far less happily characterizes as "glacial." Flowers do not come from boulders. Florescence implies a period of unflowering growth, which is none the less true life. Nor is a comparison of the literary unproductivity of a country of scanty resources and cramped material life, like the New England of the seventeenth and eighteenth centuries, with the productivity of the mother country in the same period, quite adequate. Rather it should be judged by the standards of other English colonies, and, when tested thus, it had a general diffusion of intellectual vigor which they have not equalled, and its fruitage, when it came at last, was richer than any they have borne. It is not entirely, as Mr. Adams would have it, an illustration of "the *post ergo propter* fallacy" to hold that, where training has been followed by such results, the training cannot have been wholly an evil.

Massachusetts persecution was bad enough; but it was largely the working of the intolerance of a thinking community, engaged in an enterprise characterized by intensity of belief and threatened by considerable perils from without. It was not marked, in general, by personal vindictiveness. It was free from popular blood-thirstiness. It never took the deep hold on the people that it did in Spain or France. Detrimental it undoubtedly was; but that it, or the period of intense conviction of which it was one of the characteristics, did the full amount of harm that Mr. Adams holds it did, seems far from proved.

HUXLEY'S ESSAYS.

Method and Results: Essays. By Thomas H. Huxley. D. Appleton & Co. 1893.

HUXLEY'S collected essays are to appear in nine volumes, of which this is the first. It is well-printed and agreeable to read. An introductory autobiography will serve to remind readers what Huxley's real profession is. He has, to use his own language, "subordinated" his "ambition for scientific fame" to the "popularisation of science" (in his separate treatises) and (in his essays) to an "endless series of battles and skirmishes" with ecclesiasticism and other powers. Intellectual nettles are these essays, suggestive and stimulating to the point of painfulness. Though Huxley is not a physiologist, his branch of science lies near to physiology, and physiology borders close upon metaphysics; and a remarkably well-read man in philosophy (for an outsider) Huxley is. This goes to feed and strengthen his originality, and gives it breadth. At the same time, it greatly heightens the literary interest and animation of his essays. Not that he does not sometimes show that his reading has been hasty, and that the tedious operation of rumination, which is so necessary in philosophical thought, has been a little abridged. Thus, he adheres to the sect of English nominalism—the school of Ockham, Hobbes, Locke, Hartley, Berkeley, Hume, Bentham, and the Mills—without perceiving how antagonistic they are, upon the whole, to the spirit of science. One of the prime doctrines of these men, for instance, a doctrine inherited from the pre-scientific ages, is that all generalization is a *mere matter of convenience*. The scientific man, on the other hand, without theorizing about generals, implicitly holds that laws are really operative in nature, and that the classification he is so painfully trying to find out is *expressive of real facts*. In short, the two classes of thinkers take the *con* and the *pro* of the question concerning universals. As the printer's devil would have it, Huxley's opinion is expressed on the bottom of a right-hand page and the top of the following left-hand one. We read (p. 117): "Classification . . . is *merely a convenient* [turn over] *expression of . . . facts*"; which sounds like a patch-work of two sentences. He follows the Mills in speaking of Hobbes with an extravagance of laudation which is amazing, as coming from a scientific man. What! will you call that man a great reasoner who could write treatises to uphold a circle-squaring fallacy, and whom John Wallis, hardly a mathematician of the first class, could so utterly demolish as he did? What! will you speak of him as an exponent of the spirit of science who is known in physics only by his peculiarly virulent opposition to Boyle's method and its results, and whom Boyle, a weakish sort of disputant, laid out so handsomely? Huxley praises Hobbes's "vigorous English"; but Hobbes's style, both of writing and of thinking, as well as the chief substance of his doctrines, is borrowed, or closely imitated, from William of Ockham. Now Ockham was a brilliant thinker, and some people fancy there was something modern-like about his thought. Not a bit of it; another mind so completely steeped in scholasticism of the most intensely wordy kind can hardly be instanced. Hobbes was an original thinker, even if not a very great one, but his method of thinking is scholastic, wooden, what Huxley calls "*à priori*," and anti-scientific in the extreme. Two extraordinary ideas have come to the modern consciousness from Hobbes. One is the association of ideas, which he undoubtedly stole from Aristotle; and the other is the theory of Motives, which, though it has imposed upon the world, is, in the view of many modern psychologists, a mere logical jugglery, a circle-squarer's style of thought.

Two of the most impressive essays in this volume, making a fifth of its bulk, are devoted to the praise of Descartes as the great scientific philosopher of his age. In fact, when Huxley entitles this volume 'Method and Results,' he means thereby to declare that the 'Discours de la méthode' is the true exposition of the method of science. More profitable reading than these two essays of Huxley on Descartes the literature of our time has not afforded. Nevertheless, it is impossible that the judgment of history upon Descartes should be reversed. That judgment is that while his geometry was simply the making of modern mathematics, all his other ideas proved utterly unprofitable and unscientific. Prof. Huxley may persuade us to dock the last epithet, but, about the other, history cannot be wrong.

"There are some men," says Huxley, "who are counted great because they represent the actuality of their own age, and mirror it as it is. Such an one was Voltaire, of whom it was epigrammatically said, 'he expressed everybody's thoughts better than anybody.' But there are other men who attain greatness because they embody the potentiality of their own day, and magically reflect the future. They express the thoughts which will be everybody's two or three centuries after them. Such an one was Descartes."

What a thing that to say of a man! And Huxley fairly makes it out. How can it be that, for all that, Cartesianism was scientifically barren, except in geometry, while there so richly fertile? It was a pretty complete theory of logic, nature, and the soul—the three categories under which Hegel has well summed up philosophy. But systematic completeness, as Hegel's own system well shows, is about the idlest decoration that can be attached to a philosophy. The great desideratum for a philosophy, its indispensable condition, was first stated by a thinker whom Huxley treats with uncalled-for *hauteur*—Auguste Comte; that is to say, a philosophy, to be fruitful, must be "positive"—it must lead to unmistakable consequences comparable in great detail with observation. If it does that, and if those consequences are verified to any considerable extent, it will aid the advance of knowledge. It is that which has made evolution, in the definite form given to it by Darwin, a great agent of discovery. But was not this character possessed by the theories of Descartes? Perhaps; but if they were "positive" theories, they were not theories which there was any prospect of being able to put to the test to any considerable extent, then and there, in the state of mathematics and of observational means which were at command. Hence, though Huxley can show us *now* that the Cartesian ideas had a scientific character, yet, for practical purposes, they had not that character for the men of that time. But this was not their only defect. It has been repeatedly pointed out by students of the history of mechanics that Descartes's theories really grievously offended the very rule of philosophizing upon which he had himself so much insisted. They were not *clear and distinct*. Worse than that—for that, in itself, would not have been fatal—they were not capable of being made clear and distinct. Like the works of many other philosophers, at first glance they seemed beautifully sharp-outlined, but, when closely studied, they were found to be a composite of nebulæ which no scrutiny could resolve. They wanted that fundamental perspicuity to which so few writers except mathematicians attain, which consists in this, that, unintelligible as they may seem at first reading, yet when they are closely studied they are seen to be based upon the distinctions which were pertinent to the problem.

In his long and deeply interesting discussion of Descartes's theory that animals are automatons, Huxley manifests the great disadvantage under which a comparative anatomist must labor who is not an engineer, or who has not a practical acquaintance with analytical mechanics. He thinks he makes out very clearly that animals (man included) act like machines. But he uses neither the language nor conceptions of dynamics. Far from convincing a student of mechanics, he leaves him profoundly convinced of the disparity between machines and animals. He talks about "causes," but the student of dynamics has nothing to do with

"causes." That a machine could possibly act as a frog deprived of his front brain is described as acting is what Huxley does not make at all clear to a man whose business has lain with machines and with mechanical systems.

Another fifth of the volume is taken up with a review of the Progress of Science in the first fifty years of the reign of Victoria, 1837–1887. Among its many suggestions, we have only space to notice the following:

"The doctrine of evolution, so far as the present physical cosmos is concerned, postulates the fixity of the rules of operation of the causes of motion in the material universe. . . . But it is possible to raise the question whether this universe . . . may not itself be a product of evolution from a universe of such matter, in which the manifestations of energy were not definite—in which, for example, our laws of motion held good for some units and not for others, or for the same units at one time and not at another—and which would therefore be a real epicurean chance-world? For myself, I must confess that I find the air of this region of speculation too rarified for my constitution, and I am disposed to take refuge in ignoramus et ignorabimus."

It is always unphilosophical to say *ignorabimus*, and the shores of science are strewn with the wrecks of such predictions. It is particularly rash to base such a prediction on the circumstance that the author of it would be perplexed to see how the problem is to be made amenable to exact reasoning.

One-third of the volume is taken up with recent essays concerning the general theory of politics. They are very far below the level of Huxley's work of twenty years ago, and, in comparison, seem almost mediocre, although they contain a good deal of interesting information concerning the history of some of the theories. The pretence that one can see no meaning in the statement that all men are born free and equal, would hardly have been patiently tolerated by our Revolutionary forefathers. Huxley reviles Rousseau as a mere sentimentalist. Of course, Rousseau was a sentimentalist by conviction, and it is quite true that, since he wrote, the world has received terrible proof of the evil of exaggerated sentimentalism. Still, civilization rests, and must rest, mainly upon sentiment. Prof. Huxley seems to pass a sweeping condemnation upon the application of what he calls "*à priori* reasoning" to questions of justice. By "*à priori* reasoning" he means deduction from general principles, such as Rousseau practised; but Huxley's general condemnation of this mode of argumentation makes it incumbent upon him to explain how he would have a court of justice reason. He even goes so far as to sneer at the principle of toleration. Where would Huxley, or any other evolutionist who lived in the sixties, have been without that principle? The principle of toleration is intimately connected with the fundamental principle of science, for it can have no rational basis except the acknowledgment that nothing is absolutely certain. In those branches of physics where knowledge is the most perfect, in metrology, geodesy, and astronomy, no self-respecting man would consent to put forward an assertion without coupling with it his estimate of its *probable error*. What scientific men mean by "science" is not knowledge, but *investigation*. Now the scientific man will not shut off any question whatever as too sacred or too well known for further investigation, and therefore he must tolerate every opinion. But, further, in regard to questions of politics and the like, the scientific man must admit that not only can the true alternative not be certainly named, but also that no formula can be framed all whose possible consequences shall be just; and for that reason it is most desirable that, alongside of the formula which is less erroneous, the opposite formula which is more erroneous should constantly have its advocates, so that it may not be forgotten when the moment comes at which it is to be preferred to the other. In this point of view, what Huxley calls "the pet doctrine of modern liberalism, that the toleration of error is a good thing in itself," appears to be not, after all, out of harmony with the ideas of science.

In the last essay Huxley discusses, in an ever-interesting manner, the opposing claims of Individualism, or *laissez-faire*, and Socialism, or, as he chooses to call it Reglementation, and reaches the easy conclusion that neither can be admitted as an absolute principle. There, rather lamely, he leaves the matter, without making the obvious remark that evolutionism supplies a third political maxim, perhaps superior to either of the others. For, the moment we admit that man was developed from an ape, whether suddenly or by insensible degrees, we are led to surmise that the rudiments of government antedated humanity. At any rate, government must be considered as one of those adaptive characters of the *genus homo* which result from development. This is true not only of government generally, but of each special form of it, such as the United States Constitution. Now, since the characters of races are generally highly adaptive, and are also unchangeable, except under the operation of those almost cosmical causes which gradually bring about changes in races, the evolutionary philosopher will not attempt to do more than deflect very slightly the actions of these forces; whence will result a maxim of political conduct something like this: Aid only such changes as are either inevitable or else both natural and beneficial; and so act that those changes may be brought about with the least total harm. If we were to write *integral* in place of *total*, it would make the formula sound more mathematical; and sound is almost everything in matters like this.

Huxley himself has clearly put his finger upon that one of his qualities by virtue of which he has for so long commanded the respect and admiration of the public. It lies "in the conviction which has grown with my growth and strengthened with my strength, that there is no alleviation for the sufferings of mankind except veracity of thought and of action, and the resolute facing of the world as it is when the garment of make-believe by which pious hands have hidden its uglier features is stripped off." The hopes and consolations of religion will, we believe, never be reinstated in their position of authority (if at all) until this lesson of intellectual integrity has been thoroughly learned and accepted with humility.

A New English Dictionary on Historical Principles. Edited by James A. H. Murray. Part VIII., Sect. 1. Crouchmas–Czech. Completing Vol. II. (C). Oxford: Clarendon Press; New York: Macmillan. 1893.

Dr. Murray's Christmas gift to the impatient waiters on his great enterprise was this thin instalment, most welcome as enabling them to bind up the second volume of the Dictionary. It now appears (1) that we have in hand the whole of vol. i. (A and B, pp. 1,240); (2) the whole of vol. ii. (C, pp. 1,308); (3) part of vol. iii. (D and E); (4) that, C being co-extensive with J, K, N, Q, V, X, Y, Z, and three-quarters of O, another volume is thus accounted for; (5) that still another will be required for S, which is somewhat in excess of C. The remaining ten letters of the alphabet will, we estimate, fill six volumes more, making a grand total of eleven. Just about one-fifth of the work, therefore, has been accomplished in print.

With all this fulness, much remains to be discovered. Thus, to choose an example from the section before us, the origin of the word *cub* is quite unknown: "it has been compared with a rare Old Irish word *cuib*, dog, but no historical connection has been traced." The etymology of *cuddle* is uncertain; that of *culvert* obscure, though the word goes no further back than 1770; that of *curse* untraceable beyond late Old English *curs* ("no word of similar form and sense is known in Teutonic, Romanic, or Celtic"); that of *cut*, in the sense of lot, is not surely to be found in the Welsh *cwt*, and the word is not to be identified, as in most dictionaries, with *cut*, 'the act or result of cutting,' for this occurs only in "modern English, known from the sixteenth century, while *cut*, 'lot,' goes back before 1300, standing quite alone," without the sense just cited to explain or support it, and without the associated spellings *kyt*, *kit*, *ket*, of the past participle of the verb to *cut*.

"The latter circumstance," adds Dr. Murray, "opposes any such suggestion as that *cut*, 'lot,' is an absolute use of the past participle, meaning 'the cut stick or straw,' 'the cut or marked thing drawn,' a use which would, besides, be very difficult to admit at so early a date. There is no cognate word, and no derivative from any word meaning 'cutting,' used in the other Teutonic languages; in these the word *lot*, with its cognates, is the native term. It is evident that *drawing cuts* has been from the thirteenth century a more popular form of sortilege, or a more popular and colloquial expression for it, than 'casting lots.'"

That this expression is almost as obsolescent in England as it is in this country may be inferred from the fact that Dr. Murray, after Swift in 1745, quotes only Kingsley in 'Westward Ho' (1855), "We three will draw cuts for the honor of going with him."

Curse, to return for a moment to this independent formation, is not related to *cross*, as some have suggested without supplying a particle of evidence; but the latter enormously fruitful word has still some representatives in the closing part of the letter C—as, *cruise*, *crusade*, and *crux*, a 'difficulty which it torments or troubles one greatly to interpret or explain, a thing which puzzles the ingenuity.' In the case of *crux* we seem to discern the utility of the little circulars emanating from time to time from the Scriptorium, with lists of "special quotations wanted." In list X an earlier quotation than 1859 was desired for *crux*, and we now have Sheridan, 1718, and Sir William Hamilton, 1830, anticipating Maurice, 1859.

Popular etymology is well illustrated in three instances: (1) *curtail*, "originally *curtal(l)* . . . and still stressed on the first syllable by Johnson, 1773; but already in the sixteenth century the second syllable began to be associated with the word *tail* . . . and perhaps by some in the seventeenth and eighteenth centuries with French *tailler*, to cut, whence the spelling *curtail*, *curt-tail*, *curtail*, and the current pronunciation, given without qualification by Walker, 1791"; (2) *curtal-ax*, "a much perverted form of the word *cutlass* (in the sixteenth-century *coutelas*, *coutelase*, *cutlass*, etc.), through the intermediate perversions, *cutt(le-ax*, and *curtelas*, *curtelace*, *curtelace*, the peculiarities of which it combines. The form *curtal ax*, with its variants, was so distinct from *cutlass* that it acquired a kind of

permanent standing, the identification of the final part with *ax* being favored by the use of the weapon in delivering slashing blows"; (3) *court-lodge* for *curtilage* (*i. e.*, *cortil*, *courtil*, little court or garth, plus the Romanic suffix *-age*, which plain folks, however, took for a compound of *court* with *lodge*, *ledge*, etc.).

The literate are responsible for the "merely graphic *b*" in *crumb* (*crum*), which began to be added in the sixteenth century," and "probably appeared first in the derivative *crumble* (where it has also invaded the pronunciation), after words of French origin like *humble;* there was also the apparent analogy of Old English words like *dumb*, where *b* was retained in the spelling, though no longer pronounced: cf. *thumb*." *Culprit*, which is "known (as a word) only from 1678," is an abbreviation by the legal profession. An abundance of evidence is cited by Dr. Murray in confirmation of the legal tradition "that when the prisoner had pleaded 'Not guilty,' the Clerk of the Crown replied with, '*Culpable: prest d'averrer nostre bille*,' i. e., '*Guilty;* [and I am] *ready* to aver our indictment'; that this reply was noted on the roll in the form *cul. prist*, etc.; and that, at a later time, after the disuse of law French, this formula was mistaken for an appellation addressed to the accused" instead of a negation of his plea, etc. Among the educated, again, *cult*, 'worship,' was used in the seventeenth century, perhaps direct from the Latin, then went out of fashion, and is rarely met with till the middle of the nineteenth, "when often spelt *culte* as in French." Indebtedness to the French has been masked, on the other hand, in the locution *curry favor* (1510), which is the older *curry favel* (1400), from "Old French *estriller fauvel*, . . . to curry the chestnut horse, hence, to employ deceit or hypocrisy, to gloze." Deliberate inventions are exemplified in *cyclone*, "a name introduced in 1848 by H. Piddington, as a general name for all storms or atmospheric disturbances in which the wind has a circular or whirling course." Carlyle alone has found *culottic* a handy synonym for respectable, and its noun *culottism* for respectability; nor do the French appear to have been tempted to appropriate them. Herman Melville is first cited as having given literary currency to the form *curio*, for curiosity (1851).

The historical function of the Dictionary is well displayed under *curfew*, beginning with the definition :

"(1.) a. A regulation in force in mediæval Europe by which, at a fixed hour in the evening, indicated by the ringing of a bell, fires were to be covered over or extinguished; also, the hour of evening when this signal was given, and the bell rung for the purpose. b. Hence, the practice of ringing a bell at a fixed hour in the evening, usually eight or nine o'clock, continued after the original purpose was obsolete, and often used as a signal in connection with various municipal or communal regulations; the practice of ringing the evening bell still survives in many towns."

Here we will introduce the illustration borrowed from Lyell's 'Second Visit to the United States' (1850): "Every evening at nine o'clock, a great bell, or curfew, tolls in the marketplace of Montgomery, after which no colored man is permitted to be abroad without a pass." Then Dr. Murray takes up the parable :

"The primary purpose of the curfew appears to have been the prevention of conflagrations arising from domestic fires left unextinguished at night. The earliest English quotations make no reference to the original sense of the word; the *curfew* being already in the thirteenth century merely a name for the ringing of the evening bell, and the time so marked. . . . The statement that the curfew was introduced into England by William the Conqueror as a measure of political repression has been current since the sixteenth century, but rests on no early historical evidence. See Freeman's 'Norman Conquest' (1875), iii., 185, as to what 'seems to be the origin of the famous and misrepresented curfew.'"

We conclude our already too extended remarks by observing that the true, and only, English use of *cui bono?* is, as appears from the earliest to the latest quotations, "what good?" "to what end?" "the ultimate purpose?" The classic sense "who profits?" in other words, is not good English, and it is impertinent to hold us to it.

The Letters of Lady Burghersh, afterwards Countess of Westmoreland, from Germany and France during the Campaign of 1813–14. Edited by her daughter, Lady Rose Weigall. London: John Murray. 1893.

PRISCILLA, the daughter of William Wellesley Pole, afterwards Lord Maryborough, granddaughter of the musical Earl of Mornington, and niece of the great Duke of Wellington, married, in 1811, Lord Burghersh, eldest son of the Earl of Westmoreland. Lady Burghersh was then only eighteen. Lord Burghersh had been aide-de-camp to the Duke of Wellington in the Peninsula, and two years after his marriage he was appointed military attaché at the headquarters of the allied sovereigns in Germany, and was ordered to Berlin. But all French and Dutch ports were closed to English vessels, and Hamburg had again been seized by Bonaparte, so that the journey had to be made from Yarmouth to the south of Sweden, and thence across the Baltic to Stralsund, on the coast of Prussia. Lady Burghersh had hitherto been so delicate that her family urged her not to attempt such a journey, but as she had no children to leave behind, she determined to accompany her husband. After being driven back to Yarmouth and delayed there by contrary winds for nearly a fortnight, Lord and Lady Burghersh landed in Sweden after an eleven days' passage across the North Sea. From the landing-place they had to walk most of the way to Gothenburg, with nothing to eat but Swedish cakes, baked only twice in the year and as hard as stone, and nothing to drink but a little rum and water. From Gothenburg they drove in their own carriage to Ystad, the port in the south of Sweden at which they were to embark for Prussia. This drive of 250 English miles occupied four days from eight in the morning till midnight; horses could be hired, but the rope harness had to be bought. Lady Burghersh had everything to arrange, for her husband was much occupied, and her French maid (afterwards most efficient) had not recovered from the voyage, and would only say, "J'ai tant souffert que ma mémoire ne me sert plus." Beds had to be carried, for the inns provided only an empty room of a few feet square in which to eat and sleep. Lady Burghersh writes: "We do very well. I have never seen a carpet or curtain, basin or jug, but we send the servants into the yard to snatch up the pans the chickens feed out of, or the pails from the stable, and make use of them."

The passage of seventy miles from Ystad to Stralsund took three days, and the latter part had to be made in a galliot, "a small thing with one mast and no cabin," so that Lady Burghersh and her maid sat in a boat on deck. Just as the galliot entered the harbor at Stralsund, an English brig, laden with nine thousand barrels of ball cartridges, blew up. "The balls and splinters of the ship came rattling down like a thick shower of hail. Every man fell flat on his face except B, who threw himself over me." On looking up, the whole sky was covered with black smoke, and not a single vestige of the ship was left; the effect on the sea was exactly as if it boiled. Lady Burghersh was so wholly intent on the magnificence of the sight that, as she says, she neither jumped nor trembled, but said to her terrified maid, "Mais regardez donc; comme c'est beau." Nobody was hurt on board the galliot, but houses were wrecked two miles off.

The journey south from Stralsund to Berlin occupied nearly a week, although Lord and Lady Burghersh were in their carriage nineteen hours out of the twenty-four. They reached Berlin just after the great battle of Leipzig: prisoners were arriving in large numbers, including several French marshals, and nearly forty thousand wounded were in the city. The ladies of Berlin had sold their jewels, and had sent their horses to the army; and at the daily receptions of Princess Radziwill everybody was busied in scraping lint. Before long, Lord Burghersh had to follow the allied forces to Frankfort, and his young wife, after enduring three weeks of suspense as to his fate, determined to make her own way thither. Accompanied by her maid, and attended by an English officer, who was an old friend of her husband's, Lady Burghersh undertook this journey of nine days, travelling in the depths of a German winter from two hours before daylight till ten o'clock at night. She writes:

"We have come all along the line of the French retreat, and, as it is not a month since they passed, the roads are covered with dead horses and the remains of dead men. . . . Every bridge blown up, every village burnt or pulled down, fields completely devastated, orchards all turned up. None of the country people will bury the French or their horses, so there they remain lying all over the fields and roads, with millions of crows feeding: the river Saale full of dead bodies."

One night Lady Burghersh had to pass in a wretched cottage crowded with soldiers; she lay on the carriage cushions spread on the floor of a windowless, fireless room, and in that bitter November night her only rug was a great coat. Yet, she says, "I slept well, and set off merrily next morning." Frankfort, where Lady Burghersh at last rejoined her husband, was full of sovereigns and ambassadors, the only women besides herself being two Russian grand-duchesses, sisters of the Emperor, and the Princess of Thurn and Taxis, sister of the late Queen Louise of Prussia. The squabbling and indecision among all the different powers was incredible, and Lady Burghersh often longed for her firm and decided uncle Wellington to be the one head to whom all should look up. The Emperor Alexander, in speaking to her of the recent campaign in Russia, regretted that he had not had such a commander as Wellington. As it was, he added, "c'est que le bon Dieux nous a servi de capitaine, et que l'exemple des Anglais nous a donné du courage." A month later Lady Burghersh writes: "We are just as far from any decision. The Emperor Francis and all his people are bent on one plan; the Emperor Alexander is directly against it; and the King of Prussia disapproves of both. They are all equally positive and obstinate." At length the Austrians prevailed, and a move was made to Lörrach, a village close to Basle. Lord and Lady Burghersh had here only one small room, and the aide-de-camp slept on straw in the kitchen, but Lady Burghersh made English tea every evening, and all the

generals and their respective staffs met in her room to discuss the position and to receive reports. The bombardment of Huningue near Basle was going on, and Prince Schwarzenberg, the Austrian general, had a hut built from which Lady Burghersh could watch the progress of the siege by day. At night she saw from her bed the shells bursting, but, after a short time, the noise ceased to disturb her sleep. Household troubles did, however, annoy her. The German landlady threatened to drive Lady Burghersh's chasseur out of the house, and the English footman declared with tears that he should lose his senses because his country was insulted.

Early in 1814 Lady Burghersh followed her husband to the headquarters of the allied forces at Langres in France; her first stage was thirty-one hours, during which time she never left her carriage. At that period the allies were everywhere received with open arms, and Lady Burghersh, while rejoicing as a wife in the probable termination of the war, adds: "As a soldier I must think it a pity to have had the power and not to have crushed that wretch [Bonaparte]." She accompanied or followed the allied forces from place to place, mourning over the misery and destitution around her. The troops had been insulted at Langres, and from that time no efforts of the commanders could either maintain discipline or prevent pillage throughout the greater part of the armies; the Cossacks knew no law, and robbed friends and foes alike; the streets of the towns were crowded with women and children begging for food, and Lady Burghersh acknowledges herself to be sick of war and all its horrors. A congress, consisting of six members, was opened at Châtillon, but they did little but give great dinners to each other, and the uncertainty and indecision continued. Lady Burghersh wrote from Châtillon: "I don't know what they mean to do, but I know that Bonaparte is employing all his energy, all his activity, and all his power, and that we are dilatory, uncertain, and (*entre nous*) frightened."

Lord Burghersh was again separated from his wife, and for a fortnight they had no news of each other. At last, quite at the end of March, Schwartzenberg gained a decisive victory over Bonaparte, and a few days later the allies entered Paris. Lady Burghersh missed this magnificent sight, as she had had to retire to Dijon, in order to avoid Bonaparte and his troops. Her advisers, Lord Aberdeen, Lord Castlereagh, and Prince Metternich, entreated her to wait before attempting the journey to Paris, but without consulting them further she set out with only her maid and footman. She was once arrested on the way, but was detained only for a few hours, and, after a journey of three days and nights, she joined Lord Burghersh in Paris. Lord Aberdeen and Lord Castlereagh never forgave her for having reached Paris before them.

On the conclusion of the war, Lord Burghersh entered the diplomatic service, and was British minister at Florence for sixteen years, at Berlin for nine years, and at Vienna for six years. Lady Burghersh had twelve children, and although she thoroughly enjoyed the cultivated and brilliant society with which she and Lord Burghersh were everywhere surrounded, her heart was always in her home. She survived her husband for twenty years, and died early in 1879, at the age of eighty-six.

The Paris Law Courts: Sketches of Men and Manners. Translated from the French by Gerald P. Moriarty. Charles Scribner's Sons. 1894.

THE illustrations with which this work is adorned will be a sufficient warning to the grave student of legal institutions that it is not intended for him. Were this warning not sufficient, the fact that the translation here presented is based upon a French original, 'Le Palais de Justice de Paris,' which was produced by members of the "Association de la Presse Judiciare," would stamp the character of the work unmistakably. The point of view taken by the journalist engaged in gathering at the courts such items as the public are supposed to delight in, is altogether different from that of the jurist or legal antiquary. But it must be conceded that the art of graphic writing is not one in which the authors of works upon comparative jurisprudence have excelled, and that the idea we get of the English courts from Dickens's stories, although somewhat distorted, is more vivid than that obtainable from other sources. Dickens's pictures, however, were generally caricatures and were always exaggerated, while the aim of the French reporters in this enterprise is a serious one, and is carried out with as much sobriety as the nature of this class of writers admits of. We have accordingly an unquestionably accurate description of whatever is to be seen by the eyes and heard by the ears at the Palais de Justice in Paris—so much so that a careful reader would feel quite at home were he to visit these halls, and would be able to understand the general movement of business with sufficient clearness. Further than this we cannot go, for we know little more of the nature of the law that is administered in France after reading this book than we did before; and, although we are constantly reminded of the differences in the procedure, we are not able to form any consistent idea of them. In fact, as the authors probably have no acquaintance with other systems of practice, and had no intention of writing for readers outside of their own country, we could hardly expect to get more than a superficial view of the subject.

Yet if we bear in mind that our jurisprudence is distinguished from that of France by two fundamental peculiarities—the use of the jury in civil actions, and the limitation of the functions of the judge in criminal proceedings to the application and exposition of the law—it is easy to see that we are upon familiar ground. We listen to the same complaints of the delays of the law, of excessive costs, of numberless fees, of absurd technicalities, of judicial arrogance, of the hardship of litigation for the poor, etc. The accounts of the different courts, it is true, show that the methodical French mind has carried the division of judicial labor much farther than we have; but, human nature being pretty much the same everywhere, the character of the grievances that are brought before the courts is not very different. Nor is the aspect of French litigants and lawyers and criminals anything peculiar, as we may learn from both the text and the illustrations. Of these, by the way, we may speak strongly. They are as a rule spirited and suggestive, evidently taken from life; and though with a touch of caricature, yet true and good character-drawing. Perhaps we should not say that they were cleverer work than the text, which is as clear as a guide-book and as sprightly as a column of gossip; but they so forcibly suggest the familiar types of our own court-houses that we appreciate them more readily.

Although trial by jury takes place in criminal cases in France, it has its peculiarities. The number of jurymen is very small, thirty-six being expected to try all the cases of a term, and the number of challenges is limited to twelve to each party. Hence the constitution of the jury, which of course is frequently of the utmost consequence, becomes a matter upon which the highest talents are exercised by the advocates. The antecedents of these three dozen men are carefully studied by counsel, both for the prosecution and the defence; their political opinions, the religious views of their wives, their family connections are all minutely investigated. In a case tried a few years ago in Corsica the selection of the jury was so carefully attended to that when the number was at last complete, the procureur-général leaned toward the counsel for the defendant and said, with a smile, "Your man is acquitted by ten votes to two." "So he is," answered the other when he looked over the list, and so it proved to be when the verdict was given. Neither evidence nor eloquence had affected the foreordained result. But we fear that stories as bad as this could be told of English juries.

Upon the whole we may say that those who want a good guide-book to the Paris courts, an intelligible account of the manner in which business is there transacted, and some French moralizing of a more or less edifying character, will find their requirement satisfactorily met by this book.

BOOKS OF THE WEEK.

Abbotsford: The Personal Relics and Antiquarian Treasures of Sir Walter Scott. Illustrated. London: A. & C. Black; New York: Macmillan. $25.

Adams, Prof. G. B. Civilization during the Middle Ages. Scribners. $2.50.

Anti-Higher Criticism; or, Testimony to the Infallibility of the Bible. Hunt & Eaton. $1.50.

JUST FROM THE PRESS:

THE GOVERNORS OF VIRGINIA.

A Brief Review of the Discovery of the Continent of North America, with a History of the Executives of the Colony and of the Commonwealth of Virginia. By MARGARET VOWELL SMITH. 8vo, cloth, illustrated, 457 pages. Price, $2.50, postpaid.

The purpose of this book is to lay before the public, in a convenient form, a review of the Governors of Virginia from the establishment of the Colony to the present day.

While a history of the State is not attempted, this work may yet be considered a running commentary upon it, and a coup d'œil is offered of many important events connected with the early settlement of the country.

The foundation of the Colony of Virginia was the foundation of the United States; the two facts are one and inseparable, and every lover of America must take an equal interest and pride in both.

Various rare and explanatory State Papers are embodied in this volume, and the personal sketches are gathered from the most authentic sources.

The author has done the work from pure love of it, without thought of pecuniary compensation, and with a view only to placing so much history easily and attractively within reach of the general reader, and of those interested in the old Commonwealth. The style is smooth, terse, and clear. The book is well printed and bound, and the price a moderate one.

HAVE NOW READY:

THE RELIGION OF A LITERARY MAN.

By RICHARD LE GALLIENNE. 12mo, $1.00.

CHIEF CONTENTS: The Relative Spirit—What is Sin—What is Pain—Free Will—The Hereafter—Essential Christianity—Dogma and Symbolism—The Religious Senses, etc.

"Probably the sunniest book on religion ever published "—Mr. ZANGWILL *in the Star, London.*

"The book is certainly a remarkable one, and we urge our readers not to trust to any second-hand account, but to make themselves acquainted with its contents by the ancient method of perusal."—*London Speaker.*

THE STORY OF JAPAN.

By DAVID MURRAY. (Being No. 39 of the Story of the Nations Series). With Maps and Illustrations. 12mo, cloth, $1.50; half leather, gilt tops, $1.75.

WAH-KEE-NAH, AND HER PEOPLE.

The Curious Customs, Traditions, and Legends of the North American Indians. By JAMES C. STRONG, late Brevet Brigadier General Reserve Corps, U. S. A. With frontispiece. Price. $1.25.

ARIEL SHAKESPEARE.

Third Group.

Comprising seven of the Tragedies, viz.:

HAMLET, MACBETH, OTHELLO, KING LEAR, ROMEO AND JULIET, JULIUS CÆSAR, and ANTONY AND CLEOPATRA.

Each play in a separate volume, pocket size, large type, complete and accurate text, illustrated with the celebrated designs of Frank Howard, and bound in flexible morocco. *Sold separately*, per volume 75 cts.

This edition will include all of the Plays, twenty-one of which have thus far been published.

Subscriptions are invited for the entire set (thirty-eight), to be delivered as published, and orders will be received for any volume or volumes.

"Among the innumerable editions of Shakespeare, this is one of the most convenient and pleasing."—*Boston Literary World.*

AUTHORS AND THEIR PUBLIC IN ANCIENT TIMES.

A sketch of literary conditions, and of the relations with the public of literary producers from the earliest time to the invention of printing in 1450. By GEO. HAVEN PUTNAM, author of "The Question of Copyright," etc. 12mo, $1.50.

CHIEF CONTENTS: The Beginnings of Literature—Chaldea—Egypt—China—Japan—India—Persia—Judæa—Greece—Alexandria—Book Terminology in Classic Times—Rome—The Byzantine Empire, etc.

"A special field of study, which Mr. Putnam has covered in a particularly interesting way. . . . His little volume is the more attractive because it is unpretentious and freely acknowledges its obligations to French and German students." *Philadelphia Times.*

"An important contribution to the discussion of the property in literary productions . . . The book, so far as it goes, is admirable. *New York Examiner.*

THE SPIRIT OF THE AGE; OR, CONTEMPORARY PORTRAITS.

By WILLIAM HAZLITT. Edited by Reginald Brimley Johnson. (Being a new volume in the Knickerbocker Nuggets Series) $1.

EDITOR'S TABLE; LITERARY NOTICES; POPULAR MISCELLANY; NOTES.

50 cents a number; $5.00 a year.

D. APPLETON & CO., NEW YORK.

INDEX TO THE
Popular Science Monthly,
Volumes I. to XL., 1872-1892.

Compiled by FREDERIK A. FERNALD. 8vo. Cloth, $2 50.

THE POPULAR SCIENCE MONTHLY is notably a magazine whose contents are of permanent value. Any one who is reading up a subject in natural, social, or ethical science will seldom fail to find a valuable store of information among its resources. Its first twenty years form an especially important and interesting period in the spread of scientific thought and the progress of the scientific arts. As new advances have been made, they have been explained by competent writers in the MONTHLY, so that the forty volumes of the magazine form A TREASURE HOUSE OF SCIENTIFIC KNOWLEDGE. The new Index is a key to this treasure-house, and should be owned by all who possess back volumes of the magazine. Persons who depend on a public library for the use of the volumes will find it a great convenience to have the Index at home. Each alternate page is left blank, to give space for notes and additions.

For sale by all booksellers, or will be sent by mail on receipt of price by the publishers,

D. APPLETON & CO.,
1, 3, AND 5 BOND ST., NEW YORK.

D. Appleton & Co.'s New Books.

Germany and the Germans.
By WILLIAM HARBUTT JOHNSON, author of "German Socialism and Ferdinand Lassalle," "Prince Bismarck and State Socialism," etc. 2 vols., 8vo. Cloth, $6.00.

"This excellent work—a literary monument of intelligent and conscientious labor—deals with every phase and aspect of state and political activity, public and private, in the Fatherland. . . Teems with entertaining anecdotes and introspective *aperçus* of character."—*London Telegraph.*

"With Mr. Dawson's two volumes before him, the ordinary reader may well dispense with the perusal of previous authorities. . . . His work, on the whole, is comprehensive, conscientious, and eminently fair."—*London Chronicle.*

The Romance of an Empress.
Catherine II. of Russia. By K. WALISZEWSKI. With Portrait. 12mo. Cloth, $2.00.

"Few stories in history are more romantic than that of Catherine II. of Russia, with i s mysterious incidents and thrilling episodes; few characters present more curious problems. . . . This volume, in which the Empress is the grand central figure, gives striking pictures of the condition of the contemporary Russia which she did so much to mould as well as to expand. . . . Indeed with her vices and with all her faults, as M. Waliszewski has sketched her portrait, we can hardly help liking as well as admiring her."—*London Times.*

"The author has drawn valuable materials for the elaborate review he has given us from the state papers of the Russian government, from records of distinguished Russian families which have appeared only in recent years, and from the archives of the French Foreign Office; and he has brought together and confronted most of the writers who have left us their reminiscences of the imperial potentate. . . . The industry of the author deserves the highest praise. He has left nothing undone to make his work complete, and from first to last his chapters give proof of diligent research and thorough inquiry."—*Edinburgh Review.*

General Scott.
By General MARCUS J. WRIGHT. A new volume in the Great Commanders Series, edited by General JAMES GRANT WILSON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

General Wright's book is a work of popular interest. The subject is one of the most picturesque and impressive to be found in our military history, and the author, in availing himself of the latest authorities, has produced a book which seems likely to be accepted as a standard work in its class.

How to Study and Teach History.
With Particular Reference to the History of the United States. By B. A. HINSDALE, Ph.D., LL.D., Professor of the Science and the Art of Teaching in the University of Michigan, author of "Schools and Studies," etc. Volume 25, International Education Series. 12mo, Cloth, $1.50.

The aim of this book is practical, and it was written with particular reference to the needs of elementary and secondary teachers, although it will be found of interest and value to teachers and students of all grades. It is one of the most important and valuable volumes in the series.

A Friend of the Queen.
By PAUL GAULOT. With 2 Portraits. 12mo. Cloth, $2.00.

"M. Gaulot deserves thanks for presenting the personal history of Count Fersen in a manner so evidently candid and unbiased."—*Philadelphia Bulletin.*

"There are some characters in history of whom we never seem to grow tired. Of no one is this so much the case as of the beautiful Marie Antoinette, and of that life which is at once so eventful and so tragic. . . . In this work we have much that up to the present time has been only vaguely known."—*Philadelphia Press.*

"A historical volume that will be eagerly read"—*New York Observer.*

"One of those captivating recitals of the romance of truth which are the gilding of the pill of history."—*London Daily News.*

The Brontës in Ireland.
By Dr. WILLIAM WRIGHT. With Portraits and numerous Illustrations. 12mo. Cloth, $1.50.

"A striking contribution to biographical literature, and a significant confirmation of the doctrine of hereditary genius has been made by Dr William Wright in his wonderfully entertaining narrative. . . . The book is admirably written, and is in itself as interesting as a romance. It has a number of valuable illustrations, plans, etc., and will be of the most intense fascination to all who have read and thrilled over 'Jane Eyre' and 'Shirley,' or puzzled over the mystery of the wild and erratic Branwell."—*Boston Beacon.*

"One of the most curious pages which have lately been added to literary history."—*Boston Traveller.*

"A new and thrilling chapter in the history of the Brontë sisters."—*Boston Advertiser.*

The Nation

Is published every week at Broadway and Fulton Street. It was founded by E. L. Godkin in 1865, and Mr. Godkin is still the editor.

THE NATION is an independent weekly review of literature, science, art, and politics, with a serial commentary on the most important American and foreign events, special and occasional correspondence, editorial and miscellaneous articles on prominent political and social topics, and thoroughly competent criticism of the latest developments of literature, science, art, music and the drama. The two hundred contributors who prepare this feast for the scholar and the thinker include the foremost names in American literature and thought, besides many famous men in England and France, Germany and Italy, South America and Japan. THE NATION has been pronounced by the *Saturday Review* to be "on the intellectual level of the best European periodicals." It has a large and widely distributed circulation in all the States of the Union and in foreign ports. The development of that class of independent voters who control the balance of power in several Northern States is largely the work of THE NATION, which has always fought for purity, wisdom, and independence in public life, and for honesty and integrity in legislation.

Subscription, $3.00 a year, postpaid; shorter term at a proportionate rate.

Sample copy sent free on application.

TO ADVERTISERS.

The weekly circulation of THE NATION is about 10,000 copies. This number represents, however, but a portion of the actual readers of the journal, as it goes to all the leading libraries and reading-rooms throughout the country, and to the homes of people of intelligence and means everywhere. It stands alone in its field. The announcements of the leading publishers are a feature of THE NATION, which contains more book-advertising than any other weekly paper. Prominent financial houses, the best schools, and other high-class advertisers of all kinds use its columns constantly. The utmost care is taken to exclude all unpleasant or unworthy advertising.

Advertising rates or other information given on application.

206 to 210 Broadway, New York City.

MACMILLAN & CO., 66 Fifth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 18, 1894.

The Week.

THE letter written by Secretary Carlisle to Senator Voorhees at the latter's request, concerning the state of the Treasury and the means of meeting the existing and impending deficit, has been delayed as long as possible. It shows that the shortage of revenue at the end of the fiscal year, June 30, will probably be $78,000,000, and that the gold balance is down to $74,000,000 at the present time. As the amount of greenbacks in the Treasury at the present time is only $5,000,000, it is evident that $21,000,000 of the greenback-redemption fund has been used for other purposes than those for which it was accumulated. Looking a little further, we find that the amount of Treasury notes (of 1890) in the Treasury is about $2,500,000. Subtract this from the last-mentioned sum, and we discover that $18,500,000 of the greenback-redemption fund has been used to meet the current expenses of the Government. It follows that until other resources are available this process must go on. The secretary must either stop payments in some quarter or continue to take money out of this fund. If he should stop payments, he ought to begin with the salaries of Congressmen in order to teach them a lesson in national finance. It is said that these statesmen think that the secretary has no right to use the greenback-redemption fund for any other purpose than that for which it was accumulated, but that he is required to pay all moneys regularly appropriated by Congress, including the salaries of Senators and Representatives. The only element wanting in this programme is some Wilkins Micawber to show him how to do it.

During the past few weeks there has been a general feeling in financial circles that a bond issue would be a material aid to the revival of business, and some popular misconceptions have grown out of it. A bond issue without any reason for it would not only not promote a revival, but would decisively damage all business interests, since it would imply socialism of the worst kind. There is a plethora of money in the banks, and they would like to lend it on the undoubted security of the Government at a very low rate of interest, but to issue bonds merely for that purpose would be an outrage wholly without justification, and which could not be committed in a country of intelligent people without producing a profound reaction and the most dismal consequences. The benefits to arise from a bond issue are like those which come to a railroad company from funding its floating debt. We are all of us part and parcel of a great corporation, which is temporarily embarrassed. It has liabilities that it cannot meet, and the reserve of former years is gradually disappearing. One of these liabilities, the most important of all, is that of keeping all kinds of money at par with gold, since all confidence and all credit depend upon this. The way to fund the floating debt and to insure the parity of all kinds of money with gold is to issue bonds temporarily. In other words, a bond issue is useful only to avert greater evils. In this light it would prove very useful, and there is no doubt that it will come, either with or without new authority from Congress.

Mr. Hornblower's nomination has been rejected in the Senate by a combination of the worst Republicans and worst Democrats. Twelve Democrats and fifteen Republicans and three Populists voted for rejection, and eighteen Democrats and six Republicans for confirmation. The thirty opposing Senators are a curious lot, containing nearly everybody who of late years has dragged the Senate down from its former high position. In the first place there are the three half-crazy Populists, Allen of Nebraska, Kyle of South Dakota, and Peffer of Kansas, and Irby of South Carolina, who is a half-Populist. Then there are our own Hill and Murphy, and there is Call of Florida, and Pugh of Alabama, and Gorman of Maryland, and Jones of Arkansas, and Coke of Texas. Among the Republicans there are "Bill" Chandler, and Quay of Pennsylvania, and Carey of Wyoming, and Dolph of Oregon, and Stewart of Nevada, and Shoup of Montana, and Teller of Colorado, and Pettigrew of North Dakota, and Hansbrough of North Dakota, and Perkins of Kansas. In fact, it may be said that there are not among the whole thirty more than two names of men whom any one that cared for the character and dignity of the Senate would put there. The Senators who would naturally have sat in the old Senate all voted for confirmation. It came out in the course of the debate that the President had not consulted the New York Senators before making the nomination, which was probably an error of tactics, but then there is no likelihood that Hill and Murphy would have agreed to it if they had been consulted. Mr. Hornblower had committed an offence against them which they could not afford to forgive. At the same time it must be said that if the President expected to fight them, Mr. Hornblower was an unfortunate candidate. They had a strong motive for opposing him, and he was not well enough known out of New York to rally the other Senators to his support. If he had been a judge already, like Judge Lacombe for instance, it would have been much more difficult to defeat him.

Mr. Bourke Cockran made on Saturday one of the best speeches on the tariff that were ever made in the House. It was not only sound in argument but extremely enlivening in the way of humor and repartee. Several of the McKinleyites were sent to grass in the course of the debate, and, among others, Mr. Walker of Massachusetts, who wanted to know whether it would not be a curse to this country if foreign nations would give us all the cotton and woollen goods we need for nothing. Mr. Cockran thought that if it were a curse, the people of Massachusetts would easily reconcile themselves to it. Mr. Walker's idea is that if all the goods we require were sent to us, like manna to the children of Israel, so that we need do nothing but pick them up, that method of supplying our wants would be disadvantageous in an economical sense. By the same reasoning it would be an advantage to us to have short crops of every kind in order that we might work harder for a living. Entertaining such views, it is no wonder that Mr. Walker refused the other day to present to Congress a petition from the Central Labor Union of Worcester, Mass., praying for the passage of the Wilson bill. His breath was nearly taken away when he received the petition, and he has been in a gasping state ever since.

Congressman Payne of this State made a noble attempt the other day to scurry rapidly over one of the rocky bits in the protectionist road. Chairman Wilson had asked how it could be, as long as only about 5 per cent. of the workingmen of this country are in protected industries, that the tariff could be alleged to be the cause of high wages. Why, said Mr. Payne with a superior air, it is obvious that the employers of the 95 per cent. of unprotected labor must pay wages as high as those earned by protected workmen, or else their employees would leave them in the lurch and go into the protected industries. In other words, all the bricklayers would turn machinists on the spot, and the farm-hands would begin to beat their ploughshares into steel rails. This has a lurking air of absurdity, but that there is a great principle lying perdu in it is clear from the fact that it has already begun to operate. The "Willing Workers" of Cincinnati, an organiza-

tion of the unemployed, have declined to accept an offer of work at $1 a day. They base this entirely on the unselfish ground that they cannot take any action which would tend to "lower laboring men's wages." They remain willing to work, of course, as their very name implies, but no offers below fifteen cents an hour can be entertained. Evidently they have been reading Congressman Payne's argument.

A national conference on good city government is to be held in Philadelphia on the 25th and 26th of this month, when various gentlemen connected in one way or another with the work of municipal reform will read papers or make addresses. These movements are all excellent because they keep up the interest in the subject, which is so apt to die out between elections. But we hope that the speakers will bear in mind that the charters of various cities, both of New York and Brooklyn for instance, are about as good now as they can be made in the present state of human nature in these parts. If we had the municipal elections separated in time from the State and national elections, and had a single head for the police, instead of a board, and if the terms of the heads of departments were conterminous with the Mayor's, we should in this city be probably as well off as any charter could make us. What we suffer from is the determination of the Republicans to treat every municipal election as a federal election, and vote in it, not on city affairs, but on the tariff or some other federal affair. The result of this is invariably that the bad and dangerous class is able to put its man in the mayoralty, and he fills the subordinate offices with his "pals." In other words, our trouble is, that the respectable classes are always divided, while the others are always united. What is the remedy for this? is the municipal problem.

There is something very refreshing about the manner in which Mr. Alfred T. White, the new commissioner of city works in Brooklyn, begins the discharge of his duties. He has announced a number of the most important appointments which he has to make, and at the same time has given the public a statement as to the changes which he has made, the reasons for making them, the offices which he has still to fill, and the principles which govern his course. In the chief engineer's place he retains the efficient man who has served the city in that position since 1877, and as water purveyor he selects a man who filled the office most acceptably during Mayor Low's two administrations. The new superintendent of streets is a well-known builder, "who," says Mr. White, "was not an applicant for the place, but who gives up his business and takes this position at my request and in the same spirit in which I take mine." There are twenty-one places in the department above the grade where the civil-service rules apply, and Mr. White announces that he proposes, in the interest of economy, to reduce the number to sixteen by abolishing some and consolidating others. As regards the laborers, he will soon have printed and ready for distribution rules and information concerning appointments somewhat similar to the regulations now in force at the United States navy-yards and in the Boston municipal service, and "framed with the intent of giving a fair chance to all who desire this occupation and of securing to the city the best service when laborers are needed."

The organization of the new Legislature of this State, as revealed in the committee lists of the two houses, leaves no room for doubt as to the governing forces of that body. The ostensible selecting authorities are Senator Saxton and Speaker Malby, but we doubt if there is a person of intelligence in Albany who believes that either of these two men acted as a free agent in his work. Both first came to this city to "consult the authorities," and it is made plain by the outcome that "the authorities" decided that the Legislature should be organized, not on an anti-Tammany or reform basis, but on a Tammany-Republican "deal" basis. The authorities in control of the Republican organization are now working in the interest of party harmony. They are seeking to "build up the organization" by bringing all factions together. They have decided that the old county machine here, with "Jake" Patterson at its head, shall not be overthrown but reorganized, with Patterson and his Boys safe and snug on the inside. They have decided that Tammany shall be not antagonized, but brought to terms, in order that the Republican organization may be nourished with a share in the local offices. The authorities who have reached these conclusions are not Platt and his men alone, but Mr. Depew, and the Hon. Whitelaw Reid, and the Hon. "Jim" Belden, who, in the language of the late Jacob Sharp, "does not stir around for nothing."

Gov. Stone of Mississippi deserves national recognition for the stand which he takes against lawlessness, in his recent message to the Legislature. He tells the law-makers that "nothing calls so loudly for correction as the present miscarriage of justice in trials for homicide," which breeds mob and lynch law, and encourages crime by begetting hope of escape from punishment; and he confesses that "the reproach that a man of means may slay his fellow-man with impunity is, alas! too true, as often exemplified" This is the most hopeful sign for the future of Mississippi that could be imagined—the admission by her executive that the alleged lawlessness really exists, and that a reform in this matter is the most important question for the Legislature to consider. The great difficulty about this subject has been the unwillingness of the South to confess the discreditable truth. No evil is ever overthrown until its existence is admitted.

It is unfortunate that the Republican National Committee has endorsed the proposition to admit as States Utah, Arizona, New Mexico, and Oklahoma. The Democrats in the House generally favor this policy, with the possible exception of Oklahoma, but it was hoped that the Republicans in the Senate might stand out against it, and that the scheme might thus fail in the pressure of more important matters, even if a majority of the upper branch were favorable. But apparently the Republican managers have concluded that they stand as good a chance as the Democrats of controlling half or more of the proposed new States, encouraged to this view regarding Utah doubtless by their party's recent victory for the first time in a municipal election at Salt Lake City. But it is begging the question to say, as the resolutions adopted by the committee declare, that such Territories as Arizona and New Mexico are "possessed of sufficient population and material resources to support State governments." That might be true, and yet it would still remain true that the rights of statehood ought not to be conferred upon a Territory like New Mexico, whose population is largely composed of ignorant Mexicans and Indians, or like Arizona, which had only 59,620 people (thousands of Indians included) when the last census was taken.

The *Investor's Review* of London, of which Mr. A. J. Wilson is the editor, has a leading article entitled "A Paralytic Bank of England." When a telegraphic notice of this article was published some two weeks ago, very little attention was given to it on this side of the water. The full text of the article, however, is apt to lead to rather sober thinking. The article is not in the nature of a raid on the bank. It is very far from having the appearance of vindictiveness. On the contrary, it has every appearance of respectability and fairness, and the motive of the writer appears to be merely to arrest bad practices, and thus to prevent an ultimate catastrophe of far greater magnitude than collapse of the Barings would have been if the bank had not virtually shouldered that sink-

ing concern. One of the points made by Mr. Wilson is that the bank's published statements are not intelligible. Take, for example, the item "other securities, £24,458,173," which appears in the list of assets. Here is an item exceeding by £10,000,000 sterling the bank's capital, about which the public knows nothing whatever. It may consist of discounted bills of exchange, in which case it would probably be good down to the last sovereign, or nearly so. It may consist of the Baring assets, or the unsalable portion thereof, the Murietta assets, the Leopold Salomon assets, etc., etc. Mr. Wilson offers the opinion that bills of exchange constitute the smallest part of this collection of "other securities," and that the outturn of the heap, while undoubtedly sufficient to satisfy every creditor of the bank, will not be sufficient to warrant the present quotation of the bank's shares in the market. The capital of the bank at par is £14,553,000, but it is bought and sold in the market as though it were £47,000,000, or at more than 300 per cent.

Another point made by Mr. Wilson is that the Bank directors as a body have no better knowledge of the character of the assets than the public generally. In the first place, they are not bankers. In this respect the Bank of England is peculiar. Its directors are all City merchants. This is a tradition. "The new director is never a banker, and rarely a man trained in the hard school of competitive business." The annual meeting of a joint-stock company never becomes interesting as long as good dividends are paid. The Bank's meetings are not exceptional in this regard. This is the way they go, says Mr. Wilson:

> "The governor utters a few platitudes about average rates of money, or the duty of other banks to keep larger balances with the bank or to publish better accounts, and, latterly, has added a sanguine prophecy about the excellent prospects of the Baring liquidation. All this is wound up with the motion for declaring a dividend. Then two or three shareholders, generally for years back a Mr. Jones and a Mr. Botlev, rise in succession and pour forth, with a touching virginity of mind, some of the most grotesquely inept observations it is possible to imagine. They know nothing about either the bank itself or about banking business, but the bank is their god, and they worship it with the utmost sincerity and heartiness."

All this has a familiar sound. It reads like an echo from the report of the Banca Romana. But the Bank of England is not to be classed with that concern. Nor are there any real grounds for uneasiness if steps are taken to liquidate the Baring and other rubbish that the Bank describes in the wide-embracing phrase "other securities." It would seem, however, that the Government ought to have independent knowledge of the nature of the Bank's bill-book by an examination once each year.

The British Parliament has before it a bill to prohibit advertisements in public places in rural districts, with elaborate provision for the protection of pillars, posts, gates, fences, walls, hoardings, trees, "or any other thing whatsoever" that is visible to any person on any "highway, main road, footpath, bridle-path, railroad, canal, navigable river, or any place open to the public." That this particular bill has small chance of success at the tag end of a momentous session does not detract from its interest as a sign of the times. It is one of many proofs that the slow-moving Briton has passed beyond the letter-to-the-*Times* stage of protest. Among the amendatory clauses, now under consideration, to the act regulating the powers of the Thames embankment commissioners, is one which authorizes the conservators to "prohibit and regulate the exhibition of advertisements and placards . . . or advertising . . . in any form, on the river . . . or on its banks." The year 1893 also saw the formation of a "national society for checking the abuses of public advertising," with 600 enthusiastic members. Branches of this society in the provincial towns are the next announced step on the programme. The association aims so to arouse and crystallize public opinion that 1894 may not pass without the accomplishment of an act of Parliament that will give the deathblow to present advertising abuses.

The initial step towards such legislation, for town and country, has been already taken. Mr. Edmund Boulnois, M.P., acting in concert with the National Society, has ready the draft of a general bill, to be called the "advertisements regulation act," which will empower all "local authorities" throughout Great Britain and Ireland to regulate advertising, to charge a public fee for the privilege, with a fine (not more than $25 for each offence, and $10 a day for every day during which the offence is continued after conviction) for disregard of the law, and with absolute exclusion of any kind or sort of advertisement, or of "advertisement stations," from any "arable land or pasture land, woodland, garden, public park, common, inland or tidal water, foreshore, or any part of the same, . . . or upon any tree, rock (or any part of the soil) . . . or at any railroad station distant more than 200 yards(!) from the nearest booking-office." Provision is also to be made for the *removal* of advertisements and "sky-signs"—beyond the reasonable and necessary professional or business signs attached to buildings—from streets, commons, and other public places. In a word, the British public proposes to control and reform a very potent and insidious phase of public education.

An instructive light is thrown upon the working of our tariff laws by a report of the silk-manufacturers of Saint-Étienne lately presented to the French Government. In it they took up specifically the question of their exports to the United States, Russia, and Switzerland, and the bearing on their business of tariff laws, foreign and domestic. A study of the table setting forth their sales to the United States reveals some curious relations of their exports to our customs legislation. For a time after the passage of one of our tariff bills the exports invariably fall off, only to rise again as invariably in a year or two. Thus, in 1885 the exports of ribbons and velvets from Saint-Étienne fell to $480,000, though they had amounted to as much as $1,800,000 before the tariff of 1883 was passed. However, they slowly mounted again till, in 1890, the figures were upwards of $2,600,000. This was frightful, and McKinley hurried to double the rates. Down fell the Saint-Étienne exports, of course, but equally of course they began to rise again, and in 1892 amounted to $1,260,000, or more than twice what they were in 1885, before McKinley began his holy war against foreigners. Now, to what do the manufacturers attribute their ability thus to encounter hostile legislation? Incredible as it may seem, to their ingenuity in inventing new processes and products and to their energy and enterprise in building up a foreign trade. Against these arms of precision, what can our barbarous tariff bows and arrows and blunderbusses hope to do?

The prompt trial and conviction of Vaillant, the Parisian bomb-thrower, reflect credit on the French judicial system and show a distinct toning-up of the courage of French juries on the subject of anarchist crimes. Two years ago, when Ravachol, even more of a human monster than Vaillant, was tried, the jury were forced to find him guilty, but put "extenuating circumstances" into their verdict, so that his sentence was only imprisonment for life, although he was afterwards tried and executed for another crime. This was generally believed to have been due to the terrorism in which the jury was held by anarchists; but though the same tactics were resorted to in Vaillant's case, the result was different. Doubtless every sane man in France is convinced at last that self-preservation, if no other motive, calls for the speediest possible throttling of the anarchists, and thus judges and juries have now assured them the indispensable backing of a strong public opinion. Our common-law ideas of the impartiality of presiding judges leave us somewhat bewildered at the active share in the prosecution taken by the French judges, but, after all, there can be no doubt that substantial justice has been done.

WHAT TO DO WITH HAWAII.

MR. TURPIE of the Senate committee on foreign relations has submitted the following resolution:

"Resolved, That from the facts and papers laid before us by the Executive and other sources, it is unwise, inexpedient, and not in accordance with the character and dignity of the United States to consider further at this time either the treaty or project of annexation of the Hawaiian territory to this country; that the provisional government therein having been du y recognized, the highest international interests require that it shall pursue its own line of polity. Foreign intervention in the political affairs of these islands will be regarded as an act unfriendly to the Government of the United States."

Mr. Frye has a somewhat similar one hanging over since the 3d of January, which condemns interference by our Government, "either by moral influence or physical force, for the restoration of the Queen or the maintenance of the provisional government," and asks that our naval forces should be used only for the protection of the lives and property of American citizens.

Now, the passage of Mr. Turpie's resolution at this time is the very best disposition that can be made of the Hawaiian question. Mr. Dole was perfectly right when he told Mr. Willis that our Government had now no right to interfere with him. This is quite true. Mr. Dole is the head of probably the most rascally and illegitimate little state in the world, but a state it is. His Government has been recognized by us and all other foreign governments which have any dealings with him. It is the only Government of Hawaii. It has the army and navy and the forts, and can kill any of its subjects who disobey it. Mr. Cleveland's request that it should let the Queen come back has been refused. When she rejected the conditions on which our assistance in getting back was first offered to her, Mr. Willis ought not to have meddled further in the business. In transactions of this kind there is no room for change of mind. The refusal of a throne is always final.

The provisional government and "the missionary element" being now masters of the situation, there is no reason why they should not go on and govern the Islands in their own way, and show the wicked natives what a Christian government is. We are responsible to them for nothing except protection from any other foreign power. Meanwhile we have nothing to do but see that American life and property in the Islands are safe. The President has referred the whole business to Congress, but Congress can do nothing except pass an act for the annexation of the Islands, and to do this there seems to be no disposition anywhere. The continuance of the inquiry into the Hawaiian matter and the debating about it can, therefore, have no object but to harass President Cleveland and discredit his administration, but as he is not a candidate for reëlection, this seems hardly worth while.

We say hardly worth while, because there are two very serious domestic questions before the country about which Congress can do something, and which imperatively demand its attention. One is the tariff and the other is the deficit in the revenue. The Treasury is on the verge of bankruptcy, and nothing has yet been done to help it out of its fix. Mr. Carlisle asks for authority to make a small temporary loan, and he does not get it. The whole country is waiting for the Wilson bill to be either passed or defeated, and though it is now nearly a year and a half since the people pronounced positively against Republican finance, nothing has been provided to take its place. The debate drags slowly on, and the arguments pro and con which have been doing duty for twenty and, for that matter, for a hundred years, still darken the air of the House. We have reached the middle of January, and the spring trade will open in six weeks more in absolute uncertainty, unless Congress settles down to business.

But it is impossible to dismiss the Hawaiian trouble without remarking on the illustration it affords of the value of a trained diplomatic service. Had we had it, had Mr. Stevens been a man who had learned his trade under competent instructors, his meddling in the conspiracy of "the missionary element" would have been impossible. To an old Blaineite preacher and editor, however, it seemed the most natural thing in the world. So also we may say that a trained man in Mr. Willis's place would have paid no attention to the Queen's second resolution, but would have washed his hands of the matter after receiving the first. This defect in our diplomacy—the absence of men who know the business—is not usually brought out in Europe, because our interference there is exceedingly rare. We have had no serious trouble with any European power since 1812 except the *Alabama* affair with England, and that wrecked two of our ministers, Mr. Motley and Mr. Reverdy Johnson. Our ministers in Europe are usually simple observers. But when we begin to meddle, as in Hawaii, and our agent goes beyond the reach of the telegraph, he is very apt to get out of his depth promptly. A more absurd person than old Mr. Stevens to represent a great nation could hardly be imagined, and yet if "the missionary element" had not asked him to a share in their enterprise, we should never have known it. Unhappily nothing, or very little, is done by our press at home to correct this weakness of our system or enlighten public opinion about it, for no matter of what folly or excess our minister may be guilty abroad, the majority of the editors, on some queer theory of patriotism, proceed to back him with the wildest yells and contortions.

NO STEPS BACKWARD.

MR. TOM JOHNSON of Ohio made a rattling speech on the tariff question last week. Mr. Johnson is a manufacturer of steel rails at Johnstown. He says that no duty on rails is needed, and that it serves only to keep up the "steel-rail combine," enabling them to subsidize a portion of their plant and pay certain members for discharging their hands and standing idle. Mr. Dalzell of Pennsylvania did not believe there was any such pool in existence now, although he admitted that there had been heretofore. Mr. Johnson thereupon gave a narrative of facts within his own knowledge. He said that a new pool was formed last November which agreed to give the manufacturers at Sparrow's Point, Md., $1,000 a day to close their works and discharge their men. It was a part of the bargain that the others should maintain the price of rails at $29 per ton. One of the members secretly undersold the pool. Carnegie made war on him, put the price down to $19, closed him up, and then formed another pool. This explains the mysterious fluctuations in rails a month or two ago. Nobody could get a quotation that could be depended upon. The price was $29, $25, $22, and $19, all within a very short period, but nobody could quote prices six months ahead. This violent fluctuation was due to the internal spasms of the steel-rail combine. Mr. Dalzell, the representative of Pittsburgh in the House, said that he could not controvert Mr. Johnson's facts, but that if such a pool had been formed, he deprecated it as much as anybody.

Mr. Johnson, in the course of his remarks, spoke of the Carnegie works as the finest mill in the world. This gave Mr. Walker of Massachusetts the opportunity to say that "protection made it." Mr. Johnson denied this. He said that "Bill Jones made it." He and Bill Jones were old friends. He knew exactly what Jones had done, and what Carnegie had done, and what the tariff had done. He considered the tariff a damage to all concerned, and especially to the workingmen. He did not go into the history of the iron trade in this country. If he had done so, he might have told Mr. Walker that the superiority of the United States to Great Britain as a producer of iron was at one time so great that the English manufacturers besought Parliament to prohibit the importation of American iron into the United Kingdom, and pro phesied the ruin of their own industries if such importation were allowed; and that this superiority lasted until the policy of protection was adopted by us. Mr. Johnson is right.

The conclusion of Mr. Johnson's speech was weighted with words of wisdom. "I know," he said, "that there are many Democrats here who are not in sympathy with the Democratic platform, and are at heart protectionists. The

part of political wisdom for them is to go over to the Republican party, where, in the struggle now beginning over economic issues, they really belong. But while they remain with the Democracy they must share its fate, and whether they may deem it politically wise or foolish for the Democracy to have begun this fight against protection, they must certainly see that the only safety now is in going forward." These remarks apply to all the Democratic members of both House and Senate. The protected classes are holding meetings everywhere to intimidate Democratic Congressmen. The woollen manufacturers held such a meeting in this city last week. It had no other purpose. Does any Democrat suppose that these woollen men will take him up and reëlect him to Congress if he votes against the Wilson bill? Will they rally around any Democratic flag in any part of the country? No; they will give every vote and every dollar they can raise to the election of the Republican nominee of the district, whoever he may be. The Democratic member who allows himself to be intimidated by these protected classes will fall between two stools.

No, there can be no steps backward so far as the Democratic party or individual Democrats are concerned. The only safety is in going forward, and in dragging the decrepit woollen men along. So long as these people are leaning on a tariff of 50, 60, 70, and so on up to 303 per cent. as Mr. Wilson showed the other day, they will never learn to do without it. They will always be under terror of the Ohio political shepherds to such an extent that they will never have time or opportunity to learn their own trade properly. That terror was the reason for last week's meeting. It is not fear of the Wilson bill, but of what the Ohio shepherds may do hereafter if the Wilson bill passes, that brings them together. The shepherds have held the manufacturers responsible for a good stiff duty on wool. There was some show of logic in their position as long as the Republicans were in power. There is no logic in it now, because the woollen manufacturers cannot control the Democratic party as they did control the Republican. Yet the inexorable wool-growers continue to threaten the manufacturers with awful consequences if they allow any bill to pass which contains the item of free wool, even though they may be as innocent as spring lambs of any intention to bring about that result.

THE SOCIALIST'S "OPPORTUNITY."

We have received a letter in defence of socialism which suggests several questions. It maintains that the State is bound to give every man an "opportunity" to work, "to provide for his wants himself." But who is to judge whether "the opportunity to provide for his wants himself" is a proper and sufficient one—"the State" or the man? You may offer him work, but suppose it is work which he dislikes and for which he says he is not fit—what then? Who shall decide between you? Are you bound to provide every man with work in his own trade—the builder with building, the tailor with clothing-making, and so on? If so, what about the market for his products? Who is to see to the sale of the houses or the clothing? At present the employer looks after the market, and if he sees signs that it is overstocked, he cuts down his production. But the State could not do this if it owed every man an "opportunity."

Then, again, how is the question of the reasonableness of a man's "wants" to be settled? If left to himself, he would naturally surround himself with every comfort, including, of course, a modicum of wholesome amusement, such as a night per week at the theatre or opera. If left to the trades unions, they would pay five dollars a day for street-cleaning, and other occupations in proportion. If left to "the State," the question would be passed on by gentlemen anxious to make themselves "solid" with the working classes, and they would undoubtedly make the opportunity as "golden" as possible. And then who is to manage this business of distributing opportunities? The demand for them would be enormous, and it is safe to say that it would take all the business talent of the community, and twice as much more, to meet it with any approach to justice and regularity. Where is this talent to come from? What salaries would you pay for it? And, above all, how would private employers keep these men, or get any work out of them, when the men knew that they had only to go to the Government office to claim an "opportunity" to work in their own way? It is difficult to conceive of any business calling for manual labor continuing very long in operation under a system in which the State competed with the individual capitalist by offering employment on what might be called the laborer's own terms.

Not less important than any of these questions is the question what, under this system, is to become of the large body of industrious, thrifty, and self-controlled people by whom all modern governments are now maintained, who make their own "opportunities," and seek nothing from the State but security. To this class the great body of the people in every modern State belongs. Travel in any direction you will, and you find the country full of them, in farmhouses and in workshops. They are not as a general rule rich. It is as much as they can do to earn a livelihood, pay their taxes, and lay up something for their old age. When they begin life, they try one thing or another till they find their proper place, and ask no favors from any one. Besides supporting themselves they have to support all the ne'er-do-weels and incompetents and paupers in the country. It is a great mistake to suppose that the lazy fellows and the "dead beats" live on air. They are maintained, in some sort of fashion—by gifts, loans, or poor rates—by the industrious and thrifty. It is a great mistake, too, to suppose that the "dead-beats" have no opportunities offered them. There is probably no broken man or failure in the country who has not had, if his health was good, many opportunities offered him when beginning life. He has probably missed them through stupidity, or drunkenness, or unsteadiness, or dishonesty, and he then comes for subsistence on the steady and prosperous. Is not this burden enough for the steady and prosperous?

In case the State offered opportunities to workingmen in bad times, it would, of course, find itself with immense quantities of goods on hand for which there was no market, for the demand for opportunities would be greatest when the demand for goods was slackest. These goods, like all goods made by men who have neither pride in their work nor fear of dismissal before their eyes, would probably be of poor quality, and, in default of purchasers, they would have to be stored, and being stored would depreciate. The outgo for wages and material would, however, continue, and would have to come out of the taxes, and the worse the times were, of course, the heavier the taxes would be, and it is the industrious men who find their own opportunities who would have to pay them. How long would they stand this system? How long would it be before they withdrew the opportunities and drove the opportunity men to the workhouse or the waste lands?

One of the most curious things about socialists is that they never work out their system in detail. We believe there is not in the whole body of socialistic literature, now very large, a single attempt to give us a particular, and minute, and serious account of the machinery of a socialist state. There have been *jeux d'esprit*, like Bellamy's book, and there have been burlesques by writers hostile to the system; but there is not a single book or brochure which tells exactly how the scheme of State provision for everybody would be carried out. In all the socialist writings, the source from which "the State" is to get its income is passed over without mention, and so is the market in which the socialist goods are to be sold. There are, in fact, two great assumptions at the bottom of the whole theory: one is, that the resources of the State are mysterious and inexhaustible; and the other is, that the present well-to-do class would under socialism continue in existence, and not only pay workingmen whatever wages they asked, but joyfully meet all demands made on it in the shape of property and income taxes, and buy all

the State goods, while the laborers had short hours, steady employment, and a fair share of the luxuries. That any such state of things is probable or possible, no proof is ever offered. All our experience of human nature makes it improbable. Every man's experience of his own nature makes it impossible. No sober-minded and industrious man would stay in any such community any more than in a madhouse. The lucubrations of the young professors of political economy about it are as valuable as Bellamy's book, and yet the professors are all possessed with the idea that they are pushing forward the boundaries of a new "science" with wonderful rapidity.

REGULATION OF SECONDARY EDUCATION.

BOTH a starting-point and a goal for the reform of secondary instruction and college-admission examinations in this country have been furnished by the movement begun by a few members of the National Educational Association during the summer of 1892, and guided to a successful issue by a committee of ten, of which President Eliot of Harvard was chairman. The report of this committee has just been printed by the Bureau of Education as a public document, and it is well within the mark to say that no more carefully prepared and comprehensive publication on an educational subject has appeared in this country. In form it resembles the "Lehrpläne und Lehraufgaben" issued from time to time by the Prussian minister of education, but in scope it far surpasses any such document.

The need of such an investigation and report as the committee of ten have made was urged by the colleges and secondary schools in every part of the country. Except in those Western States where a State university stands at the head of the State school system and binds the high schools to itself—as in Michigan, Minnesota, or Nebraska—there is great uncertainty and diversity in the relations of the secondary schools to the colleges, and in the work of the secondary schools themselves. This very investigation, indeed, brought to light the fact that more than forty separate subjects of instruction were to be found on the programmes of prominent secondary schools. It is well known, also, that many of the larger colleges often throw preparatory school work into the greatest confusion by arbitrary changes in their admission examinations.

To secure relief from what was rapidly becoming an intolerable condition of confusion and diversity was not easy. Every important educational interest had to be consulted and brought into co-operation, and the broadest possible basis laid for the reform movement. This was done, in a measure, by having the appointment of the committee emanate from a thoroughly representative body like the National Educational Association. It was made more certain by the composition of the committee and its admirable mode of procedure. The committee represented in its membership universities and colleges of every type, public high schools and endowed academies, and the special students of educational institutions and administration. Its mode of procedure consisted (1) in putting into specific form the problems to be solved, (2) in determining just what subjects ought to appear on a secondary-school programme, (3) in calling conferences of experts in each of these subjects, and (4) in framing a general report on the conclusions reached by these special conferences.

Nine conferences were appointed, each consisting of ten members, and the list contains the names of many leading American scholars and teachers. Hale and Collar, for example, were members of the Latin conference; D'Ooge, Keep, and Wheeler of that on Greek; Kittredge, Maxwell, and Thurber of that on English; Van Daell and Grandgent of that on other modern languages; Byerly, Fine, Newcomb, and Safford of that on mathematics; Remsen of that on physics and chemistry; Coulter of that on natural history; C. K. Adams, Hart, Macy, and Woodrow Wilson of that on history; and Chamberlin, Davis, and Harrington of that on geography. Fortunately the reports of the special conferences are appended to the report of the committee of ten, and these in themselves are well worth the trouble and expense involved in their preparation.

Five main topics were considered by the several conferences, and the discussion of these was the main business of the committee of ten. These topics were, the proper limits of the several subjects of instruction in secondary schools, the best methods of instruction, the best methods of testing pupils' attainments, the most desirable allotment of time for each subject, and the requirements in it for admission to college. On four of these points the conferences are so unanimous in recommending what progressive teachers agree in considering wisest and best that the committee of ten find little to do beyond enumerating and enforcing their recommendations. The remaining point, however, that of time-allotment among the several subjects, is a more difficult one. It involves the very troublesome task of programme-making.

Yet even here the committee did not find that the conferences were unreasonable. Each group of specialists was naturally desirous of securing time for the proper study of its own subject, but on adding together the demands as to time made by the nine groups, the result is seen to be within the possibilities of a large and well-equipped school, though far too much for any single pupil to attempt. Several programmes of study, not one alone, must therefore be made. The committee of ten provide in tabular form the material of which a thousand programmes may be made, and then give four sample programmes of their own. As these last represent the mature conclusions of the committee, reached after a prolonged study of the recommendations of the conferences, they will naturally attract a great deal of attention, and it is to them that the average principal of a secondary school will first turn. The four sample programmes are called, respectively, the classical, the Latin-scientific, the modern-language, and the English. The first makes provision for three foreign languages, one of which is modern. The second finds room for Latin and one modern language. The third embraces both French and German, but no ancient language; while the fourth provides for one foreign language, which may be either Latin, French, or German. No one of the programmes excludes the study of natural science, and the same is true as to history and geography. The time-allotment among the several subjects affords opportunity to win from each the kind of mental training it is fitted to supply. The different principal subjects are put on an approximately equal footing. All short information courses are omitted, and the instruction in each of the main lines—namely, language, science, history, and mathematics—is substantially continuous. These are all sound principles for the making of school programmes.

The committee are of opinion that under existing conditions in the United States as to the training of teachers and the provision of necessary means of instruction, the classical and Latin-scientific programmes must in practice be distinctly superior to the other two. In other words, we have not yet reduced the teaching of natural science and the modern languages to the same precision that is found in the case of the classics and mathematics; nor are competent teachers of the former subjects yet at hand in sufficient number to make it possible for the secondary schools to treat them on an equality with the latter.

On the subject of the relations between the colleges and the secondary schools, the committee speak with no uncertain sound. "It is obviously desirable," says the report, "that the colleges and scientific schools should be accessible to all boys or girls who have completed creditably the secondary course, . . . no matter to what group of subjects they may have mainly devoted themselves in the secondary school." It is, of course, recognized that, as secondary-school courses are now organized, with many feeble and scrappy

bits of instruction on a large variety of subjects, this is not a reasonable request to prefer to the colleges. But if the recommendations of the conferences and the committee were carried out, all the main subjects would take equal rank in the school. All would be taught consecutively and thoroughly. All would be used for training the powers and observation, memory, expression, and reasoning, though differing among themselves in quality and substance.

The latest published statistics show that there are in the United States more than 2,700 public high schools, with about 210,000 pupils. Of these, 25,000 are being prepared for college. There were at the same time more than 1,700 private secondary schools, with 98,000 pupils. Of these, 20,000 were being prepared for college. If the recommendations of the committee of ten be followed in spirit as well as in letter, both the 45,000 pupils who look forward to a college education and the 163,000 who expect to end their systematic study with the high school, will be given an immensely improved opportunity for sound training. The secondary schools will work in harmony, while retaining each its own individuality. And admission to college will be an incident in secondary-school work instead of the sole *terminus ad quem*.

THE FINANCIAL CRISIS IN GREECE.

ATHENS, December 20, 1893.

THIS small corner of Europe, which has played such an important and glorious part in the world's history, is laboring at present under the worst crisis that it has known since the recognition of its independence in 1830. Greece has run so heavily into debt that she can no longer meet her engagements. On December 15 the Greek Chamber of Deputies accepted the Government's proposal to pay a provisional instalment of 30 per cent. on the January coupon of the public debt, and to open negotiations with the bondholders with a view to a reduction of the capital of the debt; and yet, in 1867, the treasury balance of the Greek Finance Department closed with a surplus of 4,000,000 drachmas,* on a total revenue of 32,000,000.

What has created such a sad transition from abundance to bankruptcy? The answer is not easily put into a few words; Greek finance is a difficult problem even for professional financiers. The present situation is the result of many concurrent causes, which I shall merely attempt to outline. The sum total of the Greek public debt amounts to about 820,000,000 francs ($164,000,000), including the floating debt. The annual interest and sinking fund required on this capital is 35,329,500 francs ($7,066,000), more than five-sixths of which must be remitted abroad to foreign bondholders. As the total revenues of the state have just reached 100,000,000 dr. per annum, it is quite evident that the exportation of half of the same is a drain that a country like Greece cannot endure. The beginnings of the Greek public debt go back to the war of Liberation, before the establishment of an independent state. In 1824 the provisional government raised a loan of $4,000,000, which was entirely paid off three years ago; and in 1832 Greece borrowed 60,000,000 francs (afterward increased to 100,000,000, but reduced since then to 73,000,000). But up to 1861 no more loans were contracted. Between 1861 and 1871 the public debt was increased by 31,000,000 francs, and in 1871–1880 some 100,000,000 francs more were borrowed, thus bringing up the nominal total of the public debt to 256,000,000 francs. With the year 1881 begins a period of large loans, great internal development, and territorial extension. Thus, Greece borrowed 129,000,000 francs in 1881, 100,000,000 francs in 1884, 30,000,000 francs in 1885, 135,000,000 in 1887, 15,000,000 in 1888, some 155,000,000 in 1889, 60,000,000 in 1890–91, and 36,500,000 in 1892. Besides this there is a floating debt of 130,000,000 francs. This gives a grand total of 1,065,000,000 francs that Greece has borrowed since her political regeneration. Of this nominal capital (Greece has actually received only some 825,000,000 francs in cash), about 245,000,000 francs have been already paid off, leaving the outstanding capital of the public debt, as I said above, at 820,000,000 francs, or a burden of 372.72 francs ($74.54) per head of population.

The question naturally arises, How has all this money been spent? And in answering I shall not deal with the period prior to 1881, as that would carry me too far. Suffice it to say that a country which had been laid waste by a nine years' war, after four centuries of Asiatic oppression, was naturally destitute of everything that goes to make up civilization. Roads, harbors, public works, posts and telegraphs, national defence—all had to be created, as it were, out of nothing. If, therefore, the internal condition of Greece in 1877 was not all that could be desired, it was certainly all that could be expected for an outlay of 256,000,000 fr. Then came the war scare of 1877–1881, causing an increase of the public debt by some 140,000,000 and bringing about the forced circulation of bank-notes. However, the policy of those years had a happy issue in the acquisition of Thessaly, a fertile wheat-growing province of 13,000 square kilometres.

Since 1881 the public debt has been swelled by a nominal capital of 810,000,000 fr. (including the floating debt), the actual yield of which was 595,000,000 fr. Of this latter sum, 83,000,000 went to cover the 1877–1881 deficits, 170,000,000 to convert or consolidate older loans at a lower rate of interest, 67,000,000 to abolish the forced circulation, 66,000,000 as state subventions toward the construction of railways that are eventually to become state property; 26,000,000 for road-making; and 27,000,000 for three ironclads. The remainder, a sum of 156,000,000 fr., was employed solely in covering the deficits of the administrative years 1882–1892. In 1871 the annual interest and sinking-fund percentage on the debt amounted to 7,793,000 dr., most of which did not leave the country. Even as late as 1878 the annual amount paid out to foreign bondholders was only about 1,500,000 fr. But in 1883 it rose to 14,000,000 fr., and three years later to 22,000,000 fr., while to-day it has reached about 32,000,000 fr.

During the past eleven years, Mr. Tricoupis, the present prime minister, has been in power for an aggregate of eight years, and it has been his policy, by raising foreign loans in rapid succession, to attract foreign capital to Greece, to convert and consolidate older loans at a lower rate of interest, and to execute needed public works. An excellent programme, no doubt, but it is evident to-day that it has been carried out with too much precipitation, burdening the country with heavy obligations ere it was sufficiently developed to meet them. Another detail of Mr. Tricoupis's policy was the payment of the interest on the public debt each time out of the proceeds of a new foreign loan, in order to avoid exporting gold from the country; meanwhile a proportionate amount in bank-notes was placed to the credit of the public debt in Athens. Thus for several years no gold was exported for payments on coupons, and the country had a breathing-spell. But this, too, has proved a dangerous, one may say disastrous, course for Greece, as it practically resulted in borrowing to pay ordinary expenses.

It must be said, in Mr. Tricoupis's justification, that his policy has twice been rudely interrupted and seriously put back by a change of administration, and by the creation of financial burdens which he was in no wise responsible for, and yet had to provide for upon returning to power. Thus, in 1882, he had to pay off 83,000,000 fr. of debts of his predecessors for the war troubles of 1877-1881. In December, 1884, he abolished the forced circulation of bank-notes by paying back 67,000,000 fr. to the National Bank; but shortly afterward he was hurled from power by the elections of 1885, and his successor, Mr. Delyannis, had hardly ruled the country two months before the revolt in Eastern Rumelia broke out, causing the Servo-Bulgarian war and the foolish armaments in Greece. This of course necessitated a loan, and as foreign capitalists would have nothing to do with him, Mr. Delyannis laid hands upon the gold reserve of the banks; thus the forced circulation was again revived, to the amount of 75,000,000 fr. (since then raised to 90,000,000). Besides this, Mr. Delyannis contracted debts, about 55,000,000 fr. in all, which Mr. Tricoupis had to pay off, on returning to power in 1887. Thus the burden of forced circulation has been made a double one.

In spite of all these interruptions and obstacles, however, Mr. Tricoupis's policy has had sufficient trial to prove it to be not the one best adapted to the country's needs and resources. It has already been mentioned that 170,000,000 fr. were employed in converting or consolidating older loans, and it is true that an annual economy of 6,000,000 fr. has thereby been effected in the interest on the loans converted. But unfortunately many of these represented native capital and have all been converted into foreign loans; and thus the interest, being now paid out of the country, is a direct drain upon the country's gold reserve. Public works and railways since 1881 have cost Greece about 100,000,000 fr. This is an item no one can reasonably take exception to, nor is it this that has ruined Greece. On the contrary, travel is now much easier, and its great increase is a distinct source of revenue. Far heavier is the item of war-like preparations during the war-scares of 1877 and 1885, representing a total of 270,000,000 fr. Unfortunately for her finances, Greece has several millions of Greeks under Turkish rule to think of; this is the inheritance forced upon the Greeks by the London Convention of 1830, which refused to grant independence to more than one-fourth of the Greek lands that had fought nine long years for their freedom. Free Greece cannot, therefore, be indifferent to the fate of the Greeks in Turkey, nor cease to regard their present condition as transient; and it is ever the professed aim of Greek statesmen to build up resources which

*The Greek drachma at par is equivalent to the French franc. At present, owing to the forced circulation of paper currency, the exchange on gold is quite high—65 per cent above par. It has not been below 20 per cent. for several years, and recently was as high as 88 per cent. In this letter *dr.* stands for paper drachmas, *fr.* for francs or drachmas in gold.

shall enable Greece, at a happy juncture, to strike an effective blow for their liberation. But this naturally entails patient and systematic work, such as unfortunately has never yet been understood in Greece; and the only efforts made have been hasty armaments upon sudden excitement, which have resulted in nothing else than an increase of the public burdens. An exception must be made in favor of the three ironclads built in 1890, whereby the permanent strength of the Greek navy has been raised to a very respectable degree.

There is another item in the public debt since 1881, which, though not the largest, is yet the most discouraging. As already stated, 156,000,000 fr. effective (equivalent to a nominal capital of about 220,000,000 fr.) has been used to cover the deficits of the administrative years 1882–1892. Since 1882 only the year 1887 shows a balance of revenue and expenditure. In fact, the curse of annual deficits dates back to 1871; the budget of 1861 balanced at 25,000,000 dr., and that of 1867 shows a surplus of 4,000,000. Since 1882 the arrears of revenue have run up to a total of 75,000,000 dr. Here we have it, then, in a nutshell—Greece has become bankrupt within fifteen years, first, through injudicious borrowing and conversions, secondly, through heavy expenditure, caused by two war-scares, thirdly, through laxity of administration. The first two evils may be attributed to errors of judgment, partly justified by legitimate considerations. Greece needed railways and public works, and it seemed best to borrow 100,000,000 fr. for this purpose. It seemed very advantageous, too, to convert 5 or 6 per cents into 4½ per cents. It seemed to be the duty of the Greek Government to stand by the Greeks in Turkey; and no friend of liberty can condemn the Panhellenic "idea"—it is the foolish methods adopted in furthering that idea that must be condemned. But the charge of laxity in the administration, extending over a long period of years, cannot be palliated by any such considerations. No country can hope to have the respect and confidence of the world until it learns to live within its income, and the present misfortunes of Greece are due chiefly to the fact that her statesmen, with all their intelligence, have committed the unpardonable error of imagining that two and two could ever make more than four.

Two causes may be assigned for this unfortunate administration. First is the defective system of taxation, which is most iniquitous in Greece and weakens the country more and more every year. Instead of a land tax (in the absence of a proper survey), there is a heavy tax on ploughing-animals that greatly depresses agriculture. The tax on wine is levied at the grape-press, no matter whether the grape-juice, after several months, turns out good wine or not; thus the wine trade is kept in a state of sickly infancy. The duties on petroleum, sugar, coffee, and imported cereals are oppressively high for such articles of prime necessity. The tax on tobacco is levied in a very wasteful manner. These are only a few of the more glaring defects of the present system.

The second and most potent cause of maladministration is—*parliamentarism*. The utter dependence of the Cabinet upon the good-will of the majority in the Chamber of Deputies (there is no Senate) entails unlimited interference of the legislature in the details of administration. A deputy of the Government party can secure anything fair or foul, from a snug little public office for a constituent (regardless of the latter's fitness for it) to the pardon of a convicted murderer. Even the army and navy have been invaded by this pestilential meddling, to the utter confusion of all discipline and *esprit de corps*. And the finances have been thoroughly demoralized, on the one hand by the exemption of Government protégés from taxation, on the other by wasteful expenditure for party interests. Greece was given a full-rigged parliamentary form of government without having undergone any preparatory political training, and this régime, like a razor in the hands of a child, has not failed to produce disastrous results.

The reduction of the debt will entail great direct loss to the Greeks themselves, for many millions of Greek bonds are owned by Greeks and Greek institutions throughout the East. It is therefore unfair to impute any underhand motives to this proposal of the Greek Government, and no doubt the approaching negotiations with the bondholders will be carried on in a spirit of equity and sincerity. It lies in the creditors' interest to ask no more than the country can pay without crippling its productive resources. Let us hope their present plight will teach the Greeks a salutary lesson. Equilibrium of the budget must hereafter be the cornerstone of their financial policy, at all costs. The burdens of the public revenue must be more equitably distributed and impartially collected, and serious effort be made to encourage native industry and agriculture. Greece is by no means an exhausted land, in spite of her checkered career in the past. She could easily produce enough grain for home consumption; while her olives, oil, wine, currants, figs, and tobacco could, with proper enterprise, bring in dozens of millions of francs more a year than they do at present. The silk trade could be made a mine of gold. The country further abounds in beautiful stone and marble of every variety and color, and is rich in minerals and metallic springs. In fact, even a superficial observer sees unworked sources of wealth in every direction, which need only capital and enterprise to enrich both the individual and the country at large. D. K.

THE ROYAL ACADEMY'S WINTER EXHIBITION.

London, December 30, 1893.

At the Royal Academy's winter show, interest does not always centre about the old men. Sometimes the more recent of the "deceased masters of the British School," as they are called in the catalogue, give the collection its chief importance, and, this, fortunately, is the case in the exhibition just opened. I say fortunately, since if it is not possible to include a series as fine as the Velasquez masterpieces of some four winters ago, or the incomparable Rembrandts and Halses, Titians and Veroneses, which have often dwarfed all the canvases hung with them, in the absence of pictures of supreme value one turns gladly to examples of British painters whose names are excellently well known, but whose work can be seen only on rare occasions. It may disappoint, but there are times when even disappointment has its good uses.

In the present show there is scarce a master, Italian, Dutch, or Flemish (there are no Spaniards to be considered), who cannot be studied to better advantage in the National Gallery. The Primitives (Titian and Veronese, Van Dyck and Rubens, Hals and Rembrandt) are but indifferently represented. Indeed, in their respective sections there is little of special note, save canvases that compel attention because either the name of the painter, or else the subject chosen by a well-known man, has in it something in the nature of a surprise, something unfamiliar. Thus, in the gallery devoted to the Primitives, though there are Virgins by Bellini and Botticelli, by Mabuse and Van Eyck, the one painting which, owing to its rich color scheme and vigorous presentment of strong faces, stands out with distinction, is a portrait of the first Dukes of Urbino by Melozzo da Forli, surely a master who seldom proves so conspicuous. In another gallery, though surrounded by Bordones and Veroneses and Bonifazios, it is a "Flute-Player," by the little-known Savoldo, which charms by the austere dignity in the arrangement, the character in the face and pose of the youth who figures as a musician. Again, in a third room, the eye is arrested by a garden scene—a beautiful old garden, with clipped trees, prim flowerbeds, and a flying cupid in stone—attributed to De Hooghe; a rare contrast, truly, to the interiors which supplied him with his usual motive. I do not mean to say that there are no other good canvases; not many can be passed with entire indifference. But, as a rule, few are notable examples of the masters in question.

And so it is with the pictures of the most distinguished British painters—the portraits by Sir Joshua, Gainsborough, and Romney, the landscapes by Constable, Turner, and Cotman. These are men who, whatever their faults at times, never can be reproached as commonplace or mediocre in their work. But they have been seen before at the Academy—can be seen now elsewhere—in far greater perfection; all, except perhaps Cotman, who certainly never produced anything lovelier or more impressive than a little "Landscape" (it has no other title to identify it) which is classical almost as a Claude in its serenity of composition and dignity of line, "romantic" almost as a Corot or a Rousseau in its beauty and originality of color. It is extraordinary that, with Constable and Cotman to show the right way, the English landscape-painter should so quickly have fallen into an abyss of dulness and vulgarity.

In the British department, however, it is Stothard, a man of very different style and methods, who has been given chief prominence. Many of his paintings and drawings have been brought together to form, as it were, a separate show by themselves. As an illustrator Stothard was most popular during his lifetime, and has been best remembered since his death. Even in these days of innumerable magazines and illustrated daily papers, few black-and-white men produce drawings with such astounding facility and in such incredible numbers; even in our age of cheap and nasty reproduction, few are so careless of their reputation as he often seemed. He would illustrate any and everything, from Rogers's Poems to ordinary fashion journals. Book after book came out, decorated—or otherwise—by his drawings; now, it was 'Clarissa Harlowe' or the 'Spectator,' and now the 'Pilgrim's Progress' or Shakspere. The Bible and the *Novelist's Magazine* he undertook with equal readiness. Stothard, for a time, was very poor, and, by way of increasing his expenses, married early. For a while he had to live by hook or by crook; afterwards the habit of doing whatever fell in his way was not easily to be shaken off. Sometimes he made those charming, graceful little drawings, done either for the steel-engraver or else the wood-engravers trained by Bewick, which are really his masterpieces; sometimes he turned out the veriest hack work,

which it is kinder to forget. But, probably, even when producing his best drawings, he looked upon painting as the serious business of his life, and this winter, for the first time in many years, an opportunity presents itself to study him as a painter. The study results, it must be confessed, in some slight disappointment. After looking at the fifty or more of his canvases, it is realized that he was a man of no marked originality, though he had genuine artistic instinct and was intelligent in his appreciation of the art of Italy, Flanders, and France. He was a careful student, with a talent for imitation. Evidently, Rubens, the Venetians, Raphael, Watteau were by turns his masters. With such sympathy could he copy Titian or Veronese in the blue of the sky or the richness of the foliage that serves as background for many of his nymphs, that one would be inclined to rank him very high as a colorist were it not for those other canvases in which, foolishly, he allowed his own undistinguished individuality full play. Here his color is as crude and glaring as, in his frank imitations of the great Venetians or Flemings, it is rich and glowing. In his pretty pastorals he could paint you a landscape so beautiful in its fine conventions, with so graceful a group of dancers in the foreground, that Watteau might have envied him the cunning of his brush; and yet he could stoop to trivial sentiment and feeble story-telling worthier of the modern Academican or member of the Institute. Now, as in "The Canterbury Pilgrims," the most famous of his pictures, he could design a decoration, striking enough in arrangement to atone for hardness and spottiness of color; but again, as in that unspeakable "Children of Tippoo Sahib given up to Lord Cornwallis," the baldness of his realism, when he attempted to paint the Eastern beauties whom he never saw, becomes absolutely comic. So long as he remained faithful to the painters whom, for the time, he accepted as his masters, his work had merit of no mean order; when once he endeavored to depend upon himself, his work sank hopelessly to the commonplace. Had he been less catholic in his tastes, had he continued constant ever to Raphael or to Watteau, to Rubens or to the Venetians, it matters not whom, he might eventually have developed a style of his own. But the many masters were his undoing. His pictures, as a rule, are but imitations. For a personal note in his work, for an expression of his own artistic temperament, one looks in vain. His great virtue was his intelligence as a student—a virtue that need not, however, be valued lightly.

The same exhibition contains two Ettys, as if to prove that hard study and considerable industry alone will not make the artist. Etty, like Stothard, from whom indeed he may have derived his first incentive, went to Venice and Flanders for inspiration. He was always a conscientious student; so much so that his regular attendance at the life school, even after he had been made a member of the Academy, was resented by his fellow-academicians, who feared thereby a loss of dignity for the whole institution. And few painters have been more industrious, Etty having no life or interest outside of his studio in the old house near Charing Cross, that overlooked the river. But he lacked, in a measure, the intelligence of Stothard; the latter could produce a worthy imitation, but Etty, as one sees in the "Pluto and Proserpine" and the "Sleeping Nymph and Satyrs," was less successful, though far more ambitious. He painted flesh all his life, and yet his women have none of the voluptuous or refined beauty of the nudes by Titian and Rubens, but are mere shapeless bags of fat, their demure Victorian coiffure giving the prurient touch to which Etty would have been the first to object, could he have seen his work with the eyes of the present generation. Still, in the "Nymph" there are certain qualities—a genuine feeling for decoration and color, and a vigor in the drawing of the Satyrs—that show Etty to have been almost a great painter, an artist who just did not come off.

Fred Walker is another of the "deceased British masters" one is glad to study at first hand. He enjoys a great reputation, since many men who looked up to him as their leader are still living to sing his praise. But he was greater in intention than in accomplishment. There is no denying the beauty and glory of his own impression of a sunset which he sought to record in "The Plough," the picture most often cited in testimony of his powers; but the canvas only suggests what he wanted to do; it gives a mass of pink paint, and not the glowing roseate light of the sunset falling on cliffside and on the great clouds towering above; while, in the stilted, affected, exaggerated pose of the ploughman, one sees the beginning of much of the maudlin sentiment that now prevails among English painters. By the same trick his "Wayfarers" challenges sympathy, and so leaves one cold and indifferent. It was by simple means, by the absence of such meretricious aids for emotion, that Millet's sowers and gleaners triumphed. It may be that Fred Walker's shortcomings are the more obvious because of the undoubted talent he displayed even in his failures. Had he lived to finish his life's work, there is small doubt that he would have established on a firmer basis his reputation, which, the chances are, will grow less as time goes on. But between him and a man like the late Mr. Pettie, whose productions are now honored in a room apart, there is a wide gulf, and the contrast emphasizes the good points in Fred Walker's work. For Pettie not only failed in achievement, his standard was low, his aims trivial. Academicians would have shown greater tenderness for his memory had they not collected and hung again so many proofs of his feebleness as painter.

Still another room has been reserved for Blake's illustrations to the Book of Job. But of these so much has been said, so many times, that it would be useless to add more than a word to the mass of literature and criticism on the subject. Again one is struck with the grandeur and impressiveness of his conceptions, the naïveté of his execution, and the grotesque excesses to which his undisciplined imagination could lead him. N. N.

Correspondence.

INDUSTRIAL DEPRESSION AND COLLEGE ATTENDANCE.

To the Editor of The Nation:

Sir: The impression has taken root in the minds of many people that higher education is so essentially a luxury that it may be classed with jewels, paintings, and wines; in other words, that upon the advent of hard times the first cut in expenses is made by setting the boys at work instead of sending them to college. That this is not a true statement of fact has been my conviction for some time, and I am pleased to observe that Prof. James of the University of Pennsylvania has taken exception to it in the *Educational Review* for November. His theory, in common with that of Prof. Amringe of Columbia College and Prof. Conrad of Halle, is that times of industrial depression tend to increase, rather than to diminish, the attendance at the higher institutions of learning. And this theory is remarkably borne out by the figures given in the recent report of President Francis A. Walker of the Massachusetts Institute of Technology. I am, therefore, tempted to submit an analysis of it to your readers in the hope of evoking criticism, if not justification, for the interpretation I would put upon the figures as they appear.

There is at present a total of 1,158 students whose names are on the rolls, making an increase of 98 above the number last year. It is conceivable that a panic might affect the attendance in either one of two ways: it might diminish the size of the entering class; or, secondly, it might induce men to continue their studies for another year rather than to risk an enforced idleness if they sought employment in hard times. As might have been expected, this latter course has been generally adopted. There is an increase of 83 in the number of students remaining over from last year; so that in so far as the attendance is concerned, the panic has had a beneficial influence. Does this mean, then, that so large a number of students of this institution have been unable to secure employment upon graduation? By no means, for a further analysis of the figures shows that only 11 are graduates of the Institute.

This increase in the number of students might have been neutralized in large part had there been a marked decrease in the number of students registering for the first time. But here again there is an increase of 15 over last year's registration. Combining both entering and continuing students, we perceive an increase of 98, which is exactly double the increase of last year. It surely does not appear, therefore, that the crisis of 1893 has resulted in marked economies in the line of higher technical education.

The next point will be to show that, while gains may be expected, especially in the larger institutions, they will be most likely to occur in the purely professional or technical schools, which prepare men to enter at once upon a self-supporting existence. That the comparisons may be unaffected by local circumstances, it will be best to confine our observations to those technical schools which form part of the great universities, and to compare the growth in them with the coincident development of the academic departments. At Harvard, for instance, nearly one-half of the total gain in attendance is found in the Lawrence Scientific School, which contains less than one-tenth of the whole number of students in the university. Out of a total of 1,656 students in the academic department the increase is but 58, or about 4 per cent.; the number attending the technical school is increased by 98, although there were only 181 students on its rolls a year ago, showing an increase of 54 per cent. The most marked feature, however, is the great increase of special students in these technical courses as compared with the number in the academic department. In other words, it appears that while the size of the first-year class in both academic and technical departments is about the same as in 1892–93, there has been an increase of 70 per cent. in the number of special students in the Scientific School as compared with an increase of 9 per cent. in the college proper. Are we not justified in assuming that this represents a number of men who are biding their time by taking professional courses, and who will enter active life on the outbreak of prosperity?

The figures presented for the School of Mines of Columbia College are somewhat peculiar. In the undergraduate courses there is a normal increase of 10 per cent.; taking the school as a whole there is a lessened increment for the current year, the rate of increase being cut down from 10 per cent. in 1892–3 to 4 per cent. for the present year. This is due to a decrease in the number of graduate and special students. At all events the effects of the current depression are much less marked than in the academic department of the college, which suffers an absolute decrease of 9 per cent. But if we turn to the departments which attract special students, we see one reason for this apparently unfavorable showing, I believe, for in those courses which are most likely to attract graduate students and those holding over, we observe a great increase. The School of Political Science has an augmented attendance of 32 per cent., while the Schools of Philosophy and Political Science combined show a growth of upwards of 26 per cent. There is normally a very rapid growth; but are we not also justified in assuming that some of these men are waiting for prosperous times? In this way we are able to account for the great increases in these semi-technical courses; and our thesis seems to be amply upheld by the returns.

In Yale University, the increase of the academic department for 1891–2 was 78 on a total of 888, or about 8.8 per cent.; for this year it was 120 on a total of 966, or about 12 per cent. This certainly corroborates our theory that hard times do not necessarily endanger the cause of higher education. The peculiar significance for us lies in a comparison of these figures for the academic department with those of the technological courses. The increase in the Sheffield Scientific School was 68 on a total of 461 in 1892-3, or about 14 per cent.; in this year of depression it was 72 on a total of 529, or 14 per cent. again. There is no abnormal gain, but a constant percentage of augmentation on an increased base implies no retardation of growth at least.

The figures of the total attendance at Cornell University show an increase over last year of 5 per cent. This is somewhat below the average, which has ranged about 10 per cent. during the last few years. The entering class seems to be augmented by about 5 per cent.; the figures for the graduate departments show a very large increase, namely, 43 per cent. The average yearly increment, excluding Fellows, in these graduate courses for the last five years has apparently been about 25 per cent. If we are justified in the assumption that Cornell draws a smaller proportion of her students from the large cities than either Yale or Columbia, the inference would apparently be unfavorable to Prof. James's theory that the country boy will find less difficulty in being absorbed into active life than his confrère from the city during a time of industrial depression, for the increase in the number of graduate students is more marked here than in either of the two "city-student" colleges. I feel, however, that it would be unsafe to generalize further from such inadequate data.

Another factor which would weaken the force of comparisons in this direction is the fact that women form so large a part of the student body at Cornell. I believe that the increase in attendance will be found in general to be more affected among women than among the men, although space forbids any further consideration of the matter in this place. I shall content myself with mentioning the fact that the treasurers of two College-Women's Aid Societies have noted a marked falling-off in the demand for assistance this year. They ascribe it to the fact that parents have withdrawn their support absolutely in many cases, and that consequently fewer women are tempted to run the risk of the experiment. The communication from Vassar College in the *Educational Review* tends also to give color to this view.

One word in conclusion as to the geographical distribution of the gains and losses, as shown in attendance at the Institute of Technology. The steady increase in the number of students characterized by the last ten years has continued in the New England, Middle, and Central States as a whole. The States which show a marked decrease in the number of students at the Institute are mainly in the South and West, or, as one might expect, in Alabama, Arkansas, Colorado, Washington, etc., although New Jersey, Michigan, and Minnesota appear to be affected somewhat. Among the latter we can readily find an explanation in the growth of technical schools within their borders which would account for the decrease. The other losses are almost exclusively found in those regions where bank suspensions have been most frequent and the intensity of the depression has been most keen. It may be of interest to state that I have since discovered a very close correspondence between these figures and those which have been kindly furnished from the proof-sheets for the catalogue of Cornell University.

A point of some interest in this discussion is the opportunity afforded in technical training for utilizing the vacations in remunerative employment. Inquiries among the third and fourth-year students in our civil and sanitary-engineering courses have shown a very favorable condition of affairs. Out of a class of twenty-nine seniors in these departments twenty-one devoted the summer months of 1893 to practical work, at an average pay of $55 per month. Among thirty-one third-year students 61 per cent. obtained work, despite the depression in business, at an average wage of $51 a month. In view of the fact that a considerable portion of these classes did not even seek work, preferring to rest during the vacation, the success obtained is remarkable. When undergraduates can earn their tuition fees so easily, it is not strange that hard times should have so little effect upon the number of those who seek the professional training.

William Z. Ripley.

Massachusetts Institute of Technology,
Boston, Mass., January 4, 1894.

AN AMERICANISM.

To the Editor of The Nation:

Sir: The following notes on the word "co-education" will perhaps be of general interest:

(1.) It does not appear in the 'Century Dictionary.'

(2.) It is given by the 'International Dictionary' without comment or citation, and defined as "an educating together, as of persons of different sexes or races."

(3.) It appears in the new 'Standard Dictionary' as a term used in the United States. The two meanings which are put together in the definition of the 'International Dictionary' are here given separately. For the meaning 'education of the *sexes* together' there is a citation from Bryce's 'American Commonwealth' dated 1889. Of the other meaning no example is given.

(4.) The article in Murray's 'New English Dictionary' reads as follows:

"Co-education (of U. S. origin). Education of the two sexes together in school or college.
"1874. E. H. Clarke, *Sex in Educ.* 123. In these pages, co-education of the sexes is used in its common acceptation of identical co-education. 1874. S. [*sic*] W. Higginson, *ibid.*, 37. Any physiologist opposed to co-education."

It will be noticed that, of the two meanings given by the 'International' and the 'Standard,' but one is recognized by Murray.

(5.) Although the earliest date given in Murray's Dictionary is 1874, the word was in use many years previously to that time. The oldest document that I know of in which the word occurs bears date of December 28, 1857. It is a circular letter of inquiry sent out from Lansing, Mich., to the Union Schools of the State by Dr. Ira Mayhew, who was then superintendent of public instruction. In this circular the word "co-education" occurs but once, as follows:

"Question 10. Do advantages or disadvantages result, in your experience, from the co-education of the sexes?"

Regarding his use of the word at that time, Dr. Mayhew writes:

"In some sixteen Union Schools replying to the circular above referred to, all but four reported in favor of co-education. These four made no reference to it. All of these reports used the word as now employed. It was so used by myself and others in reports, addresses, and discussions on the subject. . . . I cannot now say whether the term originated with me."

But I find no trace of these "reports, addresses, and discussions" in which the word was employed. Dr. Mayhew did not use it in any other of his official writings of that time.

(6.) I have discovered no other instance of the use of the word before 1870. It does not appear in the places in which one would naturally expect to find it—in the speeches and reports of Edward Everett, for example, in the writings and addresses of Horace Mann (as many of them as I have consulted), or in the papers on the "education of females" published in the *American Journal of Education* and the *American Institute of Instruction*. In 1859 it was unknown even to Dr. Murray's "S. W. Higginson"; at any rate it does not appear in Col. Higginson's article, "Ought Women to Learn the Alphabet?" which came out in the *Atlantic Monthly* in that year.

(7.) In 1870 the word, contemporaneously (or nearly so) with the thing, appeared at the University of Michigan. It may be found in the *University Chronicle* of January 15, 1870. From that time on, instances in papers and magazines are numerous. An example of its use occurs in the *Nation* for March, 1870.

(8.) At Oberlin, where college co-education is said to have begun, the term was not used, I believe, until it had come into general use elsewhere. President Fairchild, in his 'Oberlin, the Colony and the College,' published in 1883, remarks that the word "co-education" "seems to have come into use in the last twenty years"; but it is not to be found in any of the college documents prior to 1870 that I have been able to consult. "Joint education" is used instead.

(9.) The slang term "co-ed," meaning 'woman student in a co-educational institution,' made its first appearance in print, so far as my knowledge goes, at this university in the History of the class of '78, published in the *University Chronicle* of June 15, 1878

It would be interesting to learn on what

grounds the word "co-education" was excluded from the 'Century Dictionary.'

FRED N. SCOTT.

UNIVERSITY OF MICHIGAN, January 4, 1894.

Notes.

WE are glad to learn that Mr. James Schouler has decided to extend his 'History of the United States under the Constitution' by one more volume, the sixth, embracing the civil war and Lincoln's administration.

S. C. Griggs & Co., Chicago, issue next month 'The Union Pacific Railway: A Study in Railway Politics, History, and Economics,' by John P. Davis, A.M. (Mich.).

A combination of Lewis Carroll's 'Sylvie and Bruno' and Diana Clifford Kimber's text-book on 'Anatomy and Physiology for Nurses,' will speedily be published by Macmillan & Co., who have also nearly ready 'The King of Schnorrers: Grotesques and Fantasies,' by Isaac Zangwill, with numerous illustrations.

The publication of a cook-book by subscription is new to us, but Delmonico's veteran chef, Mr. Charles Ranhofer, will essay it, at his own risk, promising an octavo volume of 1,200 pages, embracing 3,700 recipes, and embellished with 800 engravings.

'Great Educational Exhibits,' sketches from the Liberal Arts collection at Chicago, is announced by Wm. Geo. Bruce, Milwaukee.

Mr. W. J. Harvey has undertaken the enormous labor of transcribing the Cambridge (Eng.) records of university alumni for the four centuries 1483–1893 in twenty-one volumes, including an index volume, one for each of fifteen colleges, three for Trinity, and two for St. John's. The work will be entitled 'Alumni Cantabrigienses,' and will record admissions, matriculations, and graduations, giving Christian name and surname, particulars as to parentage, birth, education, college, rank, age at admission, tutors, degrees, dignities, etc., etc.—say 150,000 separate entries. Each college record will be purchasable by itself at a guinea a volume. Mr. Harvey's address is Heathell, Melbourne Grove, Champion Hill, London, S. E.

Publication has been begun in Germany of Dr. Muret's 'Encyklopädisches Wörterbuch der Englischen und Deutschen Sprache,' based on the 'Century Dictionary,' and not neglecting Dr. Murray's so far as it is at present available (Berlin: Langenscheidt: New York: Christern).

The second volume of Hooker and Jackson's 'Index Kewensis' (Oxford: Clarendon Press; New York: Macmillan), extends from *Dendrobium* to *Justicia*. Among the genera which occupy many columns are *Eupatorium*, *Erica*, *Euphorbia* and *Hieracium*, the latter filling no less than thirty-five columns, chiefly through the great multiplication of synonyms. Of the Linnæan genus *Halesia* there are given five species, so that those botanists who would replace this name with something of their own coinage, have an opportunity of adding a few more useless synonyms to a list which is already far too long.

The popular little 'Ariel Shakspere' devised by G. P. Putnam's Sons, shapely for the pocket and clear of print, each with its outline vignette from a series of designs sixty years old, receives just now an addition of seven volumes, viz., "Julius Cæsar," "Antony and Cleopatra," "Hamlet," "Macbeth," "Othello," "King Lear," and "Romeo and Juliet." This constitutes the third group, and two remain; but each play is to be had separately. The same publishers have added to their "Knickerbocker Nuggets" 'Essays Selected from the Spirit of the Age, or Contemporary Portraits, by William Hazlitt.' Hazlitt's judgment of Crabbe may here curiously be read in contrast with Edward FitzGerald's admiration of this poet.

'Kenilworth' makes two volumes of the International Limited Edition of the Waverley Novels (Bryan, Taylor & Co.), and 'Peveril of the Peak' one in the Dryburgh Edition (Macmillan). The etchings and designs for the former are furnished by Ad. Lalauze, the drawings on wood for the latter by Stanley Berkeley; and not much can be said for either series.

The first volume of "an illustrated and popular story" of 'The World's Parliament of Religions' has appeared (Chicago: Parliament Publishing Co.). It is a stout octavo of 800 pages in small type. The editor, the Rev. John Henry Barrows, D.D., admits that greater condensation might have been employed, and promises to sift more rigorously the material for the next volume. There is a great variety of portrait illustrations; and other pictures are of scenes, priests, temples, etc., mainly Oriental. The frontispiece shows the delegates assembled on the platform of the Chicago Art Institute.

Volume vii. of the Transactions of the Royal Historical Society (1893) contains several interesting papers. More than half the volume is devoted to part ii. of "The Inquisition of 1517," edited by I. S. Leadham. This part gives an account of the enclosures and evictions which took place in Norfolk, Yorkshire, Herefordshire, Staffordshire, and Hampshire. In his preface Mr. Leadham breaks a lance with Prof. Ashley on the subject of the legal security of copyholders or customary tenants. The volume also contains a translation of Prof. Pflugk-Harttung's "Druids of Ireland," a brief history of "The Magyar County," "Notes on the Family of Betoun," "The Laws of the Mercers Company of Lichfield," and Dr. F. Liebermann's "Instituta Cnuti." The title "Instituta Cnuti" is here applied to a private compilation written presumably in 1110. It contains a Latin translation of Cnut's laws and of various other legal enactments of which no Anglo-Saxon original is now in existence. Dr. Liebermann carefully analyzes the treatise, and, with his usual critical acumen, throws much new light on its origin and contents. We understand that he will print the first instalment of his edition of the Anglo-Saxon laws next year. He has devoted several years of laborious research to this edition, and it promises to be an epoch-making work.

The fifty-seventh bound volume of the *Commercial and Financial Chronicle*, comprising the weekly issues of this journal from July 1, 1893, to the year's close, has reached our table. The *Chronicle's* merits as a standard authority on financial events, market quotations, and monetary statistics generally, have long since received their proper recognition. The period covered by the volume just issued possesses extraordinary interest, and the record of it comprised in the *Chronicle* is for fulness and accuracy quite unrivalled.

A year ago we gave our readers some account of R. Waliszewski's 'The Romance of an Empress' (Catherine II. of Russia). This readable work now comes to us in an English translation from D. Appleton & Co. The English is fairly fluent; the transliteration of Russian proper names exhibits a queer mixture of English and French phonetics—*Ch*tcherbatof, Zou*b*of, Nikiti*ch*na, Bestou*j*ef; with inconsistencies like Goudo*w*itch, Miro*v*itch, Galitzine, Roumian*t*sof.

Under the title of 'À travers le Japon' the office of the French Minister of Agriculture has printed, on Japanese paper, five hundred copies of an octavo of 172 pages relating to the forests and forest-productions of Japan (Paris: J. Rothschild). It is interesting to know that a large portion of that Eastern empire is under the management of a well-organized forest administration, and that in the year 1882 a college of agriculture and forestry was established near Tokio, where there are now three hundred students, nearly half of whom are in training for office in the forestry departments. The course of study covers five years; three and a half are spent at the college, and the rest of the time is devoted to practical work in the field and forest. An interesting chapter of the book is that which relates to the *ourouchi*, the varnish-tree of Japan (*Rhus vernicifera*). The tree is figured, apparently by Japanese artists, its cultivation treated of, and the peculiar mode of collecting the varnish well described. The average yearly rainfall of Japan is stated to be 1430 mm. (56.3 in.), much more than in our Atlantic States, and with the peculiarity that two-thirds of it falls during the warm season, when the forests have the most need of moisture. Japan is naturally a land of forests, having nearly as great a variety of trees as Eastern North America, and nearly twice as great a variety as Europe. When will our nation learn to have the same care for our forests that is seen even among these people whom we consider far less civilized than ourselves?

The Transactions of the Asiatic Society of Japan form a literary storehouse of unique value. The papers are by special students, almost all of whom reside in Japan. Though in some instances too technical to be of general interest, they are usually popular and enjoyable. Vol. xxi., besides the revised constitution and reports of meetings from June, 1892, to October, 1893 (pp. 36), contains 289 pages of matter of unusual interest. Mr. C. Meriwether contributes a Life of Daté Masamuné, the northern daimio who, in 1613, despatched an embassy to Europe which travelled via Mexico. Much new matter from European and Japanese sources is here sifted. Like the normal inhabitant of Japan, "Masamuné valued the secondary benefits of Christianity at a higher price than its primary." "Esoteric Shinto" is treated of by Percival Lowell in that writer's brilliant style. The phenomena of god-possession, the miracle of walking on fire, and the details of life in the pilgrim clubs are described with more rhetoric and punning than is usual in the serious journal of a learned society. Mr. E. H. Parker, the eminent sinologue, gives proofs that Burmese, Japanese, Korean, and Chinese have come from one common stock. In "Ainu Economic Plants" we have the vegetable dietary and pharmacopœia of the wild savages of Yezo. No more thoroughly informing article on the Loo Chooans has ever been written than the paper by Professor (and President) Basil Hall Chamberlain, who handsomely supplements the work of his grandfather, the British captain of H. B. M. S. *Lyra* in 1816.

One of the important art works of the current year will undoubtedly be the two large volumes by Prof. Giuseppe Merzario, entitled 'I Maestri comacini; Storia artistica di mille duecento anni (600-1800).' Hardly a city or town in Tuscany but carries in some part of its historic buildings the characteristic stamp

of these anonymous workers-in-stone of Coma; the great cathedrals of Milan, of Como, of Pavia, of Pisa, even of Rome show their presence. They realize the Middle Ages for the south no less distinctly, if more locally, than the Gothic masters do for the north. With the Renaissance their characteristic qualities, the hieratical nature of their constructions, pass away; they live on and work on, but as individuals, no longer as exponents of their gild notion.

Edoardo Perino of Rome has published a new "Biblioteca Diamante," which stopped at number 100. The print and paper are fair, each little volume containing about 130 pages, and selling for 20 cen. Besides the more famous classics, this series contains a number of works scarcely accessible in modern reprints. The 'Fioretti di S. Francesco' in this edition is the prettiest reprint that exists of this matchless anthology of anecdotes and fables. The story-tellers from the Novellino down to Firenzuola, including Sermini and Pius II. (in old translation), are well represented. Boccaccio's 'Ninfale Fiesolano,' L. B. Alberti's 'Amore,' the almost contemporary life of Rienzi, Bibboni's account of his murder of Lorenzino de' Medici, and the latter's defence of his assassinating Alessandro, Campanella's 'Città del Sole,' L. Dolce's 'Della Pittura,' Buonaparte's 'Sacco di Roma'—texts of the utmost importance to the student of Italian civilization—are all reprinted in this "Biblioteca."

Braun & Cie. of Paris and Dornach have just published in perfect facsimile the splendid series of heads at Weimar that go under the name of Leonardo da Vinci. These drawings are not by Leonardo, but are excellent contemporary copies of the apostles' heads in the "Last Supper," and, considering the state the original is in, the drawings are indispensable for an understanding of Leonardo and his masterpiece.

The Johns Hopkins imprint always inspires a certain amount of respect, but we fail to find it confirmed in Scaife's 'Florentine Life during the Renaissance.' This is a somewhat chatty and desultory aggregation of material concerning Florence during the later portion of the Middle Ages. The author does not seem to be particularly select as to his authorities. Roscoe appears to be cited more frequently than Villari or Perrens, and the 'Biographie Universelle' and 'Encyclopædia Britannica' figure among the references. The phrase (p. 64) "which valued the fraction of one cent," is a somewhat unexpected resurrection of an obsolete expression.

M. Henri Gaidoz's plausible attempt in *Mélusine* to derive the Virgin of the Seven Swords from the Assyrian war-goddess Istar did not quite meet the approval of the Belgian Jesuit fathers who edit (not uncritically) the *Analecta Bollandiana*. They deny the Italian origin of the worship and the symbolism of this Virgin (which M. Gaidoz was far from inventing), and claim it for Belgium and a comparatively recent date. M. Gaidoz defends himself with much humor and erudition in *Mélusine* for November-December, 1893 (Paris: E. Rolland), and brings to the interesting discussion a number of fresh engravings, ancient and modern, including the Chartres cameo of Jupiter, taken for St. John on account of the eagle, and Charles V.'s cameo of Athena and Poseidon, taken for Adam and Eve.

In our recent account of the New York meeting of the American Psychological Association we virtually gave the contents of No. 1 of the new *Psychological Review*, edited by Profs. J. McKeen Cattell of Columbia and J. Mark Baldwin of Princeton. We must now mention the address of the President, Prof. Ladd, and the book reviews and notes. There is one illustration, representing the contrivance by which Prof. Münsterberg attains stereoscopic effects with revolving disks. The magazine is handsomely printed, and bears the imprint of Macmillan & Co.

The second number of *Around the World* (Philadelphia: Contemporary Publishing Co.) shows an advance upon the first, and has some capital illustrations.

A note in the latest issue of the *Virginia Magazine of History and Biography* is concerned with Nicholas Hayward, a merchant of London and a land-owner in Virginia towards the end of the seventeenth century. Two of his brothers settled in Stafford County, Virginia, and one of them, Samuel, became justice, clerk of the county, and a member of the House of Burgesses. The editor of the *Magazine* conjectures this was the husband of Martha Hayward, sister of the emigrants John and Lawrence Washington, whose will was printed in the *Nation* in November, 1892. Mr. Ford conjectured that Nicholas was the husband; but as there is no direct evidence of Nicholas ever visiting Virginia, the probability is in favor of Samuel. Another point is suggested by the note. Martha Hayward left to "her kinsman, Richard ffoote," some tobacco. A power of attorney from Nicholas Spencer, dated October 18, 1655, and recorded in Northumberland, authorizes his "servant," Richard Foote, to manage his affairs in Virginia. George Fitzhugh states in *De Bow's Review* that Foote was Hayward's nephew. In 1689 Foote was associated with Nicholas Hayward, George Brent, and Robert Bristow in the purchase of a tract of 30,000 acres in Prince William County (around the present village of Brentsville), and was then described as a merchant of London.

The meeting of the Geological Society of America, recently held in Boston, with one day's session in Cambridge, was characterized by large attendance, in which the more advanced students of geology from Harvard and the Institute of Technology made a good showing; and by the large numbers of papers presented. Little time was left for discussion and conference, even though a number of the essays sent in by absent authors were read by title only. Sir William Dawson of Montreal presided. Perhaps the two most notable papers were by Prof. G. H. Williams of Johns Hopkins University, on ancient volcanic rocks in eastern North America, attractive from its admirable presentation as well as from its high quality; and by Prof. T. C. Chamberlin of Chicago University, and his assistant, Mr. F. Leverett, on the past drainage systems of the upper Ohio basin, presented by the senior author, and impressive from the careful consideration of the various alternative conditions of its problems. The social part of the meeting was a pronounced success.

—The letter M still engages the editors of the 'Dictionary of National Biography' (Macmillan), in volumes xxxvi. and xxxvii., which are the third and fourth of M, and end at Millyng. The literary interest of the work is still chiefly measured by Mr. Leslie Stephen's part in it, and his incomparable hand is seen in the notices of Malthus, Harriet Martineau, F. D. Maurice, James and John Stuart Mill; with one exception, a closely related group. The exception, of course, is Maurice, and Mr. Stephen's skilful exposition of this "Platonist" is a delightful example of veiled criticism. In compact narration all these articles exhibit the mastery to which we are accustomed in the case of this writer. The investigation of Sir John Mandeville is noteworthy, and if he remains as mythical as ever, most readers will be surprised to find "Joe Miller" a substantial historical humorist, though not the father of the stale jokes imputed to him. The American gallery embraces John Mason, the founder of New Hampshire, and Capt. John Mason, the exterminator of the Pequots, Richard Mather and his sons Increase, Nathanael, and Samuel, Paul Mascarene, and, to make a great descent, the actress Adah Isaacs Menken. As to Richard Mather, we read: "William Gellibrand, the Puritan minister of Warrington, on hearing him preach, said, 'Call him Matter; for, believe it, this man hath substance in him.' This pun shows that the first vowel in Mather was short." We will end our selections with Capt. Marryat, for the sake of recalling his 'Diary in America' (1839), and with Father Mathew and T. F. Meagher, in order to remark that their casting in their lot with the pro-slavery party in this country has been overlooked by their biographers.

—A committee of the Association of Collegiate Alumnæ has made out a table showing the sums given by women during the last thirteen years to colleges for men only, for women only, and for men and women together. In spite of the fact that in 1880, with which year the report begins, Vassar College was already fifteen years old, and that the desirableness of the higher education for women was therefore already patent, it appears that the generous zeal with which women, ever since the days of Lady Anne Radcliffe Moulton, have contributed to the education of men has in no wise abated. During this time, women have given five times as much for the education of men alone as for the education of women alone, and they have given nearly twice as much for men's colleges as for women's colleges and mixed colleges put together. During only two of these thirteen years has Harvard College failed to receive considerable gifts from women, and the total amount received by Harvard alone exceeds the amount received by all the women's colleges together. If all the men whose education has been facilitated by the self-denial of women were to emulate this extraordinary openhandedness on the part of the more generous sex, then indeed the women's colleges would be amply supplied with the funds they so much need. Perhaps the most extraordinary gift this generation has seen is the legacy just made to Harvard College by the widow of the late Lewis Hayden of Boston, both born into slavery and ransomed by flight. Mrs. Hayden's will devotes a considerable sum to the founding of a scholarship for needy colored students at Harvard, preferably in the Medical School.

—Last week there was presented to the Board of Overseers of Harvard College a forcibly drawn petition, numerously and weightily signed by residents of this city, in opposition to the newly proposed relation between the Annex (alias "Radcliffe College") and the University. This relation, in a word, involves a countersigning by Harvard's President of the diplomas issued by the new college, on condition that the instructors employed meet the approval of the Harvard Corporation. The petition points out the difference in value between such a diploma and Harvard's own for men, first because the former would not (and could not) bear on its face an

explicit affirmation of equivalence, and secondly because "*the identity of examiners and of examinations* for the students of Radcliffe College and for those of Harvard College is in no way guaranteed by Harvard University" in the arrangement contemplated. If there were a real equivalence, the petitioners "are unable to see why the identical degree and diploma of Harvard College should not be conferred upon such students of Radcliffe College as are certified by their college to have pursued a course of study equivalent in amount and quality to that for which the degree of Bachelor of Arts is conferred in Harvard College, and to have passed in a satisfactory manner the examinations prescribed by Harvard College on that course." In default of this, a "degree-certificate" like that issued by the English Universities of Cambridge and Oxford would be far preferable to the countersigned diploma of a woman's college. The Overseers have appointed a committee to consider this argument, which, we believe, will be found irrefragable. That there are many sentimental, physical, and pecuniary obstacles to the immediate fulfilment of the wishes of the New York petitioners, is obvious; but it seems equally plain that the Radcliffe College scheme would postpone instead of hasten the day when "the humanities" will be taught at Harvard to human beings without regard to sex.

—The death at Cambridge, Mass., on January 10, of Frank Bolles, cut short a remarkable career. As secretary of Harvard University since 1886 he had made that office, which had previously been one of red-tape and formality, thoroughly human, to the great gain of both students and faculty. He had, moreover, by a series of judicious and clear pamphlets, set forth the actual working of Harvard, its methods of instruction, and the scope of its departments. Only last year, in a pamphlet on Students' Expenses, he helped to correct the impression that Harvard is a rich man's college. He was, in the truest sense, the student's friend, and there are scores of young men in all parts of the country who owe their start to his solicitude and sympathy. In this respect Mr. Bolles's usefulness at Harvard complemented that of Phillips Brooks; as the latter ministered to the spiritual needs of several generations of students, so the former ministered to their practical needs, finding work, temporary or permanent as the case might require, and fitting the right men into the right places with rare perspicacity. As our readers know, Mr. Bolles left behind him literary works of exceptional merit. His 'Land of the Lingering Snow' and 'At the North of Bearcamp Water' have suggested comparison with Thoreau and Richard Jefferies, though to our thinking he is distinguished from them and their followers by his absolute impersonality. He describes a walk through a wood or a stroll by a river with the impartiality of a scientist, and carefully abstains from indulging in what Ruskin calls the "pathetic fallacy"; he does not moralize nor sentimentalize. That he could have worked the other vein successfully, such a passage as that at the close of the sketch "A Night Alone on Chocorua" bears sufficient witness. His early sketches, printed in a newspaper, at once received Lowell's commendation; his two books, though so recently published, have already been cordially received in this country and in England. Still, we must think his loss to the University more irreparable than to letters.

A literary event which throws a curious side light upon the drift of contemporary politics, has just taken place in Germany. For several years past, signs have been accumulating which indicate that the German drama is at present undergoing a revolution that bears a striking resemblance to the "Storm and Stress" movement of the eighteenth century, and which, under favorable conditions, will make dramatic art once more what it was in the times of Goethe and Schiller, a leading factor in the higher national life. Even what has been accomplished thus far is worthy of most serious consideration. Works like Gerhart Hauptmann's "Weber," or Hermann Sudermann's "Ehre," cannot fail to impress one as remarkable productions, if for no other reason, on account of the fervent republicanism and the burning hatred of social injustice pervading them. One of the most recent manifestations of this same spirit is Ludwig Fulda's "Der Talisman." Fulda is, perhaps, the most refined and graceful of the younger German writers. He has published lyrics of rare melodiousness and power; he has contributed several volumes to Kürschner's "Nationallitteratur," showing his tact and good sense as a literary historian; he has translated Molière with remarkable elegance and delicacy. Even in the "Talisman" the political invective appears under the disguise of exquisite art. It is a dramatization of the familiar old fairy tale of the imaginary garment which, it is supposed, can be seen only by the good and the wise. The alleged owner of this garment, and the chief character of the play, is King Astolf of Cyprus, a man whose haughty self-assertion and implicit belief in the divineness of his royal office would commend themselves strongly to the present ruler of Germany. Although he cannot fail to have seen through the false play of the impostor who has spread the fame of the wonderful garment abroad, yet, seeing that the whole court submits to the humbug, he finally makes up his mind to submit to it himself. A grand procession is arranged at which the credulity of the people is to be tried. The King appears, surrounded by his courtiers, under a gorgeous canopy. The people throng about, each, for obvious reasons, vying with the other in boundless admiration of the wonderful robe of his Majesty, when of a sudden there is heard a child's voice: "Why, the King hasn't got anything on!" Of course, a great uproar follows, and a wild unloosening of popular passion so long repressed. In the midst of the tumult, the King rises for a moment to a certain fictitious greatness. He *will* have the people believe in his imaginary splendor, he *will* believe in it himself, he actually feels the flutter of the royal mantle on his shoulders; crazed with rage he commands his subjects to kneel down and adore him—until the frenzy overpowers him and he sinks down, shivering and shaking.

—It is not surprising that this play should have been largely interpreted in Germany as a poet's answer to the extravagant vagaries of the present Emperor. Ever since its first production at the Deutsches Theater in Berlin last February, it has drawn crowded houses. A few weeks ago, the Schiller prize—a national prize which is awarded every three years, by a commission composed of the most distinguished scholars and literary critics of Germany, to the best poetic work which has appeared within that time—was assigned to its author. And now comes the news that the Emperor has vetoed the vote of the commission, thereby giving Ludwig Fulda a good chance to become a German classic. The next step for his Majesty to take would be to promulgate an edict to the effect that until further notice no German subject shall be allowed to arrogate to himself the title of poet, with the exception of the Geheime Legationsrat Ernst von Wildenbruch, whose earnest and effective efforts to present the history of the glorious Hohenzollern dynasty in a becoming and not too realistically truthful light should commend themselves to every patriotic citizen.

LIDDON'S PUSEY.

Life of Edward Bouverie Pusey, D.D., Canon of Christ Church; Regius Professor of Hebrew in the University of Oxford. By Henry Parry Liddon, D.D., D.C.L., LL.D., late Canon and Chancellor of St. Paul's. Edited and prepared by the Rev. J. O. Johnston, M.A., and the Rev. Robert J. Wilson, M.A. In four volumes: Vol. I. (1800–1836), Vol. II. (1836–1846). With portraits and illustrations. Longmans, Green & Co. 1893.

Dr. Pusey died September 16, 1882, and Dr. Liddon entered immediately upon the work of writing his biography. Dr. Liddon died in 1890 and left the work unfinished, from no lack of diligence, but because his ground plan of the work involved for its superstructure a very great amount of careful preparation, much choosing and rejecting of materials, and much labor in the building together of those finally selected into a structure at once massive in its unity and symmetrical in all its parts. If Dr. Liddon could have carried on the work to its completion, all his friends and Dr. Pusey's would have been glad. For the two volumes now published (pp. 479, 530) he left an elaborate first draft, which is also good for ten years of vol. iii. For the rest he left carefully arranged materials, and his editors can be trusted to use them entirely in his spirit. That vols. i., ii. bring us down only to 1846, the year after Newman's secession, is much more the subject's fault than the biographer's. Dr. Liddon is never diffuse. There is not a page of his that we would willingly spare, though it is a good deal more plain and colorless, for the most part, than Dean Church's 'Oxford Movement,' which comes down to the same date. But Dr. Pusey's talent for elaboration was phenomenal. Writing of his condemned sermon of 1843, the Rev. J. B. Mozley says: "Some said it was a long sermon, others that it was not longer than usual," and both were probably right. In his literary expression he was nothing if not incontinent. When the other Tractarians were putting their thoughts into a few pages, he must have a few hundreds to express his own. His letters had the same defects of his quality as his books and sermons. They are very long, and it must be confessed that they are often very dull. Should any ask why Dr. Liddon did not abridge them, the answer is—abridgment was no easy matter. They are not long because they are diffuse, but because they are elaborate. Dr. Pusey could not express himself at once briefly and clearly. It might almost be said that he could express himself neither briefly nor clearly. But those who have read Newman and Ward and Williams and Mozley and Church upon the Oxford Movement will not be much troubled by the length of these volumes. Those best informed about the general movement will be most interested in this account of Pusey's part in it. There is no general treatment, and no dwelling upon others, even Newman, that is not necessary to a clear understanding of Dr. Pusey's activity and influence. The almost entire absence of Hurrell

BURLINGAME PUBLIC LIB

Froude from the narrative is a sign of this, Froude's noisy arrogance having been abated by his early death just at the time when Pusey was appearing on the scene.

Pusey was a few months older than Newman, who was born February 21, 1801; Pusey August 22, 1800. They were Fellows of Oriel together for five years from 1823, but for much of this period Pusey was in Germany. His life resolves itself into a succession of episodes, and the first that brought him into public notice was the defence of German theology, which he published in 1828, a reply to the Rev. Hugh J. Rose's 'State of Protestantism in Germany.' Pusey's criticism was much more sympathetic than Rose's, but its tenderness for German liberalism was much exaggerated at the time and has been since. Rose's reply to his book did much to fix on Pusey the stigma of liberalism, and his rejoinder did not completely heal the wound. Evidently Whately and the other "Noetics" thought he had become as one of them, and Newman feared he was lost. Pusey's central idea, that German liberalism was merely the reaction from an excessive "orthodoxism," and Rose's that it was occasioned by the absence of ecclesiastical control, seen from the present, are about equally absurd. From his German residence Pusey derived all that was soundest in his Hebrew scholarship, the only department of his scholarship that had any soundness; and there it was grammatical and textual, in the broader aspects wasting its strength to save a battle (the authenticity of Daniel) that was already lost.

His first approximation to the Tractarians was in his defence of the cathedral system against a scheme for sweeping innovations. Newman's anti-Protestantism declared itself in his objection to Pusey's calling Calvin a saint —this on the eve of his departure for the Mediterranean. The Movement began immediately after his return, July 14, 1833, when Keble preached on the suppression of the Irish bishoprics, denouncing it as a "great apostasy." So Newman reckoned, but Pusey dated the Movement from the publication of 'The Christian Year' in 1827. Without identifying himself closely with the Movement, he was soon circulating the tracts; and the eighteenth, on fasting, has his initials, the sign of his qualified adhesion to the cause. It drew Dr. Arnold's fire, awakening his fear that Pusey was going over to "the admiration of Christian antiquity." The Hampden controversy, so conspicuous in every history of the Oxford Movement, is much dwelt upon, but we must go elsewhere for a just estimate of Newman's "Elucidations" of Hampden's book. Pusey was hardly less active than Newman in opposing Hampden for the provostship of Oriel, but he had none of Newman's inherent predilection for sinister and savage methods of ecclesiastical revenge. In this connection there is no more interesting passage than that on Blanco White. It is as disparaging of Whately as it is ardent in its praise of White's sincerity, ability, and scholarship. Hampden's Bampton lectures, with their unqualified depreciation of scholastic and patristic renderings of Christianity, are traced back to White's influence. "It is not too much to say that he is the real founder of the modern latitudinarian school in the English Church."

Before the Hampden controversy had reached its climax in Hampden's deprivation by Convocation, May 5, 1836, of certain privileges of his office, Pusey had thrown himself into the Movement with all the weight of his tract on Baptismal Regeneration. Newman was about discontinuing the tracts, but Pusey's adhesion determined him to keep on with them. Indeed, there was a physical necessity for their continuance in the length of Pusey's tract, which, requiring a second part, carried the series beyond the point assigned for their suspension. Newman has told us of the immense importance of Pusey's unqualified accession. His wealth, his scholarship, his character, his social standing, all contributed to make his influence significant. The popular exchange of the titles "Tractarianism" and "Newmanites" for "Puseyism" and "Puseyites" indicated his importance, though it was furthered by his frank avowal of his authorship where that of others was concealed. From 1836 to 1845 the intimacy of Pusey and Newman was very close, and their mutual admiration and regard were characterized by a remarkable depth and sweetness. The impression, however, is unavoidable that even before Newman was on his Anglican death-bed, as he called it, Pusey was granted a less absolute confidence than he deserved, a good deal less than that given to Keble. The motive may have been creditable to Newman—a dread of wounding the sensibility of his friend—but the facts sometimes smack of moral cowardice, as where Pusey is left to find out in some roundabout way Newman's retraction of his abuse of Rome and in general his inclination to the Roman Church.

Nothing in this narrative is so strange as Pusey's blindness to the Romeward tendency of Newman's thought and feeling. Up to the verge of his secession, Pusey could not or would not see that he was travelling that way and sure to get there soon or late. And that his blindness was much greater than it would otherwise have been because of Newman's imperfect confidence, there can be no doubt. It had, however, a more serious cause—his own perfect confidence in the English Church while he went along with Newman in every particular of his opinions concerning fasting, baptism, the eucharist, and the other things concerning which he adopted "high doctrine," the doctrine of the Roman Church. Pusey had nothing but approval for Tract 90, or any subsequent position which Newman took up. He was even warm in his general approval of Ward's 'Ideal Church,' though that church was not the Primitive of his aspiration, but the Roman of concrete reality. From the same premises he and Newman derived different conclusions. The reader is aware of their divergence before it impressed Newman, long before Pusey was aware of it. But it was a divergence of logical and practical conclusions, not of doctrinal and ritualistic inclinations. Newman expected Pusey to follow him to Rome and urged him eagerly and passionately to do so. Later he wrote, in the 'Apologia,' that "all the time I knew him he was never near to it at all." And he was right; though what kept Pusey Anglican was less his "reason and judgment," as Newman wrote, than his instinct, which did not waver for an hour.

There is a wonderful pathos in the relation of Pusey to Newman in the last days of Newman's Anglican difficulties. The impression is continuous that Pusey's was the simpler mind, the better heart, the more generous disposition. The pathos has its comic side in Pusey's final account of Newman's loss. It was something peculiar and providential, and therefore not an example to be followed. It was God's answer to the prayers of Continental Catholics that he might come to them, while there were no Anglican prayers to the contrary, or not enough to withstand the opposing stress. Then, too, the Roman Church was much in need of him to cheer her spiritual desolation. Such were the ingenuities with which Pusey soothed his torn and bleeding heart.

Nothing could more positively attest the unbending strength of Pusey's Anglican sentiments than the fact that, while Newman was on his last legs, Pusey was himself subjected to ecclesiastical condemnation and suspended from preaching in the University for two years, the last two years of Newman's lengthened misery of parting. The condemnation was imposed with every circumstance of injustice that could make it rankle in his breast. Newman's treatment in respect to Tract 90 had not been half so bad. But while Newman's was the beginning of the end, Pusey's had no similar effect. That was because Newman's bishop was, as he said, his Pope. The Vice-Chancellor was not Pusey's. Behind the individual functionary he saw the Church and stayed his heart on her. Nor were his condemnation and suspension the only troubles that would have hurried him along with Newman or after him if he had had any thought of going. He gave a church to Leeds at an expense of £6,000, having given £5,000 to the London churches a few years before. There was no end to the obstructions and suspicions which he encountered in this business. True, it was not known that he was the donor, but that made no difference. The evangelicals would have said, if they had known it, "Thy money perish with thee." But the annoyance swerved him neither to the one hand nor the other. He bated no jot of his high sacramental doctrine, and Newman's open arms had for him not a moment's danger of perversion in their proffered peace.

The building of the church at Leeds, and especially the arrangement of the altar and reredos and their belongings, afford an interesting commentary on the popular mistake which fathers upon Pusey the ritualistic departure of later Anglicanism. To that departure he was less favorable than opposed. Of its ecclesiastical millinery he knew next to nothing, and at Leeds we find him fumbling ridiculously over details which are now understood infallibly by tyros in the ritualistic cult. Others were not wiser than himself, for in these strange things there was still much to learn.

That Pusey stayed when Newman went made an incalculable difference to the English Church. If Pusey and Keble had seceded, the stampede would have been like the outgoing of a flood. Keble remained because he had always been a high churchman, while Newman had been always on the move. Pusey remained because he was persuaded that his sacramental system was that of the Church of Antiquity and the Caroline divines, and because of his instinctive passionate devotion to the church of his baptism. His sacramentalism was something wonderful in its naïve assurance of the magical operation of the sacramental offices. It reached its climax in his recital to Newman of the horrible experience of a poor woman who had taken the eucharistic bread "unworthily." His intellectual force was nothing to his erudition, and, though he led away and safely folded the poor sheep whom Newman had left to shift for themselves, the attraction of the Movement for men of superior intelligence ceased after 1845. As for Pusey's erudition, it was strangely void of genuine historical appreciation. His appeal to antiquity was to a petty fragment of it, and why he should accord to this fragment an infallible voice he did not attempt to show. He repudiated Newman's 'Development of Christian Doctrine' as hostile to the famous "Quod semper," etc., as in-

deed it was, but without some such device both he and Newman were hopelessly adrift and making for the Socinian shore. That Newman saw this, while Pusey did not suspect it, is a proof of his more resolute intelligence.

The more personal and private aspects of Pusey's life were touched with many sorrows and anxieties. His devotion to his wife and to her memory was passionately fond. Her death made him more of a recluse than ever, and there was little need of that. His generosity was boundless, and it took more than the superflux of his liberal means. His goodness and sincerity illumine every page. His spiritual perceptions were singularly deep and true, and he lived according to their light. It was thus that he became the friend of many "spirits in prison," and delivered them from their bonds. His biographers have yet to tell of his most signal service to the English church. In 1846 he had still thirty-six years to live. They were to be full of study and anxiety and abundant recognition, love, and praise; but they would bring him no friend like Newman, and no events approaching the dramatic interest of those in which he and Newman took the leading parts upon a memorable stage.

RECENT LAW BOOKS.

Prof. Keener has made a contribution of high importance to legal literature in his 'Treatise on the Law of Quasi-Contracts' (Baker, Voorhis & Co.). It is a pleasure, in the multitude of commonplace and hasty publications which pass for legal treatises, to observe this product of careful labor and genuine scholarship. The book has a peculiar value in the novelty of its subject. Acute writers in the past, like Mr. Justice Metcalf, Sir Henry Maine, and Sir Frederick Pollock, have perceived the confusion hidden under the name "implied contract," and pointed out that "contracts implied in law" are really not contracts at all. But it was left for Prof. Keener to lift the subject bodily out of the region of contract, and to systematize and classify these duties imposed by positive law, which, chiefly for reasons of procedure, have so long masqueraded as consensual obligations. The terminology of "quasi contract" and "unjust enrichment," borrowed from the civil law and Continental systems, will seem still somewhat strange to English-speaking lawyers, although not unknown to modern writers. The value of the former term, however, for purposes of precise legal thinking, is beyond question; and we venture the prediction that few lawyers, not familiar with Prof. Keener's previous work, will fail to be surprised at the body of law which he has collected to substantiate his theory of unjust enrichment as a cause of action in our law. His authorities include an instance of the use by an English judge of the seventeenth century, dealing with a typical quasi-contract, of the maxim, "Nemo debet locupletari ex alterius incommodo." Much ingenuity and logical acuteness are shown in handling the cases, and so explaining and distinguishing them as to support the author's views. This is noticeable in the interesting chapter on "Waiver of Tort," in which, however, there may be some slighting of the historical development of the doctrine. It is to be regretted that, in a subject containing so little that is technical, and resting so peculiarly on broad principles of justice and convenience, the scope of the book has not permitted some comparison with the Roman law and with other systems of jurisprudence.

'Cassoday on Wills' (St. Paul: West Publishing Co.) is a series of lectures delivered by the learned author before the College of Law of the University of Wisconsin, and published as they were delivered, without alteration or enlargement. The book is a small one, but it contains a neat, if somewhat bare, statement of leading propositions in the law of wills. It is based on the English statutes; and the decisions cited are mostly from the courts of England and Wisconsin.

'Black's Pomeroy on Water Rights' (West Publishing Co.) is a series of articles by the late Prof. Pomeroy which first appeared in the *West Coast Reporter*, and are now, since the author's death, collected and published by Mr. Henry Campbell Black, with annotations and additions. The subject, the law of water rights in the Pacific States, is one which has greatly interested students of our system of law, affording as it does an admirable instance of the adaptability of the English common law to conditions wholly strange; or, rather, perhaps, of the evolution direct from the community of a new body of rules suitable to its needs. The book may, therefore, have an interest quite outside its assistance to the practising lawyer, which must necessarily be somewhat local. Prof. Pomeroy's articles are thoughtful and interesting, and the editor's work seems to be well done. A suspicion of "padding" in the make-up of the volume is presumably chargeable to the publishers.

'Phillips on Mechanics' Liens' (Boston: Little, Brown & Co.), is a new and careful (third) edition of a well-known book. In a subject entirely statutory and highly technical, there is an obvious limit to the value of any general treatise, more especially when no attempt is made to discuss the statutes of the different States separately. No lawyer could safely take a step in enforcing a mechanics' lien without a more intimate acquaintance with his local law than could be had from this source; and it may be questioned whether the book does not tend sometimes to mislead in giving the impression that there is something like a common law of the subject. Certainly the author might to advantage have done more in the way of comparing the statutes and tracing their relationship. But there is ground for hoping that the method adopted may help towards the happy result of a greater similarity among the various systems in the future; and the need of a third edition is evidence that the book has met a want of the profession.

Mr. Dwight Arven Jones has given the New York bar a handbook of a very useful kind in his 'Business Corporation Laws' (Baker, Voorhis & Co.). It contains the text of the various statutes now in force in this State on the subject of corporations, with references to decisions and to previous enactments. Every careful lawyer knows how important is the historical study of a statute; and in the maze of our recent corporation laws this assistance to such study is of manifest value.

'The Patent-Office Manual,' by George H. Knight (Little, Brown & Co.), is a collection of leading decisions on points of patent law, and especially on the practice of the Patent Office. The various heads are arranged in alphabetical order, with a brief statement of the law on each, and references to the cases. The volume is too small for anything more than a synopsis of the subject, and it is not clear in what respect there would be any considerable gain in its use over more complete treatises on patent law, except that it is brought down to a very recent date. The slovenly fashion of citing cases should be mentioned: decisions of the Supreme Court are cited in at least three different ways, and a reference to the regular reports seems rather the exception than the rule.

An eighth edition of Best's 'Principles of the Law of Evidence' is published by the Boston Book Company. It has been prepared by J. M. Lely of the English bar, and notes upon American and Canadian cases are added by Charles T. Chamberlayne of the bar of Boston. The original work has too long been a standard to require comment here, but we think that the editors might wisely lay more emphasis upon the chronology of the development of the subject. Since parties were permitted to testify, there has been no fundamental change in the law of evidence, even by statute. Such changes as have taken place consist for the most part in the subsumption of new cases under well-known principles. Many of these cases have been watched for, as filling in known gaps in the law, and it is convenient to know not only the name of the case, but the time of the decision. Of course, if we are told that a certain point was finally decided in a certain case, we can ascertain the date; but the editor could easily save us that time and trouble. In our judgment, also, it is desirable to let the original text of a standard work remain unchanged, the contributions of editors being printed so as to be distinguishable; but in the work before us it is impossible to tell the source of many statements without comparing the different editions. The American annotator seems to have collected an abundance of cases, but not to have done much in the way of indicating the development of the law. Thus we find no mention of the important case of the People against Carlyle Harris, regarded by many of the profession with grave doubt; and the People against Jacob Sharp is cited only to establish the proposition that witnesses should state facts and not inferences.

Aspects of Modern Oxford. By a Mere Don. Macmillan. 1893.

Every one who knows the Oxford of to-day knows that its academic life is altogether dominated by the tutorial system. But what that system is it is difficult for the outsider to realize; as many a hard-worked tutor must have reflected when he has listened to the passing visitor's sentimental commonplaces as to monastic retirement and cloistered seclusion. The outsider will understand it a good deal better when he has read the paper entitled "Diary of a Don" in the pleasant little volume of light essays which bears the title 'Aspects of Modern Oxford.' The author prefers to be anonymous; but there are various indications which would lead us to identify him with one of the most distinguished of the classical tutors of one of Oxford's most splendid foundations—one, in brief, who knows that whereof he writes. And this same paper will throw some light on another problem. It is sometimes alleged that there is a certain want of scholarly and scientific productivity among Oxford teachers—such as seems somewhat inconsistent with the conception of a university. Without entering into any elaborate inquiry, it does seem on the face of it as if the assertion were not far from the truth. When we come to think of it, few of the important works proceeding from Oxford during the last few years can be assigned to tutors of the type now so powerful. Most of them have been the fruits of a leisure which the typical tutor must de-

spair of securing. For, as our author's amusing "Diary" shows us, the Oxford tutor of today lives in a whirl of scholastic work and business from morning to night. His time is frittered away in a multitude of small engagements and worrying duties; his very sitting-room is an office where he is never free from interruption. "A Mere Don" is a good-humored conservative in things academic; he doubtless belongs to the noble army of the "Non-Placets" of whom he speaks, who make it their business to vote down every proposal of change. He would be the first to laugh at us if we made his satire the text of an exhortation, or if we showed any inclination to join the ranks of those who would "Germanize" English institutions. But we might yet ask him whether his extravaganza has not enough verisimilitude to be properly disquieting to those who care for the interests of learning.

We would, however, with more vehemence, direct to this particular essay the attention of those who are concerned with the government of American universities. There has unquestionably been a growth of the spirit of research in America of late years; but by the side of it there has sprung up a new type of professor, of a sort which makes us pause with a certain consternation. We no longer have the elderly, semi-clerical professor, of deliberate demeanor and childlike ignorance of the world. Our modern professor prides himself on his energy, his travels, his openness to new ideas. Instead of the old-fashioned recitation, he lectures—a vast improvement, but involving a great deal more mental strain on his part; he sits on innumerable committees; he reads shoals of examination papers; he meets his pupils in an "office"; and, to crown it all, he "runs a seminary." Yet

"Alas for the excellent earnestness."

In the midst of it all, is there not only too great danger lest the man should become altogether dead so far as the advancement of learning is concerned? It would perhaps be unsafe to say that conscientiousness is a snare; but we certainly need to set the scientific conscience over against the pedagogic.

The whole book is agreeable reading for a couple of hours. It is the best sort of bright magazine work; and we hardly need the autobiographical revelations of the chapter on "University Journalism" to tell us that the author is an old *Oxford Magazine* hand. If it has any defect, it is that there is a rather too obvious straining after a tone of blasé omniscience and indifference. We must not omit to add that the note of "intimacy" is well sustained by the pictures. They are called "illustrations," although they have no particular connection with the text save that both text and illustrations depict the social aspects of Oxford life; and they are inserted without any sort of regard to the subjects of the adjacent pages. But we will not quarrel with them, whatever they are called. They are very successful in catching graceful fugitive impressions—chiefly, indeed, of Oxford in its character of an athletic club and a summer resort for "sisters and cousins and aunts." But it is going too far in condescension to the aunts' ignorance to entitle the frontispiece "In Cornmarket *Street*." A few years ago "the High, the Broad, the Turl, and the Corn," or "the Cornmarket," were good enough for undergraduates, and "street" was left to the local tradesmen.

Adventures in Mashonaland. By Two Hospital Nurses, Rose Blennerhassett and Lucy Sleeman. Macmillan & Co. 1893. Pp. xii, 340, 8vo.

THIS bright and entertaining book supplies an important gap in our knowledge of Mashonaland. We have had descriptions of this latest British acquisition, from the point of view of the prospector by Lord Randolph Churchill, from that of the antiquarian and scholar by Mr. J. Theo. Bent, and, still more recently, from that of the sportsman and pioneer by Mr. Selous; and now Miss Rose Blennerhassett gives us a lady's impressions of life in the early days of one of its mining settlements, in such a frank and genial way, with such mingled fun and pathos, together with no inconsiderable descriptive power, that her little book deserves to rank with such works as 'Station Life in New Zealand' and 'Life on an Ostrich-Farm.'

The opening chapters tell of the experiences of the two nurses in the hospitals of Johannesburg and Kimberley, in each of which places they spent six months, and of their voyage from the Cape to Beira, a Portuguese town on the east coast. With their adventurous journey, in July, 1891, from this place to the interior, the real interest of the story begins. The episode is so modestly told that most readers will fail to recognize it as an exploit hardly surpassed in the annals of African travel. These ladies, accompanied the first part of the way by two Englishmen and some native porters, the latter half by one Englishman and three "boys," walked nearly two hundred miles, through a country where the constantly winding path led now through grass ten feet high, across sandy plains, through fever-haunted swamps, over rapidly flowing rivers, and occasionally through beautiful park-like regions abounding with game. At one place, as they lay in their hastily built shelters, "the lions, coming down to drink at the swampy pool just in front of our huts, made such a terrific noise that the earth seemed to shake with their roaring." So accustomed did they become to their presence that they "almost began to look upon them as bores that kept one awake when one was sleepy." Umtali was reached, apparently, in nine days, a part of the walk being "then the quickest on record." At this place they passed the two years of their service, and although their discomforts, privations, and perils are lightly, even humorously, treated, it is difficult to conceive of a life more entirely self-sacrificing than that of a nurse in a mining camp in Africa. For ten days they were besieged by lions, who not only raided the cattle-pens by night, but in broad daylight "coolly chased the police horses across the commonage." A leopard attempted to force its way into the hut where they lay prostrated with fever. A patient died in the hospital, "and a man with a loaded revolver sat there all night to protect the corpse from wild beasts." Yet it is not impossible that at times it was safer to live with them than with men the greater part of whom in those earliest days were generally "on the burst." There is an amusing account of Christmas, 1891, which, read between the lines, is infinitely sad, when "by noon every one in the place, with the exception of three or four men, was very tipsy indeed." The resident magistrate, when the quarrelsome stage was reached, arrested the Civil Commissioner, while the latter suspended the former from his functions, and "before midnight all the police were under arrest, we were told—the last man having provoked his punishment by holding a candle crooked, whilst the Magistrate himself tied the thumbs of some of his prisoners."

Miss Blennerhassett's pen-portraits are not the least entertaining part of her book. It is evident that she shares the unbounded confidence of all other Africanders in the head of the Chartered Company. "Whatever happens, people shrug their shoulders and say: 'It will be all right; Rhodes will square it.'" During a two days' stay at Umtali, "he was besieged with petitions of all sorts. Malcontents and chronic grumblers went to his hut, and came away in a few moments cheerful and satisfied. Not that anything was altered in the condition of affairs—the man's mere personal magnetism wrought the change." Of Mr. Selous she says: "He is known throughout Africa as the man who never tells a lie." At one time the nurses had in their service one Wilkins, "an excellent but doddering old person," who had been with Livingstone. One of his stories exhibits the great missionary explorer in a decidedly new light:

"One morning, sisters, and 'tis as true as I'm a-biting this crust, we were surrounded by strange niggers—and them niggers meant mischief, if ever a nigger did. Livingstone he says, 'We're lost,' says he; 'we must go back and give up. Come here, Wilkins, and advise me!' And I up and says, 'Give up, Doctor? Never! Let's go and drive 'em off.' The Doctor he looks at me. 'Right you are,' he says; 'lead on, my brave fellow, and I'll follow!' And as true as I'm a living man we slew seventy before breakfast!"

The two ladies left Mashonaland in the summer of 1893 by the same route by which they had come up two years before, forty miles of the tedious journey, however, being by the Beira and Umtali Railway. It is in this way that Mr. Rhodes has "squared" the fever and the tsetse fly.

The Barbary Coast. By Henry M. Field. With illustrations. Scribners. 1893. 12mo, pp. 258.

DR. FIELD is an experienced traveller as well as an experienced writer. Without aiming to be learned or critical or statistical, he is accustomed to see and to hear and to tell. His books are therefore enjoyable if the reader pursues the flowing narrative in the same mood with which he would listen to the story of an intelligent friend who has lately visited a foreign land, with good introductions, sensible habits, and a kindly interest in all sorts and conditions of men. 'The Barbary Coast' is probably the best, as it is the latest, of these epistolary narratives.

The author's itinerary began at Gibraltar, and it took him to Tangier, Oran, Algiers, Kabylia, Biskra, Constantine, and Tunis—a line of travel now made easy, even to Americans, by the excellent steamers on the Mediterranean, and the very fair railways and hotels which have accompanied the French in their occupancy of the southern shore of the great sea. At Tangier—most Occidental in position but most Oriental in character of all the towns on this route—Dr. Field (who had the good fortune to know the American unofficial resident, Mr. Perdicaris, and the American consul, Col. Matthews) was taken to visit the Moorish minister of foreign affairs and the bashaw who is governor of the city. Mr. Richard Harding Davis was his companion. "Davis, who is himself six feet, had for once to look up, and whispered to me (as the bashaw swept before us in his flowing robes), 'What a magnificent specimen of manly strength and beauty.'" From this reluctant governor the Americans obtained permission to enter the

prison, and there they saw the survival of that horrid kind of incarceration which once engulfed the Christian captives imprisoned by the Barbary pirates. "Starvation is the constant discipline in the prison of Tangiers. It takes a strong man to stand it long." No wonder that this humane visitor provided a hundred loaves of bread and distributed them one Sunday morning, "never more grateful for any privilege than that of going from one prisoner to another and giving to them bread." No incident of the journey is more striking than this. By singular good fortune, Dr. Field secured a "snap" photograph of Sidna Muley Hassan, the Sultan of Morocco, a likeness hardly bigger than a pin-head; and this, enlarged, makes one of the illustrations of the book. It is probably the only portrait in existence that gives any just impression of the man whom Mr. Perdicaris regards as "the best ruler that ever sat upon the throne of Morocco." This remark, by the way, suggests a well-known witticism: "Louis Philippe was the greatest monarch on the throne of France after the first Napoleon."

Algiers, often described by travellers, seems to have suggested nothing unusual to Dr. Field. His account of the land of the Kabyles is more interesting, especially as he was prepared for it by Mr. Grellet's introduction to the habits of these strong mountaineers. The gorge of Chabet is well described. Biskra, on the northern edge of the Sahara, is the southernmost point of the French railway system, and, strange to say, it is now pictured as "a fashionable winter resort with all the features of similar resorts on the other side of the Mediterranean," a distinction due to its climate, "never troubled by the mists and fogs that often enwrap Algiers and the Riviera." Constantine reminds the author of Edinburgh, Jerusalem, and Toledo. A city that has been besieged and taken twenty-four times is now so quiet and orderly that the traveller "is under the protection of law as much as if he were in France itself." The town of Bone recalls to the Presbyterian visitor the story of St. Augustine, "though the ancient Hippo is gone; not a trace of it remains." Tunis came next, another town half French, half African; near by, the ruins of Carthage, and, on the neighboring hilltop, the mausoleum of Cardinal Lavigerie, primate of Africa, and successor of St. Cyprian. From Tunis to Marseilles, and the narrative is ended. Charitable estimates of men of other faiths, of other politics, and of other manners mark every chapter of the book.

Authors and Their Public in Ancient Times. By Geo. Haven Putnam. G. P. Putnam's Sons. 1894.

THIS book is designed as a general introduction to a proposed history of the origin and development of literary property. Though the author knows that such a thing as literary property, in the modern sense of the term, had no existence in antiquity, yet he rightly judges that it is of interest, if not of absolute necessity to a clear understanding of its growth, to examine the conditions under which books were written, prepared for readers, published and distributed before the invention of printing. His book consists of six chapters. The first is a sketch of what he calls the beginnings of literature. It deals with the clay cylinder of Assyria and the Egyptian 'Book of the Dead' (the first book ever offered for sale), the folk-songs and epics of China, Japan, and India, and the religious writings of the Hebrews. In the next chapter we are brought to the first literature which deserves the name because it was unfettered by either kings or priests—that of the Greeks. Then comes "publication" through minstrels and rhapsodies, and through readings aloud by the authors themselves, then the beginnings of a reading public, collections of books, and the book market at Athens. Then, with the institution of the Museum, of the doings in which a full account is given, Alexandria became the rival book-mart, and in turn yielded to Rome, with the first great bookseller and publisher, Atticus. Finally, after Rome comes Constantinople. There is a special chapter on the materials of which ancient books were made and on the book-terminology of classic times.

It must be evident that a work like this, if thoroughly to be trusted, would be of great interest and usefulness to all book-lovers. This is by no means the first attempt at such a history. Mr. Putnam has a number of predecessors, though none in English of any importance, and he gives a good bibliography of them. He is not slow to acknowledge his obligations, especially to the works of Clement, Schmitz, Birt, and Haenny. Where he follows them we have as a rule little fault to find. But it is extremely unfortunate that he should not have submitted his book, before publication, to a classical scholar, since he himself, as he admits in his preface, is none. Yet three-fourths of it deals with Greece and Rome! It needs a thorough revision, for, to say nothing of misprints and errors in Greek words (from which, too, the accents are generally omitted), misquotations in Latin (on p. 208 there are ten errors in a poem of eighteen verses), and many mistakes in citations of the authors, there are numerous blunders of another sort. Such, for instance, is the idea that the Greek dramatic poet made any money by the sale of theatre tickets, that "rhapsody" meant originally poems sewed together, that the laws of Solon are extant somewhere, that Suidas wrote in Latin, and that the passage quoted from the "Frogs" on page 71 was addressed by Æschylus to Euripides, and that it referred to any particular tragedy—the fact being that it is spoken by Euripides, and that he was talking about the art in general. We have referred mainly to Greek matters, but this kind of error is enough to throw doubt on the authority of the whole book. It cannot be recommended in its present form, and yet, after careful correction, it might become a standard work.

Vertebrate Embryology: A text-book for students and practitioners. By A. Milnes Marshall, M.D., D.Sc., M.A., F.R.S., Professor in the Victoria University, etc. 8vo, pp. 640, 255 figures. London: Smith, Elder & Co.; New York: Macmillan. 1893.

THE publication of this work within a few months after those of Minot and Hertwig-Mark is noteworthy and a cause for gratification. Intermediate in size, it differs radically in plan. The larger part is occupied by "consecutive and straightforward accounts" of the main facts in the development of five vertebrate types, the lancelet, frog, fowl, rabbit, and man. The first and the last—like the dunce and the genius of a class—have special claims to consideration; on purely theoretic grounds the others might perhaps be replaced by less highly specialized forms, but practically they are acceptable.

An introduction of thirty-six pages gives a "General Account of the Development of Animals," necessarily brief, but for the most part clear and suggestive. It closes with an excellent presentation of the "Recapitulation Theory," from which we select the following passages:

"Evolution tells us that each animal has had a pedigree. Embryology reveals to us this ancestry, because every animal in its own development repeats its history, climbs up its own genealogical tree. It is indeed a history, but a history of which entire chapters are lost, while in those that remain many pages are misplaced, and others are so blurred as to be illegible; words, sentences, or entire paragraphs are omitted, and, worse still, alterations or spurious additions of later date have been freely introduced, and at times so cunningly as to defy detection."

In the preface the author makes frank acknowledgment of his indebtedness to other observers, and expresses regret that Minot's "important treatise on Human Embryology only came into my hands while the last sheets of my own book were passing through the press, and that I have been unable to avail myself of the rich store of facts, and of the numerous suggestive explanations which his work contains." This regret will be shared by most readers, since only experts can escape some confusion, due to the radical differences in terms and even opinions. For example, in the present work the three germ layers are designated as *epiblast*, *hypoblast*, and *mesoblast;* Minot's equivalents, *ectoderm*, *entoderm*, and *mesoderm*, are not given, even as synonyms, while Minot mentions the other set of terms only in his preface to discard them. The student and general reader might well be puzzled on consulting the index to either work. *Anlage* and *fundament*, apparently indispensable to Minot and Mark respectively, have not been found in the present volume, although there are places where some equivalent (*e. g.*, the *proton* of Aristotle) might well have been employed. Marshall, like most zoölogists, regards the lancelet as "clearly and undoubtedly a vertebrate" (p. 44), while Minot declares (p. 187) that "it is not a true vertebrate." Respecting the twisted appearance of the umbilical cord, our author says (p. 601): "It is clear that, as the cord twists, the embryo must rotate"; but Minot denies (p. 361) the existence of any proof of such rotation, or even of the actual twisting of the cord. To the impartial and bewildered layman it will probably occur that the conditions and the established facts should be submitted to an expert in physics.

The author's laudable intentions as to explicitness have not saved him from the common fault of vague generalization; when, for example, on p. 23, he states that the mesoblast forms the largest portion of the embryo in the "higher animals," does he mean the mammals, or the warm-blooded mammals and birds, or the air-breathing mammals, birds, and reptiles, or all above the fishes? The statement (p. 25) that the "tadpole is really a fish, not merely as regards its breathing organs, but in all details of its organization," might be submitted to a scientific body as an expression of opinion, but is quite out of place in a manual for students. It is hard to see what useful end is gained by the declaration (p. 90) that "as a group Amphibia [frogs, salamanders, etc.] are characterized more especially by the double nature of their breathing organs." A combined aquatic and aerial respiration occurs likewise in the dipnoans and in several ganoids, not to speak of the pharyngeal respiration of certain turtles. Minor errors are the application of *cryptobranchus* to the Japanese *megalobatrachus*, and the employment of *am-*

phiuxus in place of the prior (although less acceptable) *branchiostoma*.

As in most recent works, the ambiguous *anterior* and *posterior* are commonly accompanied by or discarded for the explicit *ventral* and *dorsal* as applied to the regions of the body, nerve-roots, etc. But, as might be expected, in the early stages of transition from the old extrinsic to the new intrinsic toponymy, some odd usages occur. For example, on p. 471, the portion of the body of an embryo is said to be "concave upward"; on p. 471 the portion of the dog's uterus farthest from the head is termed the "distal or lower part," and on p. 572 *distal* is used where peripheral would commonly be preferred.

The illustrations are mostly clear and accurate, and uniformity of abbreviation has been aimed at. There are no adequate diagrams of the general constitution of the embryo by three layers, and the two figures referred to are less available than others (17–20) farther on. Since the section on the frog is substantially based upon the author's own observations, it is disappointing to find five early stages represented by figures of models (fig. 58).

At the end of each chapter is a list of the more important recent publications on the subject arranged alphabetically by authors; but "in the text no attempt is made to assign the several statements to their original authors." In this and in some other respects the present work will be less useful for the advanced student or investigator than Minot's more elaborate treatise; but it is just what it purports to be, and will probably supply the wants of a larger number than the works of either Minot or Hertwig-Mark. A valuable section, absent or abbreviated in the other two, discusses the relation of ovulation to menstruation, and the data for estimating the age of a human embryo. The index is unusually complete, but Kleinenberg's ingenious hypothesis as to the office of "rudimentary and functionless organs" (p. 33) is not entered under any one of the three words.

The Industries of Animals. By Frédéric Houssay. (Contemporary Science Series.) Charles Scribner's Sons. 1893. Pp. xii, 258, 8vo. Illustrated.

Romance of the Insect World. By L. N. Badenoch. Macmillan & Co. 1893. Pp. xviii, 341, 8vo. Illustrated.

Letters to Marco. By Geo. D. Leslie, R.A. Macmillan. 1893. Pp. xviii, 260, 8vo. Illustrated.

The Outdoor World, or Young Collector's Handbook. By W. Furneaux, F.R.G.S. Longmans, Green & Co. 1893. Pp. xxviii, 411, 8vo. 16 colored plates and 500 cuts.

Our Household Insects; An Account of the Insect Pests found in Dwelling-houses. By Edward A. Butler, B.Sc. Longmans. 1893. Pp. x, 344, 8vo. 6 plates and 113 illustrations in the text.

THE growing interest in science has led to the preparation of many books in which the facts which are supposed to appeal most strongly to the general reader are imbedded in a jelly of literature provided to insure a certain continuity in the result. The ability to do this well is rare, and by common consent is found more frequently on the Continental side of the English Channel than among British writers. M. Houssay does not fail to sustain with credit the reputation of his compatriots. The French original of his little work is written with characteristic ease and grace, which are not entirely lost in the translation, although the latter is obviously the work of some one unversed in idiomatic English. The author divides the different industries of animals into groups, beginning with fishing and hunting, on the one hand, and, on the other, illustrating the means adopted by animals to avoid becoming the prey of fishers and hunters. Next are considered the collection of food, the commensalism of mutually beneficial animals and the practice of slaveholding, the construction and hygiene of dwellings and their defence against attacks from without. The book is pleasant reading, the faults of translation are too simple to be very annoying, and the illustrations, being mostly derived from Brehm's 'Thierleben,' are good. The scientific accuracy of the statements made is above the average in such books, the few exceptions seeming to be chargeable to the translator.

The 'Insect World' affords no romance, in spite of the author's title; the ground covered by the second work on our list is, practically, much the same as in M. Houssay's book. The language, though idiomatic, is often forced or turgid, and the drawings, when original, are "woolly" and obscure. There is nothing novel or particularly attractive in the author's mode of presentation, though many facts of interest in the life of insects are brought together in the book.

The letters to Marco were written by Mr. Leslie to an old friend, who presumably was house-bound, and are illustrated by many admirable little pen-and-ink sketches of natural objects, views and bits of architecture. Slight as they are from any point of view, they still preserve the lightness of the open air and the fragrance of garden and wood. Altogether this is a book for any denied by fate the privilege of country rambling.

Mr. Furneaux's hand-book is very fully illustrated by somewhat coarse but characteristic colored plates and numerous cuts of various degrees of merit. He tries to cover the entire field of collecting animal, vegetable, and mineral specimens, and on the whole succeeds very well. The book is distinctively British: it is the British fauna and flora which are illustrated, and the British collector's dialect which occasionally finds a place in its intentionally untechnical text. For English boys we should think the book worthy of high commendation. For our own boys and girls it is not without its use; as many of the animals and plants figured have closely related representatives on this side of the Atlantic, and many of the general instructions apply equally well to collectors in any temperate region. It will also give young people useful information about many animals and plants not found in America, but familiarly referred to in English literature and about which every intelligent person should know. We hope the time is not far distant when American boys and girls can find some hand-book, illustrated as well as this one, based on our own fauna and flora, clearly and distinctly written, and scientifically accurate. As we are free from the pest of "common names," for the most part, children can learn, as they should, the true scientific names of the objects of their search. These names are not longer or more difficult than many words in daily use which every child is expected to understand, in spite of some silly notions to the contrary; and they convey exact ideas which the "common" names rarely do.

In 'Our Household Insects' Mr. Butler has produced an excellent book, which any housewife may read with profit, and every entomologist will find convenient for reference. Although primarily written for English readers, it is equally available for Americans. Unhappily, nearly every household pest can claim the world as its country and all mankind as its natural prey. The language is not technical, the text is written in an easy, yet not too familiar, style. Each of the various creatures referred to is fully described, its peculiarities pointed out and usually illustrated, its habits discussed, and the circumstances favoring its increase made clear. It is not a book of remedies for pests, but those who intelligently read it will be far better able to cope with their tormentors than ever before. The illustrations are excellent, and the publishers have done everything to present Mr. Butler's text in a form suitable for any library.

The Protection of Woodlands. Translated from the German by John Nisbet, D.Œc. New York: Wm. R. Jenkins. 1893.

THIS is an amended translation of the rearranged fourth edition of Kauschinger's 'Lehre vom Waldschutz,' "a simple, scientific and practical little work," originally printed in 1873. A thorough reading of the book only confirms the commendatory words of the translator, who is a distinguished officer of the British forest service in India. After a brief introduction defining the aim and scope of the art of protecting woodlands, the book is divided into three sections. The first treats, in six chapters, of the protection of woodlands against injuries due to inorganic agencies such as frost, heat, rain, snow, hail, lightning, and excessive wetness or dryness of soil. The second section treats of the protection of woodlands against injuries due to organic agencies, such as weeds, parasites, domestic animals, animals of the chase, small rodents, birds, and insects; one hundred and five pages, or two-fifths of the whole book, being devoted to insects. The third section considers the protection of woodlands against forest fires, and other dangers arising from the wilfulness or carelessness of men, and contains little of value to American readers. Throughout the work there are paragraphs, and sometimes chapters, which have no bearing upon American conditions, yet the book as a whole is so sound and clear that all who are interested in its subject should own it. Now that the United States Government, the Boston Metropolitan Park Commission, and a few wealthy private citizens are making large reservations of forest lands, the American purchasers of this book should be many.

THE LAW OF STRIKES, LOCKOUTS,

LABOR ORGANIZATIONS, ETC.

By THOMAS S. COGLEY, author of Cogley's Digest.

This book gives all the case and statute law on the subjects of which it treats. It contains references to all English and American cases and statutes down to date. It is an interesting presentation of valuable material which covers the entire ground of strikes, lockouts, boycotts, picketing, blacklisting, conspiracies, labor organizations, railroads, and all the concomitant issues connected therewith, and is so thorough in all directions as to make the reader the master of the history as well as the law of the subject.

It is an attractive 400-page octavo volume of best law-book style. Price $4.00 net by express, prepaid, on receipt of amount with order.

NEW PUBLICATIONS.

LIFE AND LETTERS OF DEAN STANLEY.

By R. E. PROTHERO, with the coöperation of Dean Bradley. With Portraits and Illustrations. 2 vols., 8vo, $8.00.

"The book in every way fulfils the anticipations that were aroused by the announcement of it, and is one of the great biographies of the day."—*Chicago Tribune.*

"One of the most important of recent books. It is certainly one of the most valuable biographies of late years, and it will not be surprising to see it take rank as a standard book. The interest in it will be deep and sincere."—*Philadelphia Telegraph.*

THE PASQUIER MEMOIRS.

Edited by DUC D'AUDIFFRET PASQUIER. With Portraits. 3 vols., 8vo. Vol. I. now ready. $2.50.

"Since the record of Madame de Rémusat's observations was given to the world, no light so copious and searching has been thrown upon the Napoleonic era as is cast by this volume."—M. W. HAZLETINE *in N. Y. Sun.*

CIVILIZATION DURING THE MIDDLE AGES,

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2.50.

Prof. Adams is a recognized authority on mediæval history and civilization, and has produced a brilliant picture as well as a suggestive account of the conditions and characteristics of the middle ages and their gradual evolution.

"Prof. Adams's work is lucid in plan and style, comprehensive in its survey of the field, and has the additional merit of being highly interesting."—Prof. GEORGE P. FISHER.

PHILOSOPHY OF HISTORY—FRANCE.

By ROBERT FLINT, D.D., LL.D., Professor of Divinity in the University of Edinburgh. 8vo, $4.00.

Dr. Flint's great work, the fruit of many years of study and research, contemplates in its entirety a history of the intellectual development of France, Germany, Italy, and England. The first of the three volumes contains an analysis and discussion of Historical Philosophy in France and in French Belgium.

PSYCHOLOGY.

Descriptive and Explanatory. A Treatise of the Phenomena, Laws, and Development of Human Mental Life. By G. T. LADD, Professor of Philosophy in Yale University. 8vo, $4.50.

Prof. Ladd's works in this field are already well known, his "Elements of Physiological Psychology," in particular, being recognized as one of the most important contributions to the subject in recent years. His new book, in its originality of treatment and in its importance, is as noteworthy as anything that he has done.

MEN, WOMEN, AND BOOKS.

Essays by AUGUSTINE BIRRELL, M.P. Elzevir 16mo, gilt top, $1.00.

Mr. Birrell's new volume of essays is characterized by the same literary insight, raciness of phrase, keen humor, and warm appreciation of the charm of our great English writers as secured for his former books so great a reputation.

SCOTT'S LETTERS.

FAMILIAR LETTERS

OF

SIR WALTER SCOTT

Edited by David Douglas. With a fine steel Portrait of Scott and an Autographic Plan of Abbotsford. 2 vols. 8vo, gilt top, $6.00.

"In perusing these fascinating pages, we seem to live Sir Walter's life over again along with him. The period covered by the two volumes extends from 1797—the date of Scott's marriage—to 1825; and when it is borne in mind that nearly all the letters here printed are for the first time revealed to general knowledge, and that they lay bare the minutest details of Sir Walter's thoughts, cares, feelings, and aspirations, it is plain that Lockhart's biography was practically unfinished without this supplement. In these pages the author of 'Waverley' and 'The Lady of the Lake' is portrayed with minutest touches by his own hand."—*Daily Telegraph* (London).

"The letters of Scott are as native to the soil as the heather which he loved. He wrote as he felt. It can be said of him with as great justice as Gibbon said of Montaigne and Sir William Temple, that his correspondence 'brings us home to the house and bosom of the author.' It may be added, with equal truth, that 'careless, inimitable beauties,' such as constituted the delight and despair of Gibbon when he read Hume's works, form the special charm of Sir Walter Scott's Letters."—*London Times.*

"The magic that clings to everything that came from the pen of the Great Unknown lies over them, and the public of to-day will read them as eagerly as the public of seventy years syne read the 'Tales of My Landlord.'"—*Pall Mall Gazette.*

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

Needs Shortening

So do all cooks; and the puzzle for every one of them has been how to avoid sodden pastry. The problem has now been solved by the

NEW VEGETABLE SHORTENING

Cottolene

which makes light, crisp, wholesome and easily digested pastry. The most famous cooks in the country say so, and you will also after a fair trial. Make it now.

Sold in 3 and 5 lb. pails by all grocers.

Be sure you get the genuine.

NEW YORK AND LONDON,

HAVE NOW READY:

THE WRITINGS OF THOMAS PAINE.

Political, Sociological, Religious, and Literary. Edited by Moncure Daniel Conway. With Introduction and Notes. To be complete in four volumes, uniform with Mr. Conway's "Life of Paine." Price per volume, $2.50.

Volume I. now ready.

The first volume covers the period of the American Revolution, beginning with the year 1775. It will therefore open with Paine's anti-slavery essay and his philosophical or moral essays, while editing the Pennsylvania Magazine, these being followed by the great revolutionary, political, and controversial pamphlets which made such a profound impression on the country.

The second volume will consist mainly of the "Rights of Man," and pamphlets relating to English politics, but will also contain certain papers on French affairs.

The third and fourth volumes will consist mainly of Paine's religious writings, but will also contain some essays relating to American affairs, written in his last years. At the close will be given Paine's poems.

The Religion of a Literary Man.

By RICHARD LE GALLIENNE. 12mo, $1.00.

"Mr. Le Gallienne has produced a book well worth reading, particularly (so at least we should say) by those who are most disposed to differ with him, . . . The author treats of the hereafter with great courage, and says a good many things well worthy of the utmost attention. . . . The book is certainly a remarkable one, and we urge our readers not to trust to any second-hand account, but to make themselves acquainted with its contents by the ancient method of perusal."—*London Speaker.*

"Probably the sunniest book on religion ever published "—*London Star.*

The Story of Japan.

By DAVID MURRAY. (Being a new number of the Stories of the Nations Series). 12mo, illustrated, cloth, $1.50; half leather, gilt tops, $1.75.

Authors and Their Public in Ancient Times.

A sketch of literary conditions, and of the relations with the public of literary producers from the earliest times to the invention of printing in 1450. By GEO. HAVEN PUTNAM, author of "The Question of Copyright," etc. 12mo, $1.50.

"The Knickerbocker Press appears almost at its best in the delicately simple and yet attractive form which it has given to this work, wherein the chief of a celebrated publishing house sketches the gradual evolution of the idea of literary property . . . The book abounds in information, is written in a delightfully succinct and agreeable manner, with apt comparisons that are often humorous, and with scrupulous exactness to statement, and without a sign of partiality either from an author's or a publisher's point of view."—*New York Times.*

READY NEXT WEEK.

The Writings and Correspondence of Thomas Jefferson.

Edited by PAUL LEICESTER FORD. Uniform with the sets of the "Writings" of "Hamilton," "Franklin," "Washington," and "Jay." To be complete in 10 vols., 8vo, half leather, gilt tops. The set, $50.00.

Volume III. now ready.

Limited edition, 750 copies, printed from type; but a few sets remain for subscribers.

"The importance of the edition does not lie wholly in the form in which it is published or in the care with which the contents have been brought together and annotated Mr Ford has included in it a large mass of matter either new to print or new to an edition of Jefferson's writings."—*New York Times.*

*** *Notes on New Books, a quarterly bulletin, prospectuses of the Knickerbocker Nuggets, Heroes and Stories of the Nations Series, sent on application.*

Recent Important Publications in FINANCE AND ECONOMICS

The Tariff History of the United States, 1789-1888.

By Prof. F. W. TAUSSIG of Harvard University. Completing the narrative down to 1892. 12mo, $1.25.

The Silver Situation in the United States

(Questions of the Day Series, No. 74.) By Prof. F. W. TAUSSIG of Harvard University. 8vo, cloth, 75 cents.

"Professor Taussig is already well known by his admirable 'History of the United States Tariff,' and at a time when currency problems are attracting attention in Europe, Asia, and America, the appearance of a treatise from his pen on the history of silver in the United States during the last decade is peculiarly opportune." *London Times.*

The Distribution of Products;

Or the Mechanism and Metaphysics of Exchange. Three Essays: What Makes the Rate of Wages? What is a Bank? The Railway, the Farmer, and the Public. By EDWARD ATKINSON, LL.D. Second Edition, much enlarged. 8vo, cloth, $1.50.

"The volume deserves strong and hearty commendation, should be read by voters generally, and ought to be circulated among discontented workingmen as far as possible."—*Christian Intelligencer.*

Taxation and Work.

A Series of Treatises on the Tariff and the Currency. By EDWARD ATKINSON, LL.D. 12mo, $1.25.

The Industrial Progress of the Nation,

Consumption Limited; Production unlimited; By EDWARD ATKINSON, LL.D. 8vo, cloth, $2.50.

"The problems presented are treated with skill and force, and will interest even those who do not agree with the conclusions reached by the author."—*N. Y. Journal of Commerce.*

Prisoners and Paupers.

A study of the Abnormal Increase of Criminals and the Public Burden of Pauperism in the United States; with a Consideration of the Causes and Remedies. By HENRY M. BOIES, M.A. 8vo, illustrated, $1.50.

"Whether or not his conclusions be entirely accepted, the material he supplies for the intelligent discussion of the problem is of the highest importance and interest." —*Detroit Free Press.*

The Relation of Labor to the Law of To-day.

By LUJO BRENTANO, Professor of Political Economy in the University of Berlin. Translated from the German, with Introduction, by Porter Sherman, M.A. 12mo, $1.50.

The Corporation Problem.

A treatise on the public phases of Corporations; their uses, abuses, benefits, dangers, wealth, and power, with a discussion of the social, industrial, economic, and political questions to which they have given rise. By WILLIAM W. COOK of the New York Bar. 12mo, $1.50.

Chapters on the Theory and History of Banking.

By Prof. CHARLES F. DUNBAR of Harvard University. 12mo, $1.25.

Economic and Industrial Delusions.

A Discussion of the Case for Protection. With Explanatory Charts. By ARTHUR B. and HENRY FARQUHAR. 8vo, $1.50.

The Economy of High Wages.

An Inquiry into the Comparative Methods and the Cost of Production in Competing Industries in America and in Europe. By J. SCHOENHOF, late U. S. Consul and Special Commissioner Department of State, U. S. A., for Inquiry into the Economy of Production and Technical Education in Europe. With a Preface by the Hon. Thomas F. Bayard, late Secretary of State, U. S. A. (Questions of the Day Series, No. 73.) $1.50.

Who Pays Your Taxes?

A consideration of the Question of Taxation. By DAVID A. WELLS, JULIEN T. DAVIES, THOMAS G. SHEARMAN, JOSEPH DANA MILLER, BOLTON HALL, and others. Edited by Bolton Hall, and issued on behalf of the New York Tax Reform Association. (Questions of the Day Series, No. 71.) With Frontispiece, $1.25.

G. P. PUTNAM'S SONS,

NEW YORK: 27 and 29 W. 23d St.
LONDON: 24 Bedford St., Strand.

MACMILLAN & CO.'S NEW BOOKS.

JUST PUBLISHED. PROF. J. NORMAN LOCKYER'S NEW AND IMPORTANT WORK.

THE DAWN OF ASTRONOMY;

A STUDY OF THE TEMPLE WORSHIP AND MYTHOLOGY OF THE ANCIENT EGYPTIANS.

With numerous Illustrations and full-page Plates. By J. NORMAN LOCKYER, F.R.S., author of "The Meteoritic Hypothesis," "The Chemistry of the Sun," etc. Royal 8vo. $5.00.

*** In this work the author embodies the result of attempts he has recently made to ascertain "the early astronomical views of the Egyptians by a study of their temples, and the mythology connected with the various cults." Full of striking fact and suggestion in what is a new field of inquiry, it appeals alike to the student of astronomy, archæology, and mythology, as well as to readers taking only a general interest in these subjects.

Professor Tarr's New Book.

Economic Geology of the United States.

WITH BRIEFER MENTION OF FOREIGN MINERAL PRODUCTS

By R. S. TARR, B.S , F.G S.A., Assistant Professor of Geology at Cornell University. 8vo, $4 00.

Geological Works by Sir Arch. Geikie, D.S.C., LL.D., F.R.S.

Text Book of Geology.

Third Edition, Revised and Enlarged. Medium 8vo, $7.50.

Class Book of Geology.

Third Edition. Illustrated with Woodcuts. 12mo, $1.10.

JUST PUBLISHED. TWO NEW AND IMPORTANT MEDICAL WORKS.

PYOGENIC INFECTIVE DISEASES OF THE BRAIN AND SPINAL CORD.

Meningitis, Abscess of Brain, Infective Sinus Thrombosis.

With numerous Illustrations. By WILLIAM MACEWEN, M.D., Professor of Surgery in the University of Glasgow. 8vo. Bound in buckram. $6.00.

BY THE SAME AUTHOR,

ATLAS OF HEAD SECTIONS.

Fifty-three engraved Copperplates of Frozen Sections of the Head and Fifty-three Key Plates with Descriptive Texts. 4to. Bound in buckram. Price, $21.00.

"These volumes issued together are two of the best and most important additions to medical literature made in 1893."—*The Lancet.*

The Ethical Library. New Volume Just Published.

Short Studies in Character.

By SOPHIE BRYANT, D.Sc., Lond., Mathematical Mistress in the North London Collegiate School for Girls, and author of "Educational Ends" 12mo, $1.50.

Uniform with the above.

The Civilization of Christendom,

AND OTHER STUDIES.

By BERNARD BOSANQUET, M.A., Oxon., formerly Fellow of University College, Oxford. 12mo, $1.50.

*** *Other volumes in preparation.*

The Gifford Lectures.

Natural Theology.

The Gifford Lectures delivered before the University of Edinburgh in 1893 By Professor Sir G. G. STOKES, Bart., M P. 12mo, cloth, $1.50.

By the Same Author. Uniform with the above.

The Gifford Lectures, 1891. 12mo, cloth, $1.50.

Witnesses to the Unseen, and Other Essays.

By WILFRED WARD, author of "William George Ward and the Oxford Movement" and "William George Ward and the Catholic Revival." 8vo, cloth, $3.00.

Just Published. New Book by Professor Boyesen.

A COMMENTARY ON THE WRITINGS OF HENRIK IBSEN.

By H. H. BOYESEN, Professor of Germanic Languages and Literature at Columbia College, author of "Goethe and Schiller," "Essays on German Literature," etc. Crown 8vo, cloth, gilt top, $2.00.

The Lover's Lexicon.

A Handbook for Novelists, Playwrights, Philosophers, and Minor Poets; but especially for the enamoured. By FREDERICK GREENWOOD. Crown 8vo. $1 50

"A group of genial yet incisive papers. . . . A certain quaint originality and olden-time flavor characterize them as a whole. . . . Thoughtful as well as witty, it is a book for the library of every book lover, and has come to stay."—*Public Opinion.*

Second Edition Just Ready.

Seventy Years of Irish Life.

Being the recollections of W. R. LE FANU. One vol., crown 8vo, cloth, gilt top, $1.75.

"Brims over with delightful reading. . . . This volume is a storehouse of fresh and entertaining anecdotes charmingly set forth with genuine Irish humor of the most refined order."—*Boston Gazette.*

"Q."'S NEW BOOK.

THE DELECTABLE DUCHY.

Stories, Studies, and Sketches. By A. T. QUILLER COUCH, author of "Noughts and Crosses," "The Blue Pavilions," etc. 12mo, $1.00.

"There is something extremely delicate and fine in these half-pathetic and half-humorous sketches."—*The Outlook.*

"The book is bright, fresh, and strong from cover to cover."—*Boston Gazette.*

Mark Rutherford's New Novel. Now Ready.

Catherine Furze.

By MARK RUTHERFORD, author of "The Revolution in Tanner's Lane" Edited by his friend, Reuben Shapcott $1.00.

"'Catherine Furze' is one of the notable books of the season There are two leading characters, Catherine and the rector, 'Cardew.' They deserve a place as great character-studies in classic literature."—*Boston Daily Advertiser.*

COMPLETION OF "SYLVIE AND BRUNO."

Just Ready. By the Author of "Alice in Wonderland."

Sylvie and Bruno, Concluded.

By LEWIS CARROLL. With forty-six Illustrations by Harry Furniss. 12mo, cloth extra, gilt, $1.50.

By the Same Author. Uniform with the above

Sylvie and Bruno.

With forty six Illustrations by Harry Furniss. 12mo, cloth extra, gilt, $1.50.

THE PSYCHOLOGICAL REVIEW.

A new Bi Monthly Publication under the Editorship of Professors BALDWIN (Princeton University) and CATTELL (Columbia College). First number now ready. Single copies, 75 cents; annual subscription, $4.00.

MACMILLAN & CO., 66 Fifth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 25, 1894.

The Week.

THE adoption of the free-wool clause in the House on Thursday by a strict party vote shows that, whatever else may or may not come out of the tariff struggle, free wool is certain to come. If that should turn out to be the only thing gained, it alone would be worth the long fight. It would be worth it because it of itself would be certain in the near future to bring the whole high-tariff system to the ground. The Republican champions have taken their stand on the wool tax, and if they are beaten there, they are beaten everywhere, and they know it. The rest is only a question of detail and of time. In the matter of the tax on wool, protection has ceased to be a faith and become a superstition. It now has all the marks of blind fanaticism, refusing to trust the evidence of the senses and believing all the more firmly after belief has been demonstrated to be irrational—on the old principle, *credo quia impossibile.* Judge Lawrence, in his recent annual address to the Ohio wool-growers, tearfully declared that wool was now selling at "the lowest rates ever known in this country," but in the same breath called for "a gradual annual increase of duties" to "give such protection as would in four years enable American wool-growers to supply all needed and import none." He said he had thought the McKinley increase in duties would do the business, but had found that a mistake, as wool had simply gone lower than ever before. Now he is prophetically certain that another increase, or at any rate a "gradual annual increase," will raise prices. This is fetishism pure and simple. It is worse than fetishism, for we are sure that no savage would keep on offering rice and bananas to a totem-post that had proved itself so thorough a fraud as Judge Lawrence's wool tax has, by his own confession.

The wool-manufacturers, on their part, have been led away by the same superstition. They have tied themselves up with the wool-growers in an alliance that has been not only unholy, but, what is far worse from their point of view, unprofitable. As Mr. Edward D. Page proves in the *Wool and Cotton Reporter*, they have been completely hoodwinked by the theory of compensatory duties on their product to make up for the duty on raw wool, and have been more and more disabling themselves from making goods to compete with the foreign manufacturers either in quality or price. His conclusion is that every manufacturer ought to be glad to welcome "a system whose tendency is rather to induce men to rely upon economy, ability, and skill than to lean on the operation of the law in obtaining a profit." Against the doleful predictions of our Dolans and Norths, he very neatly sets off the dire forecast of Abbott Lawrence, who said in 1846, in regard to the reduced duties of the Walker tariff:

> "In less than twelve months after this new plan shall have been in operation, this whole country will be literally surfeited with foreign merchandise; we shall then owe a debt abroad of millions of dollars, . . . and a paralysis will have struck the business of the country."

Yet the increase of woollen manufactures in Massachusetts was 61 per cent. under that ruin-dealing tariff.

The proposition of Mr. Walker of Massachusetts, as developed in his debate with Mr. Bourke Cockran, is that if cotton and woollen goods should fall like rain from heaven in sufficient quantities to supply all our wants, it would not be worth our while to pick them up. On the contrary, it would be an injury to us. Why so? Because those who are now engaged in making cotton and woollen goods would be out of employment. They would get their own share of the shower, of course, but as they could not eat cottons or woollens they would starve to death. So there you are, floundering in a heap of goods that cost nothing, but with famine on every hand. The theory of the tariff party is, that we all ought to pay (say) 60 per cent. extra for woollen goods in order that the weavers and other workers in woollens may make a fair living. But if divine Providence should send us all the woollens we need for nothing, could we not afford to pay these people enough to board the weavers and their families at the best hotels in the country? Should we not save money by the operation? The Walker theory is as applicable to one kind of goods as to another. According to his notion we should all be ruined, in an economical sense, if all our wants of every kind and description were supplied gratuitously. We can imagine Mr. Walker remonstrating with Providence after each addition to the list of free goods. After a heavy downpour of flour and sugar he would see nothing but poverty and distress among the agricultural classes. If boots and shoes should come next, all the tanners and shoemakers would be ruined, and so on until everybody would be in the poorhouse because nobody would be in want of anything. Great is Protection!

The votes taken in the House on Monday by which sugar was made absolutely free of tax and the American people delivered from the payment of bounties on its production, may or may not be reversed by subsequent action. All these votes taken in committee of the whole are liable to be reversed in the House when the yeas and nays are called. It is difficult to say which side ought to prevail. On the one hand, it may be affirmed that bounties paid out of the public treasury to particular trades are contrary to all principles of justice, and that a gratuity collected from wheat-growers who are getting only fifty cents per bushel in order to give sugar-growers two cents per pound more than they would get in a free market, is a glaring outrage. It certainly looks so, and is perhaps intensified when coupled with it is a disguised bounty to the refiners who formed a Trust by means of which they doubled their capital by a stroke of the pen, and proceeded to pay dividends of 21 per cent. on their shares so capitalized. At the other end of the line is a handful of sugar-planters in Louisiana and Texas, by no means so hard pressed as the farmers of the North, who are receiving $10,000,000 per annum in the way of bonus for growing sugar-cane, and the only reason that can be given for paying this bonus to them is that they formerly had it under the form of a protective tariff. When the McKinley bill removed the duty from raw sugar and substituted a bounty in place of it, the mask was thrown off and the nature of the protective tariff disclosed. The sugar-planters begged that this change be not made, because, they said, the people would not allow the bounty to continue long. They would "see through it," although they could not see through the tariff, and when they should see through it, they would stop it peremptorily. This anticipation has now been realized, and it is most likely that the House will ratify the action of the committee of the whole. The votes on sugar and on wool prove that the party is more radical than the committee.

Those silly bankers and investors who hurried off their letters and telegrams to Washington and subscribed for Secretary Carlisle's loan four times over must now feel thoroughly alarmed. It was somewhat staggering to hear so promptly from the Knights of Labor that the issue of bonds was illegal and would be fought in the courts. This was poohpoohed by some thoughtless persons, but what will they now have left to say? Senator Quay ranges himself alongside the legal luminaries of the Populists, and warns the "takers of the loan" that the "securities go out

under a cloud, and that their redemption will be an important political issue in the future." Does this mean that a bondholder's political affiliations will be rigidly inquired into before he gets his interest? Will Mr. Quay, if made secretary of the treasury in the next Administration, refuse to "take the lid off," in the good old Pennsylvania fashion, to pay for nefarious Democratic bonds? It is possible that he might consent to compromise and pay all bonds printed from the plates prepared by President Harrison, when, as Secretary Foster told "Deacon" White, an issue of bonds was decided upon at the end of 1892. This is the only ray of light we now see for the unfortunate subscribers.

The Hawaiian Oligarchs give signs of uneasiness at the anomalous kind of government they are presenting to the world, and report that they are soon going to launch a constitutional republic. If they had done this, or pretended to do it, a year ago, they would have saved a vast amount of trouble to themselves and all concerned. The lapse of twelve months has not made the problem any easier. As to their new constitution, they are, of course, simply going to "proclaim" that. They gravely tell us that "no constitution in Hawaii has ever been submitted to a vote of the people, but simply proclaimed by the executive authority," and they mean to follow that precedent. It was treason for the Queen to try to do it last January, to be sure, but probably no one will remember that, and, anyhow, the real question is whether you are in favor of chastity and against the *Kahunas*. The Queen's doctrine was the monstrous one of "Hawaii for the Hawaiians," but this is now to give way to the truer motto, "Hawaii for the Americans," and the necessary hocus-pocus for disfranchising the natives and putting all political power in the hands of foreigners, by blood or citizenship, is now under way in the minds of the men who went to Hawaii with empires in their brains. They are a queer lot, and it will be an interesting thing to see how they get on. All that we ask now is that they shall not be put in the position of helping to govern us.

The petition of 8,000 legal voters of Hawaii, out of 13,000 all told, asking the United States to restore them the government which was struck down a year ago by a conspiracy of aliens acting with the United States minister, is a singularly ill-timed and ineffective document. We know that all these voters are "drunken and lewd," for the Rev. Sereno Bishop has so informed us. He admits that they are in a majority in the Islands, but when a majority is drunken and lewd, it doesn't count. Then these petitioners have apparently made the great mistake of supposing that the Republican party is in power. If it were, it would, of course, jump at the chance of living up to its historic doctrine that a black man's vote is as good as a white man's, and that the majority must rule, even if the minority has more intelligence and property. How foolish to expect a Democratic administration to proceed upon these Republican principles! Moreover, these petitioners come here after the *Tribune* has already decided that Hawaii is a "prosperous and independent republic." How could that be true if the majority of the people do not even want a republic? Really, these 8,000 petitioners are displaying a pitiable want of grasp of the situation.

The last batch of the Hawaiian correspondence is rather entertaining. Dole wrote, December 27, a letter evidently intended for the public here, pretending to believe that Willis's "attitude, language, and refusal to disclose," etc., led to the conclusion that he was going to use force to restore the Queen. The consequence was, he said, "threats of assassination against the officers of the Government," "conspiracies to create disorder," great anxiety among "aged and sick persons" and "children in the schools," and "apprehension" among "wives, sisters, and daughters," great "packing of valuables," and offers of asylum by Japanese to "unprotected women," and great "preparation of bandages," besides "agitating rumors," and an expensive increase of the military force on the part of the Government. There was much more of the same sort. In fact, Dole gave Willis to understand that he (Dole) was preparing to fight the United States, and wanted an explanation of Willis's hostile designs. Willis happily proved equal to the occasion. He asked Dole for a categorical explanation of the various phrases in which he described the causes of his apprehensions. Dole was cornered. He wrote saying that "the last mail had removed his fears, and further correspondence was unnecessary," but "was ready to furnish specifications" if Willis "still desired them." But Willis did desire them, and clung to him for an explanation. He then got another letter, not signed, from "the minister of foreign affairs," informing him that he "would not press him further for answer to his questions." Willis insisted, but at the departure of the mail had got no answer. There is no answer. The "minister of foreign affairs" was writing merely to stir up the people of the United States. The "missionary element" is full of these tricks.

The horror excited by Queen Liliuokalani's assertion that the provisional government ought to have their heads cut off and their property confiscated as the punishment of their treason, is very funny, considering that this is the penalty for treason in every country in the world except our own. We do not confiscate property, but in all other countries, especially the semi-barbarous ones like Turkey, on a level with which we might place Hawaii, they either hang traitors or cut off their heads. In proposing this penalty, therefore, the Queen was strictly within her right, and so was the *World* of this city in proposing that the provisional government should now cut off her head for plotting against them. All the emperors and kings hang or behead their defeated rebels, and the provisional government was doubtless afraid of something of the kind when it got Stevens to land the *Boston's* troops. Of course we ought to prevent any such barbarity, if we have the power, for we have got over the pristine habit of killing traitors by judicial sentence; but it is not discreditable to the Queen, as a semi-barbarian, to want to do the usual thing to her enemies. We must remember how many of us wanted to "hang Jeff Davis on a sour-apple tree," and how many good people in England want to hang Gladstone. The late Prof. Tyndall said he "deserved a traitor's doom" on Tower Hill.

President Cleveland's reasons for vetoing the North River Bridge bill cannot fail to strike even the advocates of the measure as fair and well grounded. He points out that the company asking for permission to construct the bridge was created by an act of the New York Legislature, in which it was expressly provided that the bridge should be constructed with a single span, with no pier or tower in the river; that an act of Congress, passed in 1890, granting permission for the construction of a bridge near Twenty-third street, had a like provision; that in all bills for bridges over the same river, many of which have been considered in Congress, the same provision was considered by engineering authorities to be necessary; that if the present bill were to become a law, with permission to place a pier in the river, it would carry with it also permission to the company having the grant for a bridge near Twenty-third Street to place a pier at that point; and, finally, that engineers, whose judgment upon the matter cannot be questioned, including the engineer of the company proposing to construct this bridge, have expressed the opinion that a pier is not necessary, and that a bridge can be constructed with a span over the entire distance. The latter point ought to be accepted as conclusive. If the bridge can be constructed without a pier, the company ought at once to renew its application with the objection-

able pier clause eliminated. In that way it would demonstrate its sincerity conclusively. We do not for a moment believe that the President has been animated in his disapproval of the measure by any feeling except regard for the public interest. Throughout his public career, as Mayor, Governor, and President, his use of the veto power has been uniformly wise, fearless, and completely removed from all taint of partisanship, personal prejudice, or demagogy.

The dispute over the World's Fair medal is another instance of the mess our Government makes of it every time it attempts to deal with matters of art. It blundered outrageously about the new coinage a few years ago, and the result is our present wonderful quarter. It always produces the worst building and the worst decoration, the worst postage-stamp and the worst Treasury note, to be had for money. Now it has insulted one of the most eminent artists in the country by rejecting as "vulgar" an eminently proper and eminently beautiful design, because it represented Young America as a vigorous, nude youth. We are used to the occasional outbreaks of prudery which lead young men in the West to deface paintings by Bouguereau, and matrons of Philadelphia to protest against the exhibition of pictures by Low and Harrison, but when the Government proceeds, publicly and before the nations, to follow in the same train, it is trying to the nerves. If the effect of free importation of works of art shall be to insert some knowledge of the subject into the skulls of our rulers, that alone is a reason for the speedy passage of the Wilson bill; but if the gentlemen who have been busy in this matter are fair representatives of the Senate to which they belong, we fear there is little hope for the artists when the bill comes before that body. They evidently want no art at all, domestic or foreign, in anything with which they have to do.

The downfall of Talmage is an encouraging sign of the times. We say downfall, because his resignation is nothing else than a confession of his failure. He leaves the Brooklyn Tabernacle simply because he cannot make it pay its running expenses. Last year he "praised God, from whom all blessings flow," that the plumbers, and carpenters, and gas-fitters who had bills for work and materials consented to accept twenty-three per cent. of their claims when they found they could not get any more. This year there must be a reckoning with Russell Sage, who made the concern a large loan on which the interest has not been paid, and who never compromises on any 23 per cent. basis. No way appears of meeting his demands, even with Talmage as an advertising card, and so Talmage retires, leaving his people to struggle with the problem of the great structure which he had built for his especial exhibition. That clerical mountebankery no longer pays is made clear by this Brooklyn experience, and all right-thinking persons will rejoice over the fact. Talmage's thanks to the newspapers are most appropriate, for without their help he must have broken down long ago.

There is more fear of war in Europe now than there has been for many years, certainly than since 1887. The appearance of the Russian fleet in the Mediterranean in considerable force is, as has been said by a high authority, the most serious event for England since Trafalgar, and the disturbances in Sicily are supposed to be not remotely connected with it. In fact, Italy, as a member of the Triple Alliance, seems to be all but paralyzed. She has an army of the required size, but, owing to lack of money, both organization and equipment are defective. The best authorities are of opinion that half the force in good condition would be more valuable. The finances, too, are in terrible disorder, and an outbreak of hostilities would bring on instant bankruptcy. The hostility of the French press to England is so furious and outspoken that it is a question in London whether the trouble may not begin by a summons to evacuate Egypt, which England would certainly disregard. This makes the relations of England to the Triple Alliance very interesting, but nobody seems to know what they are, although there is much speculation about them. The Germans could give very little help at sea, but they could frighten France a good deal on land, although both they and the Austrians would have a powerful Russian army on their hands on the eastern frontier. It is, however, more than likely that if England were attacked, Germany and Austria would be pleased to see her fight it out single-handed. On the Continent England's success in keeping out of international complications excites anything but admiration and good will. For England herself war just now would be particularly inconvenient, for the revenue is decreasing, and there is a heavy deficit this year, and there will have to be a loan to strengthen the navy.

There is already trouble with the South African Chartered Company. Mr. Rhodes, who got the company up and obtained its charter, organized the expedition into Mashonaland which beat the Matabeles. He has views of his own about the manner in which the new territory, which is immense in extent, should be settled and organized, and they differ considerably in some respects from those of the Government at home. Rhodes, however, has, since his victories over the Matabeles, become a great hero in the eyes of the Cape Colonists, and his success has doubtless done much to turn his head, or, as our slang would say, to enlarge it. Accordingly he has made a speech in which he substantially bids defiance to the home Government, and says that if they do not let him have his way, they may have to face an agitation for the independence of the Cape Colony. This has roused much indignation in England, and the *Economist* points out to Mr. Rhodes that his conquests were made by him not as a Cape Colonist, for the Cape Colony declined the job, but as president of a company chartered by Great Britain, and of which the stockholders are mainly Englishmen, and as a British citizen; that his enormous financial speculations are not yet a success, and that he had better keep a civil tongue in his head. This is all true, but why it should trouble Rhodes we do not well see. There is no doubt that if he got up a determined movement for separation at the Cape, the mother country could hardly resist it. It would be impossible to conquer South Africa and hold it, and if Rhodes were to attempt separation, of course he would be content to let his British citizenship go. Moreover, although it is true that his stockholders are Englishmen, it is also true that he has got and spent their money. It does not help Rhodes in England to have given $50,000 to Parnell for the home-rule agitation.

The professed purpose of the warring factions in Brazil is to "tire each other out." If the process is going on with them as fast as with the rest of the world, the end cannot be far away. It is now about four months since the fleet rebelled under Admiral Mello. The revolutionists no doubt expected that all would be over in twenty-four hours, and that Peixoto would step down and out just as Fonseca had before him. But the President was too obstinate an old soldier to give it up in that fashion, and his stubborn holding out made it necessary for the rebels to recast their plans entirely. Everything now points to their having determined to land a respectable body of troops near the capital and have the thing out in a decisive engagement. It certainly is time that some more deadly implement of war should be brought into use than the cable and rumors via Paris or Lisbon. We are glad to note, by the way, that the Brazilian minister to this country has at last abandoned the pretence that Mr. Flint's wonderful fighting-vessels were ever intended to fight at all. They are now simply going to "sail off and on" and fall furiously upon any transport that comes their way. Those ships, it is now clear, were made not to fight but to sell.

THE NEW BOND ISSUE.

If it be true, as the Washington despatches intimate, that the judiciary committee of the House intends to report a resolution contesting the right of the secretary of the treasury to use any money derived from the sale of bonds for current expenses, we hope that the wise men on that committee will consider all the laws on the statute-book before reaching a conclusion. One of these laws, approved May 31, 1878, is as follows.

"That from and after the passage of this act it shall not be lawful for the secretary of the treasury or other officer under him to cancel or retire any more of the United States legal-tender notes. And when any of said notes may be redeemed or be received into the treasury under any law from any source whatever, and shall belong to the United States, they shall not be retired, cancelled, or destroyed, but they *shall be reissued and paid out again and kept in circulation.*"

The significance of this law, taken in connection with the greenback-redemption law, is this: If the secretary were a great stickler for forms, and if he believed that he had no right to use any part of the gold reserve for the payment of current expenses, he would make an arrangement with some bank to present, say, $5,000,000 in greenbacks for redemption at the sub-treasury. For these he would, of course, hand over $5,000,000 of gold. Then he would pay out the $5,000,000 of greenbacks for his current expenses. The law not only authorizes but requires him to do so. It says that the notes "*shall be* reissued and paid out again and kept in circulation." Reference to the date of this law will show that it was passed in contemplation of the resumption of specie payments, then only seven months distant.

Now, what difference does it make whether the secretary redeems $5,000,000 of greenbacks per month with gold, and uses the former for current expenses, or whether he uses the gold directly? The one process calls for a little more trouble than the other, but not much more. Any bank, or any individual, for that matter, can present greenbacks and get gold, and then turn the gold over to a third person (for example, a Government creditor), on the very counter of the sub-treasury. A clerk of the Treasury Department could do this without violating any law, and could thus comply with the letter of the statute. The difference between this method and the direct payment of gold for current expenses is hardly so great as that 'twixt tweedledum and tweedledee.

There is another case of a like nature that the judiciary committee might report on while it has this weighty matter under consideration. The original greenback law (February 25, 1862) provided that all duties on imported goods should be paid in coin. That law has never been changed to this hour, yet greenbacks have been received for duties ever since specie payments were resumed. Why so? Because it was putting people to useless trouble to compel an importer to take greenbacks to the sub-treasury and draw gold, and then carry the gold to the cashier of the custom-house, who must return it to the sub-treasury the same day. All such idle steps are nonsense.

It is unfortunate that the law under which Secretary Carlisle is compelled to act in issuing bonds does not authorize a low rate of interest, say 3 per cent. At the time when the law was passed (1870) 5 per cent. was reckoned a low rate even for a Government bond, and 4½ per cent. was considered by good judges the lowest possible rate. When it was proposed by the House to put the rate down to 4 per cent. for the entire issue, Senator Sherman said that that would be equivalent to killing the whole refunding scheme, and that he would abandon it if such an amendment were adopted. A compromise was reached, by which the then existing debt, as it matured, could be refunded at 5, 4½, or 4 per cent., according to the state of the money market. When the specie-resumption act was passed five years later, it authorized the secretary of the treasury to "issue, sell, and dispose of, at not less than par in coin, either of the descriptions of bonds of the United States described in the act of Congress approved July 14, 1870." Under the provisions of that act Secretary Sherman sold new bonds to the amount of $95,500,000 gold, and held the money for the redemption of greenbacks. About two weeks before the date fixed for resumption, the gold premium disappeared, and the "Gold Room," the place where that metal had been bought and sold for nearly seventeen years, was closed for want of business. Consequently, when resumption day came, nobody drew any gold from the Treasury, because anybody who wanted gold could get it more easily from his own banker.

The authority given in the act of 1875 was a continuing authority. It prescribed the duties of the secretary "on and after the first day of January, anno domini 1879." It would have been absurd, of course, to provide for resumption at a fixed time and make no provision for future contingencies. There might have been a run on the Treasury, and the resumption fund might have been all drawn out. In fact, a great many people in the high circles of finance expected this very thing. It would have been a ridiculous plight for the Government if, in such a case, the secretary had had no resource, but must needs shut his doors and acknowledge bankruptcy. The Congress which passed the resumption act did not have overmuch faith in the outcome of its own action, but it could not and did not stultify itself by withholding from the secretary any means at its disposal. The faith and credit of the United States were pledged to the fullest extent and the last extremity, and that pledge remains to this day in full force and vigor.

The reason why Secretary Carlisle offers the 5 per cent. bonds described in the act of 1870 instead of the 4½s or the 4s, is that they have the shortest time to run, *i. e.*, ten years. It is easy to compute the price at which these bonds ought to sell in order to be equal to a 3 per cent. bond running the same length of time. The secretary finds it to be 117.223. Every 5 per cent. bond for $1,000 therefore must bring to the Treasury not less than $1,172.23. But the human mind is so constituted that although the 5 per cent. bond at 117.223 and the 3 per cent. bond at par are the same thing in an economical sense, nine men out of ten will not only prefer the latter, but will pay a considerable bonus for it. The premium of 17 per cent. which is required for the 5 per cent. bond will deter many bankers from bidding. The reason for this is that they have some doubt whether the next comer will pay this premium. Experience has taught them that the public do not like to pay premiums, and, as bankers usually buy in order to sell again, they take this psychological fact into account. Probably the Government could save one-quarter or one-half per cent. per annum in the rate of interest, for the whole ten years, if it were not for this premium. In other words, the Government could sell a 2½ or 2¾ per cent. bond at par as easily as a 5 per cent. bond at 117.223. The premium is a bugbear, but everybody knows that bugbears have a commercial standing. They count for something in the world of finance.

Nobody is to be blamed for this uneconomical arrangement except Congress. This body might pass a law of five lines merely amending the acts of 1875 and 1870, saying that instead of the bonds described therein the secretary may sell others drawing interest at 3, 2¾, and 2½ per cent., payable at the pleasure of the United States after two years and redeemable after ten years. But Congress, apparently, will do nothing of the kind. The secretary of the treasury must do the best he can with an antiquated law. Apparently he will have no difficulty in negotiating the present loan, even on the awkward terms to which he is limited, but Uncle Sam will pay something extra by reason thereof.

SOME HAWAIIAN ODDITIES.

We recommend for the instruction of our readers Mr. Pierce's account, in his 'Memoir and Letters of Charles Sumner,' of the use made of the navy to aid Gen. Grant in securing the annexation of St. Domingo. No one who reads it can help being struck by its remarkable resemblance to the attempt of Stevens to get possession of Hawaii. Put "the missionary element" in the place of Baez, Stevens in the place of Babcock, and you

have a singular parallel. Of course Gen. Grant's attempt was made on a greater scale, and in a bolder way, because he was a greater personage than any of those concerned in the attempt against Hawaii; but his methods were precisely the same. To crown all, Senator Morton defended the scheme in the Senate on the well-known plan which we venture to call the dog-and-the-sausages plan. A certain man bet that his dog would eat five dollars' worth of sausages within an hour. Finding the animal's appetite failing before his task was accomplished, he stimulated it by keeping another dog in a leash near by, and allowing him to make occasional dashes at the sausages. This never failed. We in like manner, when about to swallow any little island or dependency for which the American public seems to have no appetite, always try to rouse it by pretending that England, or some other power, is after it.

Mr. Pierce says: "Sumner completed his speech on the second day and was followed by Morton, who maintained that the acquisition was desirable as the key to the West Indies, and that if not made by the United States, England and France would shortly have the prize. This is a familiar argument in such cases, but an interval of twenty years has shown that in this instance it was misapplied." The annexationists are very strong on "keys." They never want to seize anything that is not "the key" to something else. Hawaii, for instance, is "the key to the Pacific." It is impossible to convince them that no island can be "the key" to anything unless you have a navy big enough to defend it against all comers. The only key in the world to sea-surrounded places is a huge navy.

This is a very curious and interesting feature of the controversy, because it is entirely in a line with other attempts to regulate American policy by foreign opinion. All through the tariff discussions we have been invited by the high protectionists, instead of considering, with the aid of facts and figures, what best suits our own interests, to watch foreign emotions, and to be guided in our legislation by English joy or sorrow. If the English showed sorrow over anything we were doing, we were to keep at it; if, on the contrary, they rejoiced over it, we were to change our course, and the American public were invited to study not their own organs of opinion, but the London *Times* and *Economist*, in order to make up their minds about domestic legislation.

There is a somewhat similar confusion of ideas about the support of the Government in dealing with foreign questions. It is a fixed idea, with a certain class of publicists among us, that in any controversy with a foreign power our own Government should be supported, whether it be right or wrong. That is to say, that any political adventurer like Blaine, who scrambles into the State Department, is at liberty to get up with foreigners disputes, born, it may be, of ignorance as much as of unscrupulousness, which shall silence completely the conscience and morality of the public, while he prepares the army and navy for some deed of villany or absurdity. This theory was first started in order to silence the anti-slavery men's protests against the Mexican war, but happily the best portion of the American people has never accepted it. In spite of occasional aberrations, our Government has for a century continued to make valuable contributions to international morality by doing as it would be done by to all nations.

But the "our country, right or wrong" theory has been and is held with great tenacity by nearly the whole body of politicians and by certain newspapers, among others the New York *Tribune*, the chief organ of the Republican party. This organ held, in the Bering Sea controversy, for instance, that, although there might be no international law prohibiting pelagic seal-killing, it was open to us, or any one nation, to draw down from heaven or out of our own moral consciousness a rule for the purpose, which, willy-nilly, should bind the human race; and it preached with great vehemence the doctrine that any newspaper which said nay to this was "a bad American." But in the Hawaiian controversy it has abandoned its own principles in a very amusing way, for it has for weeks and months loaded the President of the United States with the foulest abuse, on behalf of a foreign government of very recent origin and at least doubtful antecedents, has advised it to fight him, and has treated his envoys as liars and knaves and fools. There is nothing in recent political literature which can equal the scurrility which this American newspaper has heaped on its own Government for taking a course in a diplomatic matter which had all the marks of good faith, and could not possibly be charged with anything but blundering. Any foreigner who got from the *Tribune* his conceptions of the American President and his advisers, might fairly conclude that he was the head of a huge band of brigands. This has been the more extraordinary because the director of this organ has himself represented the country abroad, and was supposed to have learned, during his brief term of office, the lesson of fidelity to his own Government. But there is in him now not a trace of official propriety, and he rages against his country just as if he were a missionary's son denouncing the Queen.

THE NOMINATION OF MR. PECKHAM.

MR. CLEVELAND'S nomination of Wheeler H. Peckham for the Supreme bench shows that he is becoming something like his old self again, or, in other words, that he has entered on the policy with which he should have begun his administration. He was not elected as a conciliator or restorer of "harmony," or as an expert political manager. He was nominated and elected, in the teeth of extraordinary opposition on the part of all the politicians, as an honest and courageous man. It was his tariff message, and his silver letter, and his vetoes which made him a second time President of the United States. Both letter and message were, from the politician's point of view, the height of folly, but the people love a man who is not afraid.

That he should have forgotten this when he took office was surprising, but forget it he apparently did. Although before the election he refused to submit to Tammany dictation, after the election he apparently lost heart, and got it into his head that by some sort of contrivance he might be the means of healing the Democratic dissensions in this State and getting the party to present a united front to the enemy. There is no other way of accounting for his manner of filling the postmastership of this city—a terrible descent from the appointment of Pearson in 1885—and his long delay in filling the district attorneyship here and in Brooklyn, and the naval office and surveyorship in the custom-house, for his open cessation of intercourse or consultation with the anti-snappers who elected him, and his wholly unnecessary fling at the civil-service reformers in his last message. We should be glad to think that these things were not signs that he was forgetting his true rôle in American politics, but we fear they were. He never was and he never will be so popular, so strong in public esteem and respect, as he was in the first three months after his election. Had he used that popularity for beginning an unrelenting war on the Hill faction and all that it stands for, for discountenancing it openly, and letting it be known openly that between him and it there could be no peace, there is a fair reason for supposing we should not now be burdened with Hill and Murphy, or that their following in the State would be too weak and contemptible for notice.

That golden moment was allowed to pass, however. The President discarded his old advisers, reappointed none of the good men of 1885, and, through the Quincy debauch with the consulships and other things of the same sort, led many to suppose that the hero of 1884 had become, in defiance of all reason and all probability, in the last term he was likely to hold, a commonplace distributor of spoils and restorer of "harmony." That the disappointment has been great to tens of thousands, there is no denying. The loss to this State has been immense, for, with a courageous fighting-man in the Presidential

chair, the State politics might have been lifted to a higher level than it has reached any time since 1885.

It is to be said, however, on the other hand, that no President maintains his popularity during his first year, and that any mistakes he makes are apt to be made then. He seldom gets time to consider his situation seriously until the second year. The nomination of Mr. Hornblower we looked on as an indication, slight it might be, but still an indication, that he was disposed to reconsider his policy, and take up the only part for which nature or circumstances had fitted him—the part which we assigned him the day after his election, that of the man who said, "Here I stand. I can do no otherwise. God help me." That nomination was defeated by all sorts of influences. The arguments used against it probably had less than anything else to do with its defeat, for its opponents were men who do not argue, but they supplied something to show to the public. They said they had never heard of Mr. Hornblower; that he was young for the place, and that his experience had not been sufficiently wide and varied—in all which there was a shade of plausibility. The rejection placed Mr. Cleveland once more at the parting of the ways, and filled his friends with fresh anxiety. If he now recurred to his old idea of "harmony," and sought out what would be agreeable to Hill and the promiscuous herd who follow him in the Senate, his fate was sealed. But he has chosen the better way, by nominating another man, Wheeler H. Peckham, who is older than Mr. Hornblower, who stands as president of the Bar Association at the head of the New York bar, who has had as much practice of every kind as a man can have in a long life, and who enjoys everybody's respect, both as a citizen and lawyer, and was even more conspicuous than Mr. Hornblower in resisting Hill's attempt to put a thief on the bench of the Court of Appeals.

Even were the President disposed to take for the place a man of Hill's selection, he would be unable to discover among the followers of that worthy any lawyer fit for such an office as judge of the Supreme Court. Such men do not keep such company. But he might have gone outside the committee which condemned Maynard. His confining his second choice to one of its members shows that he means to fight, and in fighting he will have all that is best in the community at his back. As a general rule the community sides with the President in contests with the Senate. Mr. Cleveland has won one such fight, when the Senate demanded the papers on which he made his removals, although he had the most respectable members of the Senate, such men as Mr. Edmunds for instance, arrayed against him. With nothing now to fear but the opposition of such nondescripts as Hill and Murphy, the Populists, and the young adventurers who have been sent up by the mining and pastoral States of the far West, his eventual triumph seems pretty sure. But, win or lose, the fight is a good one. It is not simply a fight for the confirmation of a good nomination. It is a fight for good government, for good judges, good laws, for political purity, and the fair fame of the American people.

THE TRANSFORMATION OF THE PULPIT.

Mr. Royce has been getting well belabored for his article in the January *Forum* on "The Decline of the American Pulpit." A great many occupants of that pulpit, who, like the Rev. Amos Barton, have the opinion, though not the sensation, of great power, have arisen to let their own persons refute his alleged decline, and the religious press has been giving him buffets with brotherly unanimity. We ourselves have thought his article open to pretty serious criticism, though not in the line followed by his clerical censors. For example, he begins by attributing the decline to the lack of "trained men" in the ministry, and ends by telling the "training schools" that they are responsible for the same decline. What he really meant is probably better indicated in the figures given in the *Independent* by President Fisher of Hanover College, which show how very small a proportion of theological students comes from the leading colleges of the country.

But the whole controversy seems to us a profitless one, because it is so largely a dispute about words. Mr. Royce's "decline" was a fatally red rag. If he had contented himself with pointing out the great changes which have come over the Protestant pulpit in the last thirty years, and refused to call those changes either a decline or an improvement, we think he would have fared better. At any rate, he could have kept himself more closely in touch with fact, and could have written with less warmth and been replied to with less wrath. For there can be no doubt, in the mind of one with an unprejudiced eye on the development of church life in the United States, that the pulpit has undergone a sweeping metamorphosis within a generation. We do not see why this may not be recognized with entire good nature, and without calling bad names on either side. The intellectual ability or the piety of the clergy of to-day need not be dragged into the question at all, and the whole thing may be resolved into the query whether the changed conditions and demands of the congregations have not, in fact, produced a changed type of the clergy.

Just here, we think, is where Mr. Royce made a fundamental mistake in assuming that the kind of preacher the people want to-day is a "seer," a man of "spiritual eyesight," a "poet in the poise of his mind." Taking the average congregation in the older parts of the country, this would be far from the fact. Such "a prophet of the soul" as he has in his mind's eye represents, rather, the unpopular and disappearing type, which is being replaced by quite another. The best way to find out the kind of preachers the people want is to ask what kind they have. They get what they want in the long run, and we may be sure that the most successful ministers of the present come nearest the ideal of the present.

What, then, are the principal qualities demanded and exemplified in the successful clergymen of the day? We should put the social qualities first of all. Church people want a pastor who is thoroughly acquainted with all the proprieties and amenities of life, who is as much at ease in a parlor as in a pulpit, who can meet them and their friends on terms of social equality, and never give them occasion to blush for him. Then they are more and more coming to insist upon surrounding church services with an air of quiet decorum. They would simply shudder at one of Mr. Royce's prophets, blurting out all sorts of unpleasant and ill-bred truths. Some crusty old fellow has said that all preaching is essentially bad manners. It may have been once, but we have changed all that. "Doctrinal preaching" has gone, mainly because it is not "good form." Dr. Shedd laments its disappearance, but his complaints are as nothing to what would be heard from the congregations if it were to reappear again. But it will not, nor will the famous doctrinal preachers of other days, who were invisible through the week and incomprehensible on Sunday.

Next in order comes executive talent. The modern church is a complex business requiring administrative ability of a high order. More and more of this is coming to be required of the minister. Let one take up the "year-book" of a city church, with its ramified charitable and educational and missionary interests, and he will see what a head for business the clergyman in charge of it must have. The vast property administered by Trinity parish or the Collegiate Reformed Churches in this city is, of course, exceptional, yet it suggests the kind of work that falls upon the ministry at the present day. What would a prophet do if plumped down at a table with a lot of intricate accounts and tough business problems thrust in his face? He would rather tackle Jezebel or the prophets of Baal twenty times over.

It makes little difference whether we call the changes in the pulpit which these inexorable demands have brought

about a decline or an advance. They amount, in fact, to a transformation, which is all the while becoming more complete. How it works in individual cases may be inferred from a colloquy between two college classmates, one of them a clergyman, ten years after graduation. They were comparing notes about intellectual growth and their opportunities for it, and the clergyman said grimly: "You will see at once how much wiser I am than in college when I tell you that I have since gone to two or three hundred afternoon teas, have played five hundred sets of tennis with the daughters of my parishioners, have attended many scores of receptions, and gossiped three hours on an average at each, have presided at a thousand or two meetings of trustees and boards, circulated a couple of hundred subscription papers, and built three churches, two chapels, and a rectory. I need only add," he concluded, "that in my church the wild Western sign, 'Don't shoot the organist, for he is doing his best,' has been transferred from the organ-loft to the pulpit."

MARTIAL LAW IN SICILY.

ITALY, January 11, 1894.

SICILY is in a state of siege, under martial law, and assuredly there is no sadder heart in Italy to-day than Crispi's. He who contributed so largely in 1848-'9 and in 1860 to liberate his native island from the Bourbon; he who, for years afterwards, remained in the breach to obtain justice, to promote education, to cover the island with railroads, ports, and harbors; he who was foremost in the hospitals of Palermo during the cholera scourge—after exhausting every effort to pacify the populations, pledging himself and his colleagues to introduce measures for the redress of grievances, for the transfer of taxes from the *have-nots* to the *haves*—has been at last compelled, in the presence of downright crime, to demand the King's sanction for the exceptional measures necessary for the safety of life, for the protection of state officers in the exercise of their duties, for the restoration of order.

When I last wrote, the agitation was confined to the peasants and miners who, enrolled in their Fasci, had obtained a certain amount of relief in the form of contracts with their masters, which, if they did not secure "a living wage," insured a net gain, so says Signor Colajanni, of five millions during the present year. Suddenly and violently a fresh agitation was set on foot against the local taxes, especially against the octroi (the tax on consumption), against the hearth tax, and the surtax laid by the communes on the income tax paid by the heads of families. It began in Monreale, whence in 1866 the malefactors, incited by the monks, friars, and clericals, descended on Palermo, all unprepared because the prefect and the head of the police refused to believe in the warnings of those who best knew the intentions of the "black party," and for a week the city was given over to the miscreants, who burnt and pillaged, destroyed public and private buildings, broke up the statues of Garibaldi and the King; and because the Marquis di Rudini, then mayor of Palermo, headed the national guard and fought valiantly against the crew of savages, they burnt his palace to the ground, his father dying in consequence and his wife escaping with bare life. One fact in the Monreale episode of December, 1893, it is only just to note: everywhere the Fasci had exerted themselves to maintain order. Some of the members, admitted to the communal councils, had the people well in hand. "The taxes are unjust," said they; "we know this, we are drawing up a scheme for abating the most obnoxious ones; but, since you have elected us, you must trust and allow us to choose our own methods and the opportune time." With the exception of some renegades, most of the leaders *did* sincerely believe that Crispi's ministry would radically reform "the incidence of taxation," especially as the relations between the premier and Colajanni have been growing ever more cordial; indeed, Crispi consulted his quondam foe as to the most urgent needs and possibilities, while Sydney Sonnino and Boselli, ministers of the treasury and of agriculture, were known to be engaged in drawing up various schemes for the taxation of uncultivated land and for the introduction of legal contracts between landlord and tenant.

The state of siege is a very mild one. At first the people of Palermo were alarmed, began to lay in provisions as a precaution against famine, to withdraw their deposits from the savings banks, to close their shops, and to shut themselves in their houses. But, on the following day, everything returned to a normal state, the citizens being reassured in view of the fact that only riots were to be suppressed. Colajanni had an interview with Gen. Morra di Lavriano, who consented to his issue, by telegram, of a proclamation to the "laborers of Sicily," which had an instantaneous influence in inducing the real laborers to do their best to impede the disorders which they had had no hand in promoting.

"In the name of all my companions in faith," runs Colajanni's manifesto, "I implore you to preserve absolute calm, to avoid whatsoever may lead to a useless shedding of blood—a misfortune always—and which now can only aggravate the condition of the laborers. Let your pacific and calm attitude demonstrate the uselessness of all repressive measures. Once the disorders are at an end, the pledge of the Government exists to redress that portion of your grievances whose existence it acknowledges. You must await the promised redress, and trust that the measures adopted may suffice to overcome the resistance of the local *camarille* who coalesce to maintain the present injustice, and to recognize your rights, hitherto despised. The conditions of the moment impose this line of conduct; whosoever gives you contrary advice is a traitor."

These words, which the real leaders of the people have read to the illiterate peasants and miners, have been magical; the fact that Colajanni and Crispi are reconciled gives great hopes that the crying grievances of the Sicilians will be redressed; and while Sonnino, the one man on the continent who knows the true conditions of the peasants and the miners, is at work on his land bill, Crispi is studying the possible measures for removing the heaviest of their burdens, namely, the tax on consumption.

It would require more space than you could afford to explain all the horrors of this tax on all the poor in Italy, but especially on the Sicilians and Sardinians. When the first rulers of Italy had ruined the nation by their violent centralization, when the landowners and land tenants had paid a year's land tax in advance, then the wiseacres bethought themselves of a tax on a broad basis, the grist tax and the tax on consumption; then, not satisfied with using this as a source of state revenue, they allowed the communes to put on a *surtax*. This tax, which in 1871 brought in sixty millions to the state and seventy-one to the communes, in 1890 brought in eighty millions to the state and 140 millions to the communes. These communes may tax all that the state leaves untaxed and put a *surtax* on all the taxes of the state—*i. e.*, on all food, fuel, and beverages, on flocks and herds, on materials for construction, and also on the state tax on land and houses, besides the *fuocatico*, or hearth tax. Now in Northern Italy, where the workingmen *do* take part in politics and political elections, the communes have, for the greater number, placed heavy surtaxes on land and on houses—on the *haves*, that is—whereas they have taxed with a comparatively light hand the food of the people, the *have-nothings*. Thus, Piedmont, which has almost exactly the same population as Sicily, lays on twelve millions; Lombardy, with an extra half million of inhabitants, twelve millions also; Venetia, with only a quarter million less of inhabitants, seven millions; while Sicily pays twenty-two millions and a quarter; the hearth tax, which is imposed on the very poorest, amounting to an extra two millions. Nor do these figures explain the entire infamy of the system. The country is divided into "closed" and "open" communes,' which contribute in different proportions to the communal tax. Take Venetia and Lombardy, where the country districts are populated with villages and farmhouses. There the farmers and peasants pay a tax when they kill a pig, or for such articles as they have to purchase in town, as there is a tax on retail business; but they grind and eat their own corn in the shape of bread, maccaroni, or polenta, they drink their home-made wine untaxed, they eat their fowls, their eggs and vegetables untaxed; so that, though the land and income taxes are heavy indeed, they manage to make ends meet. But in Sicily there are *no* rural districts; the peasants, fishermen, and miners are forced to live in the great cities, the large or small towns, and the few villages; they are all forced within the octroi barrier, and must pay for every morsel of food that they consume, for the sticks that their women and children pick up, for the litter of their mules or horses, for the bran on which they feed their pigs and poultry.

Then, again, while the surtax on all else is limited to a fixed sum, the state tax, the tax on bread, paste, rice, and flour, is allowed to be extended to one-fifteenth of its actual value. Take corn and flour: Sicily produces one-seventh of all the corn crop in Italy, but the peasants who raise it, living in towns, are compelled to pay the state tax and the surtax even on their own share. If they purchase, they have to pay the price which the custom tax increases. Take Palermo: the custom-house duties are five lire (the corn laws once abolished are again in force); the home producers sell their corn at the same rate as the foreign corn. To-day, wheat in Sicily costs thirty lire per quintal. Palermo being one of the largest cities, the government puts on an octroi tax outside the gate of two lire. The commune of Palermo, not content with putting a tax of 15 per cent. on the actual price of corn, lays it on that price and the Government tax added together, so that it brings the tax up to 24½ per cent. The poor people who eat anything but "beans and greens" live on bread and paste; hence all the weight of this unjust impost falls on them. As it is in Palermo, so it is everywhere, because the signori in the municipal councils never put a surtax on land until they have exhausted all the resources of the octroi and *fuocatico*. It is to these *camarille* that Colajanni alludes in his manifesto.

To refer again to Piedmont as compared to Sicily: in the former province the surtax on land is thirteen millions, in the island of Sicily it is but five millions. The ability of the Government will be shown in removing these abnormal facts, in adjusting the incidence of taxation. It must bring the landholders to a sense of their duty. The owners of land in Sicily have trebled their rents since 1840, when the last census was taken; they have doubled them, as Orlando Ruggiero shows, during the last twenty years. Contrast this with the condition of the "distressed landlords" and the "perplexed farmers" in England, who, owing to American and Australian competition, find "horn and corn" unremunerative, and you will see how the condition of land tenure in Sicily is responsible for all the evils under which the poor toiling masses groan. Sonnino, in his great work, the 'Peasants in Italy,' affirmed that there was no remedy save to "bring the landlords into direct contact with the tillers of the soil, abolishing the middlemen." If he can succeed in doing this, he will have proved himself one of the greatest statesmen that Italy has possessed in ancient or modern times. But to succeed he must wait for the dissolution of the present Parliament. Then Crispi must go to the country on the programme of economical and social reform; he must prevent and punish all interference with the liberty of elections, and then he will be sure to have a strong, firm working majority—not a bought mob who will leave him in the lurch, but the representatives of the people who toil, who suffer, and can now not bear an additional feather's weight on their bent and burdened backs. There are plenty of resources left in the country. As Bodio showed in his pamphlet on the progress of Italy during the last twenty-five years, an immense amount of wealth escapes taxation. Luxury is ever on the increase; feasts and banquets are the order of the day. At the present moment, *starving* Syracuse spends 25,000 lire to fête Prince Thomas, who is a very quiet, unpretending gentleman, even as Caltanissetta spent 80,000 lire on the adornment of one hall in the municipality for the reception of the King and Queen in 1880, to the great regret of the sovereigns and of the public. In short, monarchy and representative institutions are on their trial as they have never been since the days of 1870, when there was hesitation about going into Rome or sending an army to the assistance of the Emperor Napoleon. If the monarch and his patriotic advisers can induce the wealthy, landed, and capitalist classes to alleviate the burdens of the masses, they may yet have a long term of life. But if not, depend upon it, the people will reverse Cattaneo's ultimatum to the Austrians who threatened to starve the inhabitants of Milan, "As well die of hunger as by hanging," and will say, "As well be shot as starved." The present return to order in Sicily is obtained by the terror of the "black party" lest they be found out to be the instigators of the riots, and by the efforts of the people who believe in Crispi and in most of his colleagues in their resolve to relieve their burdens and to liberate them from their domestic tyrants. If they should be deluded and deceived, then indeed no one would dare to prophesy the results to Sicily and to Italy as a whole. J. W. M.

IN THE BALEARIC ISLES.—VI.

MAHON, December, 1893.

WHEN we announced our intention of going to Menorca, our friends in Mallorca shrugged their shoulders as if caprice alone could prompt such a journey. The distance between the capital cities of the sister islands is only a night's sail, yet there seems to be little intercourse between them, save in the way of commerce; their mutual relation to the central government at Madrid being the rather perfunctory tie that binds them together. Why Mallorca should have been so bountifully endowed with a rich soil, happy climate, and grand landscape features, while to her neighbor were given a scanty soil and meagre aspect, only those deep in the secrets of the gods can tell. Whether this great disparity in the physical aspect of the two islands would be complemented by noticeable differences in the character of the inhabitants, we were curious to see.

We chose the most inconvenient route to Mahon, via Alcudia, as it promised a greater diversity of experiences. From Palma through vineyards and pretty hamlets to Empalme the way was familiar; but from there a branch road skirted the southern base of the Sierra, bringing into view strikingly bold, individual crags, with ruined watch-towers that mark a period of eternal vigilance. At La Puebla, the termination of the railroad, we were to take diligence to Alcudia, about six miles distant, and from there the steamer to Mahon. The diligence proved to be a high two-wheeled peasant's cart, with rope bottom and woven-hemp sides, and with scanty room for six persons; the baggage being tied in a precarious fashion behind. But no scarlet-coated Highland coachman was ever more autocratic than our olive-skinned islander, who for livery wore his calico shirt outside his trousers, and, on our suggesting a more secure adjustment of our belongings, waved us away with such a lordly air that we meekly clambered up to our seats. Our fellow-passengers were peasants, with the exception of a Mahonese artisan returning to his home in high spirits, whose lively sallies frequently upset the habitual gravity of his neighbors. In almost any other country we should have attributed this exuberance to the influence of the "flowing bowl," but we have yet to see a case of intoxication among these temperate people. We have been told by a resident of a quarter of a century, who has visited every town and village in the islands, that the only drunkenness he has ever seen has been among sailors belonging to foreign ships temporarily in port.

Our primitive diligence had the merit of lightness, and we sped past fields hedged with reeds and aloes, and by the Albufera, half veiled in thin, blue smoke, once a vast, noxious marsh, now, through English energy and intelligence, dyked and drained, and converted into an exceedingly fertile tract, divided into small holdings. Just beyond is Alcudia, wearing the melancholy aspect of bygone prosperity, and bearing the empty title of "city," the superlative "fidelísima" having been bestowed upon it by Charles V. for its allegiance to him during certain domestic troubles. We were glad to leave its close, lane-like streets, and pass out between the massive double walls, now crumbling to decay, and through the old gateway to the road that leads to the port, where a refreshing breeze blew in from the sea. It is a pity that these towns and villages should remain cramped in narrow quarters, now that the Moors are under guard in Africa and the Barbary pirates have become regenerated or have found other occupations.

At the head of the straggling line of half-a-dozen houses fronting the bay was our modest little *fonda*, whose principal room served as bar, reception, and family dining-room. There was none of that delightful bustle which, in an English inn, for example, always follows the advent of travellers and calls up such pleasant anticipations. Our hostess moved about with depressing deliberation, and we had begun to despair of supper when we were asked if we liked fish. Meanwhile our gay Mahonese, after inviting every one to drink with him (which invitation was politely declined, according to custom), took a guitar, and, seating himself in the open doorway, through which we could see the moonlight trembling on the waters of the bay, sang several spirited ballads. After another long delay supper was announced, and consisted of three courses of fish. Our host waited upon us in unconventional shirtsleeves and sombrero, but the table was graced with snowy napkins, a refinement we have sometimes found counted among the "extras" in decorous England.

A tidy chamber invited us to sleep, and the soft notes of the guitar were fast luring us into the fascinating unknown, when we were quickly recalled by the expostulatory tones of a drove of pigs. The pig is one of the chief exports of Mallorca, and, fed royally on figs, carobs, and sweet acorns, when transformed into crackling does not need for sauce even the gentle Elia's famous dissertation. But in transit it is quite another thing. For more than half a century pigs and passengers, the former sometimes numbering hundreds, have jostled one another on the same boat, almost shared the same cabin. The Spaniard muffles himself in his cloak, and shuts out as well as he can the noisome odors and incessant squealing, but his proverbial patience has long since passed the border line of virtue. The pigs, more enterprising, have recently made use of the public press to protest against being obliged to share the gangplank with the passengers. Their success leads all those who go down to the sea from Mallorca to pray devoutly that they may soon demand a separate ship.

As we were rowed out to meet the steamer from Barcelona, we could just distinguish, in the early light, the outlines of the mountains that come down to the bay of Alcudia and which help to form its beautiful port. The pigs had already embarked, and, their number being limited, the miseries of the turbulent channel that rushes between the two islands, were not unnecessarily augmented. A furious gale drove us to the southward so that we did not see the low-lying coast-line of Menorca until within two hours of reaching Mahon. The rather narrow entrance to this port has the effect of a mean hall in a noble dwelling, for the harbor is three miles long and widens inwards, containing so many capacious inlets formed by the indentations of the low hills which hem it in, that the boast of the Mahonese of its capacity to shelter "all the squadrons of the world" seems easy of belief. The ruins of Fort San Felipe, at the water's edge to the left of the entrance, are memorials of the fatuity with which humanity follows precedents. Built by Charles V. and strengthened by subsequent rulers, captured and thrice lost by the English, after heroic defence, the lesson was at last learned, and La Mola, just opposite, a miniature Gibraltar, formed by nature for the defence of the harbor, is now covered with massive fortifications, still in process of enlargement. An immense lazaretto, the largest in Spain, has provided the means of purification for thousands of ships from the Levant. Vessels of different nationalities were at anchor "under observation," and as close as possible to the yellow flags which defined their

limits lay small boats, whose occupants were relieving the tedium of their confinement by fishing. About midway of the harbor we passed a small island, having a sanguinary history; it is now the site of a large military hospital. The arsenal at Villacárlos, the village on the south side of the bay, the Georgetown of the English, and the navy-yard on the north, complete the warlike aspect of the approach to a city raised under martial auspices, Mahon being the ancient Portus Magonis, founded 452 B. C. by the Carthaginian general Magon, supposed to have been the brother of the great Hannibal.

The city rises irregularly on natural terraces of rock worn into deep fissures and dyed a tawny red by the action of sea and air. Its buildings, all white, are of a nondescript architecture without individual beauty, but in the transparent atmosphere this whiteness produces an airy, luminous effect. The steep streets are clean, some roughly paved with the native rock, and there is a welcome absence of the subtle odor that haunts the streets of Palma. As in Palma, the ground floors of many of the dwellings are given up to the pursuit of various trades, and the family life grouped about the carpenter or shoemaker bench makes a pleasant picture. There are no traces of the Saracens in Mahon, no remains of their picturesque architecture, and we missed the glimpses into charming patios, with gardens beyond, so frequent in Palma. Rows of prim, closely shuttered dwellings—attributed to English influence—succeed one another with melancholy monotony. A lively genius, however, seems to preside over the town. In place of the mournful notes which in Palma always suggest the vanquished Moors, gay operatic airs enliven the streets. Even the refrain of El Sereno has a merry lilt as, with excess of zeal, he calls forth the early hours. The wickets in the doors, too, have an air of coquetry, which the chance sight of a demure face framed within does not belie. The variety of social types representing a mixed inheritance gives piquancy to the street scenes, while a nautical flavor is added by the universal custom of carrying parcels in handkerchiefs, knotted sailor-fashion. Spanish costumes have given place to modern fashions, though with certain graceful modifications. Whatever traces of British occupation a prolonged stay might discover, they do not lie on the surface. We have rarely heard English spoken, but a sign, "Marshall's Coffee House," over a door on the way to Villacárlos suggests old-time English good cheer. The noticeable absence of posters picturing a rampant bull led to the agreeable discovery that Menorca has advanced far enough in civilization to leave behind the barbarous amusement of bull-baiting. A spirit of unaffected kindliness seems to animate the people, which affects the stranger happily. Of the public buildings little can be said. The Church of Santa María possesses a grand organ, perhaps the finest in Spain, which can be heard on Sundays at high mass. There is an attempt at a museum, and a small but excellent public library occupies a portion of one of the old convents, and is in charge of an intelligent librarian, enthusiastic in his work. Through the courtesy of the owner, Señor Pons y Soler, we had the pleasure of examining a rare and interesting collection of antiquities, evidences of various civilizations that have peopled Menorca.

Walking about the western outskirts of the town, we came upon a fine highway bordered with pines. As a rapidly driven vehicle approached we were surprised at hearing a peremptory request to "stop." This exclamation belonged to a very limited fund of English which, with the conveyance, was placed at our service for a drive to San Luis, a village "limpísimo," some four miles distant. Even in Holland "the cleanest of villages" do not always live up to their reputation, but as we had never seen a village answering to that description in the Baleares, we accepted. Scarcely were we seated when our driver, with an indescribable air, asked if we were "milors." Our reply did not seem to lessen the elation which radiated from his whole person, and threatened to make our tour of San Luis rather embarrassing. We walked up one street and down the other of this curious place, where not only the walls, roofs, and chimneys of the dwellings, but outbuildings, fences, and sidewalks were covered with a dazzling coat of lime. The children's backs bore evidence of the freshness of the application, for it was Sunday, and the day before had witnessed the weekly frenzy with which the women of San Luis endeavor to banish every vestige of grateful color. Here and there, however, a green bough leaned against a house, or a brilliant pomegranate hung over a garden wall in a defiant way; but the streets were treeless, and, under the keen sunshine of this semitropic zone, no mortal eyes could bear such brightness unflinching. As a consequence, every man, woman, and child in the place squinted. Yet, in spite of this painful neatness, San Luis was not unattractive. The odor of sanctity diffused by this superlative cleanliness accorded with the peaceful Sunday-morning atmosphere, but did not prevent the manifestation of that spontaneous gayety which is one charm of the native character.

We had the pleasure of sailing down the harbor, one balmy afternoon, with a native and long-time resident of Mahon, who as a boy had sailed on the old *Ironsides*, and had spent his early manhood in Massachusetts. The Yankee accent which he still retained called up homely pictures of domestic cheer under far different skies; and his reminiscences of the heroic times of Garrison and Phillips, and the bright ideals which he still cherished of our democratic institutions, had the effect of prophecy, and banished the dark pictures conjured up by modern politics. Our friend reverted to the days when Mahon was our Mediterranean naval station, and spoke of the friendly recollections of Americans entertained by the people of the island. Admiral Farragut often visited here during his midshipman days, but probably his wildest dreams never pictured his returning in after years to be the recipient of a popular ovation.

Only a mile or so southward from Mahon, at Trabucó, we came upon those primitive monuments in which Menorca abounds, and which have given rise to so much wonder and speculation as to their origin and purpose. The T stones, so called from their shape, were supposed to have been heathen altars, and various theories were advanced concerning the sacrificial victims. But more recent investigations point to their probable more utilitarian use as the central supports for the roofs of megalithic edifices. Imagine a single block of stone 18 inches thick and 7 feet broad, rising upright 9 feet above the ground and supporting a horizontal slab measuring 12 feet in length by 5 in width, and 2 feet thick. It is easy to form a mental diagram of so simple a structure, but it must be seen to understand the powerful effect its isolated massiveness produces upon the imagination. Adjacent are usually circular tumuli built of enormous stones, occasionally roughly shaped, and sometimes containing rude interior staircases and chambers. They are known as talayóts, from *atalaya*, or watch-tower. Around them are the remains of ancient towns, rudely built of massive stones, most of them prostrate, but enough remaining to mark the form of the dwellings, and the whole surrounded by protecting walls, of which a few remain in wonderful preservation.

From the talayót we overlooked a wide sweep of country. The first impression was one of melancholy: small, barren-looking fields encircled by high stone walls and containing two or three fig or olive trees, sometimes but a single tree, also surrounded by a wall, both for protection and as a ready means of disposing of this embarrassing crop of stones; outside these enclosures, trees with tops bent almost to the ground by the force of the prevalent north wind and with branches thickset and twisted together, while scattered here and there over the almost level plain are the grim talayóts that have kept watch for unknown ages. Then the whimsical aspect takes possession of one, and there is a fascination in those fantastic, wind-swept trees and mysterious heaps of stones which the most smiling beauty sometimes fails to exercise. S. G.

THE GREEK REVIVAL IN PARIS.

PARIS, January 4, 1894.

CIVILIZATION lives by contrasts. At the very moment when we are introducing on the French stage the Scandinavian drama, and trying to become acquainted with Ibsen, there is a revival of the old classic tragedy, and it is played not only at the French Theatre, it is played at one of the most popular theatres of the Boulevard, called the Renaissance. At the French Theatre, we have "Oedipe Roi" and "Antigone," at the Renaissance we have Racine's "Phèdre."

"Oedipus Rex" is perhaps the most perfect drama that was ever written; the emotion is created by the most natural means, and grows from beginning to end till it reaches the highest point it can attain. It is the most tragical expression that has ever been found of the struggle of man against destiny, against fatality. We have now the good fortune of possessing an actor who plays the part of *Oedipus* with a perfection which borders at times on sublimity. The name of Mounet-Sully will probably be remembered as long as the name of Talma. Mounet-Sully is a conscientious actor, an artist; he is modest, and I am told that he receives advice better than any other of the comedians of the French Theatre. He is tall and handsome, and has the most harmonious and sonorous voice; he was born for tragedy or the heroic drama. He has sometimes been tried in modern comedies, but it is almost painful to see him in a vulgar part; he was made to move among heroes and demigods, or in the fantastic domain of the imagination. There is in him a certain sort of exaltation which carries him along, and which has become natural to him. He is never so perfect as when he plays a part which seems almost out of the limits of humanity. I have been told by Englishmen who had seen *Hamlet* played by the best actors that Mounet-Sully surpasses them all in his conception of this most extraordinary character. Even in a French translation, he has contrived to do full justice to Shakspere. It is impossible to be more pathetic, more dreamy, more melancholy. Mounet-Sully seems all the time on the uncertain border of reason and

madness; he leaves our mind constantly perplexed. He is never coarse or vulgar; he is always the Prince Hamlet; there is in him an innate nobility of gesture, of movement, of voice.

It is a curious fact that Mounet-Sully has achieved his greatest triumphs in parts like this, or like *Hernani*, which is almost unnatural. We can hardly think now of Victor Hugo's beautiful drama without thinking of Mounet-Sully and of Sarah Bernhardt, in the happy days when Sarah Bernhardt played *Doña Sol* and Mounet-Sully played *Hernani*, and when Victor Hugo could have before his eyes the most poetical reflection of his own thoughts. Mounet-Sully was much admired also in the part of *Nero* in "Britannicus"; he represented well the young tyrant, in his first struggles with *Agrippina*, when the monster which was in him had not yet shown all its horror, when it was, so to speak, growing from hour to hour. But his great triumph of late years has been in "Oedipe Roi," where he appeared in all the majesty of the Greek tragedy. The translation of Sophocles by Lacroix is as good as a translation can be; it is in French verse, and the verses are very fine.

The same cannot be said of the translation of "Antigone," which was made more than twenty years ago by Meurice and Vacquerie. The verses are often flat, and sometimes coarse and vulgar, and the language is in painful contrast with the situations. This "Antigone" has very recently been revived at the French Theatre. Mounet-Sully plays in it the part of *Creon*, the King of Thebes; he plays it with his usual force, and I might say magnificence of expression, but it is impossible to take as much interest in "Antigone" as in "Oedipe Roi." All the incidents of the drama turn upon a point which cannot touch us as much as it did the ancients. The struggle between the King and *Antigone* over the forbidden burial of her brother has not much to interest a modern mind; we can understand only with some difficulty *Creon's* fury and the dreadful punishment which he inflicts on *Antigone*, whom he orders to be buried alive. We cannot imagine any better the sudden change which comes over him when he discovers that his son, who is in love with *Antigone*, has joined her.

The authors and the director of the French Theatre have given us this tragedy in order to make what they believe a complete restoration of the Greek theatre. We have in it a real chorus, represented by a number of old men who sing in unison. The stage is double, having two stories; the chorus, the people, move on the lower story, and a double staircase allows access to the upper story, on which we see a temple, and on which move and talk the principal actors, *Creon*, *Antigone*, etc. When *Antigone* is condemned by *Creon*, she comes down the staircase and makes an appeal to the people; but the chorus is inexorable. All the details have been studied with the greatest care; and the temple, which is built of brick and wood, has been copied from a drawing in the 'History of Greek Architecture,' a very learned work by M. Chipiez. The music pretends to be Greek music. It was composed by Saint-Saëns, and is very monotonous and dull; moreover, it is almost impossible to understand what the chorus is saying, though this is essential to the drama. Altogether, this reconstruction of a Greek theatre has not been a very happy experiment, though *Creon* played his part with great majesty and dignity, and though Mademoiselle Bartet, dressed like a Tanagra figurine, enveloped in graceful veils, gave very poetic expression to *Antigone*.

It is idle to hope to give on a French stage a real reconstruction of the Greek theatre. Men like Corneille and Racine did not care much for what we now call "local color." They followed strictly the law of the three unities of Aristotle, and one of these unities is unity of place. There is no change of the decoration in the classic tragedy; the mind ought not to be too much amused by material details and to be drawn away from the dialogue, from the intellectual part of the drama.

I have spoken at length of Mounet-Sully; I must say something of his brother Paul Mounet, who is also playing at the French Theatre. He was tried first in inferior parts, but he has lately revealed himself as a great actor. He is just now playing the part of *Titus* in Racine's tragedy of "Bérénice" in a manner which is truly remarkable. It is a pity that he is not as handsome as his brother, but he has the same sonorous voice, and I have never seen an actor wear the Roman toga and the imperial purple with so great majesty. Talma must have looked so when he was applauded by Napoleon. The tragedy of "Bérénice" is one of the finest of Racine's; his marvellous talent found an admirable field in a subject which to others would have seemed too sterile. An ancient historian has told the story in very few words: "Titus reginam Berenicen, cui etiam nuptias pollicitus ferebatur, ab urbe dimisit invitus invitam." How wonderful is the laconism of the Latin language. What long struggles are contained in these three words, "dimisit invitus invitam." Titus loves Berenice, he loved her before he was chosen Emperor by the Senate, but the Roman law is inexorable. Cæsar cannot marry a Queen. The old republican hatred of kings has survived the republic; the Roman people will not for a moment admit that a Cæsar should marry another than a Roman; it looks upon an Oriental queen as the populace of London would look upon some Indian princess. Berenice loves Titus, she loved him before he became Emperor, and now she is told that she cannot become his wife. She is angry at first, but after a while she submits to the inevitable; she cares as much for the glory of Titus as Titus can himself; she will leave Rome and return to Palestine—"dimisit invitus invitam."

What attracted Racine to this theme of Berenice and Titus was its very simplicity. He had long looked for the subject of a tragedy which should be very free from intrigues, from crimes and murders, even from incidents. The ancients (I mean the Greeks) greatly valued this simplicity, and Racine was a great admirer of the ancients. It can be truly said that in "Bérénice," as well as in all the plays of Racine, the French language attained the highest pitch of perfection. He represents, as it were, the *summum*, what the mathematicians call the maximum, of perfection of the French in verse, as Mme. de Sévigné and Bossuet represent the maximum of perfection in prose. Racine had, at times, an extraordinary boldness. When *Titus* separates from *Bérénice*, he tells her, in reply to her reproaches,

"Hélas! que vous me déchirez!"

And she answers:

"Vous êtes empereur, seigneur, et vous pleurez!"

This is exactly what took place between Louis XIV. and Mazarin's niece, Marie Mancini. Mazarin, sacrificing his own interests to those of the state, would not allow young Louis XIV., who was in love with Marie Mancini, to marry her, and when the separation took place Louis XIV. cried, and she said to him: "Vous êtes roi et vous pleurez!"

We find Racine again on another stage, very inferior to the French Theatre, the Renaissance, now managed by Mme. Sarah Bernhardt. I went to see her play "Phèdre" (which alternates with the "Dame aux Camélias"). She has not escaped time's "irreparable outrage"; she is no longer the *Phèdre* whom I saw in other times at the French Theatre. Her golden voice has suffered from uttering the shrieks of so many dramas, played in all countries. Still, in the milder moments of her part, she remains a most poetic and graceful figure. She still has that spark of genius which has made her incomparable.

Correspondence.

THE SOCIAL-DEMOCRATIC FEDERATION AND PRACTICAL POLITICS.

To the Editor of The Nation:

Sir: My friend Mr. H. G. Wilshire has just sent me a copy of your journal, containing a letter from Mr. W. J. Ashley of Cambridge, Massachusetts, in which occurs the following passage on the decay of revolutionary Social-Democracy in Europe: "In England it [this decay] is sufficiently indicated by the prominence of the Fabian Society and the disappearance from practical politics of the Social-Democratic Federation." With the Fabian Society and its work I have nothing to do. But its members have never claimed that they constitute an *organization* of Socialists in any sense of those words, and I hold a different opinion as to its prominence in "practical politics" from that held by Mr. Ashley. Certain it is that, according to their own confession in a recent number of the *Fortnightly Review*, they have failed to influence the "practical politics" of the Liberal party with which they are connected; while the failure of the Progressive party on the London County Council, acting to a considerable extent under their influence, to deal adequately with the pressing social problems of this nation-city will, I fear, tell greatly in favor of the reactionary party at the next elections.

On the other hand, you will, sir, perhaps, allow me to give a few facts in relation to the Social-Democratic Federation, which will prove to your readers how far we have "disappeared" from practical politics:

(1.) During the past year we have far more than doubled the number of our genuine paying members, and have also doubled the number of our active branches in London and in the Provinces. Those who know how exceedingly difficult it is to get English workmen—and our organization is almost wholly composed of workers—to pay for their own politics, will understand what an immense advance this betokens in the fourteenth year of our existence.

(2.) The Social-Democratic Federation now commands all but a majority on the Executive of the London Trades Council, and our influence is felt more and more each day on that body.

(3.) At the great annual Congress of Trades Unions at Belfast last year—the Congress of the "aristocrats of labor"—we carried a resolution, by 137 votes against 96, in favor of the complete socialization of all the great means and instruments of production, distribution, and exchange. This thoroughgoing, revolutionary resolution was proposed by James Macdonald, one of the oldest members of the Social-Democratic Federation, and seconded by Peter Curran, likewise an old member of

the S. D. F., who left us to work in the New Unionism, but rejoined last year. I attach the very greatest importance to this voting, which I have every reason to believe will be affirmed by an increased majority next year, as well as to the resolution, likewise carried by Social-Democratic influence, committing the trades unions to take an active part in politics. This they have hitherto refused to do.

(4.) We have at the present moment three thoroughgoing revolutionary Social-Democratic candidates before the constituencies of Walworth (London), South Salford, and Burnley; and should have many more if payment of election expenses and payment of members of Parliament were the law. Even as it is, we shall probably be able to run a few more at the general election, and there are Socialists who, like Keir Hardie, M. P., West Ham, and Peter Curran at Barrow in Furness, will have our support, though they do not run under our direct control.

(5.) We have placed many members of the Social-Democratic Federation on municipal councils, vestries, school boards, and even boards of guardians in different parts of the country. In Burnley, where I am myself standing as a candidate for Parliament against both Tory and Liberal, we have just carried two municipal councillors against the efforts of both factions, and in the five wards out of thirteen which we contested in this Radical stronghold, we polled 1,775 votes; that number being 76 more than the Liberals and Radicals polled in the same wards.

All this scarcely reads, I venture to think, like "the disappearance of the Social-Democratic Federation from practical politics." I may add that John Burns owes his seat for Battersea to the work done in that constituency by the Social-Democratic Federation, of which he was a member and in which organization he undoubtedly received his social and political education. The last statement is true of Thomas Mann and others.

In conclusion, I may say that there is not a single practical palliative proposal now before the English public which was not first set forth and pushed by the Social-Democratic Federation; while the tremendous work our comrades have done this winter on behalf of the unemployed in pursuance of our agitation of the last ten years seems to me practical and beneficial enough by itself to call for some acknowledgment.—I am, sir, your obedient servant,

H. M. HYNDMAN.

9 QUEEN ANNE'S GATE,
LONDON, S. W., January 8, 1894.

P. S.—I find that I have omitted to state that our journal, *Justice*, which has been running now for ten years, is printed at our own press; that it is edited by a workingman, H. Quelch, and is largely written by workingmen; that also, though larger in size than it has ever hitherto been, it is paying its expenses without any advertisements. "Prominent" as the Fabians may be, they have no journal of their own whatever: their monthly review, *To-Day*, died of inanition some years ago. Mr. Jerome K. Jerome has taken the title for his weekly paper. H. M. H.

ARCHÆOLOGY IN CRETE.

TO THE EDITOR OF THE NATION:

SIR: As the Greek Syllogos of Candia is preparing to acquire the great inscription of Gortyna, and has already despatched to America appeals for contributions to that end, some account of this body and its services to archæology seems appropriate.

In the year 1875, the Syllogos was founded with the object, in the words of its president, "of collecting funds for the diffusion of Greek letters and the education of the Greeks in Crete." The Turks form only one-fourth of the population, are chiefly of Greek descent, and understand accurately the Greek language alone. In 1885, Dr. Joseph Hazzidakis (consular agent of the United Sates in Candia) was chosen president, and continues in office. At that time, the public funds for education being sufficient, Dr. Hazzidakis proposed to turn the small resources of the Syllogos towards the investigation and preservation of the extant remains of antiquity in the island. The Government was persuaded to forbid the destruction of antiquities, and the Syllogos began to buy such relics as came to light and to preserve them in its museum—a collection which is already more than respectable. By the zeal and efforts of the Syllogos the so-called Ἰδαῖον Ἄντρον and the Cave of Eilithyia were excavated, and the position of the city and river of Amnisos accurately defined. Later, by its aid, Dr. Halbherr was enabled to excavate, in Gortyna, the temple of Pythian Apollo, where were uncovered the oldest extant Greek inscriptions, and Messrs. Halbherr and Fabricius were assisted in the investigations, at the same site, which led to the discovery of the great inscription in question. At present the Syllogos is the centre of all archæological work done in Crete.

With the hope that this mention may throw some light on the history and services of this society, I am, etc., JOHN ALDEN.

CANDIA, CRETE, December 31, 1893.

[The appeal referred to above states that the well-known "great inscription of Gortyna, the most famous of the epigraphical remains of Greek antiquity that have come down to us," is in danger of perishing from the action of running water, or from ignorance or malice, being in the same place in which it was discovered in 1884. It is proposed to buy it and transport it to the museum of the Syllogos, at a cost of $2,000. As an inducement to subscribe to this object, the Syllogos offers a cast of the entire wall to any institution contributing $125, delivering it free at Brindisi, Trieste, Genoa, or Marseilles. The Syllogos may be addressed through its president or its secretary (Prof. S. Xanthoudidis) at Candia.—ED. NATION.]

FULDA'S "THE TALISMAN."

TO THE EDITOR OF THE NATION:

SIR: In your issue of yesterday, you call attention, in a paragraph of considerable length, to the "literary event" of the successful performance of Ludwig Fulda's "Der Talisman." In the article no hint is given that the plot is identically that of a very familiar story of Hans Christian Andersen's, in which American children took delight fifty years ago and more.

Respectfully, WILLIAM EVERETT.

WASHINGTON, D. C., January 19, 1894.

Notes.

WE read in the *Library Journal* for January that librarians will shortly be asked by circular what support they will give to an 'American Catalogue' of books previous to 1876 (not included in the 1876 volume), compiled from Roorbach, Kelly, Stevens, and other sources, and perhaps confined to author-alphabet alone.

G. P. Putnam's Sons' spring list embraces the Writings of Thomas Paine, edited by Moncure D. Conway, the first volume (1774–1779) being nearly ready; volumes iii. and iv. of Paul Leicester Ford's edition of Jefferson's Writings; 'The Life and Correspondence of Rufus King,' edited by his grandson, Dr. Charles R. King, in five volumes; 'Oliver Cromwell,' by Samuel H. Church; 'Tennyson: His Art, and His Relation to Modern Life,' by the Rev. Stopford A. Brooke; 'A History of Social Life in England,' edited in six volumes by H. D. Traill; 'Piers Plowman—1363–1399,' by J. J. Jusserand; 'Art in Theory,' by Prof. Geo. L. Raymond of Princeton; 'Secularism: Its Progress and Morals,' by John M. Bonham; 'American Song,' a collection of representative poems, with analytical and critical studies of their writers, a text-book, by A. B. Simmonds; 'James Henry Chapin of Connecticut: His Life and Work,' by Geo. Sumner Weaver, D.D.; 'Random Roamings in Time and Space,' by the Rev. Augustus Jessopp, D.D.; 'Mediæval Life and Literature,' studies by the late Prof. E. T. McLaughlin of Yale; and 'The Life and Teachings of Jesus,' by Arthur K. Rogers.

Henry Holt & Co. will issue shortly a 'History of the Mental Growth of Mankind in Ancient Times,' in four volumes, by John S. Hittell, and 'John Ingerfield, and Other Stories,' by Jerome K. Jerome.

Macmillan & Co. have in press 'Sources of the Constitution of the United States,' by Dr. C. Ellis Stevens.

'Studies in the Evolution of English Criticism,' announced by Ginn & Co., will attract attention by reason of its author, Laura Johnson Wylie, being a "Graduate Student of English in Yale University."

The Burrows Brothers Co. of Cleveland are American agents for a complete translation of Catullus, the metrical part of which was the work of the late Sir Richard Burton, while abundant notes will be supplied by Mr. Leonard C. Smithers. The issue will be limited to subscribers, and will not exceed fifteen hundred. Blake's portrait of Catullus is to be etched as a frontispiece. The book will be a large octavo.

The uniform edition of Thoreau's works issued by Houghton, Mifflin & Co. is brought to an end with three volumes, "Spring," "Excursions," and "Miscellanies," the last consisting of fugitive papers recovered from magazines and other periodicals, and from some books; the most considerable features being an estimate of Carlyle and his works in 1847, and the anti-slavery utterances entitled "Slavery in Massachusetts," "A Plea for Captain John Brown," and "The Last Days of John Brown." These prose fragments are preceded by Emerson's sketch of the author from the *Atlantic* of August, 1862, and succeeded by Thoreau's translation of the "Prometheus Bound," Pindaric versions, and scanty original verse. A general index is affixed, and two of these three final volumes have frontispiece portraits of Thoreau. The record thus seems as complete as his most ardent admirer could wish.

The second and concluding volume of 'The World's Parliament of Religions' (Chicago: The Parliament Publishing Co.; New York: J. A. Hill & Co.) follows close upon our notice of the first, which it resembles in its pictorial assortment with a pronounced Eastern flavor. The denominational congresses are reported in

the latter part of this volume, and furnish occasion for swelling the number of portraits.

A handful of books from Macmillan challenge consideration mainly by reason of their illustrations. The first is a small one of Dent's, 'Bon-Mots of Charles Lamb and Douglas Jerrold,' edited by Walter Jerrold, and disfigured by "grotesques" by Aubrey Beardsley. The attempt to marry Japanese monstrosities of design to Western humor meets the fate that might be expected, even if the designs bore any relation to the jests of the text, which they do not. The full-length pen-sketch of Lamb is the best and indeed the only "illustration," besides the portrait of Jerrold. Fitness distinguishes the illustrations to 'The Temple,' for they are "almost all taken from engravings produced in the century before George Herbert's time—that is to say, from designs which he had seen or might have seen." Albert Dürer, Holbein, Martin Schongauer, Lucas van Leyden, and George Whitney hold the leading place, and what ought to strike every eye, but will not, is the complete harmony between the older woodcuts and the printer's types; and the facsimiles of the metal engravings are much less inharmonious than our mechanical "process" hatching. A few useful notes are added. Christina Rossetti has fallen into good hands in the case of her nursery 'Sing-Song,' illustrated by Arthur Hughes, and of her 'Goblin Market,' illustrated by Laurence Housman. Mr. Hughes's designs are pat, usually graceful, and in their best humor excellent. Mr. Housman's are as decorative as they are odd, and thoroughly in the spirit of the weird lyric. Both reprints are prettily bound.

Sir Joshua Reynolds is not a very entertaining personage, and his well-regulated life is not a very good one to write of unless one devotes more space to his illustrious circle of friends than to himself. Mr. Claude Phillips keeps pretty close to his subject in the biography which comes to us from the Scribners, and has hardly succeeded in making it amusing. Reynolds was an accomplished type of the fashionable portrait-painter—courtly, stately, polite, impeccable, and "invulnerable," and withal somewhat cold-blooded. His personality is eminently respectable, but it is not fascinating, and a comparison between him and his great rival, Gainsborough, is not unlike the famous one between Addison and Steele. In painting, too, we are inclined to think Gainsborough the more vitally artistic nature; but Reynolds had an enormous vogue in his day, and was considered the first artist of England when England had the best art of Europe, and it is not surprising that the English should try to make an "old master" of him and place him among the great ones of art. His faults seem to us too great and his merits insufficient for him to hold such a position with the world at large. His life is a little apt to resolve itself into a catalogue of his sitters, and such a catalogue, made up from his pocket-books, is apt to prove monotonous. Mr. Phillips gives all the facts along with some very just criticisms. His book is likely to prove acceptable.

The veteran artist W. H. Beard, after a lifetime devoted to the painting of animals, has undertaken to set down for the use of others what he has learned about 'Action in Art' (Cassell Publishing Co.). There is much common sense in the book, and a good deal of it might prove useful to beginners. What Mr. Beard has to say about the use of instantaneous photography and the difference between art and science in the treatment of the action of animals, is interesting and generally sound. On the other hand, he is at sea about the tails of comets, which he takes to be caused by "the resistance of the . . . ether through which they pass forcing back the luminous substance," in spite of the fact that the tail is as often before the comet as behind it; while on p. 16 he gives a cut of a rolling wheel with "particles of dust . . . flying at a tangent from its rim" in the wrong direction. It is a pity that his English was not revised by some more practised writer, and that he could not restrain his tendency to puns.

The University Extension series, edited by Principal Symes of Nottingham, England, and published by Methuen & Co., London, contains a recent number on 'Meteorology,' by H. N. Dickson, who has for some years past been associated with the discussions of the *Challenger* observations. The volume is of compact size, and its materials are fresh and as a whole well chosen and accurate; but it would appear from the order in which they are presented that the author is less experienced as a teacher than as a student of the subject.

'Climates of the United States in Colors' is the first line of the redundant title-page of a volume of charts prepared by Dr. Charles Denison of Colorado, now reissued (Chicago: Keener Co.). The facts are derived almost entirely from the reports of the Signal Service, whose publications are advisedly popularized in such books as this one. The charts may be commended to physicians and teachers as presenting a series of climatic illustrations not generally accessible elsewhere. The colors of the charts might be much more agreeable, and the mounting of the folded pages is awkward, as part of their text stands upside down.

A small octavo of 500 pages of fine print is Dr. E. F. Willoughby's 'Handbook of Public Health and Demography' (Macmillan), in which the elements of those sciences are taught dogmatically and correctly. It is too condensed to be agreeable to the general reader, but it is a very convenient addition to the student's library. In view of the author's nationality, it is a little odd that he persists in attributing to Mr. Francis Galton, the demographer, the hygienic devices of his cousin, Sir Douglas, the engineer.

A collection of Norwegian poems, both old and new, has recently appeared in Christiania, with numerous illustrations and decorated margins by Thorolf Holmboe. Over a dozen poets are represented, including Welhaven, Munch, Ibsen, Björnson, and Lie. From the same city comes a critical study by the young author, Hj. Christensen, of his fellow-Norwegian writers, several of whom bid fair to become worthy successors to Björnson. As the first serious attempt to explain the latest literary movement in Norway, the work deserves to become known outside of Scandinavian lands.

'A Prince of India' has been translated into Danish, and has been very favorably received by the Copenhagen press. A second edition of 'Ben Hur' is also announced from Copenhagen.

Die Romanwelt is the name of a new weekly paper published in Stuttgart by Cotta, which is to be cosmopolitan in its scope. A translation of Pierre Loti's 'Mon Frère Ives' is begun in the first number, in which also appears the opening of a novel, "Es War," by Hermann Sudermann, known to American readers by his "Dame Care" included in the "Odd Number Series." Stories by the dramatist Fulda, by Spielhagen, and by Ernst von Wildenbruch are also promised. The size of the new weekly is a little larger than the *Nation* and the *Revue Bleue*.

The Bulletin of the Department of Geology of the University of California at Berkeley, edited by Prof. A. C. Lawson, now reaches four numbers and 163 pages. In the first number the editor shows that the granites of the Coast Range, regarded by Whitney as eruptive into the Tertiary rocks, are in reality of much more ancient origin; the Coast Range sediments lying upon the denuded surface of the granites. In the latest number Prof. Lawson describes, in a most acceptable and effective manner, the diverse movements of the southern coast and the off-shore islands of California in recent geological times. The first volume of the Bulletin is to include 400 or 500 pages, and the University liberally offers to send all the numbers to any subscriber who will agree to pay $3.50 when the volume is finished.

The *Journal of Geology* of the Chicago University has now completed its first volume of eight numbers, maintaining throughout the seriously high quality with which it was begun. The list of editors and associate editors on the title-page is a sufficient guarantee that the *Journal* will be well continued. The most generally interesting article of the last number is by Branner, on the supposed glaciation of Brazil, in which he makes it clear that Agassiz, Hartt, and Belt were mistaken in their conclusions concerning glacial action in torrid America, as indeed the first two observers came to think themselves. Curiously enough, their errors have been turned to account both by those whose theories need the support that the glaciation of Brazil would yield, and by those who wish to throw discredit on the whole subject of glacial geology.

The *Geographical Journal* for January is largely taken up with Dr. John Murray's interesting and stimulating plea for the renewal of Antarctic exploration. He gives in a very condensed form nearly all that is known in regard to this region, together with sketches of the principal voyages to it. To his mind there seems to be abundant evidence of the existence around the South Pole of a "vast extent of true continental land, the area of which is greater than that of Australia, or nearly 4,000,000 square miles." While the waters of the surrounding ocean teem with a great profusion of life, both animal and vegetable, "no land animal, and no trace of vegetation—not even a lichen or a piece of seaweed—has been found on land within the Antarctic circle." He advocates, in the interests of pure science wholly, a naval expedition of two small ships, fitted out for a three years' cruise, and carrying two parties of about ten men each for land exploration. The paper is illustrated, and is also accompanied by a series of maps showing the supposed contour of the continent and the routes of the principal explorers, the oceanic deposits, ice limits, currents, winds, temperature, rain-fall, and magnetic phenomena. The president of the society, Mr. C. R. Markham, announced that the council had appointed a committee for the purpose of reporting on the best means of achieving the objects of Antarctic exploration. Mr. Ravenstein contributes a short account, with a map, of the Anglo-German treaty of November 15, 1893, respecting the boundary of their West African possessions. There is also a notice of the discovery, in a volume of miscellaneous papers belonging to the Biblioteca Strozziana, in the National Library of Florence, of a map by Columbus relating to his fourth voyage, "and absolutely the only map which dates back to the great discoverer himself."

The *Scottish Geographical Magazine* for January opens with an interesting account by Miss Annie R. Taylor of her recent adventurous journey in Tibet. Being able to speak the language of Lhassa, and wearing the Tibetan dress, she got within three days' journey of the sacred city. Here, being betrayed by a faithless Chinese servant, she was compelled to return to China, which she reached safely, though enduring great hardships, after an absence of about seven months. She praises the Tibetans for their "chivalry and kindness," and says that they are "hospitable, friendly, trustworthy, and by no means averse to intercourse with Europeans." Their exclusiveness is wholly due to the Chinese, who jealously guard the frontiers for their own trade interests. This paper is followed by a description of the Hawaiian Islands by Adolf Marcuse, the most interesting part of which is the account of a visit to the crater of Kilauea. He was accompanied by several natives, who, when night fell, threw into the crater offerings of sacred berries and live fowls, at the same time singing a monotonous chant to Pele, the fire-goddess. Mr. H. M. Stanley pays a warm tribute of affection to the late Mr. A. L. Bruce, the son-in-law of Dr. Livingstone and promoter of the British East-Africa, the African-Lakes, and the British South-Africa Chartered Companies, as well as the principal founder of the Scottish Geographical Society.

A map of interest to geographers may be seen in the atelier of M. Fr. Schrader, director of cartographic works for the firm of Hachette & Cie., the well-known geographical publishers of Paris. The map embraces the entire world on a scale of 1-2,000,000, corresponding to a globe measuring twenty metres in circumference, and hence on half the scale adopted for the map of the world by the International Geographical Conference at Berne in 1891, on recommendation of Prof. Penck. On this map M. Schrader and his aids enter every report of cartographical progress, wherever made, and on whatever scale; thus keeping a full record of the accumulation of geographical knowledge, and making it possible to prepare new maps on the basis of the fullest information We commend the plan to American publishers of maps and geographies.

Japan's increase in population, as well as in wealth, is noticeable. The census completed December 31, 1892, shows that there were 7,817,570 houses and 41,089,940 subjects of the Mikado, of whom 31,290 were known to be abroad. "Nature's argument against polygamy" is illustrated by the practical equality of the sexes, there being 20,752,366 males and 20,337,574 females. In the three classes of nobles, gentry, and commoners, respectively, were 3,853, 2,014,306, and 39,071,781 persons. Besides 1,122 prisoners, unregistered as citizens, there were 4,462 foundlings not yet adopted. The increase over 1892 was of 11,201 houses and 371,263 persons. Of 617,234 boys and 589,800 girls born last year, 105,554 were still-born. There were 348,489 marriages and 113,498 divorces. In the empire were 7,575 persons over 90, and 140 persons over 100 years of age.

On Presentation Day (1893) at the University of London, of the twenty-one persons on whom the degree of M.A. was conferred six were women; out of fifty M.B.'s six were women, and of eighty who secured the degree of B.Sc. twelve were women. Three women also took an M.D. Detailed investigation of these examination lists shows that, in the Faculties of Art, Science, and Laws, women (who formed about 20 per cent. of the graduates) were first in six (50 per cent.) subjects, men being also first in six. The women came out ahead in mental and moral science, botany, physiology, French, German, and English, while the men retained first rank in classics, mathematics, chemistry, experimental physics, physical geography, and common law and equity. In the pass list for the examination in the theory and history of teaching, there were nine women and no men, which points, we hope, rather to the increasing demand for trained women teachers than to the mental inferiority of the male sex.

It is nearly a generation since the French Academy of Sciences, on the report of a commission of men, awarded one of its highest prizes to Miss Kovalevski for her valuable contributions to the science of astronomy—investigations relating to the theory of the movements of solid bodies around a centre. A similar although somewhat more definite honor has recently been conferred on an American student, Miss Dorothy Klumpke, who has received from the Sorbonne the degree of Doctor in Mathematical Sciences. The thesis which secured this degree was modestly called "A Contribution to the Study of the Rings of Saturn," and the president of the Sorbonne, in conferring the unusual honor on Miss Klumpke, spoke of the value of this thesis, "which you have prepared according to our course in higher mathematics, with an assiduity that we could not ignore, and which is the first that a lady has presented and successfully sustained before our Faculty to obtain the degree of Doctor of Mathematical Sciences. You have worked in a deserving manner, and the Faculty has unanimously decided to declare you worthy of the grade of doctor."

The second Annual Authors' Readings, under the auspices of the Booksellers' and Stationers' Provident Association of the United States, will take place in Music Hall, Fifty-seventh Street and Seventh Avenue, on the evening of February 6. Among the authors who will read from their own works are Gen. Lew Wallace, George W. Cable, Richard Watson Gilder, Julia Ward Howe, Paul Du Chaillu, John Kendrick Bangs, and Col. T. W. Higginson.

—The second volume of Mr. Paul Leicester Ford's scholarly edition of Jefferson's Writings (Putnams) receives tardy notice at our hands, but we can only repeat our commendation of the undertaking. All needful light continues to be thrown on the documents reproduced, and the admirable "itinerary and chronology" for the period (1776-1781) is prefixed. The more important contents are a rough draft and a fair copy of Jefferson's proposed Constitution of Virginia; the Declaration of Independence in a first draft copied by John Adams, the reported draft (both printed and in facsimile), and the engrossed copy—in parallel columns; drafts of the bill to abolish entails, the bill to establish religious freedom, the bill for the more general diffusion of knowledge (by the establishment of common schools), etc., etc.; and the proclamation of the Virginia embargo of November 30, 1779. Light on the time rather than on Jefferson is thrown by the "bill concerning slaves," which he drew up in connection with the codification of the Virginia statutes, and which was a mere digest of existing law but for the ineffectual attempt to limit slavery; and by the bill of attainder directed against the brigand Josiah Philips, which legalized the killing of him by any one after the date fixed for his surrender to stand trial. In defence of this measure, which assumed the guilt of the accused as being notorious, Jefferson, like Patrick Henry, laid down the principle of the right of society to protect itself, in terms applicable to our latter-day anarchists. "Those who declare war against the human race," said Henry, "may be struck out of existence as soon as they are apprehended." "No one," declared Jefferson, "doubted that society had a right to erase from the roll of its members any one who rendered his own existence inconsistent with theirs." The Jeffersonian Democrats who voted for the national law against the importation of contract labor, will read with horror of their idol's desire to indulge in that privilege himself. "Music," he wrote in 1778, "is the favorite passion of my soul," and he would fain have kept "a domestic band of [professional] musicians." His means not permitting that, he cast about to see if he could not tempt with "a certainty of employment for a half dozen years" Italian gardeners, weavers, cabinet-makers, stone-cutters, and vine-dressers, who could also "perform on the French horn, clarinet or hautboy & bassoon, so that one might have a band of two French horns, two clarinets, & hautboys & a bassoon, without enlarging their [his] expenses."

—Any one taking up the new edition of Mr. Egerton Castle's 'English Book-Plates' (London: Bell; New York: Macmillan), and happening to open at the rigid *ex-libris* of Thomas Carlyle, with its boastful motto, "Humilitate," finds himself wondering how it is that a great humorist could be so deficient in humor as to have thus laid himself open to the mocker. The book-plates of many other men of letters are reproduced in Mr. Castle's glibly written volume, some in facsimile by process of one kind or another, and some from the original coppers. The literary leanings of British pictorial art are seen to advantage in designs wherein allegory and even anecdote and story-telling are in place. In the later plates, in those devised since the revival of interest in the *ex-libris*—a revival which began on the publication of Poulet-Malassis's pioneer treatise—the improvement of recent decorative art in Great Britain is very obvious. Among the worst of all the plates here given, both as respects the taste of the owner and the drawing of the artist, is the label used by Lord Wolseley. The superiority of the etching-needle in the making of book-plates is made manifest more than once in Mr. Castle's pleasant pages, as, for example, the fine portrait-book-plate of Mr. Walter Pollock, fencer and poet, and the punning design of M. Paul Avril (etched presumably by M. Abot). The new edition is superior to the old in having a bibliography, in which Mr. Laurence Hutton's papers in the *Book-Buyer* are noted, but not his revision of them in his volume in "Harper's American Essayists," and in which also the chapter in 'The Home Library' by Arthur Penn fails to find mention.

—That a lineal descendant of Oliver Cromwell was to be found in our own day is a fact known, presumably, to very few. Such a descendant, however, was Mrs. Avarilla Oliveria Cromwell Bush, who died last November. This lady's grandmother, the wife of Thomas Artemidorus Russell, was Elizabeth Oliveria (born in 1777), the only daughter of Oliver Cromwell (born in 1742), the last male of his family to bear its name. Elizabeth Oliveria was the great-great-great-granddaughter of the Protector. The eldest son of Mr. T. A. Russell, Cromwell Russell, had one child, the lady lately deceased, who was born July 19, 1826. As evidencing the pertinacity of popular prejudice, it is said that the Oliver Cromwell of the

last century, who was a solicitor in chancery, experienced great disadvantage in consequence of his patronymic, and that he objected to the proposed assumption of it by his son-in-law. Since the death of Mrs. Bush, announcement has been made of that of Mrs. Elizabeth Oliveria Prescott, the sister of Artemidorus Cromwell Russell, son of Thomas Artemidorus Russell, in her ninety-second year. The Cromwell heirlooms, together with the Cheshunt Park estate, now pass to Mrs. Bush's son, the Rev. Thomas Cromwell Bush.

—By the death of Dr. Johan Fritzner, which occurred in Christiania on the 17th of December, 1893, Norway has lost one of her most eminent scholars at the great age of nearly eighty-two years. Fritzner was educated for the ministry, and from 1839 to 1877 he served as the pastor of various churches, but his name belongs not to ecclesiastical but to scientific history. A year older than Ivar Aasen, who survives him, the two have advanced *pari passu*, though entirely independent of one another, in the achievement of reputation as linguistic scholars. Aasen devoted himself wholly to the study of the Norwegian dialects still spoken in Norway, and as a result produced his comprehensive 'Dictionary of the Norwegian Dialects,' a work which has received the highest measure of praise from the philologists of all countries; while Fritzner, on the other hand, gave his attention to the Old Norse language, and undertook the collection of materials for an Old Norse dictionary, a work greatly needed. Cleasby's 'Icelandic-English Dictionary' had not yet appeared, and students of Old Norse were limited to Björn Haeldórsson's dictionary, published by Rask in 1814, to Dr. Sveinbjörn Egilsson's 'Lexikon Poeticum,' printed 1854–1860, and to various brief vocabularies. Fritzner's 'Dictionary of the Old Norse Language' appeared complete in 1867, a work of 900 pages, and was welcomed with enthusiasm by all scholars pursuing northern studies particularly, and by linguists generally. Dr. Gudbrand Vigfusson pays it a high compliment in his edition of Cleasby's 'Icelandic-English Dictionary,' and emphasizes his great indebtedness to it. When sixty-five years old, Fritzner retired from the ministry, but only for the purpose of devoting his whole time to a thorough revision of his great dictionary, which had gone out of print. Of the revised work the first part appeared in Christiania in 1883. Part 23 was published just before his death, and includes the letter "R," making 2,200 printed pages; that is to say, the new edition will be fully three times as large as the first, and it will be as much improved in quality as in quantity. Fritzner retained his mental and physical vigor until he had passed the line of eighty, and though he did not live to see the whole work in print, yet the portion from R to the end of the alphabet was all finished by the author before his death, and will be published as speedily as possible. In his earlier years Fritzner served as minister in Vadsö, in the extreme north of Norway, and he published several valuable essays on the language, mythology, and civilization of the Lapps. At the fourth centenary festival of the University of Copenhagen in 1879, he received the honorary degree of Doctor.

HART'S ESSAYS ON AMERICAN GOVERNMENT.

Practical Essays on American Government. By Albert Bushnell Hart, Ph.D., of Harvard University. Longmans, Green & Co.

THIS book is a solid, substantial, and most satisfactory piece of honest work. The author has selected his sheaves with excellent judgment, and threshed the grain out of them to the very best of his ability. There is no eye-service in it—no paragraph written to round out an article or help fill the pages of a magazine. Prof. Hart has worked for his readers with a will, and there is no reader so well informed on the topics of the book that he will not find it interesting, suggestive, and instructive. As to those persons who know little or nothing of the topics treated of, they will find, if they be persons of ordinary intelligence, constant surprises, which will be to them "food for thought," beginning with the discovery how much thought has been given to such subjects by other people.

These eleven essays, with one exception, it is almost needless to say, have appeared in print before—in the *Atlantic*, the *Quarterly Journal of Economics*, the *Magazine of American History*, etc. The periodical literature of the time admits to print numberless writers who should never have been allowed to see themselves there, and it indirectly fences out of the book-field many an author who would have waited and labored until his seedling expanded from the annual plant of the magazines to the perennial of a book. Yet the periodicals contain many an article which should outlive their year, and it often seems as if it would be a good thing to have a *Magazine of Magazines*, into which a board of competent censors should admit articles, not less than a year old, deserving of a lasting place in literature. The system which substitutes articles for books has one good element, that it compels the author to condense: it has a corresponding fault, that it compels him not to condense too much, but to omit. In saying what he wishes to on the theme he has at heart, he cannot speak of subjects which should be considered with it. We cannot say that this last cause has been operative here, yet the result is much the same as such a cause would ordinarily bring about. Prof. Hart's forte is in facts. He collects them with unwearied patience; he arrays them in logical lines with a strong and skilful hand; he presents them to the beholder with admirable clearness, and his deductions are sound "as far as they go," or as far as his premises invite him to make deductions.

As an illustration of the former, the reader may take the masterly exposition of one of the most important—many people will say the most important—of American public questions, the exercise of the suffrage. It will astonish almost every reader that such a wealth of thought, research, and information can be compressed into the limits of such an article, and yet be interesting, clear, and indeed attractive. As an illustration of the way our author illustratively brings his carefully winnowed statistical facts within the easy comprehension of his readers, we clip the following. Could it be better shown that a crude quotation from the census would not disclose the real state of the case?

"Only a seventh of the people of the United States are foreign-born, but of the men of voting age more than one-fourth are foreigners; and as long ago as 1875, 65 per cent. of the adult men in New York city were foreign-born. The proportion of men in middle life and above is even more startling. Of 500 men above thirty-five whom the New Yorker meets while crossing City Hall Park any day, 400 are certainly foreign-born."

While the author sweeps over the whole field of the suffrage, his practical object is to solve the question of compulsory voting, and no one who reads the article can doubt his having done so. He demonstrates the gratifying fact that the actual vote of the American people is astonishingly near the potential *whenever there is anything to vote for—i. e.*, when they believe that their votes will effect something. The real problem is how to give them something to vote for, and how to stamp out the fraudulent and corrupt elements that permeate the suffrage. Prof. Hart, as we have said, winnows his statistics, patiently and thoroughly, but there are conditions often which do not appear in statistics. When he was making his computations of those who vote and those who do not, did he bear in mind the old familiar Democratic maxim, "Vote early and often," or the modern Republican practice, "Send them in blocks of five"?

If we turn now to the article on the Speaker as Premier, we shall find that the author has set forth with the same clearness a long array of facts showing the great and still increasing power of the Speaker, who started in 1789 as a mere presiding officer, and who is "likely to become, and perhaps is already, more powerful, both for good and for evil, than the President of the United States." Here Prof. Hart draws the somewhat loose and startling deductions that the Speaker "is premier in legislation," and that "it is a wholesome reaction from a divided irresponsibility and a wasteful system of conducting the business of legislation." Whatever parallelism there may be between the Speaker of the present decade, with his self-assumed, undefined, unrestrained, and indeed unknown powers, and the British Premier, is clearly presented, but a reader of the article will have very shadowy ideas of the differences. Prof. Hart's deductions, so far as they go, are philosophically drawn from his premises of fact, but there are other and much more important deductions which should also be drawn from them, and there is a premise which does not appear in his strong array of facts. That premise is Speaker Keifer. If, in November, 1880, a man had stepped into an assemblage of 500 intelligent American citizens who were neither inhabitants of Ohio nor Grand Army men, and cried with a loud voice, "Who is Keifer? Who is J. Warren Keifer?" the chances are that the whole 500 would have answered with one voice, "We do not know; we never heard his name before!" And it is safe to say that, outside of Ohio and Grand Army circles, none of the 500 would have heard his name again during the ensuing thirteen months. And then what happened? Nothing more than this: the unknown individual, through wily combinations in the House of Representatives, commonly called log-rolling, became Speaker, with more power, "both for good and for evil, than the President of the United States." Try to imagine the English people, at a general election, choosing, in effect, a man to be their Prime Minister of whom they had never heard, and of whom they would hear absolutely nothing for thirteen months after the election! The thing is inconceivable. The British elector at the last election who cast his vote for this member of Parliament or that member of Parliament, knew just as well that he was voting for Gladstone or Salisbury as the citizen of Maine or Massachusetts knew when he put his ticket in the box for some unknown Presidential electors that he was voting for Cleveland or Harrison. The resemblances between the Premier and the Speaker are interesting and curious; but the differences between them are radical and absolute. The Premier represents the avowed principles and policy of the nation; he is the standard-bearer of the victorious ma-

jority of the people, chosen to carry on the government by constitutional methods. The Speaker is a nobody, chosen by half of the Legislature to appoint its committees and preside over its deliberations; his interference with our methods of government is non-constitutional; he can never be a standard-bearer so long as we elect our Presidents; and his assumption of powers which do not belong to his office is at best a dangerous and demoralizing makeshift.

We pass now from the first essay in the volume to the last—a philosophical inquiry as to "Why the South was defeated in the Civil War." Those of us who were old enough to vote in 1860 will find many facts that we knew before, but also many explanations of things that we did not then understand. Those of us to whom the great war is but history and tradition will find an admirable exposition of the causes and effects which have resulted in our present Union. Appreciating fully this article, and hoping and believing that it will pass into subsequent and revised editions, we call the attention of the author to some points as to which we deem revision necessary.

"Except in the Shenandoah Valley, to a less degree in Mississippi, the Federal armies could nowhere support themselves from the country until Sherman's march to the sea in 1864."

If this were confined to the Atlantic States, it would be substantially true; but, applied as it is to all of the Confederate territory, it is certainly a great mistake. Western Tennessee, Mississippi, Louisiana, and Arkansas were more richly furnished for the needs of an invading army than any invaded country of like extent that the sun ever shone upon. Gen. Grant issued an order that his troops should live upon the country, and he has expressed his astonishment at the agricultural wealth which the country contained. We have before us the instance of a single plantation which came under his eye where the Quartermaster-General allowed, among other things, 68,000 bushels of corn, 17,000 bushels of peas, 33 horses and mules, 100 barrels of pork, and 4,000 cords of wood. Corn, bacon, horses and mules, cattle and hogs abounded. In the above designation of territory we have not placed Georgia, through which Sherman's army marched happy and well fed, while his bummers revelled in abundance. Forrest, too, carried his entire command from one end of the war to the other, so says Confederate authority, without making a single requisition upon either the Quartermaster or the Commissary Department of the Confederate States.

"The percentage of Southern prisoners who died in the well-conducted Northern prison of Elmira was greater than the percentage of Northern prisoners who died in Andersonville . . . Differences of diet, of habit, of climate had tended to make out of the South a race easily incited to the fiercest of rapid effort, but which was less able to bear continuous fighting and hardship."

Professor Shaler, on the contrary, has shown most conclusively that there probably never was a body of soldiers in this world that, through four years of warfare, hardship, privation, and disappointment, showed such magnificent endurance, physical and moral, as the First Kentucky Brigade in the Confederate army. Johnston's army in its retreat before Sherman, and Lee's in the trenches at Petersburg, through the privations and discouragement of the last year of the war, most assuredly present as splendid examples of soldiers bearing continuous fighting and hardship as anything that our Northern soldiers ever displayed. Statistics, moreover, are dangerous things except where conditions are identical. Southern writers have used these same prison statistics to prove that Southern prisoners were as badly treated as the prisoners of Andersonville. Many healthy Northern soldiers, too, after passing months of wretchedness in Southern stockades, found that good food, good clothes, and comfortable habitations seemed to cause or develop dangerous illnesses.

"President Davis and General Lee agreed that the last possibility of success was in arming the negroes, and a company of black convicts from the Richmond jails was actually organized."

This, we think, understates the case. Certainly we have ourselves seen a copy of the Petersburg *Index*—probably the last issue that was published before the fall of Richmond—which gave an account of the organization of a colored company and the presentation of a stand of colors, made, if we remember aright, by the ladies of Petersburg. This part of Confederate history seems to have been ignored by Confederate writers. It would be interesting to know what was done with these black troops—whether they marched or fought or encamped with white ones. They effected nothing, it is true, but the war seems to have been prolonged until both sides should recognize the African as a soldier in what was at the beginning most assuredly a white man's war.

"Slavery was the cause of the military defeat of the South," is Prof. Hart's answer to the initial question, Why was the South defeated in the Civil War? We do not think that his premises justify his conclusion. Slavery may have been the cause in the same sense that a bad breakfast eaten by a Prime Minister may have been the cause of a war. The Rev. Edward Everett Hale has written a story to prove that the military defeat of the South was caused by a hoopskirt. But in a philosophical inquiry of this kind we are dealing with causes which are proximate and apparent, and not with those that are remote and speculative. Prof. Hart shows that for four years, with almost every white man capable of bearing arms in the army, slavery fed the Confederacy; and slavery did this abundantly and with unswerving fidelity. The trouble was not that there was lack of food, but that there was lack of railway transportation. Slavery cast no paralyzing vote; its disaffected forces did not oppose and embarrass the Confederate Government; it did not shriek "On to Richmond!" nor compel the fighting of battles for political reasons. If the slaves only once, in the long four years, had struck the Confederacy such a blow as the Union received from the Indians of Minnesota or the draft rioters of New York, it is not unlikely that that blow would have carried it down. Prof. Hart quotes approvingly a Southern speaker who said: "A single brand flung into our houses [by our slaves] would have caused our armies to be dissolved—and it was not flung." It is said that "slavery weakened every blow that was struck and every arm that struck a blow." But this is mere rhetoric. Did slavery prevent Lee's orderly marches through Maryland and Pennsylvania, or impair the awful heroism of Pickett's charge at Gettysburg, of which all Americans may well be proud?

The real cause of the downfall of the Confederate military power was that both sides determined to stake all upon the hazard of a single die, and that die was Richmond. The South so determined when they resolved not to abandon the Confederate capital until driven out. The North so determined when Gen. Halleck wrote his not sufficiently famous letter overruling Gen. Grant's short-sighted project for compelling the evacuation by a flank movement from North Carolina. Grant's famous sentence about fighting it out on this line if it took all summer was only a response to Halleck's masterly exposition of the situation. Jefferson Davis said that he could carry on the war for twenty years after Richmond should be abandoned, but the good sense of the Southern people eschewed the vindictive folly. If the South could hold Richmond until the North should overwhelm itself in its extravagant expenditures, or until England and France should intervene, the South would succeed; if the North should capture the city and its heroic army, the Confederacy should fall with it. The South stood by its determination, and, when the die was cast, it gave up the fight.

Studies of Travel. I. Greece; II. Italy By Edward A. Freeman. G. P. Putnam's Sons.

It was well to collect these sketches, originally published in the *Saturday Review*, the *Guardian*, and the *Pall Mall Gazette*, for they throw light not only on many little-visited places in classic lands, but also on the methods of the late Prof. Freeman as an historical writer. Whoever turns to these sketches for picturesque descriptions or for formal historical statements will be disappointed. They are rather the random memoranda of the associations called up in a very erudite mind by the sight of this or that ancient town. Often, indeed, the associations are not at all those of the average traveller. At Assisi, for instance, it is the memorials of old Roman times, and not of St. Francis, that Mr. Freeman explores. His proclivity for archæology everywhere manifests itself. His habits of giving rein to conjecture, and of illustrating antique or mediæval conditions by reference to Saxon history, his hatred of the Turk, his clear perception of the significance of the perpetual struggle between Occident and Orient, between Aryan and Semite—are all indulged very freely. In his journey through Central Italy, he proves, by many quotations, the high esteem in which he held Macaulay's "Lays."

The net result is such a discursive talk as a professor might give to a class of advanced students who were expected to know when they came to him all the facts usually furnished by text-books, his purpose being to interpret, by allusion or surmise, the general bearings of the subject. Like most travellers and historians, Freeman seems to have been little interested in the recent history of Italy; but he would go far to read a fragmentary Etruscan inscription or to examine a Roman column. In style we recognize those qualities with which his larger works have made us familiar. There is the same *ex-cathedra*, almost pedantic, tone; the same repetition of phrase; the same antithesis of thought. Freeman rarely writes simply; he seems always to be arguing. Like many preachers, he pounds the pulpit so often, and on so slight provocation, that he has no resources left for emphasizing really important points. Open his books where you will, and you will come upon a passage like this:

"The *difference* between the *abiding* greatness of Perugia and the *abiding* littleness of Cortona is no doubt largely due to the physical *difference* of their sites. Both are *hill cities*, mountain-*cities*, if you will: but they *sit* on *hills* of quite *different* kinds. The *hill* of Perugia is better fitted for growth than the *hill* of Cortona. Cortona *sits* on a single *hill top*. Perugia *sits*, not indeed on seven *hills*, but on a *hill* of complicated outline, which

throws out several—possibly seven—*outlying*, mostly *lower*, *spurs*, with deep valleys between them. The Etruscan and Roman *city* took in only the central height, itself of a very irregular shape and at some points very narrow. The *lower* and *outlying spurs* were taken within the *city* in later times. Hence it is only in a small *part* of their circuit that the original *walls* remain the present external *walls;* it is only on *part* of its western side that we can at all go behind Perugia. But the *lower city* is still thoroughly a *hill-city*. The *hill* of Perugia is *lower* than the *hill* of Cortona, while the *city* of Perugia is vastly greater than the *city* of Cortona."

As the reader runs over this passage, in which we have italicized Freeman's repetitions, does he not feel as if he had before him some dry demonstration in chemistry, or some abstruse legal argument? Does he not feel that, in historical or descriptive writing, this sort of thing is unliterary, clumsy, mannered? Better, a hundred times better, Carlyle's mannerism, in which the strength is real, in which there is richness of phrase, flash of imagination, humor, and wisdom. Equally to be shunned is Freeman's incontinent use of the comparative method—his telling us, at Tiryns, for instance, not what there is at Tiryns, but wherein Tiryns differs from Mycenæ and Argos, and at Argos, what there is at Tiryns. You get, on the whole, an imperfect idea of what Napoleon was and did, if you are informed at every moment of his unlikeness to Cæsar and Cromwell. In a word, Freeman seems to us to represent a crude and ill-digested state of comparative historical writing; a state in which comparison, instead of being subsidiary, is shoved up into the first place. And yet, so great is his learning, so sound are his general interpretations of historic development, and often so helpful are his casual reflections, that these little volumes of essays, not less than his longer works, deserve to be read by scholars.

The Classic Myths in English Literature. Based chiefly on Bulfinch's 'Age of Fable.' By C. M. Gayley. Boston: Ginn & Co. 1893.

Myths of Greece and Rome: Narrated with special reference to Literature and Art. By H. A. Guerber. New York: American Book Co. 1893.

THESE two books are a natural outcome of that utilitarian zeal which has for the present curtailed the study of the classics in our country, and through which a knowledge once universal among college-bred men is becoming a mystery to many. Many a young man lightly cuts himself off from the power of understanding a "dead language," only to find out too late that he has left himself incapable of the widest understanding of his own. For, as Lowell once said, "only those languages can properly be called dead in which nothing living has been written." If the classic languages are dead, yet they speak to us in their myths, if in no other sort, on pages written every day and upon canvases painted in every land; for the classic myths are the backbone of much of our literature and the background of much of our art. To know either truly, we must be able to listen to the voices of the past; and if we cannot comprehend them in their own tongues, we must do the next best thing, listen to them as interpreted by people better instructed than are we.

To give the rising generation that knowledge of the myths which used to be had from the classics is the object of the books named above. Prof. Gayley has taken Bulfinch's 'Age of Fable' for his ground-work, and has altered it almost out of recognition. It used to be a delightful romance. It is now a school text-book, crammed with information, but no longer possible to read, only to study or consult. Having shed this tear for the dead king, we hasten to cry long life to the new. He is the man of destiny—after good Cronus, Zeus, and his learned daughter; he had to come, and we can honestly acclaim the manner of his coming. His opening speech is all about the origin and the elements of myths. Dear old Bulfinch knew little of this, nor did anybody else in those

> "days endeared to every Muse,
> When nobody had any Views."

But nowadays plenty of people know how it all really was, and the new king sets forth the various theories how myths were made, under the heads of the Theory of Deterioration, including the historical, philological, and allegorical interpretations, and the Theory of Progress, beloved of Mr. Andrew Lang and all whose god is folk-lore. Our new monarch is no despot, however, and he generously lets us select the dogma that best suits us; for, like Frederick the Great, his motto seems to be, "Hier muss ein jeder nach seiner Façon selig werden."

But it will be the part of wisdom to drop the figure of his Majesty ere he grows too heavy for us to carry. To the theories of myth-making succeed accounts of all the principal myths in Greek, Roman, Norse, and German mythology. Prof. Gayley has used the best sources (of which a long bibliography is given), and he tells the familiar stories well. Many quotations are introduced from English and American poems which illustrate the myth or some development of it, or which "suggest the spirit and mien of ancient art." But the real novelty in the book is the commentary at the end. Here, in nearly a hundred closely printed pages, are collected simple expositions of the more evident interpretations of the myths, references to additional poems and verses in which allusion is made to them, brief descriptions of works of art, ancient and modern, and genealogical tables of the principal mythical figures. The whole concludes with rules for the syllabication and pronunciation of the names, and with two capital indexes.

The book is a careful piece of work throughout, shows unsparing study and remarkable accuracy, and may be highly commended for the purpose for which it is intended. A few omissions and errors may be mentioned. Among the rules for syllabication we miss one of the most important and useful, namely, "A Latin word has as many syllables as it has vowels or diphthongs." Under Hesper, Tennyson's beautiful trochaic after Sappho should find a place. Is Japetus (used frequently for Iapetus) a nightmare recollection from the German fumbling with I and J, or does Prof. Gayley here commit himself for once to the theological interpretation, and believe that the Titan came out of Noah's ark? Apuleius should not be called the "inventor" of the romance of the Golden Ass. The ascription of the 'Bibliotheca' to the grammarian Apollodorus sets the date of the work about two hundred and fifty years too early.

We cannot praise the illustrations, of which the book contains more than a hundred from the antique in the form of woodcuts. Many of them are old cuts which have been used in a school-book issued by the same publishers. They are on the whole unattractive, and often rude in execution. The original source of most of them seems to be Roux's 'Pompei,' a work in which the imagination plays a strong part. Among the worst are those of the Amazon, of Priam before Achilles, and a very peevish-looking Venus of Milo. The satyr of Greek art had no goat's legs, and hence the picture on page 77 is wrongly entitled.

Faults in execution cannot be found with the illustrations in Mr. Guerber's book. There are about seventy, all full-page photogravures, a much more satisfactory form of picture, and, in these days of processes, scarcely more expensive than the old-fashioned cuts. Some of them, such as that of the Vatican Penelope, of Perrault's Cupid Asleep, and of Sichel's Medea, are really beautifully done. Three-quarters of them are from modern works, both in painting and in sculpture, and in all but one the choice was well made. But the picture of the Education of the Vestals looks more like a cooking-school than a solemn religious function. In the text, fewer myths are treated, but these in much more detail than in Prof. Gayley's book. Mr. Guerber writes in lighter vein; his style is that of the story-teller or popular lecturer, and hence his book reads easily and is better suited to awaken the interest of young pupils. But, in some of his attempts to be graphic, it seems to us that he runs the risk of vulgarizing the myths. We do not like to be told that Phædra proposed to Hippolytus to "elope" with her, and that when he refused she accused him of trying to "kidnap" her. Juno delivering "curtain lectures" jars on us, and "chubby, rosy child" is not the Greek conception of Eros. A good many things of this sort ought to be eliminated from another edition. The *woulds* and *shoulds*, too, need careful scrutiny. This book also is provided with a chapter on the origin of myths, with two good indexes, and contains many carefully chosen quotations from ancient and modern poetry.

Diary of Jacob Hiltzheimer of Philadelphia. New York: Jacob Cox Parsons, 270 Broadway. Pp. 270.

Travels in America 100 *Years Ago.* By Thomas Twining. Harper & Brothers. Pp. 181.

THE handsomely bound and printed diary of Jacob Hiltzheimer extends from the year 1765 to 1798, with the exception of the years 1771, 1775, 1776. It was chiefly written in Philadelphia, where the writer filled various public offices and took active part in all public and charitable movements. Though containing some records of Revolutionary days and persons, as its careful index shows, it is, like many of the diaries of the times, meagre in the details of public events of which we wish most to know. It exhibits as its chief points of interest the records of deeds and surroundings petty in themselves, and of value principally to the student of social and domestic customs and to writers of histories of the people rather than of wars and leaders of wars. As to the man himself, the diary affords ample evidence of public esteem and confidence, and of many domestic virtues. Indeed, we feel when reading the pages, as with all frank records of daily life, that we know him well.

Though Mr. Hiltzheimer was a member of the vestry of the German Reformed Church for many years, he showed no narrowness in religious views, noting with interest at one time the number of candles and surplices in a service at the Roman Catholic Church; listening to Friend Rebecca Jones at the Quaker meeting-house; hearing Methodist Pilmore preach from the grand-stand at the race-course, and giving us more than one glimpse of that picturesque fanatic and most successful humbug, Jemima Wilkinson. He says she wore

one August Sunday "a white hat but no cap, and a white linen garment that covered her to her feet. She looks more like a man than a woman." And again he says of her: "She spoke in the New England dialect, and appeared to be about twenty-five years of age; her hair was dressed like that of a man, and she wore a black gown after the fashion of church ministers." Opportunities for amusement were more plentiful at that date in Pennsylvania than in New England. Mr. Hiltzheimer attended cider-frolics, pigeon-matches, beefsteak dinners, barbecues, bull-baitings, cock-fights, turtle-frolics, and innumerable horse-races and fox-hunts. He saw fancy skaters, electrical fishes, and exhibitions of fireworks; attended concerts and theatres. After the fashion of his day he visited all the brides and drank many a noble bowl of punch at the bride's house, and he decently and reverently attended the funerals of his dead friends.

They had in those times a very summary way of dealing with refractory servants. Shortly after having noted that "our maid Rosina was impertinent to her mistress," we find our Philadelphian taking the saucy young redemptioner before the squire, who promptly ordered her to the workhouse. After remaining a month in that confinement, Rosina boldly answered "No" when asked if she would go back to her master and behave as she ought, and was promptly remanded. She soon repented, and was released; her master paid for her board and lodging while under detention, and quickly sold her for £20 for her remaining term of service. Less piquant reading is the record of Mr. Hiltzheimer's faithful and conscientious service as street commissioner, setting milestones, naming streets, overseeing the building of sewers, which yet has its value for reference.

The account of Thomas Twining's travels is, from its narrative form, of much more readable quality. This energetic and intelligent young Englishman, only nineteen years of age (and handsome too, if we can trust his portrait), made a visit of pure curiosity to America in the interval between two terms of residence in India; and the record he left of his information-seeking travels answers the questions we ask to-day of the condition of America a century ago, when the new government was not yet of age, and forms a welcome addition to the contemporary accounts of other travellers, such as Chastellux and Dwight. Nothing escaped Mr. Twining's notice and his concise noting—the food, beds, houses, streets, private citizens, and public officials. He bore approving testimony to our buckwheat cakes and Maryland pork, showed much patience over our bad streets and inns, gave a most vivid and interesting account of interviews with many public men, notably with Washington, to whose dignity and elegance he bears full testimony. He foresaw clearly the future of our nation, and it is pleasing to know that he lived to see the greatness he prophesied, for he did not die till 1861. While frankly noting imperfections, he says most sensibly that many things could not be otherwise than imperfect in so new a country, and that "it was not for an Englishman to reprobate a state of things so lately the bequest of the British nation." In short, this clearly told little book of travels fulfils Bovee's two requisites for a book: it is "luminous and not voluminous."

The Days of Lamb and Coleridge.

By ALICE E. LORD. 12mo, $1.25.

"Has described them in such a fresh and spirited manner that every reader will thank her for having rendered them more real to him than they ever before had been."—*Congregationalist.*

HENRY HOLT & CO., N. Y.

History of Dartmouth College

AND THE TOWN OF HANOVER, N. H., by FREDERICK CHASE. Vol. I. to the outbreak of the college controversy. Large 8vo, cloth, $3.50 net; postage 24 cents. Sent on receipt of price by JOHN K. LORD, Hanover, N. H.

PAPER BY THE POUND and envelopes. Greater quantity, lower price than by quire. Samples, all grades, prices marked, on receipt of 10c. WM. R. JENKINS, fine stationery, 851-53 Sixth Ave. (48th St) N. Y.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON, W.

Now Ready. Third Edition. 8vo, $4.50.

CIVILIZATION and PROGRESS

By JOHN BEATTIE CROZIER.

Revised and Enlarged, and with New Preface,

More fully explaining the nature of the New Organon used in the solution of its problems.

"The book is worthy of careful study, and is a genuine contribution to sociological science. . . . The book is a most excellent one."—*Popular Science Monthly.*

"The ability of Mr. Crozier consists in a remarkable clearness of detail vision, singular acumen of distinction—the power, so to speak, of seeing through millstones, of being in a manner clairvoyant. . . . This accurate and subtle thinker. . . ."—*Academy.*

"This is the most remarkable and important work of the last twenty years. It is not too much to say that Mr. Crozier can enter the lists with men like Carlyle, Comte, Herbert Spencer, and John Stuart Mill, all of whom he treats sympathetically, and holds his own."—*The Rev. H. R. Haweis, M.A.*

"The book of a very able man. . . . The testimony which we are compelled to give to the high ability of this ambitious work is completely impartial. . . . Full of original criticism. . . . Great literary faculty. . . . A book far less superficial than Mr. Buckle's."—*Spectator.*

"No one can rise from the perusal of this work without the conviction that its author has established a claim to stand high among the most profound and original thinkers of the day. . . . He has set himself an ambitious task, and he has very narrowly indeed escaped entire success. . . . Will repay perusal and reperusal."—*Knowledge.*

"This is a work of real ability. It is full of thought, and its style is both forcible and clear. The reader is borne on a stream of strong thinking from point to point, until at last, when he pauses to get a little mental breath, he finds that he has been doing almost as much thinking as the author himself, so stimulating and suggestive is the book, and so full is it of discriminating, vigorous, and subtle ideas. . . . This rich and suggestive book."—*The Inquirer.*

"This truly great and remarkable work. To the accuracy of the scientist and the generalizing grasp of the philosopher, Mr. Crozier adds the instincts of the historian and the administrative faculty of the economist. The book is more profitable and suggestive reading than Buckle's."—*The Agnostic Journal.*

LONGMANS, GREEN, & CO., 15 East 16th Street, New York.

"BOOKS WANTED."—*Low, Marston & Co., Ld, St Dunstan's House, Fetter Lane, London, have special facilities for supplying out-of-print and scarce English, American, and Foreign Books wanted by Booksellers, Libraries, and Collectors.*

HOUGHTON, MIFFLIN & CO.'S

NEW BOOKS.

A Protégée of Jack Hamlin's, and Other Tales.

By BRET HARTE. 16mo, $1.25.

A new volume of Mr. Harte's inimitable stories, nearly all relating to California and the West.

The Rousing of Mrs. Potter, and Other Stories.

By GERTRUDE SMITH. 16mo, $1.25.

A pretty book of fresh, vigorous, readable stories, some of which have appeared in *The Century* and other periodicals. Several of them are Western in scene and characters, some are located in New England, and one in Italy.

A Symphony of the Spirit.

Compiled by GEORGE S. MERRIAM. author of "The Story of William and Lucy Smith," etc. 16mo, gilt top, $1.00.

Mr. Merriam has gathered here, for the consolation of those who have lost dear friends, some threescore poems of faith and uplifting thought from Wordsworth, Tennyson, Browning, Emerson, Longfellow, Lowell, Whittier, Matthew and Edwin Arnold, and others.

The Cambridge Longfellow.

Longfellow's Poetical Works. Complete in an entirely new edition, with a Biographical Sketch, Notes, Index to First Lines, a Portrait, and an Engraving of Longfellow's Cambridge Home. Printed from new plates, large type, on opaque paper, and attractively bound. Crown 8vo, gilt top, $2.00; half calf, gilt top, $3.50; tree calf or full levant, $5.50.

"In every respect a model of a low-priced but tasteful and substantial book."—*The Outlook* (New York).

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.

THE

Popular Science Monthly

FOR FEBRUARY.

From Creation to Evolution. I. The Visible Universe. By ANDREW D. WHITE, LL D.

This is the first of a group of papers by Dr. White which are intended to show that the modern scientific conception of the universe, including man and his activities, has been developed out of the theological and metaphysical conceptions through a continuous progression. Readers of the Monthly will find the subject traced with all the wealth and definiteness of evidence which always characterize Dr. White's writings. These papers are in continuation of the series "New Chapters in the Warfare of Science."

Tyndall and His American Visit. By Miss E. A. YOUMANS.

An account of Tyndall's only trip to this country, containing hitherto unpublished letters.

Heredity in Relation to Education. By Prof. WESLEY MILLS, M.D.

Counsels teachers to look at the characteristics of the parents in order to learn how to treat their pupils.

Where Bananas Grow. Illustrated. By JAMES E. HUMPHREY.

Describes the banana plantations of Jamaica, and tells with the aid of pictures how the fruit is gathered and shipped.

OTHER ARTICLES ON

NOTES FROM A MARINE BIOLOGICAL LABORATORY (illustrated); THE RELATION OF EVOLUTION TO POLITICAL ECONOMY; PHYSICAL CONDITIONS OF THE DEEP SEA (illustrated); THE CIRCASSIAN SLAVE IN TURKISH HAREMS; THE PSYCHOLOGY OF A DOG; SUPERSTITIONS OF THE FRENCH CANADIANS; THE WANDERING JEW AT THE SALPETRIÈRE; THE SHAPE OF THE EARTH FROM A PENDULUM; THE POSITION OF GEOLOGY; SKETCH OF DAVID STARR JORDAN (with Portrait).

EDITOR'S TABLE: LITERARY NOTICES; POPULAR MISCELLANY; NOTES.

50 cents a number; $5.00 a year.

SCRIBNER'S MAGAZINE

FOR FEBRUARY, NOW READY, CONTAINS:

THE SEA ISLAND HURRICANES. The first of two well-illustrated articles by **Joel Chandler Harris**, who, with a special artist, visited for Scribner's Magazine the scenes of devastation wrought by the storms last autumn in which over 2,000 people perished and 30,000 were rendered homeless.

EDWARD BURNE-JONES. A series of illustrations from the work of this celebrated artist more full and elaborate than ever before published, several of which are printed for the first time. **Cosmo Monkhouse**, the eminent English Critic, has written a sympathetic study of the artist

ON PIRATICAL SEAS. An authentic narrative (from his journals) of the adventures of **Peter Grotjan** in 1805, which reads like a "true Treasure Island"

ORCHIDS. An account of the search made for rare varieties in tropical countries, with numerous illustrations of beautiful types By W. A. Stiles

THE SCHOOL-MASTER, particularly the school-master of primitive days in the West, by **James Baldwin**, with many illustrations, by A. B. Frost.

GEORGE W. CABLE'S SERIAL. The second instalment of "**John March, Southerner.**"

OTHER ARTICLES are: "**Mr. Lowell on Art Principles**"; **Stories** by Mary T Wright, Robert H. Russell, Geo. I. Putnam; **Poems**, and **The Point of View.**

Price, 25 Cents.

CHARLES SCRIBNER'S SONS, NEW YORK.

Just Ready. The Only Treatise on the Subject.

THE LAW OF STRIKES, LOCKOUTS,

LABOR ORGANIZATIONS, ETC.

By THOMAS S. COGLEY, author of Cogley's Digest.

This book gives all the case and statute law on the subjects of which it treats. It contains references to all English and American cases and statutes down to date. It is an interesting presentation of valuable material which covers the entire ground of strikes, lockouts, boycotts, picketing, blacklisting, conspiracies, labor organizations, railroads, and all the concomitant issues connected therewith, and is so thorough in all directions as to make the reader the master of the history as well as the law of the subject.

It is an attractive 400-page octavo volume of best law-book style. Price $4.00 net by express, prepaid, on receipt of amount with order.

J. SELWIN TAIT & SONS

A NOTABLE BOOK.

MEMOIRS OF

ANNE C. L. BOTTA.

Written by her friends. With selections from her correspondence and from her writings in prose and poetry.

EDITED BY

PROFESSOR VINCENZO BOTTA.

A limited edition, printed on Holland paper with gilt top and untrimmed edges. Engraved portrait of Mrs. Botta. Cloth, 8vo, 475 pp., $3.50.

An extraordinary tribute, and one that could not have been called forth by any ordinary character. Mr. James Anthony Froude, Mr. Parke Godwin, Mrs. Julia Ward Howe, Mr. E. C. Stedman, Mr. Charles Dudley Warner, Miss Kate Field, Miss Kate Sanborn, Mr. John Bigelow, Miss Edith M. Thomas, Mr. Richard Watson Gilder, Mrs. Mary Mapes Dodge, Mr. Moncure D. Conway, Mr. Justin McCarthy, and many more have contributed these memoirs.—*The New York Sun.*

There is a touching charm about many of these memoirs; they glow with the splendor of lofty and real attachment, and they pulsate with generous and responsive life as do hearts. . . . For nearly two generations Mrs. Botta was a conspicuous force and figure in the social and intellectual life of this city. When she died, Julia Ward Howe remarks, "All her friends remain her debtors." . . . Andrew D. White quotes Horace Greeley, who said: "Anne Lynch is the best woman God ever made." . . . Froude declares that while he lives he can never cease to remember her. . . . Charles A. Peabody will remember her "as a benefactor so long as memory shall continue to serve me."—*New York Times.*

Sold by all booksellers, or sent, postpaid, on receipt of price by the publishers,

J. Selwin Tait & Sons,

65 Fifth Avenue, New York.

If you want **FRENCH BOOKS,** *or books of any description—School Books, Standard Books, Novels, etc.—send to* **WILLIAM R. JENKINS,** *Publisher and Importer,* **851 and 853 SIXTH AVENUE (48th Street), NEW YORK.** *Catalogue on application.*

Importations promptly made.

Extract from Letter of Prof. John Tyndall.

"I consider the portrait I have marked as the best that has ever been made of me, and hope you will preserve the negatives for future orders."

Imperial Panel Photos, on heavy bevel mounts, 14x17. Price, $3 00 each. Also Cabinet Photos. For sale by THE F. GUTEKUNST CO., 712 Arch St., Philada.

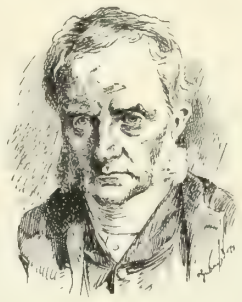
CHARLES SCRIBNER'S SONS' NEW BOOKS.

Life and Correspondence of Dean Stanley.



By R. E. PROTHERO.

With the co-operation of DEAN BRADLEY. With Portraits. 2 vols., 8vo, $8.00.

The striking personality of Dean Stanley and his preëminence in the ecclesiastical, literary, and social history of his time, give to this biography a special value and importance. Based upon Dean Stanley's voluminous correspondence, the work is complete, thorough, and authoritative.

"The book in every way fulfils the anticipations that were aroused by the announcement of it, and is one of the great biographies of the day."—*Chicago Tribune.*

"Stanley's personality breaks out on every page where letters are given, and often in the mere narrative of facts, so strenuous was he and so much alive."—*G. W. S., in N.Y. Tribune.*

"It presents a great career with desirable fulness and in a literary form intensely attractive."—*Boston Advertiser.*

"The two volumes are of almost fascinating interest"—*London Standard.*

"One of the most valuable biographies of late years."—*Philadelphia Telegraph.*

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many well-nigh indispensable."—*Boston Journal.*

"Should take its place with the great biographies of the world." *N. Y. World.*

"One of the most profound, scholastic, and brilliant biographies ever written."—*Chicago Daily News.*

"Their biographical interest and value are beyond all praise."—*Pall Mall Gazette.*

Psychology.

Descriptive and Explanatory. A Treatise of the Phenomena, Laws, and Development of Human Mental Life. By G. T. LADD, Professor of Philosophy in Yale University. 8vo, $4.50.

"I find it a most excellent and useful work. . . . A most thorough and exhaustive treatment of psychology."—Prof. J. H. HYSLOP, *Columbia College.*

Philosophy of Reality.

Should It Be Favored in America? By JAMES McCOSH, D.D., LL.D. 75 cents *net.*

Under this title Dr. McCosh has revised and considerably enlarged his little book entitled, 'The Prevailing Types of Philosophy."

Civilization During the Middle Ages,

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2.50.

"Prof. Adams's work is lucid in plan and style, comprehensive in its survey of the field, and has the additional merit of being highly interesting."—Prof. GEORGE P. FISHER.

Philosophy of History—France.

By ROBERT FLINT, D.D., LL.D., Professor of Divinity in the University of Edinburgh. 8vo, $4.00.

"A valuable and entertaining book. The thoughtful scholar will find it a rich mine of thought."—*Chicago Inter Ocean.*

MEN, WOMEN, AND BOOKS.

By AUGUSTINE BIRRELL. 16mo, uniform with "Obiter Dicta," $1 00.

"Augustine Birrell has won for himself an enviable reputation as an essayist, and his new volume will add to it. In pen portraiture he is a master." *Boston Advertiser.*

OBITER DICTA SERIES:—**Obiter Dicta,** by AUGUSTINE BIRRELL First and Second Series, each 16mo, $1.00; **Res Judicatae,** by AUGUSTINE BIRRELL, 16mo, $1 00; **Letters to Dead Authors,** by ANDREW LANG, 16mo, $1.00; **Views and Reviews,** by W. E HENLEY, 16mo, $1.00. *Just Ready.* **Stelligeri, and Other Essays Concerning America,** by BARRETT WENDELL, 16mo, $1.25.

CHARLES SCRIBNER'S SONS, 743-745 Broadway, N. Y.

THE SWINE AND THE FLOWER.

I shrank to meet a mud-encrusted swine,
And then he seemed to grunt, in accents rude,
"Huh! Be not proud, for in this fat of mine,
Behold the source of richness for your food!"

I fled, and saw a field that seemed, at first,
One giant mass of roses pure and white,
With dewy buds 'mid dark green foliage nursed,
And, as I lingered o'er this lovely sight,
The summer breeze that cooled that southern scene
Whispered, "Behold the source of Cottolene!"

—*M. E. Wilmer.*

SCHOOL OF DRAWING AND PAINTING.

Eighteenth year now open.

Instruction in drawing from the cast and from life, in painting, modelling, and decorative design, and also in artistic anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell, and Philip Hale (Drawing and Painting), C. Howard Walker and Mrs. William Stone (Decorative Design), B. L. Pratt (Modelling), G. H. Monks, M. D. (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the Museum. For circulars giving detailed information, address Miss ELIZABETH LOMBARD, Manager.

UNIVERSITY OF MICHIGAN

SUMMER COURSES.

During the summer of 1894, beginning July 9 and continuing six weeks, courses of instruction will be offered in Mathematics, Sciences, Languages, and other branches of study.
These courses are primarily intended for teachers, and will be given by members of the Literary Faculty.
For circulars and information, address
JAMES H. WADE,
Secretary University of Michigan, Ann Arbor, Mich

LAKEWOOD HEIGHTS SCHOOL
LAKEWOOD, NEW JERSEY.
AMONG THE PINES. A thorough and attractive **School for Boys.** JAMES W. MOREY.

RIVERVIEW ACADEMY,
POUGHKEEPSIE, N. Y.
58TH YEAR. Prepares thoroughly for College, the Government Academies and Business. Military organization. BISBEE & AMEN, Principals.

Teachers, etc.

WANTED IMMEDIATELY—BY A lady in Baltimore, an expert stenographer and typewriter (woman). Applications may be addressed to D. G., care of the *Nation.*

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

School Agencies.

AMERICAN AND FOREIGN TEACHERS' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to
Mrs. M. J. YOUNG-FULTON.
23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N.Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

THE NEW AMERICAN TEACHERS' AGENCY.—Teachers seeking positions and those wishing a change at an increased salary should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

THE ALBERT TEACHERS' AGENCY has filled over 1,300 positions, more than half within the last two years. High class vacancies now for September. New handbook sent free. C. J. ALBERT, Manager, 211 Wabash Ave., Chicago, Ill.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc, supplied to colleges, schools, and families. MIRIAM COYRIÈRE, 150 5th Ave., cor. 20th St., N. Y.

NATIONAL BUREAU OF EDUCATION, Miss CROSTHWAIT, Prop., cor. Church and High Sts., Nashville, Tennessee. The Leading School and Teachers' Agency of the South and Southwest.

School Agencies.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

THE BRIDGE TEACHERS' AGENcies, 110 Tremont St., Boston, and 211 Wabash Ave., Chicago. Agency Manual free to any address.

An Agency is valuable in proportion to its influence. If it merely hears of vacancies and *That* is something, but if tells you about them it is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*

GINN & COMPANY PUBLISH

FOR ALL INTERESTED IN POETRY:

A Primer of English Verse. By Prof. HIRAM CORSON of Cornell University. 232 pages. $1.10.

The leading purpose of the volume is to introduce the reader to the æsthetic and organic character of English verse—to cultivate his susceptibilty to verse as an inseparable part of poetic expression

A Hand-Book of Poetics. By FRANCIS B. GUMMERE, Professor of English Literature in Haverford College. x+250 pages. $1.10.

The book has three divisions—Subject Matter, Style, Metre. Each is treated from two points of view—the historical, tracing the growth of different kinds of subject, of expression, or of rhythm; and the theoretical, stating clearly the principles and laws of the matter discussed.

Sidney's Defense of Poesy. Edited by Prof. ALBERT S. COOK of Yale University. xlvi+103 pages. 90 cents.

As a classic text-book of literary æsthetics, Sidney's *Apologie for Poetrie* has enduring value and interest for every student of language and poetics

Shelley's Defense of Poetry. Edited by Prof. COOK. xxvi+86 pages. 60 cents

Shelley's *Defense* may be regarded as a companion piece to that of Sidney, and a comparison of the two essays is of the greatest interest to students of historical English style. *The Four Ages of Poetry*, by Thomas Peacock, is also contained in this volume.

Cardinal Newman's Essay on Poetry. With reference to Aristotle's Poetics. Edited by Prof. COOK. x+36 pages. 35 cents

This *Essay* is valuable, not only as a notable example of the literary work of one who has been considered the greatest master of style in this generation, but also for the author's presentation of Aristotle's ideas.

Addison's Criticisms on Paradise Lost. Edited by Prof. COOK. xxiv+200 pages. $1.10

The text of this edition is based upon the literal reproductions of Arber and Morley, and, allowing for the modernization of spelling and punctuation, is believed to be more correct than any published in this century.

The Art of Poetry. The Poetical Treatises of Horace, Vida, and Boileau, with the translations by Howes, Pitt, and Soame. Edited by Prof. COOK. 214 pages. $1.25.

This volume contains the Latin, Italian, and French originals, with the standard English metrical translations. A full index and a topical analysis of the three-fold work greatly enhances its value.

Characteristics of the English Poets, from Chaucer to Shirley. By WILLIAM MINTO. $1.65.

What is Poetry? By LEIGH HUNT. Edited by Prof. COOK. vi+98 pages. 60 cents

One of the most delightful short papers on the subject of poetry.

Dante Handbook. By GIOVANNI A. SCARTAZZINI. Translated from the Italian, with Notes and Additions, by Thomas Davidson, M.A. $1.25

This Handbook, written by the first of living Dante scholars, contains everything necessary to enable the student to study intelligently the supreme Christian poet—"The voice of ten silent centuries." It is divided into two parts, the first treating of Dante's Life, the second of his Works. To every section is appended a valuable Bibliography.

Introduction to the Poetry of Robert Browning. By Prof. W. J. ALEXANDER of University College, Toronto. $1.10

"I think your estimate of Browning and your analysis of his limitations and their causes are the best and truest yet made."—*F. J. Furnivall, LL.D., Founder of the original "Browning Society."*

IN PRESS:

In the Athenæum Press Series.

Old English Ballads. Edited by F. B. GUMMERE of Haverford College.

A Book of Elizabethan Lyrics. Edited by F. E. SCHELLING of the University of Pennsylvania.

Selections from Gray. Edited by W. L. PHELPS of Yale University.

Any of the above books sent, postpaid, on receipt of price. Special terms for class use.

We have an announcement in the *Nation* every week, here or just after Schools.

Ginn & Co., Publishers, Boston, New York, Chicago, London

LONGMANS, GREEN, & CO.'S NEW PUBLICATIONS.

DISCOVERY OF LAKES RUDOLF AND STEFANIE:

A Narrative of Count Samuel Teleki's Exploring and Hunting Expedition in Eastern Equatorial Africa in 1887 and 1888.

By his companion, Lieutenant LUDWIG VON HÖHNEL. Translated by NANCY BELL (N. D'Anvers), author of "Heroes of African History," "Art Guide to History," etc., etc. With 179 original Illustrations and 5 colored Maps giving Route of Expedition, Altitudes of Camping-Places, Mountains, etc., Nature of Surrounding Country, etc. 2 vols., 8vo, $12.00.

LEONIDAS POLK,

Bishop and General.

By WILLIAM M. POLK, M.D., LL.D.

With 4 Maps in the Text and 5 Folders, 2 full page Illustrations, and 4 Steel Plates.

In 2 volumes. Crown 8vo, cloth, gilt top, $4.00.

"Perhaps our civil war had on neither side a more interesting and picturesque figure than Bishop Leonidas Polk, who throughout the greater part of the war was one of the Confederate military leaders . . . The career of General Polk has found a worthy memorial in the biography by his son, Dr. William M. Polk of this city

The book is an admirable representation of a simple, sincere, and powerful character. It contains three pictures of Polk, which are of themselves significant. . . . The sketch given of the life and work of Polk as Missionary Bishop of the Southwest is highly instructive, and is, at the same time, a delightful picture of a very peculiar society. . . Many interesting glimpses of the war and of war days are to be found in these volumes. There is an account of an interview of Polk with General Grant about an exchange of prisoners" . . . N. Y. *Times*

Longmans' Civil Engineering Series

Edited by the author of "Notes on Building Construction."

TIDAL RIVERS:

Their Hydraulics, Improvement, and Navigation. By W. H. WHEELER, M. Inst. C.E., author of "The Drainage of Fens and Low Lands by Gravitation and Steam Power." With Illustrations. Medium 8vo, $5.00 *net*.

*** Other volumes of the Series are in preparation.

MINING:

An Elementary Treatise on the Getting of Minerals. By ARNOLD LUPTON, M.I.C.E., F.G.S., etc., Mining Engineer, Certificated Colliery Manager, Surveyor, etc., Professor of Coal Mining at the Victoria University, Yorkshire College, Leeds, etc. With 596 Diagrams and Illustrations. Crown 8vo, $3.00 *net*.

MINING ROYALTIES:

Their Practical Operation and Effect. By CHARLES ASHWORTH JAMES. Crown 8vo, $1.75.

AGRICULTURAL ANALYSIS.

A Manual of Quantitative Analysis for Students of Agriculture. By FRANK I. ADDYMAN, B.S.C. (Lond.), F.I.C. Crown 8vo, $1.75.

PRACTICAL AGRICULTURAL CHEMISTRY

FOR ELEMENTARY STUDENTS. Adapted for Use in Agricultural Classes and Colleges. By J. BERNARD COLEMAN and FRANK T. ADDYMAN. 12mo, 50 cents, *net*.

CELESTIAL OBJECTS FOR COMMON TELESCOPES.

By the Rev. T. W. WEBB, M.A., F.R.A.S., Vicar of Hardwick, Herefordshire. Fifth Edition, revised and greatly enlarged by the Rev. T. E. ESPIN, M.A., F.R.A.S.. (2 vols). Vol. I. (Part I. The Instrument and the Observer. Part II. The Solar System) now ready. With Portrait and a Reminiscence of the Author, 2 Plates, and numerous Illustrations. Crown 8vo, $1.75.

LONGMANS, GREEN, & CO., Publishers, 15 East 16th St., New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 1, 1894.

The Week.

THE resolution adopted by the judiciary committee of the House respecting Secretary Carlisle's issue of bonds, does not question, but on the contrary concedes, the secretary's right to issue bonds under the act of 1875. It questions only his right to use the money so obtained for other purposes than the redemption of United States notes. The resolution is in these words:

"Resolved, That it is the sense of the House of Representatives that the secretary of the treasury has no authority, under existing law, to issue and sell the bonds of the United States, except such as is conferred upon him by the act approved January 14, 1875, entitled 'An act to provide for the resumption of specie payments,' and that the money derived from the sale of bonds issued under that act cannot be lawfully applied to any purposes except those specified therein."

This is a very different thing from questioning the secretary's legal power to issue bonds. What he shall do with the money after he gets it, is of no concern to those who subscribe for the bonds. Their holdings are good in any case. We think that the committee might be in much better business than airing their opinions in this futile way. It would be more statesmanlike to report a bill forbidding the use of the money for ordinary expenses than to pass a resolution—a mere *brutum fulmen*—expressing their private opinion on the subject.

The meeting between the secretary and the leading bankers of this city was held for the purpose of enabling the secretary to explain the legal points that had been raised by the House judiciary committee and by the injunction suit brought by the Knights of Labor (since thrown out by the Supreme Court of the District of Columbia). Incidentally the fact was brought out that the bankers of this city had not subscribed for the new loan to any considerable extent, because they did not like to pay the large premium, amounting to over 17 per cent., which subscribers must pay under the terms of the circular. Another fact was made clear, that the bankers did not see any reason for putting in bids until the last moment, since all bids stand on an equality at the time of opening. Naturally everybody who wants any bonds desires to obtain them at the lowest price. What the lowest price is cannot be known till about the time of closing. Although nobody has a right to see the bids until they are opened, a pretty good opinion can be formed as to the average price by anybody who has a considerable interest in finding out. That the holding back of the New York bankers signified nothing except a natural desire to get bonds at the lowest rates possible under the terms of the circular, was shown by their subscription for $30,000,000 on Tuesday.

The secretary has ample power to get all the money he wants. If the loan is not taken at 117.223, he has only to advertise again at a lower rate. He can sell his 5 per cent. ten-year bonds at par if he cannot get better rates, and it will be his duty to do so. It will be his duty, also, in our judgment, to give all subscribers an equal chance to bid. This rule is of more importance than the price at which the bonds are taken, and it is only by the observance of the rule that the secretary can escape criticism from the anti-bank party in Congress. Granted that such criticism would be without foundation, nevertheless it has great influence on the politics of the country. Any secretary of the treasury will reckon ill who leaves it out of his calculations. Especially at this time, when there is such a ravenous demand in certain quarters for "coining the seigniorage," would it be dangerous to offer to Mr. Bland and his pack any fresh occasion to give tongue against the banks.

Senator Jones takes this occasion to place a headstone at the grave of free silver, in the shape of his seven days' speech of last October, now for the first time published in the *Congressional Record*. Having been one day longer about it than the heavens and the earth were in creating, its bulk is correspondingly large. After one hundred two-columned pages the Senator perorated, closing with an elegant poetical extract, stating,

"And *this is all* that the watcher said"

We may well be thankful that he stopped when he did, though we suspect that the reason for it was much the same as in the case of the Scotch preacher who said, "But, my brethren, I will not dwell longer on this subject," only to hear a shrill voice from the gallery, from a woman who did not approve of written sermons, "Ye canna, for your paper's rin out."

In the debate on the coal tariff in the House the Republicans and a few Democrats took the position that it is best for the country to get rid of its coal supplies as rapidly as possible, by preventing any other coal from coming in. Yet all these people know that the coal deposits of every country are limited in amount, and that, when exhausted, they cannot be replaced. Competent geologists have estimated the supply of the United States from known deposits at not much over one hundred years at the progressive rate of consumption which has taken place in the past, while that of Great Britain is reckoned at not more than fifty years. Now, what is to be said of the intelligence of those who cry out against the introduction of Nova Scotia coal into the New England States, and who insist that the deposits of Pennsylvania and Maryland shall be drawn upon not only to supply those States, but also to haul the coal to them? Every car-load of coal hauled requires the consumption of a certain percentage of the load in order to move it. If the same amount of coal can be obtained without this waste, we are the gainers. It is, moreover, an advantage to us to burn the coal of other countries rather than our own. Both sources of supply will be exhausted all too soon. The talk we hear about inexhaustible supplies of fuel is perilous nonsense. There are hundreds of empty holes in the ground which were heralded as inexhaustible mines in flattering prospectuses during the present generation. The time is coming when protectionists as fatuous as Mr. Walker of Massachusetts will be glad to have coal fall from the moon, and will not consider such acquisitions an injury to the country. We observe that this antediluvian voted for seventy-five cents per ton duty on coal in order to make the tariff fair and square.

The *Iron Age* publishes a chart showing the fluctuations in the prices of copper, lead, spelter, and tin plate from 1889 to 1893 inclusive. It is interesting to note that while there has been a considerable decline in the prices of metals generally, the price of tin plate holds the advance which was caused by the McKinley bill. It has been falsely asserted several times, since the Wilson bill has been under discussion, that we are paying no more for our tin plates than we did before that bill went into effect. The chart of the *Iron Age* shows that the advance in tin plates commenced in May, 1890, when it seemed likely that the McKinley bill might become law, and that it has continued to the present time with a few fluctuations. Had it not been for the McKinley bill, tin plates would have followed the decline of iron, steel, and pig tin abroad. It has been demonstrated also that the foreigner does not pay the duty on pig tin. The McKinley duty on this article went into effect July 1, 1893. The market price of pig tin here is exactly four cents per pound higher than in London, this being just the amount of the McKinley duty.

One of the strongest objections to the income tax is that its ulterior motive

does not appear in the bill and is never stated in debate by its advocates As a general rule, taxes which have any object in view except getting money for the Government are iniquitous. The exceptions, such as liquor licenses and the tax on State bank bills, all have their aim and end openly avowed. As regards the income tax, there is no doubt that it is an attempt on the part of the South and West to put on the people of the Northeast more than their share of the public burdens. It is in this section that the people with more than $4,000 annual income most abound, and the South and West want to punish them for being in comfortable circumstances. This is the first time in American history that an attempt of this sort has been made—that is, that Congress has proposed to tax one section at the instigation of others; and it would be difficult to conceive of a more dangerous precedent just now. Moreover, the class with incomes over $4,000 is a small class, and no reason for marking it off for punishment has ever been given. The millionaires in it are very few in number. The great bulk of it consists of persons in very moderate circumstances who have a hard struggle to educate their children and make ends meet.

There is only one excuse for this attempt at sectional taxation on the part of the South, and that is the pension laws. These same laws were also largely answerable for the adhesion of the South to the silver purchases. For thirty years we have gone on pouring money out of the Treasury by tens of millions of dollars to be spent in one part of the country only. Hardly a dollar of this goes into the South. This year, in the midst of our sorrow and suffering, we are paying out $160,000,000 on account of a war which came to an end thirty years ago. This is dispensed in cash and in small sums, and none, or next to none, of it reaches the Southern States properly so called. We are within the mark when we say that $1,500,000,000 have been spent in this way since the close of the civil war. This would be very unfortunate from a financial point of view, even if the money all came out of Northern pockets; but besides getting none of it, the South has had, and has, to contribute to it. The Southerners who got up the war and fought it out are mostly dead or superannuated. It is their sons and grandsons who now constitute the South with which we have to deal, and they would be more or less than human if, having got the power of legislation in their hands, they did not try to get a whack at the people who have imposed on them such intolerable burdens. But they are none the less very foolish, for they are going to insure the return to power next fall of the party which concocted and maintains the pension swindle. A clearer case of biting off one's own nose we have seldom heard of.

Apparently the question of Mr. Peckham's confirmation rests largely with the Republican Senators. Hill hopes to get a number of the Democratic Bourbons, under the lead of Pugh of Alabama, to stand with him in opposition, but he cannot hope to succeed unless a majority of the Republicans come to his rescue. His sole reliance is the chance that "Bill" Chandler and his kind can persuade Republicans generally that it would be "good politics" to reject an eminently well-qualified nominee in order to foster dissensions in the Democratic party. But Republican Senators who may be disposed to take so low a view of their duty are likely to find out, before the vote is taken, that their rejection of Mr. Peckham would be the worst possible politics for their own party. It is reported that the President will send no more nominations for office to the Senate until the vacancy on the Supreme bench has been filled. This is exactly right. The issue is whether the Senate shall usurp the appointing power, whether "the courtesy of the Senate" shall override the Constitution of the United States. There can be no compromise of such an issue, and there should be no complication of other questions with it. Everything else should wait until the Hills and the Chandlers of the two parties surrender.

The *World* has had the happy thought of resurrecting an interview with Hill eight years ago, in which he denounced most vigorously precisely such a policy as he is himself now pursuing. It was at the time when Mr. Cleveland was having his struggle with the Senate over the papers on which he based removals of old officials and the appointment of new ones, and Hill sustained the President's attitude as entirely right. Among other things which he then said of the confirming power that apply excellently to the present situation, was the following:

> "It does not reject bad men. It rejects good men to keep bad men in. It does not work as a help or enlightenment to the President or Governor. It works as a ball-and-chain on both. It makes in the Federal Senate a series of as many Presidents *in petto* as there are representatives of States in that body. It makes Senators office-brokers and executives the bondsmen of such office-brokers. Senators claim in effect to be assistant presidents and assistant governors, and seek to make elected presidents and elected governors subject to them."

Mr. James Schouler, the well-known historian of the United States, reviews the Hawaiian controversy in the February *Forum*. His conclusions only show how unfit are the methods of historical investigation in such a matter. What weight can be attached to the opinions of a man who writes about Hawaii without once calling it a "key" or a "cross roads," and who has a deplorable way of pinning himself and his opponents down to the evidence? The fact that distinguished lawyers like Judge Cooley and Mr. Coudert pronounce the legal evidence against Stevens complete, and that a distinguished historian like Mr. Schouler now declares the historical evidence also complete, only proves how little true patriotism has to do with either law or history.

The conference on municipal government, which came to a close on Friday in Philadelphia, drew out a remarkable number of well-written papers. It cannot be said to have thrown any very new light on the problem of municipal reform, but it was invaluable as a means of rousing and extending interest on the subject among those who think about municipal reform at all. Ten years ago, nay, five years ago, no such gathering would have been possible. The class of people who spoke at and attended the meetings this week were not then giving thought to the government of our great cities. They were occupied with temperance, or charity, or civil-service reform, or the tariff. That American cities could be better governed, and that it was necessary to try to get them better governed, was something which had not occurred to them. It was noteworthy, too, that in the discussion very little, in fact no, attention was bestowed on charters or distribution of powers. Nearly every address was devoted to the best means of bringing influence to bear on the voters in favor of better city government. The fact is that we have in Brooklyn to-day a charter which nearly all critics and observers are agreed is the kind of charter which is best adapted to our present needs in all the large cities, inasmuch as it puts good government almost immediately within reach of the voter if he elects a good mayor, and enables him to concentrate his attention on the mayor's character and career. The work to be done now is mainly work of evangelization, or missionary work. It is to convince people, as the preachers say, of the sin and discomfort of our present situation, and point out to them the way of salvation.

One of the speakers, Mr. Edwin D. Mead of Boston, discoursing on Friday on the theme of education as a means of "arousing public sentiment in favor of good city government," made a curious slip. In the course of an excellent address, speaking of the press as a means, indeed the chief means, of public education, and deploring the frightful appearance the morning papers presented on that day by giving four times as much space to the Florida prize-fight as to all other subjects of public interest, with as much disgusting "display" as

their columns would allow, he proceeded instantly to mention the Boston *Herald* as a model newspaper, which stood above all its fellows as a public instructor. The fact is, that the *Herald* is one of the worst purveyors of corrupting and degrading intelligence the country contains, in spite of the general excellence of its editorial matter and correspondence. It was only a year ago that it defended its reports of prize-fights, on the ground that it was bound to publish everything the public wanted or would pay for, because, as it said, it satisfied "an element in human nature." And while Mr. Mead was speaking, it was giving eight columns to the Florida prize-fight, beginning with two on the first page, containing a half-naked portrait of the victor and a smaller one of the other ruffian. Worse reading than those eight columns were, or less likely to predispose people towards good city government or any good thing in city life, we have never happened to see. Nothing, let us add, does so much to keep alive the faults of the press as this thoughtless sort of praise in which good people like Mr. Mead indulge. They revile the press fiercely in private conversation, but you find the worst papers in the land on their tables at home, and when, on any public occasion, they are afraid of them or want a "notice" or report, it is well if they do not praise them to the skies

---

The anti-machine Republicans, with a fluency which must once more impress Mr. Cornelius N. Bliss as objectionable, have issued another very long address to the public, which was published in full in the *Tribune*. We find in it many revelations of party secrets which have heretofore been regarded as the sacred property of the family circle. In calculating the expense which the new organization, adopted by the Boys at the suggestion of Messrs. Bliss and Root, will entail, the address says it will aggregate $100,000 a year for rentals alone, and about $30,000 more for furnishing. In regard to the headquarters for each of the 1,187 election districts the address speaks in this shocking manner: "There are not enough Republican liquor-saloons to-day to provide for one-fourth of these places; indeed, there are whole Assembly districts where there is not a single Republican saloon-keeper." This is a direct intimation that the Republican liquor-saloon is to be the centre of activity and common meeting-place of the reformed Republican machine. Nothing so startling has been revealed concerning the Republican party since the memorable telegram of the Hon. Shed Shook to the Hon. Whitelaw Reid, sent from Albany a few years ago, while an excise bill was pending, announcing that the bill had been so amended as to "give to Republican saloon-keepers the protection to which they are entitled." The *Tribune* never published that revelation, but it gives full publicity to its fellow now. Scarcely less startling is this slighting allusion to the Union League Club's contributory habits: "Will the Union League respond to the call? It did not raise $2,500 during the last campaign; its contributions to all the State campaigns of late years have been on a par with its efforts last fall." Even more impertinent is the following: "Why are not the voters in the different election districts as competent to handle their affairs as the sleek, well-fed members of the Union League Club?" We refrain from comment on these revelations and queries, following the discreet policy of the *Tribune* towards them, but we should think that the publication of such extremely inharmonious and inflammatory matter in the *Tribune* would impair its editor's standing as a good party man.

The *Forum* for February contains two contributions upon the gold question which are of great interest. In one of them Mr. Edward Atkinson gives the silver advocates and bimetallists several things to think about in their retirement. He points out that international commerce has adjusted itself to a unit or standard of value which is expressed in terms of gold because experience has shown it to be the safest, surest, and best standard attainable, because a unit of gold or its multiples will buy anything anywhere, because it is the only medium by which each and every debt in every civilized country can be liquidated, and because it will be maintained as a standard for the same reasons that brought it into use, without regard to legislation, treaty, or agreement. The folly of the United States departing from such a standard would be incomparable, for, as Mr. Atkinson shows, we are to a greater extent than any other nation the creditor nation of the world. We buy from other countries such articles as we could, to a very large extent, spare. The products which we sell are, almost to the full extent of our exports, products which the world cannot spare. Hence it follows that, having established the prices of our grain, our provisions, our oil, and our cotton upon the gold standard, for which we annually become creditor in such manner that the price of the whole domestic product rests on or is established by the price at which we export our excess, we hold a check payable on demand in gold or its equivalent on every bank or banker in Europe. If now we were to negotiate a bimetallic treaty, giving other nations an option to pay us in gold or silver, at an arbitrary ratio, we should wholly lose the advantage of our position. "We should," says Mr. Atkinson, "throw away our paramount supremacy, because the very essence of a bimetallic act of legal tender is to give the debtor a choice of which the creditor is deprived."

Scarcely less instructive than Mr. Atkinson's article, of which we have given a very incomplete outline, is another in the same *Forum*, from the pen of Mr. J. F. Fraenkel, on the erstwhile absorbing question of a scarcity of gold. Mr. Fraenkel goes over the statistics of gold production in the past, and gives the latest information about the renewed activity in the gold-mining regions of this and other countries, showing very clearly that there is certain to be a large increase in the output of the world for the year just closed and for following years. His estimate for 1893 is $148,000,000, or an increase of $10,000,000 over 1892. The amount of gold available for monetary uses in 1892 was $63,000,000, and Mr. Fraenkel's conclusion is that "it is not impossible that in a few years a quantity of gold not far from $100,000,000" will be available for such uses, adding: "If this should prove true, it would seem futile to speak of an impending scarcity of gold." We have been listening very intently for some weeks, and have not heard anybody prophesying such a calamity.

Although we cannot predict what will be the results of King Milan's sudden and theatrical return to Servia, it is safe to say that they are not likely to be for the good of the country or the peace of Europe. His ex-Majesty is pretty sure to make mischief whenever he has a chance. After long troubles, the Servians were to be congratulated on having got rid of a sovereign whose life, public and private alike, has been shameful, and whose one great merit was his readiness to divest himself of his divine rights and take compensation in hard cash. When one has a few million francs in one's pocket, Paris is doubtless a far pleasanter home than Belgrade, and the society of the Jockey Club more congenial than the eternal squabbles of politicians on the vital question of the ins and the outs. It may be, however, that Milan's money has given out—as has happened to him before—or that Paris is dull this winter; or it may be that he feels his son needs fatherly advice in the midst of confusion which even he can hardly make worse confounded. He has, therefore, gone back to Belgrade, where his chief support seems to be an army that he has led only to disgraceful defeat. Nothing could be more wearisome than recent Servian history, with its ceaseless and senseless cabinet changes; nothing less important in itself. The appalling element in the situation is the fact that the condition of the Eastern question, and of the relations between the great powers, makes it always possible that the antics of some irresponsible person or party may bring on the most terrible war in the history of mankind.

AFTER-PANIC BANKING.

THE comptroller of the currency has published an abstract of the reports made to him by all the national banks in the country on December 19, 1893. These figures are interesting in themselves, because the statements of so large a number of banks—3,787 in this case—give a trustworthy view of the general business situation. But they are still more interesting when compared with last summer's statements, for this comparison shows the real working of the panic on the money depositories, and the not less interesting after-panic accumulation of idle money in the banks.

The combined statement of the national banks in December, 1892, may be called the last which reflects normal conditions. Before the next statement—that of March, 1893—had been compiled, trouble was already in sight, depositors were beginning to hoard money, and interior banks were calling in their Eastern balances. On the 9th of December, 1892, the individual deposits of our national banks aggregated $1,764,456,177. The statement issued nearest to the extreme panic strain was that of July 12. That statement showed the shrinkage in individual deposits to $1,556,761,230. The withdrawal of deposits in the critical distress of August was undoubtedly much heavier; for as late as October 3, the date of the next report, the total of individual deposits remained as low as $1,451,124,330. Although no official figures are obtainable at that date, it may be guessed that in August, before the gold-import movement had fairly begun, the private-deposit fund of all the banks had sunk quite as low as $1,300,000,000.

Last month's statement reports the total holdings on this account at $1,539,399,795, which, it will be observed, is a sum materially smaller than that returned in the middle of last July. It does not, however, by any means follow that the hoarding craze was still in force during December. On the contrary, the actual money reserves of the banks show an amazing increase. A year ago the total coin and paper money held by the national banks was $318,641,595. In July these reserves had sunk to $289,254,850. In August they certainly went much lower. Yet on December 19, 1893, the aggregate was no less than $414,135,407. In other words, during the five months between July and December the net gain in the money holdings of the national banks was fully 70 per cent. Of the gain during this interval, $60,000,000 represents the increase in legal-tender Government notes alone.

Not all this increase in cash holdings of banks since the panic month represents hoarded money now returned to circulation. The fifty millions gold imported from Europe since the opening of August has now found a resting-place in bank reserves. The Government has paid out large amounts—about $41,000,000—since July, chiefly in gold, and between July and November, before the Sherman law's repeal, there was issued $5,000,000 in new Treasury notes. Moreover, the savings banks and trust companies have not only returned their bank deposits withdrawn in the panic months, but have deposited a total balance larger than that of a year ago. The recent January report of the trust companies of this city showed their uninvested cash, much of which is deposited with national banks, to be $30,000,000 greater than at the opening of 1893, and the same is true in a less degree in other cities where the industrial and security markets are idle. It should be remembered, however, that actual hoarding of money by private individuals is the single cause of trust-company withdrawals; so that, allowing $90,000,000 for the inflow of money, these last five months, from Washington and from Europe, there is still left $25,000,000 for the increase from other quarters since last July. This amount is probably not far from the total sum, naturally held in national-bank reserves, which was hidden away in actual cash by hoarders during the panic.

A different cause must be sought for the fact that the total of individual deposits in all the national banks was smaller by $17,000,000 last month than it was in last July. The deposit fund in banks is not only used as a basis for loans, it is also very largely the result of loans. When a bank lends a thousand dollars to a customer, it does so by adding that thousand to the deposit fund inscribed to his credit. He may, of course, withdraw this deposit through checks deposited in other national banks, or even in outside institutions. But, in the long run, increase in loans causes a nearly corresponding increase in deposits.

Now the loan account of the banks, after the panic strain had ceased, showed nothing but continued liquidation. During the panic, loans were fairly maintained by the heavy issue of that emergency bank currency known as clearing-house certificates. The panic over, the cancellation of these certificates began at once, and it was, of course, effected by the calling in of loans. This special motive for contraction ceased when the last loan certificate was retired in November. But trade had by that time fallen completely into its after-panic stagnation, and at the very moment when money began again to roll in to bank reserves, the demand from business borrowers had almost ceased. The total loans and discounts outstanding December 19 last to the credit of the national banks was $151,000,000 less than the total on the 12th of last July. This tells its own story.

A word may be added as to the New York city banks. Under the national-bank act, a country bank, though required to hold in cash 15 per cent. reserve against deposits, may itself at its discretion deposit three-fifths of this reserve with banks in certain large cities named in the statute. Of these "reserve cities" New York is the favorite, because its banks habitually allow to other institutions 2 per cent. on their deposits. During the panic not only were local deposits withdrawn from New York city banks, but the hard-pressed country institutions called back their deposited reserves. As a result, deposits in the New York clearing-house banks sank in August to $370,000,000, or seventy millions less than at the opening of the year. In September the tide turned. Private depositors returned their money to the banks; local institutions followed suit; and finally the interior banks, finding no use at home for their now ample cash reserves, hastened to forward the money for deposit at New York, where it might get the 2 per cent. interest. The result is striking, but hardly profitable to the New York banks. Last Saturday's statement showed that total deposits in our city clearing-house banks had increased $177,000,000 since the August panic season, that the actual money holdings of these banks had increased three-fold, and yet that the loans had increased barely twelve millions. In other words, there is to-day in the banks of New York city a deposit fund of $547,694,400, much of it bearing interest to depositors, and of this sum $129,000,000 is not in use at all.

ONE PHASE OF THE TARIFF.

THE debate in Congress on the Wilson tariff bill on Wednesday week turned in part on the question whether our protected manufacturers sell goods to foreigners at lower rates than to Americans. Upon this Mr. De Witt Warner made some very pointed remarks. Several Republican members having controverted the statements in one of the publications of the Reform Club, Mr. Warner said:

"That pamphlet of the Reform Club was made up under my personal direction, and I stand ready to vouch for every quotation in it, and for the fact that the comparative figures given are for identically the same article, from identically the same lot, the wholesale price, with all discounts deducted. The fact is, that if you go to a store and buy the goods and let the manufacturer deliver them himself aboard the ship, so that he can be sure they are really for export, you get one price, and if you buy the goods to be delivered to you, and therefore, perhaps, to go into the home market, you have to pay a much higher price. For two years I was in correspondence on this matter with agents and dealers all over the world, and there is not a statement in the pamphlet of the correctness of which the documentary evidence was not on file before the book was published. There is not a single figure in it that has ever been successfully refuted, or that any one has ever claimed successfully to have refuted. In very many cases the correctness of the figures is verified by the written confessions of the manufacturers themselves. This sort of business still continues, and it will continue as long as the protective tariff makes it possible."

This phase of the tariff is not in the least a matter for surprise. The Republicans ought to defend the practice instead of denying its existence. Some of them, in former debates, have defended it, saying that it is a gain to the country to sell abroad the surplus of production, even if the profit is very small, since it is a question of little profit or none. This argument is intelligible, and, what is more to the purpose, it conforms to the facts. Take a case lately cited in the *Evening Post* by Mr. A. H. Saxton, a well-known hardware-dealer in this city. The manufacturers of cut tacks have had the American market to themselves for more than half a century, under every kind of a tariff—under the Walker tariff, the Morrill tariff, and the McKinley tariff. They exported their products to Australia and elsewhere as long ago as 1860, and are doing so still. Recently Mr. Saxton had occasion to inquire what were the foreign prices of these goods. He found that the American duties on tacks were equal to 105 per cent. ad valorem, and that the domestic price was within 10 per cent. of what the foreign ones would cost with the duty added, "so that while cut tacks can be exported in competition with the foreign article in the markets of the world, the protective tariff enables the manufacturers to obtain from our own people almost double the price they could otherwise command."

It is needless to multiply illustrations. It is just as certain and inevitable as any other law of trade that the maker of an article who has the domestic market secured to him by the tariff will sell his surplus in foreign markets at any price he can get above the cost of production. Sometimes a tariff is enacted for that express purpose. Such was the outrageous tariff of 1869 on copper and copper ores. Before that law was passed we were exporting copper to European markets in large quantities, and this was notoriously the best copper in the world, and was obtained more cheaply than it could be produced elsewhere. Moreover, the companies producing it on Lake Superior were the richest in the world. For these reasons precisely, and in order to kill certain copper-smelting establishments in Boston and Baltimore, which were working in part on foreign ores, the copper tariff bill of 1869 was passed. It had the intended effect. It killed these smelting establishments, and it enabled the Calumet and Hecla Company to raise their price in the home market to the foreign price plus the tariff and freight. In other words, the company sold copper to Englishmen, Frenchmen, and Germans at five cents per pound less than they charged American consumers for the same article. One of the unexpected results was that some shrewd American dealers bought Lake Superior copper in foreign markets and shipped it back to New York, where it was entered free of duty as an American export returning in the original packages, and was sold at lower prices than the same kind of copper could be obtained for that had never crossed the ocean. This condition of things never caused a blush on the cheeks of the tariff-makers or the beneficiaries. The latter sent an agent to Europe who bought up all of their own copper that could be found in that market, and thereafter refused to sell any there unless they knew that it was to be consumed abroad.

This case is only one of hundreds. It is a little more glaring than others because the copper tariff of 1869 was a bill by itself. It contained nothing else, and hence it drew attention to a single item. It was peculiar also in the avowal made by its advocates that if they did not get what they wanted, they would kick the whole system of protection to the winds. It was peculiar further in the fact that the bill was vetoed by President Johnson and passed over his veto by a two-thirds majority. Aside from these quite extraneous circumstances, it was in no way different from the cases exposed in Mr. Warner's pamphlet or those mentioned in Mr. Saxton's letter. They are "all of a piece." They are as inevitable as the tariff-protected Trusts and combines.

SOCIALISM IN PRACTICE.

A CORRESPONDENT of the *Débats* has been writing some interesting letters from Roubaix, describing the workings of socialism in that place. It is a thriving manufacturing city of 120,000 inhabitants, which in 1892 elected a mayor and Municipal Council of pronounced socialistic views and on a frankly socialistic platform. Their "electoral programme" consisted of fourteen articles, and proposed, among other things, to furnish school-children one meal a day and two suits of clothes a year, to suppress taxes on the necessaries of life, to establish an eight-hours' day with a guarantee of at least a minimum wage; promised free employment bureaus, free medical advice and medicines at cost, free legal advice in "all matters concerning workingmen"; and declared in favor of paying city officers no higher salaries than those received by skilled workmen. On the strength of these proposals and promises the socialist mayor and Council were elected by large majorities, and have now been in control of Roubaix for one year.

What have been the results? It was to answer that question that the correspondent made his inquiries, rightly deeming one concrete case to be worth a thousand dreams on paper. He found that the new era had not got on very far. The socialistic authorities were not finding it so easy to perform as to promise. Certain annoying laws stood in their way, as, for example, those which enabled the prefect of the department to put a summary stop to their plan of having the city furnish free medical and legal advice. They took a sweet revenge on him by refusing to offer him the customary annual dinner, but that did not open their city pharmacies. Then there was the proverbial sobering effect of power, which made the Council willing to put up for a while longer with the miseries of a corrupt society. Some of their schemes they have now abandoned or deferred until public opinion shall be "riper." But the huge expense of applied socialism is what has most staggered them. It is all very well to have a New Jerusalem, but who is going to pay for its gold-paved streets?

However, a beginning has been made, if only to make ready for the next election. The project of feeding and clothing school-children was cautiously carried out in the case of twelve schools and 1,500 children. This cost the municipality $10,000. If the system should be applied throughout the city, according to plan and according to justice, the cost would be, it is estimated, at least $200,000 yearly. As it is, the city expenses for 1893 were more than $30,000 greater than for 1892. Where is the money to come from? From the nature of the case it will not do to increase the taxes on workingmen. But cannot the "bourgeois" be bled? In the first place, it is doubtful if they will quietly submit to the operation, and equally doubtful if taxes can be devised for their special benefit which will not hurt either the pocket or the feelings of some workingman. This was neatly shown in the attempt of the Roubaix Council to levy the *octroi* taxes so as to hit the bourgeois only. Common kinds of cheese were left free, while Brie and Gruyère were taxed. But instantly a great outcry arose from the proletariat. Were they, then, never to have any of the good things of life? Taxing luxuries, forsooth! Why, it is of the very essence of socialism to divide up the luxuries, and not start out this way on the vile capitalistic theory that the poor workingman is never to have his bit of Gruyère! These considerations are proving very embarrassing to the Council.

The personnel of the Council is also worth notice. It is composed of thirty-six members, of whom twenty-eight are saloon-keepers. There are 8,000 saloons in Roubaix, so that it is only fair that they should furnish a goodly number of apostles of the new religion. It is no wonder, either, that they should show a readiness to help themselves to the good things of the Kingdom. The Council has had frequent occasion to take little excursions to various points to study socialistic experiments, and the bills are regularly presented to the city. Thus, they took a trip to Guise recently, and turned in a bill of $40 each; the railroad fare, it may not be without pertinence to remark, is $3. It is only fair to say that

such proceedings have awakened complaints that the Council was showing a dangerous tendency to "s'embourgeoiser," and that a similar reproach has been directed against the mayor for having had his salary increased from $960 to $2,700.

What else could be expected? It is not society that must be changed, but human nature, before any other results can be looked for. Those who say with Mark Pattison that socialism is coming, and is bound to come, distrust and hate it as they may, overlook the fact that human nature has been longer in the world than any social theory, and will stay longer than any social theory not in accordance with it. As Mr. Goschen said in his president's address before the British Economic Association:

"The socialist 'ethical' man is an hypothesis, just as the older economic man was an hypothesis. I am afraid that the one hypothesis will find as little its counterpart in this world of ours as the other hypothesis; and if the economic man is a monster, the ethical man, as pictured by the socialists, is an angel who will not walk upon this terrestrial globe."

JEFFERSON'S NOTES ON VIRGINIA.—I.

BROOKLYN, January 24, 1894.

THE wide reputation and high value that have been accorded to the 'Notes on Virginia' for over one hundred years makes any attempt to praise it at this day little less than a work of supererogation. Its frequent republication is alone testimony sufficient to prove its unusual merit. Aside from its intrinsic value, it is of interest as Jefferson's most serious piece of book-making, and the one on which the larger part of his philosophical reputation was based during his lifetime. It was also, at the time of its production, a notable contribution to American scientific writing, and has been, perhaps, the most frequently reprinted book ever written in the United States south of Mason and Dixon's line. Yet, in spite of this reputation, I have been surprised, in a recent study of the book, to find how little was known concerning its true history, and how important a comparison of the various editions was for a proper use of the book. Some of these facts seem of sufficient value to put in print.

The 'Notes on Virginia' was prepared for the benefit of the French Government, by Jefferson, in 1781. It purported merely to answer a series of questions concerning Virginia which that government was asking of each State of the Union. But after Jefferson had sent his replies to the French minister, he went over his Notes, and elaborated them into a full account of the State, making a work of the utmost value. His friends asked for copies to such an extent that Jefferson concluded to print it, and, when he reached Paris, he had two hundred copies struck off. The printer of the edition has never been known, but is revealed by notes in his diary, for he records on September 13, 1784: "Pd. M. La Marche in part for sheets 1,176f."; and under October 15: "Pd. M. La Marche balance for sheets 69f." A few of these copies Jefferson at once distributed, always writing on the fly-leaf a request that it be considered a confidential communication. At the Columbian Exposition, in the French exhibit, Lafayette's copy of the book was shown, with the following autograph inscription, which is a good type of the others:

"Th. Jefferson begs the Marquis de La Fayette's acceptance of a copy of these Notes. The circumstances under which they were written, and the talents of the writer, will account for their errors and defects. The original was sent to Mr. de Marbois in December, 1781.

"The desire of a friend to possess some of the details they contained occasioned him to revise them in the subsequent winter. The vices however of their original composition were such as to forbid material amendment. He now has a few copies printed with a design of offering them to some of his friends, and to some estimable characters beyond that line. A copy is presented to the Marquis de La Fayette whose services to the American Union in general, and to that member of it particularly which is the subject of these Notes and in that precise point of time too to which they relate, entitle him to this offering.

"To these considerations the writer hopes he may be permitted to add his own personal friendship and esteem for the Marquis. Unwilling to expose these sheets to the public eye the writer begs the favor of the Marquis to put them into the hands of no person on whose care and fidelity he cannot rely to guard them against publication."

Jefferson's reason for such secrecy was due to his severe strictures on slavery and the Constitution of Virginia. He had himself suffered in the party heats of his State, and he knew that he should make himself disliked by the whole "planter interest" by his views on the former, and by Patrick Henry and his partisans by his criticisms of the Constitution. Otherwise he had no wish to withhold its publication, as is shown by a letter of his to Chastellux:

"I am not afraid that you should make any extracts you please for the Journal de Physique which come within their plan of publication. The strictures on slavery and on the constitution of Virginia are not of that kind, and they are the parts which I do not wish to have made public, at least till I know whether their publication would do most harm or good. It is possible that in my own country these strictures might produce an irritation which indispose the people toward the two great objects I have in view, that is the emancipation of their slaves & the settlement of their constitution on a firmer & more permanent basis."

Yet even these criticisms had been toned down by Jefferson before printing. The original proof-sheets of this first edition are preserved in the New York State Library at Albany, and, to show how far Jefferson modified his "first thoughts," the following comparison of what he wrote concerning the action of the Virginia Assembly in 1781 in voting that "40 members be a quorum during the present invasion," and what he printed, is interesting:

PROOF-SHEETS	TEXT OF 1784.
But they might as well have voted that a square inch of linen should be sufficient to make them a shirt, and walk into public view in confidence of being covered by it. Nor would it make the shirt bigger, that they could get no more linen.	But this danger could not authorize them to call that a house which was none; and if they may fix it at one number, they may at another, till it loses its fundamental character of being a representative body. This vote expires with the present invasion, it is probable the former rule will be permitted to revive; because at present no ill is meant.

Jefferson's revision did not end with the proof sheets. As first printed, the text of 1784 advanced his famous theory of shell formations in high mountains, a theory which was greeted with such ridicule by the French press that Jefferson promptly cancelled the three pages that contained it, and had new leaves printed for insertion in their place. He wrote to Carmichael, December 26, 1786:

"My Notes on Virginia having been hastily written, need abundance of corrections. Two or three of these are so material that I am reprinting a few leaves to substitute for the old. As soon as these shall be ready I will beg your acceptance of a copy."

This change was as follows:

CANCELLED LEAVES.	SUBSTITUTE LEAVES.
But such deluges as these will not account for the shells found in the higher lands. Besides the usual process for generating shells by the elaboration of earth and water in animal vessels, may not nature have provided an equivalent operation, by passing the same materials through the pores of calcareous earths and stones? As we see calcareous dropstones generating every day by the percolation of water through limestone, and new marble forming in the quarries from which the old has been taken out, which is said to be the case in the quarries of Italy. Is it more difficult for nature to shoot the calcareous juice into the form of a shell, than other juices in to the forms of Chrystals, plants, animals, according to the construction of the vessels through which they pass? There is a wonder somewhere. Is it greatest on this branch of a dilemma or on that which supposes the creation of such a body of water, and its subsequent annihilation? Have not naturalists already brought themselves to believe much stranger things? Thus, they seriously concur in the opinion that those immense hills and plains of marble to be found in every quarter of the globe, nay the very foundations of the earth itself, which is of limestone in large tracts of this country and probably of others, and has been found here to continue solid to the depth of 200 feet, farther than which we have not penetrated, that these, I say, and all other calcareous bodies are animal remains. M. de Voltaire, who seems first to have suspected that shells might grow unconnected with animal bodies, specifies an instance in a particular place in France which has never yet, as far as I have heard, been disproved or denied.	M. de Voltaire has suggested a third solution of this difficulty. (Quest Encycl. Coquilles.) He cites an instance in Tourraine, where, in the space of eighty years, a particular spot of earth had been twice metamorphosed in to soft stone, which had become hard when employed in building: in this stone, shells of various kinds were produced, discoverable at first only with the microscope, but afterwards growing with the stone. From this fact, I suppose, he would have us infer that besides the usual process for generating shells by the elaboration of earth and water in animal vessels, nature may have provided an equivalent operation, by passing the same materials through the pores of calcareous earths and stones: as we see calcareous dropstones generating every day by percolation of water through limestone, and new marble forming in the quarries from which the old has been taken out; and it might be asked whether it is more difficult for nature to shoot the calcareous juice into the form of a shell than other juices into the form of chrystals, plants, animals, according to the construction of the vessels through which they pass? There is a wonder somewhere. Is it greatest on this branch of the dilemma; on that which supposes the existence of a power of which we have no evidence in any other case; or on the first, which requires us to believe the creation of a body of water, and its subsequent annihilation? The establishment of the instance cited by M. de Voltaire, of the growth of shells unattached to animal bodies would have been that of this theory. But he has not established it. He has not even left it on ground so respectable as to have rendered it an object of enquiry to the literati of his own country. Abandoning this fact, therefore, the three hypotheses are equally unsatisfactory; & we must be contented to acknowledge that this great phenomenon is as yet unsolved. Ignorance is preferable to error: and he is less remote from the truth who believes nothing, than he who believes what is wrong.

Quite as curious is a change Jefferson made in another part of the text of the first edition, in revising it for the edition of 1787—a change which indicates how far the influence of the French theories then germinating into the Revolution, as well as the frightful social condition of France, had developed his democratic theories. This change is made in his paragraph on the government of the American Indians:

TEXT OF 1784.	TEXT OF 1787.
Very possible there may have been anciently three different stocks, each of which multiplying in a long course of time, had separated into so many little societies, the principals of their government being so weak as to give	Very possible there may have been anciently three different stocks, each of which multiplying in a long course of time, had separated into as many little societies. This practice results from the circumstance of their hav-

this liberty to all its members.

ing never submitted themselves to any laws, any coercive power, any shadow of government. Their only controls are their manners, and that moral sense of right and wrong, which, like the sense of tasting and feeling in every man, makes a part of his nature. An offence against these is punished by contempt by exclusion from society, or, where the case is serious, as that of murder, by the individuals whom it concerns. Imperfect as this species of coercion may seem, crimes are very rare among them, insomuch that were it made a question, whether no law, as among the savage Americans, or too much law, as among the civilized Europeans, submits man to the greatest evil, one who has seen both conditions of existence would pronounce it to be the last; and that the sheep are happier of themselves, than under care of the wolves. It will be said, that great societies cannot exist without government. The savages therefore, break them into small ones.

PAUL LEICESTER FORD.

THE ANCIENT COMMONWEALTH OF SAN MARINO.

FLORENCE, December 1, 1893.

As in Plato's time it was a literary fashion to look upon Sparta as the type of a pure and simple government, so in modern Europe it is customary to consider San Marino the sole survivor of the mediæval Italian republics, and a worthy example to degenerate democracy. Padiglione, in his learned 'Dictionary, Bibliographical and Historical, of San Marino,' has collected an anthology of flattering opinions upon his beloved country from more than a hundred writers, ranging from "Adams" to George Sand. I have just finished a long-contemplated visit, intended to test the statement of the great work above cited, that San Marino is "a state for its ancient freedom and observance of laws a model for all civilized nations."

Like Sparta, also, the little republic is first of all distinguished by the difficulty of reaching it. In the spring or fall one might enjoy a beautiful walk thither from Florence across the mountains through Vallombrosa and St. Leo, but at this season the new railway northward from Florence is welcome. On the way one is tempted to philosophize over that Roman love for grandiose building which reappears in Italian railway works: the viaducts are so long and so imposing, the tunnels so frequent, that the inquiry thrusts itself upon the mind whether Italian engineers are not prone to shirk the difficulty of maintaining the permanent way on the soapy slopes of the Apennines by putting it up into the air, or enclosing it in the interior solidity of the mountains. The gnarly backbone of Italy thus penetrated, the road descends more peacefully to Faenza, a town once famous for its majolica, and still showing excellent country earthenware in its market-place. Thence the Bologna-Ancona trunk line leads to Rimini, and so into another world.

It is not of Rimini that I shall write—Rimini, where the bridge and arch of Augustus are fresher and newer than the modern hotel, and yet less ancient than the mediæval palace-castle of the Malatesta, and less pagan in feeling than the beautiful Renaissance cathedral. To the San Marinese, Rimini is only their most convenient point of connection with Italy and the universe. From Rimini the traveller bound to San Marino sees through the vaporous light of the early morning a long dark ridge, some ten miles away, hedging in the upper end of a broad valley which stretches northward. The road, more undulating than is common in Italian mountains, leads past scattered farmhouses, the loopholed walls telling a sufficient story of the former insecurity of the country. As the miles increase, the sky line of Monte Titano takes on a curiously regular serration, with square-edged pinnacles, grouped about three large rectangular masses. After some eight miles a bridge is crossed, and the traveller is out of Italy. As the light carriage ascends the new road, serpentining its way up a range of foot-hills, the mountain begins to resolve itself from a simple wall into a splendid cliff, with capes and bays; and now, on three bastions thrust well forward towards the lower country, distinctly appear three massive towers, each with a pennant—at once the ancient defence of the still-concealed town and the origin of its coat-of-arms—three towers with feathers.

At the foot of the cliff, yet still high above the surrounding country, lies Borgo, where, according to Baedeker, "the wealthier inhabitants" reside; where there is a bank and a theatre, and where one finds, according to the veracious Dehò's 'Guida di San Marino,' "elegant palaces on a small scale, and beautiful shops; . . . a modern citylet furnished with whatever ministers to the needs of life." Here is the first shock to the enthusiastic seeker after historical truth, for Borgo is visibly nothing more than a squalid provincial town, in which dirt and discomfort are distributed with republican impartiality. Still, Borgo is not the capital city. From above its zigzag streets leads a steep paved path, the Costa, winding under the cliff and around the buttress of the mountain, and bending back through a fortified gateway into the lower corner of the town of San Marino.

In situation and first aspect the town is singularly like Assisi; it rests on the gentler slope of Monte Titano, only the fortifications showing on the steep front; and the streets lie one above another, connected by inclines and flights of steps, up to the tiny piazza. A few minutes' observation shows the marked difference between the two towns: here are no towers, no dismantled forts—in a word, no traces of old family strongholds; and here are none of the delightful mediæval or Renaissance buildings which adorn the neighboring cities. No old palaces or guild-halls or churches attract the eye. In situation, in walls, in picturesque streets, the place is mediæval, but in the more elaborate buildings and even in the spirit of the place it is distinctly recent. Houses are going up, a new and easy road sidles around the mountain from Borgo; a good hospital marks the public spirit of the people; the old castle crowning the heights is a tidy prison; the church, of the present century, is spacious and well-planned; a new and stately town hall is nearly finished. In the library of the state are two surprises: a few very excellent pictures by well-known Renaissance artists, and, in the vestibule, a tablet setting forth the gratitude of the republic for an endowment, for the purchase of books, the gift of

"WILLIAM WARREN TUCKER
DI BOSTON."

From the delightful wild garden above the church may be seen the commanding situation of the prosperous little place. It is like no other Italian view with which I am familiar. On all sides are sharp hills, showing little rock exposure, and in the hollows lie unbridled rivers, flowing through broad plains of their own débris. To the north and west rise the Apennines, high but not forbidding. The villages are few; only one other fortified place is visible. Yet it is evidently not its situation which has given its peculiar history to San Marino. Its site is such as Umbrians and Etruscans loved; yet there is no trace of ancient settlement. It is well suited for such a convent fortress as its neighbor, St. Leo, but it has no similar foundation. A mediæval robber-baron would have been happy in such an eyrie, but he never came to take it. The site is in many ways as advantageous for a great commercial city as that of Siena or Perugia, but it never grew rich. From Monte Titano may be seen the low sea-coast near Ravenna; within sight have passed the fleets of Pompeius, Justinian, Bajazet, the Venetian Dandolos, and the Genoese Dorias; yet it was never a maritime place. The armies of Cæsar, Hadrian, Frederick Barbarossa, and Napoleon passed near by, yet none of them made it a stronghold. San Marino is now what it has been for at least ten centuries—a quiet fortified village, the abode, and, if need be, the refuge, of a farming community. From the castle the eye easily follows the frontier line, nowhere more than four miles distant, which includes in its twenty square miles three or four other villages. That line marks the farthest extent of territory which the republic has ever governed, and it has never exceeded in inhabitants the present 8,000.

Between this miniature country and its institutions there is a delicious disproportion. The little area of thin soil has for centuries maintained a complicated government. In the town-hall are tablets dated with such inscriptions as "Onofri et Pasi Consulibus." The archives contain the records of the "Consiglio Principe e Sovrano," and of the "Consiglio dei XII."; of three systems of courts; of the three Secretaryships of the Interior, Finance, and Foreign Affairs; of the Militia and the Guard. There is a national post-office; there is an army of nine hundred and fifty men and eight officers; there are diplomatic agents in Paris and Montevideo, and consuls in various European cities. Services rendered to the State or to science may be rewarded by knighthood, and so late as 1876 San Marino expressed its gratitude to an English lady for her gift of a statue of liberty, by making her Duchess of Acquaviva.

Titles are by no means the most undemocratic part of the republic. On examination it is seen to be in fact an oligarchy. Sovereignty is exercised by the Council of Sixty, the members of which hold for life, and which fills its own vacancies out of the heads of families of the republic. From this council twelve members are chosen semi-annually by lot; from the twelve six are chosen by vote; from the six two are chosen by lot, and they serve for six months as the consuls or "capitani," the executive of the republic. Judges are chosen for three years. In its essential features this is the system of Venice and other mediæval republics; not one in twenty-five of the adult men is possessed of "political rights" as understood in America or in Italy.

Yet an oligarchy among yeoman farmers is a very different thing from an oligarchy among merchant princes. San Marino may be compared with colonial Massachusetts. The few voters have always really represented the mass of the people. It has been a singularly united, courageous, honorable, public-spirited, and

prudent people. Union was possible because it was and is a poor community, in which there were no powerful families to fight and expel each other, or exiles to come back with an enemy's army. The courage of the people is shown by their hospitality to Garibaldi when he was fleeing after his defeat of 1849. An excellent moral fibre was manifested when, in 1868, the Republic refused to receive the gambling establishments which had been made illegal in other countries. The new town-hall is a monument to the enlightened public spirit of the San Marinese, as well as to their taste. That the State is prudent is shown by its distinction, almost unique in Europe, of having no public debt.

Other little states in Europe have had similar good qualities, yet have long since been destroyed. Why has San Marino outlived them all? One obvious reason is that in the fiercest battle one soldier is left alone to tell the tale: San Marino has escaped political destruction as Venice has escaped material destruction, as one among a thousand. Still, my old teacher's explanation "why the oldest walls are the best" is pertinent here: "If they were not the best," said he, "they would not be the oldest." The republic which has records as far back as 885 must have been solidly founded. The perpetuation of the government is due in the first place to a singular freedom from any desire to extend its borders. The outlying villages have been added by gift or by their own free will; and when, in 1797, Gen. Bonaparte invited the San Marinese to make their wishes known, "if any part of the adjacent territory is absolutely necessary to you," the hard-headed leaders declined "an enlargement which might in time compromise their liberty." On the other hand, the poor town had nothing worth plundering, and annexation was so difficult a task that Benedict XIV. said of Cardinal Alberoni's attempt in 1739: "San Marino is a tough bread-crust; the man who tries to bite it gets his teeth broken."

Nevertheless, even peaceful and inoffensive communities were not safe during the last twelve centuries, without powerful protectors. The determining reason for the freedom of San Marino since 1300 has been the friendship of potentates, first of the neighboring Dukes of Urbino, then of the Popes, then of Napoleon, then of Italy. Twice has San Marino been occupied by a foreign power. In 1503 Cæsar Borgia had grasped it, and Julius II. made him loose his hand; in 1739 the Pope overruled the occupation by his own legate, Alberoni. We have already seen what compliments the French lavished during their conquest of Italy in 1797. Napoleon III. later, by gifts of books and civil speeches, testified a like love for republican government—in San Marino.

When the kingdom of Italy was formed in 1860, no one cared to erase from the map a state which even the Pope had spared, and in which Europe was interested. Hence the San Marinese retained a situation comparable with that of the native states in India. A "consolato" of the Italian Government resides in the town; the schools are assimilated to the Italian system; appeals may be had from the courts to the Italian upper courts, and precautions are taken to prevent the harboring of refugee criminals. Yet of the old sovereignty four important incidents are retained. San Marino has a post-office, a kind of national plaything; but the rare and beautiful stamps are much prized by collectors, and doubtless the sale helps the coffers of the state. The San Marinese manage, and well manage, their own local affairs, without any annoying interference from an Italian prefect. They owe no military service to Italy, and their own militia is no burden. Above all, they pay no taxes to Italy. If I were an Italian, I should like to be a San Marinese.

As the interesting day on Monte Titano advanced, clouds began to gather on the distant hills and in the valleys beneath. Reluctantly I descended the steep Costa. As I reached Borgo the mists swept up, blotting out the cliffs and wrapping in deserved obscurity the representative of a fledgling sister republic over the sea, and with him his political philosophy. ALBERT BUSHNELL HART.

DANTE'S VISUAL IMAGES, AND HIS EARLY ILLUSTRATORS.

FLORENCE, December 24, 1893.

MERE learning has perhaps done its very utmost with Dante by this time, and, if the subject is not to become stagnant, it must now be approached from other points of view, and the light of other than merely philological and philosophical erudition must be thrown upon it. Is it not rather extraordinary that thus far it has occurred to only one writer, and that not one of the corps enrolled to write on the subject, but a free-lance such as Vernon Lee is, to ask the question what visual images Dante had while giving his perfectly plastic descriptions of the exterior universe? Few students of Dante stop to wonder what correspondence there can be between his visual images while writing and those called up in our minds while reading him, and they are apt to fancy that the correspondence must be great. But those of us who visualize at all cannot read about Trajan and the Widow, let us say, without seeing an image based on some one or on a whole number of Roman bas-reliefs. Dante could not have had such an acquaintance with the antique as we cannot help having, and his visual image of a scene taking place in Greece or Rome or Judea could have had no great likeness to ours. It could scarcely have been otherwise with the figure of Virgil himself. We cannot help dressing Virgil as a Roman, and giving him a "classical profile" and "statuesque carriage," but Dante's visual image of Virgil was probably no less mediæval, no more based on a critical reconstruction of antiquity, than his entire conception of the Roman poet. Fourteenth-century illustrators make Virgil look like a mediæval scholar, dressed in cap and gown, and there is no reason why Dante's visual image of him should have been other than this.

That Dante had visual images, there can scarcely be a doubt. We have, in proof, besides the unequalled plasticity of all his descriptions, the detailed account in *Purgatorio*, Canto X., of the various reliefs representing acts of humility. These reliefs are simply the descriptions of the visual images called up in Dante's mind by the acts of humility. "To take plastic shape in the mind" has become a common phrase in criticism, but it can have no meaning unless that of *becoming visualized;* and as the phrase is applied to Dante, it means that Dante visualized everything that passed through his mind. Nothing, therefore, could bring us nearer to a knowledge of those contents of Dante's mind of which he was himself aware while writing, than if we could form some conception of his visual images.

Dante himelf gives the clue. On the first anniversary of Beatrice's death, he says in the 'Vita Nuova,' he sat down and drew the figure of an angel. A student of early Tuscan art must know how this angel looked. Dante could not have invented this figure, but, like all amateurs, he drew an angel of the kind his favorite painter would have drawn, and in this instance the painter is Giotto. Dante's angel in all likelihood resembled one of Giotto's such as we see in Assisi, Padua, or Florence; and had Dante gone further and drawn a whole scene—that is to say, exactly rendered as only form and color can render a visual image—its relation to one of Giotto's whole pictures would have been the same. Dante's visual image of the Virtues, of the heavenly hosts, of Christ and the Virgin, of St. Francis, could not have been very different from Giotto's, nor even his image of Beatrice very different from one of the great painter's sleek-faced, almond-eyed, waistless women. Beatrice did not necessarily look like this. The visual image is not the direct impression of the object, but the memory of the impression more or less vague according to the varying powers of visualization; and in a lover of the arts such as Dante was, visualization is largely determined by the works of art with which he is intimately acquainted. It is Giotto whom Dante knew best and loved best, and it is the study of Giotto, therefore, and of kindred painters (some even closer in spirit to Dante, such as Duccio, Simone Martini, and the Lorenzetti) that will enable us to form a clear conception of Dante's visual images.

None of these painters shows trace of direct Dantesque inspiration, and none of them has left what would have been the most valuable of all commentaries on the real Dante, a series of illustrations to the 'Divina Commedia.' But they frequently dealt with subjects fringing on Dante's, and a systematic study of these would be a great help in reconstructing the poet's visual images. Illustrations, moreover, by their followers, the heirs of their conceptions, exist in plenty. After these contemporaries of Dante, no painter at all on a level in genius with him appeared until Signorelli, but by that time visual imagery had changed from mediæval to modern. To a certain extent, the antique had already been critically reconstructed. Still, Signorelli's illustrations in the chapel of S. Brizio at Orvieto have an interest not only as interpretations by a great artist, but as the visual images suggested by Dante to a person much nearer the poet than we are, for the attitude of the Renaissance towards antiquity was still subjective—far less than Dante's, but endlessly more than our own. The Renaissance viewed antiquity not with our feeling of its being for ever past, but with longing and the hope of wholly restoring it to a living present. It is this which gives that fascinating tinge of romance to Renaissance reconstructions of antiquity. Michelangelo's attitude is already quite like our own, and his visual images could give no clue to Dante's; but as interpretations they would be invaluable, for he is the only artist of modern times whose genius was of a kind and of a quality to be compared with Dante's. That a series of illustrations by Michelangelo to the 'Divina Commedia' existed there can be but little doubt, and their loss is one of the greatest the study of Dante has incurred. Botticelli's sketches are scarcely to be considered, for, great as they are as works of art, Botticelli was too subjective to give his illustrations a greater connection with the subject than can be had in lineal rhapsodies. Zuccaro and Stradano, working when the Renaissance was rotten-ripe, far from being a help, are as much in the way as Doré. They were even farther from suspecting the difference between their own and Dante's visual

images. The next great event in the study of Dante will probably be an edition of the 'Commedia' with illustrations chosen from the finest of the fourteenth and fifteenth centuries, and from the best by Signorelli and Botticelli, supplemented by such parallel conceptions as may be found in Dante's contemporaries, and even in Michelangelo and Tintoretto. The editor of such an edition of the 'Commedia' will find that the ground has been well prepared by Dr. Ludwig Volkmann, in his pamphlet on early illustrations to Dante.*

Dr. Volkmann has examined more than seventy illustrated codices in Germany and Italy, not having extended his studies beyond these countries. France and England would have increased the list considerably. He divides the codices into two classes, those containing illuminations and such as have water-color or lineal illustrations. The *Inferno*, as might have been expected, attracted the greatest number of illustrators, the *Purgatorio* fewer, and the *Paradiso* least of all. Traditional compositions, therefore, as for ecclesiastical subjects, sprang up for the first, while the illustrator of the last had to rely on his own invention. But it seems to have taken a whole generation before illustrators found out what parts of the 'Commedia' they could handle. At first they tried all the cantos.

Illuminated codices contain, as a rule, miniatures for the initial letters only at the beginning of each of the three sections, and these miniatures soon became stereotyped. In the initial of the *Inferno* Dante is represented either at his desk, or with Virgil in the forest. The P of the *Purgatorio* contains either Virgil and Dante sailing up to the Mount, or a picture of souls aflame. The L of the *Paradiso* gives a bust of Christ, the Trinity, or Dante and Beatrice. A few of the illuminated codices contain elaborate and very complete illustrations. Of the fourteenth century, the best of all is one in the Nazionale at Florence, dating from about 1333. Here Minos, Pluto, and Cerberus are represented not as we who have been brought up on Smith's 'Classical Dictionary' think of them, but as creatures with hoofs, claws and horns, and flaming eyes, as Dante in all probability saw them in his mind. A codex in the Angelica at Rome is almost on a level with the one in Florence. Among miniatured codices of later days the most valuable is certainly the one in the Vatican that was begun for Frederic of Urbino by some follower of Giovanni Bellini, and finished at a much later date by some one who was no stranger to Lorenzo Lotto's works. This codex would yield a number of plates for an illustrated edition of Dante.

The great difference between the illustrations in miniature and those in outline or water-color is that the former never represent the same person more than once in the same illustration, while the latter tend to be panoramic, crowding several events in which the same person is concerned into one composition. This, by the way, was a practice common in Italian painting in general. The best of this latter series is a codex in the Marciana at Venice, with 245 large illustrations, for the most part in outline, by an artist who shows great affinities with the Florentines of the Trecento. At the beginning of the *Paradiso* he has represented Dante at the feet of Apollo, who appears here as a young, fair-haired knight fiddling to his heart's content. Most of the other illustrations are equally remote from our own conceptions and probably equally close to Dante's visual images. At Altona there is a valuable codex of about 1400.

The early engravings, such as Baldini's, have small value except as playthings, and the early woodcuts are scarcely better, although they often have inimitable traits of naïveté; but the conceptions of their authors are too infantile to touch Dante at all. The first edition of Dante with woodcuts appeared at Brescia in 1487. Repetitions and improvements of this were published at Venice in 1491, 1493, and 1497. But it is the illustrators of the fourteenth century, and not these late people, who bring us close to Dante's visual image. These scarcely deserve attention. B. Berenson.

*'Bildliche Darstellungen zu Dantes Divina Commedia bis zum Ausgang der Renaissance.' Leipzig; Breitkopf & Härtel, 1892.

Correspondence.

A CORRECTION.

To the Editor of The Nation:

Sir: Having seen my name mentioned in your notice of 'Twenty Years at Sea,' I was naturally curious to learn in what connection it was used. The book is in such great demand that it is only now that I have been able to obtain a copy of it. I have read with great surprise the story about the "battle of the hats," for no such affair occurred on board. A few men (not of my company F) may possibly have thrown their hats overboard, but I have no recollection of such a thing. If the author had so chosen, he might have narrated an incident of a much more serious character that *did* occur while we lay at Rio, and which would have given an idea as to the enforcement of discipline among the troops on board very different from that conveyed by his amusing story. Francis J. Lippitt.

Annapolis, Md., January 24.

MADAME KOVALEVSKI.

To the Editor of The Nation:

Sir: In this week's issue of the *Nation*, in an account of Miss Klumpke's recent achievement in attaining the degree of Doctor in Mathematical Sciences in Paris, occurs the curiously inaccurate statement that "it is nearly a generation since the French Academy of Sciences, on the report of a commission of men, awarded one of its highest prizes to *Miss* Kovalevski for her valuable contributions to the science of astronomy," and later that "a similar though somewhat more definite honor has been conferred on an American student," etc.

As a matter of fact, it is just five years (December 24, 1888) since the Prix Bordin was awarded to Mme. Sophie Kovalevski, then professor of mathematics at the University of Stockholm, while at that very time Miss Klumpke was making observations at the Paris Observatory. Such an achievement should hardly be forgotten so soon, and I may perhaps be pardoned for saying, without wishing in the least to disparage Miss Klumpke's success, of which we as Americans may well be proud, that Mme. Kovalevski's memoir was the product of the mature mind of a mathematician of the first order, and is hardly to be compared with a doctor's thesis, however clever. It was a contribution to pure mathematics rather than to astronomy, and it may be seen that the honor conferred could hardly have been more "definite" when we consider that the Prix Bordin, the second in the list of fifty-nine prizes conferred by the Academy in that year, was specially raised from 3,000 to 5,000 francs, on account of the high quality of the memoir. The committee, in unanimously recommending the memoir which was found to be Mme. Kovalevski's, said:

"L'auteur ne s'est pas contenté d'ajouter ainsi un résultat du plus haut intérêt à ceux qui nous ont été transmis sur ce sujet par Euler et par Lagrange; il a fait de la découverte que nous lui devons une étude approfondie dans laquelle sont employées toutes les ressources de la théorie moderne des fonctions. . . . La Commission émet le vœu que le mémoire couronné soit imprimé dans le Receuil des Mémoires des Savants étrangers."

It seems rather remarkable that this gifted woman, for whom a professorship was created in the University of Stockholm, should have been refused election to the Swedish Royal Academy of Sciences because she was a woman. There lies before the writer a copy of the motion of Prof. Mittag-Leffler, that the word "män" in the constitution of the Academy should be replaced by the word "personer," together with his forcible advocacy of the claims of Mme. Kovalevski to election. Although conservatism won, it has since been recognized that in the premature death of Mme. Kovalevski not only did the world lose one of its most remarkable women, but mathematical science one of its leading exponents, without regard to sex.

Let us be thankful that in Paris at least brains are recognized as brains, whether male or female. How long shall we wait before such is the case in this progressive country? While in Paris, Russian or American, man or woman, may become a doctor if he show the necessary attainments, here a petition must be handed around that Harvard shall allow women who have done the work to receive a real Harvard *A.B.* Harvard is not the only American university that lets women in at the back door. What answer is made to them if perchance they seek a doctor's degree?—Respectfully,

Arthur Gordon Webster.

Worcester, Mass., January 27, 1894.

[The source of our confusion may be discovered in the fact that Miss Corvin-Krukovski (Mme. Kovalevski) won her philosophical doctorate at Göttingen in 1874, at the age of twenty-one.—Ed. Nation.]

DESCENDANTS OF CROMWELL.

To the Editor of The Nation:

Sir: When a literary fact lies open to all the world and is apparently overlooked by all the world, one feels the same reluctance to call attention to it which he would to pick up a purse on a crowded sidewalk. If there is anything in it, how did it happen to be left for him? But my own curiosity in this case overpowers my hesitation. I have seen floating through the press for some weeks, and I find noted in your last issue, what is said to be the hitherto unknown fact that a descendant of Cromwell was living till lately—Mrs. Bush, who died in November. But in the preface to 'The Fall of the Monarchy of Charles I.,' published in 1882, Prof. Samuel R. Gardiner says that he is himself a descendant of Cromwell and Ireton. This has always been highly interesting to me as an instance of transmitted genius, though, as so often happens, in a different line; and I am sincerely concerned to know why the press, both of England and America, have unani-

monsly ignored it in this discussion. Has Prof. Gardiner since disclaimed the genealogy, or have others disproved it? If true (and I at least have seen no contradiction of it), it is far more important than the case of a dead lady of no account.

I ask without dogmatism, simply to learn the truth. F. M.

HARTFORD, January 26, 1894.

A CLERGYMAN'S QUALIFICATIONS.

TO THE EDITOR OF THE NATION:

SIR: Your generalizations in criticism of Mr. Royce in the *Nation* of January 25 do not coincide with what I have learned from my observation, which to be sure is limited. It seems to me that churches do not get, as a rule, men who are essentially "society" men. A very superficial glance shows us that the majority of theological students do not come from that class of families who consider the social amenities important. So, whatever may be the demand for clergymen with social qualities, and however successful a few churches may be in getting such, it is certainly true that the average church does not have the opportunity to choose a pastor from among those who are perfectly at ease in the parlor. At the same time it is evident that the majority of clergymen, however trained in early life, do, from the nature of their position, acquire a certain ease of manner—in the sitting-room, if not in the parlor.

What is demanded is that the clergyman of to-day be a "pastor" as well as a preacher, and this is only a juster way of putting your position. People do require that a minister shall not confine his efforts to the study. If he does that, he is criticised as not being a good "pastor." The experience of the clergyman whom you quote in the last part of your editorial does not seem to me common enough to warrant your generalization. The pastor is, however, expected to make calls, especially on the sick, and adds to his popularity, and may add to his usefulness, if he shows himself willing and able to talk with his parishioners on topics in which they are interested. More personal work is expected of the clergy than formerly, but if this work is of the perfunctory, superficial sort, his people are not satisfied. Men desire in the man at the head of the church some one a little better than they, and one who from his character and ability appeals to their better selves. It is their misfortune that they are not always able to get such men.

You are right when you speak of the importance of executive talent. As the church has seen the necessity of extending its functions on account of the growth of the cities and the desire to reach out more widely, the need of organization has been made apparent. In these respects there has been a transformation. Yet the principal quality still demanded in a minister is that he shall be a good preacher, and the quarrel with Mr. Royce ought to narrow itself down to the question: What, in the eyes of church attendants, is a good preacher? One of the most popular and admired ministers in a certain city of one hundred thousand or more, is notably awkward and lacking in the social amenities; another, in a city of about the same size but of a very different sort, is criticised for his lack of social qualities, but he probably gets the largest salary of any minister in the city, with perhaps one exception. H.

JANUARY 26, 1894.

PROFIT AND INTEREST.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of December 28, 1893, p. 491, you quote: "This conduct [abstinence] of which profit is the reward has no name simply because it has no existence"; but in your just strictures on Mr. Cannan's attitude, you silently correct this by saying: "Now, the proposition that interest is the reward of abstinence, etc." Mill's analysis of profit may be supplemented and extended, but can it be disregarded by any one who thinks about such matters, even if it is brushed aside by some who write? Minor differences are naturally of slight importance when profits themselves are to be swept away. There are no wages of superintendence, no compensation for risk, no remuneration for abstinence, in the books of those who are elaborating the political economy of the future. All men are going to be disinterested and intelligent; and, as a consequence, one may hope, willing and able to state their predecessors' opinions correctly. Is not this likely to be, to the socialist State, a source of danger that has been unnoticed hitherto by those who are intent on promoting the intelligence of future ages? Mill himself says:

"Strange that when the greatest embarrassment felt by all who have any considerable number of thoughts to express, is to find a sufficient variety of precise words fitted to express them, there should be no practice to which even scientific writers are more addicted than that of taking valuable words to express ideas which are sufficiently expressed by other words already appropriated to them."

A. I.

NEW BEDFORD, January 24, 1894.

THE MEDICAL ADVERTISEMENT ABOMINATION.

TO THE EDITOR OF THE NATION:

SIR: Many of your readers besides myself must have felt an agreeable emotion run through them when they saw the note in your last week's paper describing the new Society for the Regulation of Advertising in Public Places in England. Even here we may then hope, if the English agitation succeeds. But pending the possible restriction hereafter of open-air placards and inscriptions, it seems to me that the time is already quite ripe to begin to take action in our several States concerning a form of advertisement from which America suffers as no other country ever has been or ever will be cursed. I refer to the medical advertisements in our newspapers. Since nothing important can be accomplished nowadays without the formation of a "society" to carry on the agitation, will not some persons of public spirit, aggressive character, and organizing faculty, form a national association, which should have branches in all the States, for forcing their legislators to impose limits on this truly hideous feature of our latter-day life? Every product of social evolution inevitably proceeds to excesses until it has to be regulated by law for the better protection of the individual. Electric wires are the last case in point; cannot medical advertisements be the next? Their evolution has gone on with ever-accelerated velocity, invention succeeding invention, and discovery following on the heels of discovery as to their susceptibility of wider elaboration, and as to their money-bringing power, until now they literally form the principal feature of our provincial newspapers, and in many of the "great dailies" of our cities play a part second only to the collective display of suicides, murders, seductions, fights, and rapes; while thousands of shameless persons are reputed to add materially to their incomes by selling for publication their portraits with descriptions, sincere or insincere, of their pretended cures.

It seems as if no acuter instance could be found of the way in which, in our country, private greed is suffered to override the public good. For if a justification of these advertisements be sought, absolutely nothing can be alleged save the claim that every individual has a right to get rich along the lines of his own inventiveness, or of that of the cynical literary geniuses whom he may employ. The essays, the anecdotes, the elaborate accounts of symptoms, the portraits of sufferers, are a direct attack of the most efficacious sort upon the public health. They are meant to be such an attack; they have no other conceivable aim or intention than to produce panic, to beget in susceptible readers, by their incessant repetition, the fixed idea and apprehension of disease. Such fixed ideas and apprehensions are among the most potent morbific agents known; and the amount of hypochondriacal misery and actual disease caused by these suggestions would certainly, if it could be measured, prove almost incredibly great. The way in which a certain "kidney" nostrum, which played a pioneer's part in the evolution of these advertisements, was worked, was truly diabolical, and has hardly been rivalled since. And the advertisers have cut themselves off from replying that the reader has his protection in his own hands, for "no one need read these advertisements unless he will," since they have arranged that he shall read them whether he will or no, by their ingenious system of misleading headlines and sham introductions, that begin with something educational or literary and end with liver, nerves, or blood. We buy our newspapers because we need them for other reasons. We find every alternate column beginning with a "scare-head" that suggests momentous news, and we presently discover, coördinated with perhaps a change of ministry in England, the annexation of Hawaii, or the passage of a tariff bill, accounts of Mr. Mingo's kidneys, Mr. Hawkshaw's bronchi, or Mrs. Hecla's skin—on which the grotesque pictures of the sufferers set the seal. Like Ulysses, these worthies have become a part of all that we have met; and all experience is an arch where-through their entrails gleam as it were iridescently upon us, until the world looms to our imagination in a sort of catarrhal vapor, or as if bathed in a cancerous and hæmorrhoidal mist. Such is the education of our young people, and such the indecency of the background, or rather of the foreground, in the full sight of which we all are forced to live.

The evil is increasing with formidable rapidity. It has grown greatly in the past two years. I returned home last September after living fifteen months in countries where most matters here so articulate have not yet found a voice, and I remember that the first sight I got of the Boston *Herald* on the steamer-wharf made me involuntarily jerk back my head and catch my breath, as if a bucket of slops had suddenly been thrown into my face. How much farther the nuisance will go unless legislatively interfered with, it is impossible to predict. It may be a somewhat delicate matter to frame just the right bill, but it seems as if it must in any case be based on a restriction of the amount of space which a medical advertisement shall be permitted to take. In a limited number of lines, details of disease and panicky suggestions cannot be introduced. Being public enemies as deliberate and intentional as they are venomous, the authors of

those advertisements should be treated as public enemies and have no mercy shown. The first steps towards such a society for agitation as I propose might well be made by the medical societies of the several States. The power of ideas over bodily conditions is now so solidly established as a fact, and the doctors have so honorably shown themselves in the character of preventers as well as in that of curers of disease, and are so well recognized as disinterested guardians of the public health, that they need have no fear, when the inevitable cry of professional rivalry and persecution goes up from those whose gains are menaced, that the community will take it up. *Some* day, through *some one's* exertion, the thing is sure to be brought to a stop. It is as certain as anything can be that a generation will come after ours, so conscious of spiritual forces and of health as a public ideal, that when, in the chamber of horrors of their historic museum, they look upon a newspaper of our day, framed upon the wall to show the régime under which our generation lived, they will refuse to believe their eyes, and will consider such a license given to private rapacity as something incredible that never could have been.—I am, sir, truly yours,

WILLIAM JAMES.

CAMBRIDGE, MASS., January 22, 1894.

[Prof. James will be glad to learn of the existence of a New York "Act for the more effectual prevention of wanton and malicious mischief, and to prevent the defacement of natural scenery."—ED. NATION.]

THE WHITE CITY.

TO THE EDITOR OF THE NATION:

SIR: There has been some discussion during the past year as to whom is due the honor of having first applied the term "White City" to the World's Columbian Exposition at Chicago. As in Bach men discover, patent or latent, all forms of modern music, so in Emerson all modern ideas seem to be anticipated. Thus, in Emerson's lecture on "The Conservative," delivered in December, 1841, I find the following passage, one clause of which (I venture to italicize it) evidently has a prophetic claim to the priority of the disputed honor: .

"For man is the end of Nature; nothing so easily organizes itself in every part of the universe as he; no moss, no lichen, is so easily born; and he takes along with him and puts out from himself the whole apparatus of society and condition *ex tempore*, as an army encamps in a desert, and, *where all was just now blowing sand, creates a white city in an hour*, a government, a market, a place for feasting, for conversation, and for love." N. H. D.

JAMAICA PLAIN, MASS., January 22, 1894.

"TOTE."

TO THE EDITOR OF THE NATION:

SIR: In Lorenzo Dow's 'Journal,' third edition, Philadelphia, 1816, the Southern word "tote" is used in a manner which may indicate its original meaning; hence this communication. At page 173, describing his adventures in Georgia, in the year 1803, Lorenzo says: "I preached in George-town, and set out at eight at night for Augusta; and travelling nearly all night, I came to a camp where some negroes were *toting** tobacco to market." The italics and asterisk are Lorenzo's, and at the bottom of page 174 is the note:

"*The mode of toting tobacco to market is by rolling it in casks, with a wooden axle through the midst, on the ends of which are fastened the shafts for the horse to draw it by; 15 or 16 hundred weight may thus be pressed and carried to market."

As Lorenzo prints the word toting in italics, and adds the meaning in a footnote, it is not unlikely that the word "tote" originally meant this method of hauling tobacco. This is an illustration of the early use of the word in this country which may interest philologists.

F. E. M.

Notes.

THE well-known librarian, Mr. J. N. Larned of Buffalo, President of the American Library Association, has compiled a 'History for Ready Reference,' from the best historians, biographers, and specialists, in their own words. The work possesses a universal character, and is to be published by subscription through the C. A. Nichols Co., Springfield, Mass.; the first of the five volumes is on the eve of appearing. Precise references for all the passages quoted and topics treated will make this History a virtual index to a "select library of ten or twelve thousand volumes." Original historical maps, colored charts, tables of contemporaneous events, and "such a collection of the historical documents of the past and present as the reader may look for in vain elsewhere," are some of the promised attractions of this novel enterprise.

The second volume of Taine's 'Modern Régime' will soon be issued by Henry Holt & Co.

G. P. Putnam's Sons will publish immediately 'Ships that Pass in the Night,' a novel by Beatrice Harraden. They further announce 'Newton Booth of California: His Speeches and Addresses,' edited by Lauren E. Crane; 'Primary Elections; A Study of Methods for Improving the Basis of Party Organization,' by Daniel S. Remsen; and 'The Evolution of Woman: An Inquiry into the Dogma of her Inferiority to Man,' by Mrs. Eliza Burt Gamble.

'James Gilmour and His Boys,' by Richard Lovett, M.A., author of 'James Gilmour of Mongolia: His Letters, Diaries, etc.,' will soon be issued by the Fleming H. Revell Co. It is composed principally of letters from Gilmour to his two young sons while they were at school in England. Many of the letters are to be given in facsimile, and the whole will constitute a quaint and very touching work.

'Marcella' is the title of Mrs. Humphry Ward's forthcoming novel, to be issued by Macmillan & Co., who have also in press 'A Course in Experimental Psychology,' by Prof. J. McKeen Cattell of Columbia College.

Prof. Charles W. Shields of Princeton has written and read publicly on several occasions an essay on the four articles of church unity proposed by the American House of Bishops and the Lambeth Conference. The Scribners will issue it under the title of 'The Historic Episcopate.'

Any one who desires copies, in good print, of Magna Charta, the Declaration of Independence, and the Mecklenburg Resolves, may be recommended to procure the handsome volume, 'The Sons of the American Revolution: New York State Society, 1893-94,' prepared by Edward Hagaman Hall, historian and registrar of that society. He will find, thrown in, a roll of the members, with brief biographical sketches, sometimes of decided interest, accompanied by portraits, views, and facsimiles in many styles of art. There is an index to the Revolutionary ancestors mentioned, but no conspectus of the membership.

At the instance of Dr. Wm. Seward Webb, the correspondence and journals of his grandfather, Samuel Blachley Webb, an officer and prisoner of the Revolution, have been collected and edited by Worthington C. Ford, in three volumes, royal octavo. Col. Webb's part in the first exchange of prisoners as well as in the subsequent negotiations for a general exchange gives prominence and importance to this subject, while the value of his correspondence is attested by his connection with Silas Deane, Gen. Putnam, and Washington. The work is rich in portrait illustrations of a high grade. One hundred of the 350 sets printed are offered for sale to the public through Charles H. Burnett, 51 E. 44th St., N. Y.

One has often to observe a sensuous motive in the publications by bibliophiles, singly or associated, for bibliophiles, both in France and out of it; and this motive is suggested by the new-old edition of D. G. Rossetti's 'House of Life' which the young firm of Copeland & Day, Boston, bring out in a very handsome manner, and, as they say, "in its [1870] innocence and perfection." For various reasons, however, these sonnets and lyrics may be prized and enjoyed, and we do not say they are not worthy of so much typographic painstaking. The full-faced letter may be read without glasses, and harmonizes well with the floreated initials; but the affectation of giving no indention to overlapping lines makes an impediment to understanding and remembrance, of the sonnets particularly. The printer's colophon is an excellent device, and the publishers' mark is also to be praised as a design and for its use; but had it been reduced in scale we think we should have liked it better.

'The Centenary of Louisville' is the eighth of the luxurious quarto publications of the Filson Club of that city (Cincinnati: Robert Clarke & Co.). This historical essay by the president, Mr. Reuben T. Durrett, was read in 1880 before the Southern Historical Association, but was printed only in an abbreviated form. It is now expanded with notes and appendices, and forms a starting-point for the municipal history. There are portraits of the author, of La Salle, and of Gen. George Rogers Clark, the founder of the city. Mr. Durrett argues in favor of the year 1669 as the date of La Salle's visit to the Falls of the Ohio, but with a convenient assumption of low water and high water to suit the hypothesis; and he very positively assigns by conjecture to La Salle the famous iron hatchet unearthed at Shippingport in 1808 beneath the trunk of a sycamore tree, whose rings he diminishes in number in order to settle in his way the antiquarian dispute over the provenance of the tool.

The thin volume, 'Bills of Mortality, 1810–1849, City of Boston,' issued towards the close of last year from the Registry Department, is chiefly important as making accessible the mortuary records for the period in question originally published as official broadsides and then copied into the daily press. The main interest, however, lies in the reprint of Lemuel Shattuck's 'Essay on the Vital Statistics of Boston from 1810 to 1841,' which Mr. Whitmore, the Registrar, has wisely prefixed to the burial tables. This essay may still be read with profit; its historical scope in the matters of growth of population and epidemic diseases embraces early colonial days. The chapters on white and colored mortality, on the preponderance of females, on still-births, on infant mortality, on the effect of seasons on mortality, and seriatim on the causes of death, are curious and valuable in the light of the present day. Scarlet fever was first intro-

duced into Boston in 1735, and in that and the following year 4,000 persons were sick with it, and one in thirty-five died. In 1792 Boston had about 18,000 inhabitants, of whom 10,655 were supposed to have had the smallpox when that scourge reappeared. All the rest took it except 262 who got out of town, and 221 who proved not susceptible to it.

The lectures and papers which form the subject of the volume entitled 'The Inventions, Researches, and Writings of Nikola Tesla,' by Thomas C. Martin (New York: the *Electrical Engineer*), represent the work of a young Servian electrical engineer now well known in this country as well as in Europe. Mr. Martin has played the part of a Boswell to the author, and is by no means behind his prototype in admiration for his subject. The work consists of four parts—on polyphase currents; Tesla effects with high-frequency and high-potential currents; miscellaneous inventions and writings; early phase motors and the Tesla oscillators. The second part, on currents of high frequency and high potential, is the one which has chiefly attracted public attention, and which seems to promise most for the future. The other parts relate mainly to motors of the kind known as alternators. While the work contains much that is original and suggestive, there is a general want of completeness about results. The experiments on currents of high frequency and potential were interesting and brilliant, but, so far as we can discover, have up to the present time led to nothing. The other papers are mostly made up of suggestions more or less ingenious, but, we believe, leading as yet to nothing definite. In the case of any scientific invention we need descriptions of apparatus actually constructed and used, and we want perfectly definite and reliable statements about the results obtained. We do not find them in the work before us, or at least to any but a small extent. Meantime, it is only fair to Mr. Tesla to say that much is expected from him, and that his own statements about his work are modest and unassuming.

Nearly fourteen years ago we noticed the second volume of Dr. Friedrich Ratzel's 'Die Vereinigten Staaten von Nord-Amerika,' a laborious and on the whole important work for the information of the author's countrymen. This second part, which he then entitled "Culturgeographie, unter besonderer Berücksichtichung der wirthschaftlichen Verhältnisse," he has worked over very thoroughly in the light of the last census, and now more curtly styles it "Politische und Wirthschafts-Geographie" (Munich: R. Oldenbourg). The scheme is substantially unchanged, but the strictly geographical section has been greatly developed, and under Population our negro problem has been distinctly set forth, especially in view of Mr. Bryce's having left it on one side, thus making, says Prof. Ratzel, "the impression not so much of a breach in his edifice as the absence of an entire wall." The author's good will to this country continues to be manifested, and American women will be gratified by what he has to say of their good looks, amiability, and ambition for culture, and the knightly courtesy shown to them by the other sex. He acknowledges assistance from many prominent American scholars and officials, and gives evidence of having followed closely the periodic press of the United States, if not always with a native's discrimination among his authorities. In addition to a few charts in the text (in Roman characters, by the way), there is a colored map of the United States ingeniously contrived to exhibit a variety of the larger factors in our civilization. And to the two fold praise of a German be it said that there is an index as well as a table of contents.

The annual report of the Geological Survey of Canada for 1890–91, recently issued under the direction of Dr. Selwyn, consists of two heavy volumes with a package of maps. Explorations in the interior of the vast Canadian territory occupy a large number of pages, to which students of that little-known country should turn. The subject of perhaps the most general interest to geologists in this country is the account of the superposition of the Trenton limestone on the smooth surface of the Laurentian gneiss. An excellent photographic plate illustrates this remarkable memorial of an ancient land surface submerged beneath a hardly less ancient limestone-making sea. The report for 1888–89 may be referred to as containing a graphic description of the breaking up of the ice on one of the northward flowing rivers, the Liard, whose headwaters feel the influence of advancing spring while winter still lingers further down its course.

'Certain Climatic Features of the Two Dakotas' is the title of a large monographic report by Lieut. J. P. Finley of the Weather Bureau, called for by a resolution of Senator Pettigrew in 1892. Although prepared in the same year, its imprint is 1893. It is chiefly concerned with the droughts from which the Dakotan farmers have already suffered severely; the loss thus caused in 1887 and 1888 being estimated at $25,000,000 a year. The conclusion reached is, that while deficiency of precipitation is the first cause of droughts, the activity of the hot southerly winds, by which the ground is dried up, is an important second cause. Wind-breaks of trees are therefore recommended, and extensive irrigation is regarded as essential. It is implied that the forests on the Black Hills influence the precipitation there, although no demonstration of this very doubtful conclusion is offered. Tree-planting in the Dakotas must, however, be very useful in checking the winds close to the ground and thus diminishing evaporation.

The topographical survey of Connecticut, executed under the joint control of the U. S. Geological Survey and a local State commission, includes some thirty contoured sheets on a scale of about one mile to an inch (1:62,500). Another map of the whole State on two large sheets on a scale of about two miles to an inch (1:125,000) has just been prepared by the Geological Survey, with contours for every hundred feet of height. Although not on the same scale or in the same style as the reduced maps of New Jersey, Massachusetts, and Rhode Island, this two-sheet map of Connecticut makes a worthy member of the State-map series. It is printed in three colors: contours in brown, water in blue, and roads, boundaries, and names in black. The double-lining of the roads on a map of this scale does not seem desirable, as it gives them an undue prominence. Single black lines would be as easily understood, and would distract the eye less from the physical features expressed by the brown-contour lines and the blue streams, which certainly deserve the first emphasis in a topographical map.

Mr. Wm. Morris Davis, Professor of Physical Geography in Harvard University, is lecturing to the teachers of Rhode Island on the fundamental principles of this subject, drawing his illustrations from the State map, or from countries whose natural features are similar to those of Rhode Island or contrasting with them, etc.—instruction which must certainly make itself felt beneficially in the teaching of geography in the public schools.

The opening article of *Petermann's Mitteilungen* for November is taken from a Russian official report upon the distribution of amber throughout the empire. From the accompanying map this deposit appears to be chiefly confined to a belt of country running northwest and southeast not far from the western frontier, though it is also found in the Caucasus, in Siberia, and at several places on the shores of the White Sea and Arctic Ocean. There are continuations of the accounts of the lakes of Celebes and the pampas of Argentina, together with a notice of Sir Thomas Elder's Australian exploring expedition of 1891-92, with a map. The December number contains an article on the distribution of the extremes of heat over the globe, with three charts showing the lines of equal maximum and minimum temperature and the mean absolute variations. There is also an interesting account of observations made in the ice-cave of Szilicze in Hungary, with a reasonable and simple explanation of its peculiar phenomena.

The London *Times* publishes a very suggestive paper read before the Colonial Institute by Miss Flora L. Shaw on the Australian outlook. The editorial comment upon it discloses the fact that this lady was the writer of the remarkable series of letters to the *Times* from the Cape and from Australia which have been published separately and have been favorably noticed in these columns. They were characterized by great descriptive power, clear statement of facts, and intelligent grasp of the subjects treated, whether political or industrial. The same qualities are displayed in this paper, in which Miss Shaw emphasizes the fact that there are two Australias—the temperate and the tropical—each with life, commerce, labor, and hence politics, cast in a different mould. In an interesting passage upon the fruit and wine industry of the south, she says that one of the most striking movements that are to be observed is the "tendency to place upon the land a higher class of intelligence than has ever before been associated with agricultural pursuits"; while in regard to the sugar plantations of the north she does not hesitate to say "that in no country which I have yet visited in any quarter of the globe is the manual laborer so well provided for, so liberally paid, or so carefully safeguarded from oppression, as the South Sea Islander employed in Queensland." The great needs of both sections of the continent are population to develop its marvellous agricultural and mineral wealth, and more and closer channels of communication between the separate colonies themselves as well as with the mother country.

From the table in the *Publishers' Circular* of the English publications for the past year it appears that there was a slight increase over the numbers for the previous year. The various classes of books are, however, not represented in a similar manner. There was a marked falling off, for instance, in theological works, novels, works on political and social economy, the arts, education and medicine. In juveniles there was an extraordinary increase as well as in miscellaneous works, while travels, history, and poetry show but slight relative changes.

—Senatorial courtesy is receiving an extension in many directions. There have just been issued as Senate Misc. Doc. No. 14 two addresses by Hon. James W. Savage (not a member of Congress), on Nebraskan history, delivered before the Nebraska Historical Society in 1880

and 1885. An examination of these addresses fails to show any good reason why the United States Senate should print them, and, in point of time, something fresher might have been obtained if the Senate is going into the business of printing historical addresses of purely local interest. This issue was made on a resolution introduced by Senator Manderson, on December 11, 1893, that "the usual number of the pamphlets," etc., be printed "for the use of the Senate." The issue is certainly unusual, and introduces a practice that should be condemned from the start. Another questionable use of the franking privilege is making the wrapper serve to advertise political doctrine. The law provides that the words "Part of *Cong. Record*" be used on the wrapper of Congressional speeches; but what can be said of this?

PUBLIC DOCUMENT.

United States Senate.

Part of Cong. Record.

Maintenance of the Protective System Necessary to Secure National and Individual Prosperity.

Speech of
HON. J. N. DOLPH.
In the Senate, Dec. 18, 1893.

FREE.

Some enterprising tradesman may use the space for advertising his own wares.

—Time, according to the latest (ninth) published report (1891-'92) of the United States Civil-Service Commission, has brought about a decided increase in the chances for women who wish to enter the public service. The civil-service law practically went into effect in 1883; the report for 1884 stated that while the "law" made no distinction on account of sex, the "appointing power" had thus far used its discretion in the selection from the list of eligibles of less than one-sixth as many women as men, although a larger proportion of female than male competitors passed. During the fiscal year 1890-'91, 147 women were appointed to the classified departmental service (exclusive of 122 printer's assistants in the Bureau of Printing and Engraving); during the same period 776 men were appointed, or a proportion of women to men of somewhat less than 1 to 5. In the year 1891-'92 (the period covered by the present report) the number of women appointed in corresponding departments was 86, and of men 245, showing a proportion of women to men of a little more than 1 in 3, a very decided gain for women. While the Commission naïvely expresses itself as unable to account for this change of animus on the part of the appointing powers, it comments on the fact as one of general interest, and suggests that it "probably shows that the prejudice which has heretofore existed to some extent against the appointment of women to the classified service is gradually disappearing." When, however, the lists and tables of promotions are scrutinized, we feel that the mystery is partly explained. By executive order, December, 1891, promotions were put on the basis of the efficiency records kept in the departments and the close competitive tests which have supplemented these records; these "show that when women in the public service have a fair and even chance with the men they win their full share of the more lucrative and responsible positions; . . . it has been noticed that this is especially true with reference to those who have come into the service through the competitive examinations of the Commission."

—That the extension of the merit system is the main explanation of the remarkable increase in the number of women appointed and promoted in the classified civil service is disclosed by the elaborate tables incorporated in this report. At the civil-service examinations throughout the country a higher general average of marks is secured by women than by men, except in the more difficult technical examinations, where as a rule women do not compete—"when they do, the showing is decidedly in favor of the men." The earlier reports of the Commission did not always indicate the sex of competitors, but a table has been prepared which gives the ratio of women to the whole number examined, as well as their ratio to the whole number who passed the examinations for different branches of the service, from January, 1886, to June 30, 1892. We find that whereas the women were only 12 per cent. of the number examined, over 77 per cent. of women passed as against some 60 per cent. of the men. The men's record is improved, however (the general proportion being raised to 62 per cent.), if we add the examinations for the railway mail service, for which women are ineligible. About 69 per cent. pass of those who are examined for this branch of the postal service, not classified until 1889, and whose record since then may be cited as a typical instance of the value of reform. Indeed, within a few weeks the chairman of the Commission has stated to the President that the classification of the railway mail service "acted like magic in putting a nearly complete stop to changes for partisan reasons," and secured for 1893 "the complete absence of the unseemly exhibitions which accompanied the wholesale removal of railway mail clerks in 1889."

—It seems not inappropriate to mention in connection with these gains for women corresponding recognition of the rights of negro citizens, which the report also enumerates. Previous to the Harrison Administration there had never been a colored woman employed as a printer's assistant in the Bureau of Engraving and Printing; the first one was certified in February, 1890. Up to 1889 there was but one colored clerk in the Treasury Department. Since that time there have come into the Auditor's Department five colored clerks and a colored chief clerk, with a salary of $2,000. Of these, four have been promoted in grade and salary since first appointed. The Treasury has also two negro immigrant inspectors and a chief of division. In the Interior Department the Recorder of the General Land Office is a colored man at a salary of $2,000. There were employed at the end of 1892 in the executive departments and other branches of the Government service in Washington 2,393 colored people, whose annual salaries aggregated $1,370,623.98. Apparently merit has become an "open sesame" to two classes of citizens alike—those politically or socially disqualified by sex or by color.

—Miss Margaret Lee of St. Hugh's Hall, Oxford, has done a real service to students of the English drama by editing "Narcissus" (London: D. Nutt). The play, a burlesque of the story in Ovid's 'Metamorphoses,' was acted at St. John's College, Oxford, in 1602, as a Twelfth Night merriment, and is preserved in a single manuscript in the Bodleian Library. Though destitute of literary merit, "Narcissus" is in several respects a valuable document. It will probably attract most attention for its curious resemblance in one respect to Shakspere's burlesque "Pyramus and Thisbe": the well (*i. e.*, spring) in which Narcissus saw his fatally beautiful face is introduced as a *dramatis persona*. "Enter one with a bucket and boughs and grass," is the stage direction, and then the *Well* speaks, ending with:

> "And thus, lest you should have mistook it,
> The truth of all I to you tell:
> Suppose you the well has a bucket,
> And so the bucket stands for the well;
> And 'tis, lest you should count me for a sot O,
> A very pretty figure called *pars pro toto*."

Miss Lee has done her editorial work pretty well. The notes are disappointing. The introduction is better, but contains one curious oversight: the epigrams of which Miss Lee gives a specimen, and which she seems to think inedited, have long been in print.

—Some months ago a German tribunal in a provincial town sentenced a man to several months' imprisonment for lese-majesty, because he kept his seat while the Emperor's health was drunk. Recently a similar prosecution occurred in another town, but the accused was acquitted, the judge deciding that keeping one's seat under such circumstances could not be regarded in the eye of the law as an insult to his Majesty, unless words were used clearly implying an injurious intent. This view would doubtless be endorsed by the great majority of judicial authorities in Germany; but the number of judges willing to interpret the law in subserviency to the supposed wishes of an arrogant monarch is large enough seriously to imperil personal liberty. In Prussia "there's such divinity doth hedge a king" that even the brute beasts in his service must not be lightly spoken of. The captain of a battery stationed in Berlin recently condemned an artillerist to several hours of extra drill daily as a punishment for "Beschimpfung eines königlichen Dienstpferdes" (insulting a horse in the royal service) by calling the noble animal a "pig." Nothing is more common in the German army than for a subaltern to address a common soldier as a sloth, a hyena, or a rhinoceros, but we are not aware that this vituperative confusion of species has ever been punished or even reprimanded by a superior officer. It is not easy to conceive why "a horse in the royal service" should be supposed to be endowed with a more delicate sense of honor than a man in the royal service, unless it be that the former is the actual property of the king.

SYMONDS'S ART ESSAYS.

Essays, Speculative and Suggestive. By John Addington Symonds. New edition, in one volume. London: Chapman & Hall; New York: Charles Scribner's Sons. 1893.

Some of the essays in this volume which deal with plastic art are of peculiar interest to the belated reviewer, in that they are devoted to the extended setting forth of a doctrine more than once upheld in these columns and the only true doctrine, as we believe, of the relation of art to nature. This doctrine we have nowhere seen so elaborately stated or so carefully argued as in these essays, and we shall therefore devote the greater part of this review to an analysis of this argument and a statement of our points of agreement and disagreement with it, giving but a brief outline of the other contents of the volume.

The initial essay, on "The Philosophy of Evolution," aims to show how the evolutionary doctrine may aid man to reattain the religious spirit by showing him his brotherhood with nature, and inculcates a modernized pantheism.

Then follow essays "On the Application of Evolutionary Principles to Art and Literature" and "On Some Principles of Criticism," which preach a modified Taineism, allowing more place for the judgment of good or bad in art than does Taine; and these again are followed by the group of essays we intend to consider at greater length. Then come "Notes on Style," which are taken up almost entirely with literary style, and which are rendered difficult of appreciation to the average reader by the fact that they are based on long, untranslated quotations in half-a-dozen languages; "Democratic Art," which deals mainly with Walt Whitman, for whom, it is known, Mr. Symonds cherished a somewhat incomprehensible admiration; "Landscape" and "Nature Myths and Allegories," in which our author's pantheism crops out again; two criticisms of Matthew Arnold's and Walter Pater's critical doctrines; "The Pathos of the Rose in Poetry," and "A Comparison of Elizabethan with Victorian Poetry." There is much of interest in all of these, much that is really "suggestive," but we shall be obliged to pass them by with this slight mention. The group of essays which we shall dwell upon comprises those on "The Provinces of the Several Arts," on "The Relation of Art to Science and Morality," on "Realism and Idealism" and "The Model," on "Beauty, Composition, Expression, Characterization," and on "Caricature, the Fantastic, the Grotesque"; and it is especially with the third and fourth that we shall have to deal.

The first two of this group of essays deal with well-worn ideas, and are sound expositions of uncontested truths. That each of the arts has its own methods of expression and its own proper content, and should not be expected to express other truths or other emotions than those which are proper to it; and that art in general has a place apart from science and morality while it yet cannot escape quite from either, and must, as an expression of man's spirit, say something to man's intellectual and moral nature as well as to his senses—this is their burden. Our only objection to Mr. Symonds's treatment here is that he does not sufficiently distinguish between the ostensible "subject" of a work of art and its true theme or motive, and assumes them to be one. This is not necessarily the case, and is often the reverse of true, and this is why the believers in art for art's sake and the believers in a meaning to be expressed in the language of art misunderstand each other so constantly. Art is a language, say these, and mere beauty of expression is not enough—you must have something to say. Assuredly. The form is all-important, say those, and we care nothing for the subject. And they too are right. For the real meaning of the artist, his true motive, can be expressed in no other language than his own. How Titian painted is the only question of importance about him, because what he felt before a beautiful nude body is inherent in his method of expression and is his message which cannot be translated. "Mere technique" cannot exist, for technique is expression, and the artist's soul is in his handling and not in the catalogue label of his picture. The form is all-important because "the style is the man," and Michelangelo interests us more than "The Creation of Adam." Even in literature the case is different only because the medium of expression, language, is the vehicle of thought for all of us and seems almost thought itself. In so far as writing is art, it is style that makes it so. We know a poet's thought only by its expression, and criticism of art is technical criticism, or it is nothing.

But the misunderstanding between the advocates of manner and the advocates of substance is nothing to the misunderstanding between the realist and the idealist, and both are based on distinctions without differences. That all art is both realistic and idealistic, and that the greatest art is that art which combines in the highest degree the utmost realistic power with the utmost idealistic feeling, is the doctrine that we have preached, in season and out of season, for many years, and it is this doctrine which Mr. Symonds sets forth in the essays we will now examine.

He confines himself to sculpture and painting, saying that "the principles arrived at will be found applicable in some measure to literature." Music and architecture he puts aside as not falling "within the sphere of these ideas." Sculpture and painting are in their very nature imitative arts, and "proceed by imitation of external objects." Realism, thus, "forms the substratum and indispensable condition of all figurative art." But it would be absurd to suppose that an imitation is the better for being a bad one. Nobody wants a portrait which is not like, or an image of a god "which is not as accurately adequate to the human form in which that godhead . . . might have resided, as knowledge and skill can make it." "The figurative arts, by the law which makes them imitate, are bound at every step of their progress to be realistic." But the artist soon finds absolute realism as impossible as absolute idealism. He cannot draw or paint truly. There is not only the limitation of his material, but the limitation of his personality. "No two men see the same woman or the same tree. Our perceptions are necessarily colored by those qualities which make us percipient and impressible individualities, differing each from his neighbor in a thousand minute particulars." Thus, willy-nilly, an artist is necessarily an idealist, and must show not what *is*, but what he sees and feels. And he soon becomes a conscious idealist, for, as he cannot get absolute truth, he must supply its place. He must convey the sense of life by exaggeration of some sort, for he cannot get motion. He must give the sense of light by some falsehood, for he cannot paint with light itself. Flesh will not pulse with blood upon his canvas, and he must make it more colored than it is in nature—marble will not breathe, and it must be more beautiful in form than reality, or it will not look so lovely. Hence it is that "Realism and Idealism are as inseparable as body and soul in every product of the figurative arts," and that "Idealism in art is the ultimate elaboration of that comparative inaccuracy and that imported subjective quality, both of which distinguish the most literal drawing from a photograph." And then Mr. Symonds hits upon the right example, too, "that perfect synthesis which makes the work of Pheidias exemplary," and quotes from Haydon his account of his first sight of the Elgin marbles and his rapture at discovering "the most heroic style combined with all the essential detail of actual life." These figures are, by general consent, the highest attainment of art, and, as we have said before now in these columns, their eternal example to artists is in their "combination of ideal power with a magnificent realism which is unequalled in any work, earlier or later."

Our only objection to this course of reasoning is that it does not dwell sufficiently upon composition—upon the *pattern-making* side of art. This omission is partly supplied in a later essay, but we do not think that Mr. Symonds ever quite recognizes the importance in art of the instinct which leads the savage to cut crossed lines on his paddle-blade. The instinct for ornamentation is as fundamental in humanity as that of imitation, and its base is love of *order*. Art is form-giving, *ordering*, and arrangement is its essence. It is ordered lines that the savage scratches on his paddle, it is ordered steps that make the dance and ordered sounds the song, and the frescoes of the Sistine are a developed pattern. The imitative instinct and the instinct for order work together from the beginning, and pure imitation might be painting or carving but not art, and pure pattern-making art but not painting or sculpture. Now the pattern-making instinct necessarily modifies natural fact in every smallest detail to make it fit into the preordained scheme of the whole, and supplies the lack of perfect imitation, which is impossible, by giving an obvious completeness and order to what seems the fragmentariness of nature. Here, we think, is the true key to the "ideal" in art. All plastic art is both realistic and idealistic, and the highest art is *both* in the highest degree. When art becomes too exclusively realistic, it ceases to be art and tends to become science. When art ceases to be realistic, it tends to become pure decoration. "Within this limit is relief enough," and between scientific draughtsmanship on the one hand and pure ornament on the other, all the artists of the world have found room to develop their special personality and their special style. But, to quote Mr. Symonds again:

"We might parody the famous saying of Pascal, and declare that the consummate artist must be a *réaliste accompli* and an *idéaliste soumis*. In other words, he must use the truest truth of nature, the most scientific grasp of actual form, in the service of imaginative symbolism. He must at one and the same time obey and control the model, departing at no point from its teaching, but utilizing its character and individuality for the further purpose of expression."

This is the whole gospel of art.

THE DIPLOMATS OF 1777.

B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773–1783. Vol. XVIII. Nos. 1644–1702. London: B. F. Stevens. 1893.

THE fifty-nine papers of vol. xviii. cover only the time between August 9 and September 26, 1777, but these seven weeks were important in the negotiations busily pending between France and England. With a few interesting exceptions, the strictly diplomatic communications go on uninterruptedly, and show an increased spirit of concession by the French ministry, and still bolder requests, almost demands, by the English, who were at this point encouraged by the surrender in July of Ticonderoga. The most important contention, at this juncture, on the part of Stormont, is in regard to the intended departure of 4,000 French troops to the West Indies, accompanied by five or six ships of the line. Mr. Forth, whom Vergennes, in a letter to Noailles (No. 1667), calls a "great debauchee," seems to have made the discovery of this plan, and also to have learned that the orders regarding this movement had been so ill conveyed by Sartine that the King had declared they should be "the last which M. Sartine would have to convey." Vergennes appears to have heard of Stormont's sources of information, for in another letter to Noailles (No. 1646) he intimates that the English ambas-

sador must "ruin his Court in expenditure for spies," since he "gathers up all the petty absurdities which are retailed at the clubs, and perhaps even in the cafés." By August 13 Lord Stormont had worked himself into such a condition that he virtually urged upon Weymouth an "immediate rupture" in order that a seizure might be made of the whole French Newfoundland fishery, which, by a dilatory policy, in a few weeks might find time to escape a sudden move (No. 1649). Nor was Vergennes dead to the fact that suddenness had its advantages, for, in No. 1651, convinced that Stormont wanted war, he impressed upon Noailles that "twenty-four hours are precious in certain situations." A little later, on August 20, Stormont, after insisting upon a complete sifting of the motives which urge the increase of forces in the French West Indies, is at last almost persuaded that the ministry is really pacific.

In No. 1659 Stormont communicates in agreeable French to Vergennes the news of the surrender of Ticonderoga, assuming an interest which the latter "will be good enough to take in our success"—the nearest approach to humor thus far ventured by the serious Englishman. Immediately follows an interview with Maurepas (No. 1662), in which Stormont declares that he has "had declarations enough," and that he wants "no more words, no more promises"; but, nevertheless, as he writes to Weymouth, evidently baffled, he cannot "reduce their conduct to any system," and doubts if Maurepas has "any regular, uniform plan of deceit." He was, however, of the opinion that the French did not desire war, and therein he was probably right, because the significance to the French of the success or of the defeat of the insurgents was far from evident to the ministry, however clear the situation might seem to the King.

Another letter (No. 1663) from Beaumarchais relieves the general depression of the situation. Full of "honest indignation," he speaks of "terrible finance," as well he might at this time.

The dilemma of the French ministry, just referred to, is seen in a letter of Vergennes to Noailles (No. 1666) on Forth's mission. Forth represented only North and Mansfield, and his object was the return of English vessels taken by privateers. Could such return have been made under other circumstances, it was impossible as matters now stood, because, in the event of the Americans and English coming to terms, the French would only gain the enmity of one side, and would win no love from the other. If obliged to make easy terms with their colonies, the English, as Vergennes shows in his next letter to Noailles, would only find a fresh object of national hatred in France and Spain.

What amounts to an ultimatum is at last pressed by Stormont in No. 1670, when he asks of Maurepas an audience with the King. The same day, September 3, he confers with Vergennes, who mentions pointedly, in reply, the Circular Order to the Courts of Admiralty forbidding sale of prizes, and also another order to the Procureur Général of the Admiralty Court to prosecute violations of this Circular Order; he would not make promises, or at least evaded the suggestion by Stormont that he should sequester or deliver English vessels already in port, but he did, however, admit that the strengthening of the forces in the West Indies was done at the desire of the Court of Spain. Pertinent to this last admission are the two cipher despatches (with deciphers) of September 4, from the Marquis d'Ossun, the French ambassador to Spain, in the second of which it is intimated that recent English demands seem to the Spanish Court both minatory and insulting to France (Nos. 1672, 1673).

The most spirited despatch of the volumes is No. 1674, from Stormont to Weymouth, relating a conversation with Vergennes over the increment of the French fleet in the West Indies. When it came to the question of prizes, Vergennes said, or Stormont states that he said, it was his intention to get rid of "ces gens-là, et de chasser cette Vermine."

Forth's mysterious comings and goings—his frequent embarkings at Dieppe or at Brighthelmstone and other movements—are chronicled in the next number (1675) by Noailles, who characterizes him as "very fit to undertake commissions which may be disowned in case of non-success." Vergennes, on his part, writing to Noailles a little later, points out with obvious truth that the forcing an act of complaisance from France would really prove a damage to the prestige of England, and that the retaliatory measure of sending English troops also to the West Indies might be the very thing which France most wanted. To this latter proposition he says, most graciously, that he has no objection: "Every one can do as he likes in his own house!" Noailles in return (No. 1683) offers a delightful bit of French address, in recapitulating to Vergennes the whole attitude of France to England as polite, gracious, and yet ready to be firm. He cites an anecdote of Lord Sandwich, who some years previous had "let drop a very true remark in saying that none but novices could be pardoned for counting on promises given here [the court of London]."

Stormont (No. 1687) drops, for the moment, statecraft and descends to gossip, derived doubtless from spies. Beaumarchais, he hears, has threatened Sartine as being in his power, but is promptly told that if he lets slip such an expression again, he is to be shut up for the rest of his days. Of Franklin, Stormont goes on to say "he can assume any shape, and nothing is so natural to him as artifice and fraud." Remembering the sources of which Stormont did not hesitate to avail himself for information, and contrasting with this Franklin's perfect openness of conduct, however adroit he may have been in keeping perfectly silent when silence was best, we must fairly admit this remark of Stormont to be one more of his rare indulgences in jesting. His irritation may have been excited by news which he repeats in his next (No. 1688), dated September 17, 1777, to the effect that Vergennes has signified to Franklin and Deane that the Court "has now taken its Resolution for War, which Resolution will show itself soon." Stormont's last important despatch to Weymouth (No. 1697), on September 24, reveals much of the secret sources of his information; he speaks of La Fargue as mentioned in his last confidential letter (probably No. 1696, which is "cancelled," is the very letter). Stormont also speaks with seeming certainty of Franklin's and Deane's growing dissatisfaction with France, especially as regards the privateers. Following this is the "Memorial of the American Commissioners to the Count de Vergennes and Count d'Aranda" (No. 1698), an important document and one never before printed. In connection with this "Memorial" the letter of the Comte de Lauraguais (No. 1691) to Vergennes is of value. He tells, in a somewhat confused way, of a supper with Franklin, Deane, and Lee. "When our good wines had somewhat excited the Doctor," Franklin went on to say something not very distinct, but very good-natured, and ended by offering France the English colonies! Deane and Lee, on the other hand, somewhat reproached France for dilatoriness. The tenor of the Count's letter is to show that England really had more interest in getting control of the French West Indies than in conquering America.

Nos. 1658, 60, 68, 77, 85, 86, conclude the papers captured from the *Lexington*, off Ushant, on September 19, 1777, by Lieut. Bazely of the cutter *Alert*, whose official report to the Secretary of the Admiralty forms No. 1695. A docket of the twelve papers taken makes No. 1689 of this volume. The lot, as a whole, is not a rich "take," for the more important documents were all thrown overboard; Nos. 1677 and 1685, however, were letters to Capt. Johnson from the brave but unfortunate Wickes, who was drowned in the *Reprisal*, off the Banks in 1778.

Two letters, Nos. 1665 and 1693, are from Col. Philip Skene, "Burgoyne's evil genius," as he has been called, to the Earl of Dartmouth. As usual he lauds Burgoyne extravagantly.

One of the interesting features of this volume is a letter (No. 1682) from that sourest of men, Alexander Wedderburn, to William Eden. Replying to some strictures on the limited authority accorded to the management of the royal forces in America, Wedderburn says of recent personal news from New York, that "the peculation which is visible there is very outrageous, that the Hospitals are in a shocking condition, that the Howes grow rich, and that they are charged with Procrastination in order to end the war slowly and by Treaty." However, he concludes flippantly, "Tout va au mieux dans ce meilleur des mondes possibles."

There is a variant of a Franklin anecdote in No. 1648. Lenoir, in giving further details of Hodge's arrest, says that Franklin, on hearing that Stormont had circulated a report that the Americans had been beaten with a loss of 4,000 men, remarked, "Truth is one thing, and Stormont another" (*La vérité et le Stormont sont deux*). Parton, who always makes the best of a story, has it: "It is not a truth, it is only a Stormont."

Reality versus Romance in South Central Africa. By James Johnston, M.D. With fifty-one full-page photogravure illustrations from photographs by the author and map. Fleming H. Revell Co. 8vo, pp. 353.

THIS is an attempt to give a truthful picture of South Central Africa as it appeared to one who travelled through it with a special object in view. Dr. Johnston, a Jamaican physician, determined to learn by personal observation whether the negroes of his island could be profitably employed as lay assistants to white missionaries in Africa. With this single motive he crossed the continent from the Portuguese possessions on the west coast by way of the Zambesi River, Mashonaland, and Lake Nyasa, visiting all the Protestant mission stations on his route. His journey of forty-five hundred miles, through regions inhabited by numerous hostile tribes, though marked by no special incident, is deservedly memorable from the fact that he never fired a shot in anger or self-defence, nor lost a carrier by death—a record probably unique in the annals of African travel, and testifying to great tact and patience in dealing with the natives, as well as unremitting care for his men. It is evident that he took his journey with impressions of the extent and success of African missions which personal observation prov-

ed to be false; and at its close he frankly confesses that at present there is no opening for the Jamaicans in the region which he visited.

This failure of his hopes, together with his disillusion in regard to the prosperity of the missions, has doubtless colored his account more than he is aware or possibly intended. He describes the belt of the continent through which he passed as, with a few exceptions, a comparatively barren wilderness, whose fertility has been greatly exaggerated. Its climate is pestilential, and a white man can live in it only by the greatest care. The missions, even the most prosperous, the American in the west and the Scotch in the east, have not got beyond the initial stage of laying the foundations for a permanent work. With righteous indignation he denounces those missionaries and societies who have published flattering reports of impossible successes, or withheld the unpromising truth for fear of "discouraging contributors." In vigorous terms he brands the so-called self-supporting missions, those established on the "faith alone" plan—an idea largely countenanced in this country—as absolutely mad enterprises, foredoomed to failure, and which have already cost many valuable lives. The substantial truth of all this cannot be doubted, especially considering the fact that Dr. Johnston is a devoted supporter of missions, though regarding them with a certain hard-headed Scotch common sense. Still, it should be remembered that the impressions of a mere traveller, however shrewd and observing, are not always the most truthful representations of permanent conditions, and it may very possibly be that the state of Central African missions is more encouraging than it appears to be in these gloomy pages.

A considerable part of the book is taken up with the recital of the ordinary experiences of African travel; and though the author penetrated some unexplored regions, he contributes little to our knowledge of them, their resources, or their inhabitants. An interesting account, however, is given of the chief of the Barotse, a native tribe on the upper Zambesi, a man of more than common intelligence and capacity, who is convinced of the ability of his people "to learn the various arts and become wise like Europeans. He is by no means an idler himself, much of his time being spent in wood-carving, with very primitive tools, turning out bowls and other dishes of wonderful symmetry, and exhibiting exceptional skill and taste." Dr. Johnston prints a remarkable letter which he received from this African king, hotly accusing the British South African Company of some very questionable sharp practice in respect to a treaty which its agent induced him to sign under false pretences.

Dr. Johnston passed through the territory of another tribe whose king, the well-known Khama, he characterizes as "a noble example of what Christianity and civilization can do for the African." Khama's new capital, Palachwe, was suffering at the time of his visit in March, 1892, from an attack of malarial fever, due to its unhealthy situation and to its unsanitary condition resulting from the habits of the natives. In commenting upon this, Dr. Johnston expresses his surprise that the king, who is so strenuous in prohibiting the sale of liquor to his people, should be so indifferent or blind to other dangers to which they are exposed from their manner of life.

"He lives in one round Kaffir hut himself, and his people must aspire no higher; hence we found whole families with grown-up sons and daughters herded together promiscuously in their small round grass and mud hovels. In no instance have we seen the semblance of a partition, not even a bit of calico hung up to divide the sleeping-places, while immorality is more brazen-faced than among the most uncivilized we have met hitherto."

Mashonaland finds but little favor with this writer as a farming country. "No one," he says, "looking out on the dreary wastes we have traversed during the last forty-five days, could hope to earn even a bare living from the arid soil." So desolate is a part of it that he travelled for twenty-three days without seeing more than a single native village. In Salisbury, bankruptcy was "the order of the day," and the deepest discouragement prevailed among the miners. The only thriving business seemed to be the liquor trade, for "out of a hundred wagons now on the road to Salisbury seventy carry an average of two thousand bottles of intoxicating liquor each."

In one respect Dr. Johnston's book surpasses all other accounts of Africa which we have seen, viz., in the remarkable excellence of the numerous photogravure illustrations, from photographs taken by himself, which it contains. They give the best idea of mission stations, native villages, and especially of the natives themselves, which we have ever obtained from pictures. Some of the representations of scenery, as of the Victoria Falls and of Livingstonia on Lake Nyasa, are of great beauty. A good map of south Central Africa adds to the usefulness of this valuable though depressing book, which we commend to the thoughtful attention of all who are interested in African missions.

Sam Houston, and the War of Independence in Texas. By Alfred M. Williams. With Portrait and Maps. Boston: Houghton, Mifflin & Co. 1893.

We can well understand that Mr. Williams has found it no easy task to write a Life of Sam Houston which should fulfil the requirement demanded by Schopenhauer in a biography—that it should be more interesting than the history to which it renders service, and that to this end it should never subordinate the biographical element to the historical. The biographer admits that the limitations of Houston's character must forbid us to reckon him "among the world's great men," yet he acted a foremost part in the dark and bloody drama which has passed into history as the "War of Independence in Texas." If, in the period of pioneer adventure and of internecine feud between Mexican and American on our southwestern border, he had had all the martial qualities of a Siegfried, he as yet stands too near our epoch to have gathered around his brow the nimbus which in the haze of a distant past has settled on the head of the German hero in the Nibelungenlied. Indeed, the elements of character were so crude and so coarsely mixed in Houston that, even when we regard him simply as "a type of his time and circumstances," we find it impossible to fuse those elements into the symmetry of a heroic figure, albeit that he shared with Austin in the "glory" of founding the "Lone Star Empire," and that, at one time, he fed his fancy and pricked his ambition with vast and imperial schemes of a dominion extending from Oregon down the Pacific coast to the Gulf of Mexico, with Texas for the pivot of the "amalgamating" movement. To this coalition the Rocky Mountains were to interpose no barrier. The glory of the United States was to pale before the rival empire on the Pacific. Nothing short of "annexation" could prevent the fateful decree of "Manifest Destiny." In fact, the briefest retrospect of Sam Houston's career will suffice to show that he was much more at home when leading his band of restless and valiant adventurers, who never valued their lives at a pin's fee, than when he dipped into the future with visions of a constructive statesmanship far removed beyond his ken.

Born in Rockbridge County, Va., on the 2d of March, 1793, young Houston received only the slenderest rudiments of education in an "Old Field School." Placed as a clerk in a country store, he soon absconded and identified himself with the Cherokee Indians. Deserting his Indian tribesmen under stress of debt for powder and trinkets, he returned to such "civilization" as was accessible in the Tennessee mountains, and, cutting "a sour-wood stick" as the baton of his pedagogical office, he taught school for a season. When he was only twenty years old, he enlisted as a private in the United States army. He soon rose to the rank of ensign. He took part, under Gen. Jackson, in the battle of To-ho-pe-ka in 1814, and was severely wounded. He was appointed a subagent of the Cherokees in 1817. He resigned this office in dudgeon because of a rebuke received from John C. Calhoun, then Secretary of War, and because of false charges lodged against him by men who were smuggling slaves into Florida, and whose nefarious traffic he had obstructed. He next studied law and was admitted to the bar. In 1823 he was elected to the United States House of Representatives from the Ninth District in Tennessee. In 1826 he fought a duel with Gen. William White on what his biographer calls "a notable duelling-ground by the name of Linkumpinch, just across the Tennessee line"—in Kentucky. In 1827 he was elected Governor of Tennessee. In 1829 he married a Tennessee lady, but she left him three months after the bridal, and returned to her father. The causes of this domestic *esclandre* are not known. To hide his mortification Houston buried himself in the tribal seclusion of his old friends, the Cherokees, among whom he soon took to himself a squaw-wife, "after the Indian fashion." On the occasion of a visit to Washington in 1832, he assaulted the Hon. William Stanberry in the open street for words spoken on the floor of Congress deemed derogatory to his honor as an Indian contractor or agent. Arraigned before the bar of the House for this ruffianly violence, he was released with only "a mild and perfunctory reprimand" by the Speaker, Andrew Stevenson of Virginia. Returning to his clansmen, he opened among them a trading-post, and sank to such a low depth of degradation, from his drinking habits, that he received from them the cognomen of "Big Drunk."

He left the Indians and went to Texas in 1832, at a critical juncture in the history of that Mexican province. Its American settlers were meditating a revolt from the Mexican confederacy. John Quincy Adams, while President of the United States, had aroused Mexican jealousy against the American colonists by proposing to purchase the territory which they were now occupying. Gen. Jackson was known to be still more eager in these designs of annexation. In 1833 the Texan settlers determined to organize the territory into a State and to petition the central Government for a peaceful separation. Hence the beginning of the intestine feud. The first shock of arms took place in 1834. Then followed, in quick succession, the capture of San Antonio, the fall of the Alamo, the massacre of Goliad, and the decisive battle of San Jacinto, by which

Texan independence was secured. Houston was installed as President of the new republic in 1836. He kept watch and ward against Mexican incursion. He pacificated the neighboring Indian tribes. Building again the family altar by marrying a second wife in 1840, he renounced, through her influence, his habits of drinking and swearing. He was reëlected President in 1841. He favored the annexation of Texas to the United States, and adroitly played his cards to this end by dallying with threats of now an English and now a French protectorate.

On the consummation of annexation in 1844, he was naturally chosen, with Gen. Rusk, to represent the State at the national capitol. On entering the Senate, he provided himself, says the biographer, "with a supply of cypress shingles, and filled his waste-basket during the debates with the shavings that curled from under his sharp knife." When he went to church, his shingle and knife helped him to endure the tedium of the sermon. When he took part in the debates of the Senate, it was always on the side of moderation where slavery was concerned. He opposed the repeal of the Missouri Compromise, and defended the New England clergymen who protested against that breach of public faith. He opposed secession, but yielded at last to the torrent which swept him off his feet. He was Governor of Texas at the time the ordinance of secession was passed. Refusing to take the oath of allegiance to the Southern Confederacy, he was deposed from office. President Lincoln offered him the commission of a major-general in the Federal service, but he declined it. Henceforth he was literally "a man without a country," and he could but wait amid the thickening shadows till his change came. He died July 26, 1863, at a time when his dark forebodings of Confederate disaster and overthrow had been confirmed by the fall of Vicksburg.

Passing from the biography of Sam Houston to the history of the "War of Independence in Texas," we may say that it is concisely told by Mr. Williams. The materials he has selected and the authorities he has consulted are ample for the outline sketch which is all that he could undertake in preparing an historical framework for his biographical portrait. We could wish, however, in the interest of literary accuracy, that more attention had been paid to the proof-reading of the volume. Such a leading character in the annals of Texas as David G. Burnet is doomed (by the proof-reader) to have his name spelled now in one way and now in another. A long account of Houston's "conversion," as given by his pastor in Washington, the Rev. G. W. Samson, D.D., is credited to the "Rev. G. W. Simpson," who reappears in the index with still another *alias* for his Christian name. The index at other points is marred by misprints. April 11, 1844, instead of April 17, 1844, is given as the date of the famous "Raleigh letter" which Henry Clay wrote against the annexation of Texas, to the confusion of his Presidential hopes.

Civilization during the Middle Ages, especially in relation to Modern Civilization. By George Burton Adams, Professor of History in Yale University. Charles Scribner's Sons. 1894. 8vo.

HISTORIANS may be roughly divided into two classes—those who laboriously delve into the original sources for the purpose of elucidating exhaustively some special subject, and those who gather together and coördinate the results of others' labor and reproduce as a whole the story of the past. Both classes are necessary and both are deserving of all honor, although the patient toil of the indefatigable seeker after facts is less apt to win popular applause than the work of him who can arrange those facts in a striking whole and illuminate them with brilliant generalizations and captivating theories. Such a book as that which Prof. Adams has laid before us could not be produced by a writer of the former class, for a lifetime would be insufficient to acquire at first hand the details of the history of the inner life of all Europe from the fifth to the fifteenth century. It is not, of course, that the author attempts to present all these details, but an accurate familiarity with them is essential for his object—the presentation of the philosophy of European history, tracing the relations of causes to effects and the interaction of the multifarious factors which have advanced or retarded civilization and determined the fate of nations.

Only wide reading and considerable thought could have enabled Prof. Adams to perform his task. To what extent the thought is original it would be difficult to say, for he is chary of references, and a thorough acquaintance with modern historians, especially the Germans, would be necessary to determine how far he has thought out the problems for himself and how far he has been influenced by his guides. One of the pitfalls in the path of those who work at second hand is that they are apt to be insensibly influenced by the views of those whom they follow and whose statements they have insufficient means of controlling. In general, Prof. Adams seems to have escaped this danger, and to have given a fairly accurate though uneven account of the modifications through which the institutions of Europe passed during the mediæval period. In some instances he has evidently been misled, as when (p. 234) he tells us, of the forgery of the False Decretals, that "its immediate object was to defend the independence of the bishop against the claims of the archbishop"—a view to which a careful study of the documents would scarce have brought him, especially as it was an archbishop, Riculfus of Mainz, who was the sponsor of the forgeries and busied himself with their dissemination. So a personal acquaintance with the records of the period would have preserved him from the error (p. 273) of classing the Manichean Albigenses with the evangelical Waldenses as making a "clearer demand . . . in regard to practical Christianity." It is perhaps not so easy to explain his assigning (p. 269) the close of the crusades to the expedition of St. Louis to Tunis in 1270, and explaining their abandonment by a change in the "feelings and judgments and desires" of the people, so that "the working mind of Europe could no longer be moved." In fact, among the impelling motives of the crusaders he somewhat strangely omits to mention the attractions of the indulgences so lavishly granted. In the terrors of the mediæval eschatology these continued to be eagerly sought for, but they became vulgarized by being peddled everywhere for money, notwithstanding which they could still for nearly two centuries at any time arouse anew the crusading spirit; if it was no longer directed against the infidel, this was because the Holy See found it more profitable to employ it against enemies nearer home. The expedition led in 1396 by Jean sans Peur to destruction at Nicopolis and the repeated crusades directed against the Hussites, in one of which there was an English contingent under Cardinal Beaufort, sufficiently show that Prof. Adams's view of the period and causes of their decline needs correction. Similar modification is required in the exaggerated estimate of the abasement of the papacy consequent on the so-called Captivity of Avignon. It was by no means, as asserted on p. 398, "almost as sudden and final a destruction of the imperial power of the Popes as the ruin of the Hohenstaufen family had been of the imperial position of the German kings." The proceedings at Rense and Frankfort in 1338 which are cited in support of this have no such supreme significance as is here attached to them. But a few years later, the "priests' Emperor," Karl IV., was elected through papal influence and subjected the Empire to the Church more fully than it had ever previously been.

Partly, no doubt, such lapses may be attributed to the dogmatic tone which is almost inevitable in the attempt to compress within four hundred and fifty pages a sketch of the course of civilization in Europe during a thousand years. Yet this dogmatism, customary in a teacher addressing his students, is carried too far in a book intended for the general public. There is throughout an ease in explaining how everything was the necessary result of what preceded it that is sometimes misleading, inasmuch as it ignores the fact that many questions are still *sub judice*, and that many others are of a more complex character than they are here represented. To accept the *ipse dixit* of any one we must feel implicit reliance not only on his learning, but also on the calm sobriety of his judgment, and this reliance is shaken by inconsiderate remarks which sometimes surprise the cautious reader, as when (p. 172) we hear of "men who would be regarded as weak sovereigns even to-day, when, in general, a stupid king or an insane one is as good as any or even better," or when (p. 397) we come across a remarkable statement about "the forces of modern politics which have reduced the papacy to political insignificance"—an insignificance which Bismarck and Caprivi, Carnot and King Humbert have strangely never recognized. It was not without cause that Bismarck pronounced Leo XIII. the ablest statesman in Europe.

Prof. Adams's style is rather negligent, and at times somewhat obscure. There would seem to be loose thinking as well as loose writing in the assertion (p. 289) that "the Portuguese were able to buy in India several times cheaper than the Venetians in Egypt," and in the apparent self-contradiction involved in the observation (p. 279), "The truth is, the various lines of progress are so interwoven, as has already been said, advance in any is so dependent upon advance in all, that it is not possible to say that any one of them, either in theory or in fact, is a necessary condition of the others."

The Last Day of the Carnival. By J. Kostromitin. Translated from the Russian. London: T. Fisher Unwin.

THE fly-leaf of this little volume bears the announcement: "This work is the first of a series, in which the author intends to give, in a literary form, an important account of present social and political life in Russia." From internal evidence, the author would seem to be a Russian who does not live in Russia, and the translation was made by another Russian similarly situated. The English is, at times, of such a sort that one is inclined to suspect that the author must have assumed all the responsibility of the proof-reading and supplied the money for printing, in his eagerness to get po-

litical tracts, in the form of stories which embody his views, before the public. Certainly, neither style, language, nor literary skill is what we should expect in a book for which Mr. Unwin assumed financial and other responsibility. Yet there is a rude power, a considerable talent of description, which will be more agreeable and comprehensible, no doubt, in later works, when the author learns to be less abrupt, to tone down his bald political sermons, or cast them into the narrative, and to tell his story straight through once, instead of making it lap in incoherent lengths without order.

As the title indicates, it is the history of the last day before the austerities of the Russian long fast begin. The scene is laid in a country town, where every one is bored to death with individual and collective stupidity. If we are to believe the writer, gambling, deep potations, and coarse practical jokes are the only known means of relieving the monotony of existence. The picture he draws is distinctly repulsive. The frankness with which the disagreeable details are set forth is responsible for much that seems, at first sight, exaggerated. Setting aside that frankness, we can see, on reflection, that the foundation facts are not very different from those which underlie an idle society in any country, in any town, large or small, where material pleasures alone are pursued with ardor. In this case, we are called upon to make allowances for people who have no library, it is stated—but who are too lazy to send for books or to read them if they had them, we are bound to add; who are debarred from the discussion of revolutionary ideas, but who, evidently, say and do pretty much as they please after all. It is not probable that this book will be popular, or even that it will fulfil its author's intention of instructing the public. One must have lived in Russia, must know the language, and be intimately acquainted with the character and peculiarities of the people and of these foreign Russians, in order to discriminate between the caricature and the truth here, to comprehend the irregular style, and to gather an idea of the author's meaning, except when he is engaged in downright preaching, most inartistically interpolated. But, for such people, the book has no special value, because all the facts, political and social, are already old to them. The rest of the world will find it a puzzling nightmare.

HAVE JUST ISSUED:

A REMARKABLE BOOK.

A SUPERFLUOUS WOMAN.

1 vol., 12mo, extra cloth, $1.00.

Will create as much of a sensation as the "Heavenly Twins."

By MARION HARLAND.

Mr. WAYT'S WIFE'S SISTER.

By MARION HARLAND (Mrs. Mary Virginia Terhune), author of "Common Sense in the Household," etc., etc. 1 vol., 12mo, extra cloth, $1.00.

By W. CLARK RUSSELL.

THE EMIGRANT SHIP.

By W. CLARK RUSSELL, author of "List, ye Landsmen!" "The Romance of a Transport." 1 vol, 12mo, extra cloth, $1 00.

By J. COMPTON RICKETT.

QUICKENING OF CALIBAN.

A Modern story of evolution. By J. COMPTON RICKETT, author of "The Christ that is to Be." 1 vol., 12mo, extra cloth, laid paper, etc , $1.00.

"It deals with some of the more modern theories of evolution, and does this in a thoroughly interesting manner."—*Boston Daily Advertiser.*

"The story is a very strange one, and will doubtless be widely read. There are strong characters in addition to the leading ones, and incidentally the shams of London society and intellectual life are cleverly revealed."—*Boston Times.*

"Brimful of meaning, suggestion, and fine satire."—*London Academy.*

"Since Mr. Grant Allen's well-known study of the Rev. John Creedy, we have scarcely come across so remarkable a book as the present—in which the author of that original and unusual book, 'The Christ that Is to Be,' has given us a second proof of his originality and power."—*The Bookseller (London).*

By WILLIAM H. BEARD.

ACTION IN ART.

With over two hundred and twenty illustrations from the original drawings by the author. 1 vol., 8vo, extra cloth, gilt top, etc., $2.00.

Prof. H. BLÜMNER.

HOME LIFE OF THE ANCIENT GREEKS.

Translated from the German of Prof. H. BLÜMNER by Alice Zimmern. With numerous illustrations. 1 vol., 8vo, extra cloth, etc., $2.00.

By HENRY MORLEY, LL.D.

ENGLISH WRITERS.

An attempt towards a History of English Literature.

Now ready, Vol. X., SHAKESPEARE AND HIS TIME: UNDER ELIZABETH. 1 vol, 12mo. extra cloth, etc., $1.50.

HISTORY OF THE CAMPAIGN

FOR THE

Conquest of Canada

IN 1776,

From the Death of Montgomery to the Retreat of the British Army under Sir Guy Carleton.

By CHARLES HENRY JONES.

1 vol., 8vo, cloth, 234 pages. 8 full-page portraits of Revolutionary Generals. Gilt top, untrimmed edges. Published by Porter & Coates at $3.00. Our price, 75 cents; postage, 17 cents.

Of the military movements on the Northern frontier during the Revolution, much has been written about the campaign of Montgomery in 1775, which terminated in his untimely death on the last day of that year. Much has also been written about the disastrous campaign of Burgoyne in 1777. The same attention has not been paid to the events of the intervening year of 1776, which, though less striking in their effects, were of the greatest importance to the cause. There is not anywhere, so far as we are aware, any detailed account of that long and severe campaign. Its salient features have been noticed by all historians in passing, and some of them have dwelt upon it with more or less minuteness, but we have nowhere been able to find a connected, reliable, and circumstantial narration of all its interesting and often distressing events. Such a history the author has given us in this book.

VOL. LVIII—NO. 1493. THURSDAY, FEBRUARY 8, 189 PRICE 10 CENTS.

Charles Scribner's Sons' Standard New Books

SECOND EDITION NO[illegible]DY.

LIFE AND CORRESPONDENCE OF DEAN STANLEY.

By R. E. PROTHERO.

With the Co-operation of DEAN BRADLEY.

With Portraits and Illustrations.

2 vols., 8vo, $8.00.

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many well nigh indispensable."—*Boston Journal.*

"Should take its place with the great biographies of the world "—*N. Y. World.*

"One of the most profound, scholastic, and brilliant biographies ever written."—*Chicago Daily News.*

"Their biographical interest and value are beyond all praise."—*Pall Mall Gazette.*

"One of the great biographies of the day."—*Chicago Tribune.*

"It presents a great career with desirable fulness, and in a literary form intensely attractive "—*Boston Advertiser.*

"One of the most valuable biographies of late years."—*Philadelphia Telegraph.*

THE PASQUIER MEMOIRS.

Edited by DUC D'AUDIFFRET-PASQUIER. With Portraits. In 3 vols., 8vo. Vol. I. now ready. $2.50.

"Memoirs which promise to be among the most valuable ever published concerning the Napoleonic period. Pasquier's account of the Empire is surely one of the best that any contemporary has left us. It will be found rich in material concerning the imperial régime, and in portraits of Napoleon's family and associates."—*Atlantic Monthly.*

"Pasquier lived through the Revolution, the Consulate, the Empire; he held office under every régime; he became the Chancellor of France; he was intimate with Napoleon and Talleyrand—in short, of all Frenchmen save Talleyrand himself, he was the best equipped to write the history of his time. How well he has done this it is as yet too early to say; but he has done it admirably should the remaining two volumes of the work equal in interest the first, now before us."—*Philadelphia Press.*

PHILOSOPHY OF HISTORY—FRANCE.

By ROBERT FLINT, D.D., LL.D., Professor in the University of Edinburgh, author of "Theism," "Anti-Theistic Theories," etc. 8vo, $4.00.

"The volume makes up a large octavo of 705 pages, and is replete in interest to the philosophical student of history. It is both historical and critical, and it aims to show the rise and progress of reflection and speculation in human developments. It is a valuable and entertaining book. The thoughtful scholar will find the volume a rich mine of thought."—*Chicago Inter Ocean.*

CIVILIZATION DURING THE MIDDLE AGES.

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2.50.

"Prof Adams's work is lucid in plan and style, comprehensive in its survey of the field, and has the additional merit of being highly interesting."—Prof. GEORGE P FISHER.

"This volume, we are confident, will be found one of the notable books of the year just begun. Professor Adams proceeds on the assumption that the facts of history are known. It is with the sequence and philosophy of these facts he deals, and it is here that his work has its great value."—*Boston Daily Advertiser.*

REMBRANDT: HIS LIFE, HIS WORK, AND HIS TIME.

By EMILE MICHEL. Edited by Frederic Wedmore. With more than 320 Photogravures, colored Plates, and text Illustrations. 2 vols., royal 8vo, $15.00.

"Let us say at once that the book is admirable, and, considering what it contains, astonishingly cheap. M. Michel is one of the leading authorities on Rembrandt and his works, and has written a monumental, and, we should think, nearly definitive life. Hardly too much can be said in praise of the illustrations." *The Nation.*

MEN, WOMEN, AND BOOKS.

By AUGUSTINE BIRRELL. 16mo, uniform with "Obiter Dicta." $1.00.

"Augustine Birrell has won for himself an enviable reputation as an essayist, and his new volume will add to it. His pen sketches are wonderfully graphic."—*Boston Advertiser.*

OBITER DICTA SERIES.- **Obiter Dicta,** by AUGUSTINE BIRRELL. First and Second Series, each 16mo, $1.00; **Res Judicatae,** by AUGUSTINE BIRRELL, 16mo, $1.00; **Letters to Dead Authors,** by ANDREW LANG, 16mo, $1.00; **Views and Reviews,** by W. E. HENLEY, 16mo, $1.00; *Just Ready:* **Stelligeri, and Other Essays Concerning America,** by BARRETT WENDELL, 16mo, $1.25.

CHARLES SCRIBNER'S SONS, 743 and 745 Broadway, New York.

ON HISTORICAL PRINCIPLES,

Founded mainly on the materials collected by the Philological Society. Edited by JAMES A. H. MURRAY, B.A. Lond., Hon. M.A. Oxon., LL.D. Edin., D.C.L. Dunelm, etc. With the assistance of many scholars and men of science.

Imperial 4to, half morocco, $13.00. Also ready, Vol. I—A, B. Imperial 4to, half morocco, $13.00.

*** Also still sold in parts as follows: Vol. I, Part I., A—ANT; Part II., ANT—BATTEN; Part III., BATTER—BOZ, *each* $3.25; Part IV., §1, BRA—BYZ, $2.00. Vol. 2 Part IV., § 2. C—CASS, $1.25; Part V., CAST—CLIVY, $3.25; Part VI., CLO—CONSIGNER, $3.25; Part VII., CONSIGNIFICANT—CROUCHING, $3.25; Part VIII., § 1, CROUCHMAS—CZ, $1.00.

Economic Geology of the United States.

WITH BRIEFER MENTION OF FOREIGN MINERAL PRODUCTS

By R. S TARR, B.S, F.G S.A., Assistant Professor of Geology at Cornell University. 8vo, cloth, $4 00.

The Study of the Biology of Ferns by the Collodion Method.

For Advanced and Collegiate Students. By GEORGE F. ATKINSON, Ph B, Associate Professor of Cryptogamic Botany in Cornell University. 8vo, cloth, $2 00.

PROF. J. NORMAN LOCKYER'S NEW AND IMPORTANT WORK.

THE DAWN OF ASTRONOMY:

A STUDY OF THE TEMPLE WORSHIP AND MYTHOLOGY OF THE ANCIENT EGYPTIANS.

With numerous Illustrations and full-page Plates. By J. NORMAN LOCKYER, F.R.S., author of "The Meteoritic Hypothesis," "The Chemistry of the Sun," etc. Royal 8vo. $5.00.

*** In this work the author embodies the result of attempts he has recently made to ascertain "the early astronomical views of the Egyptians by a study of their temples, and the mythology connected with the various cults." Full of striking fact and suggestion in what is a new field of inquiry, it appeals alike to the student of astronomy, archæology, and mythology, as well as to readers taking only a general interest in these subjects.

JUST PUBLISHED.

Electric Waves:

Being Researches on the Propagation of Electric Action with Finite Velocity through Space. By Dr. HEINRICH HERTZ, Professor of Physics in the University of Bonn. Authorized English Translation by D. E. Jones, B.Sc. With a Preface by Lord KELVIN, President of the Royal Society. 8vo, Price, $2.50.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 8, 1894.

The Week.

THE incorporation of the income tax with the tariff bill was unresisted by the Republicans of the House as a body, although the tax encourages discriminating legislation against the very constituencies which are most strongly Republican. Besides being socialistic, the income tax is sectional and meant to hit the people who, as a rule, are the supporters of the Republican party. When the limit of exemption from the tax was made $2,000 in 1870, there was no concealment of the fact that it was a blow aimed at the rich manufacturing classes of the East. The increase of wealth in twenty-four years has made it necessary now to double that sum so as to make sure of being sufficiently tender of the West and South. In 1867, when the tax was collected on all incomes above $1,000, twice as much was paid in a single collection district in New York as in the entire States of Virginia, Texas, Tennessee, South Carolina, North Carolina, Mississippi, Louisiana, Alabama, Georgia, Arkansas, and Florida. In 1869 seven States, Massachusetts, New York, New Jersey, Pennsylvania, Ohio, Illinois, and California, although containing but 40 per cent. of the total wealth and population of the country, paid more than 75 per cent. of the income tax. Of course this disproportion became still greater when the exemption was increased to $2,000. Fixed now at $4,000, the sectional intent of the tax is obvious.

Mr. Cockran's speech against the income tax was filled with effective points, none of which was more searching than his retort on Mr. Bland. That gentleman had defended the tax on the ground that it would relieve the country from the danger of anarchy. "What does that mean," asked Mr. Cockran, "except to relieve the anarchistic elements of the country from the necessity of indulging in anarchy because we outstrip them in the race of socialism?" If Congress will only single out a class offensive to the anarchists and strike them hard enough, then the anarchists will for a time refrain from throwing bombs. But Mr. Bland ought to know that he will speedily have to increase his dose to make it effective. The socialists will never be content with this mere beginning of spoliation of a class, but will demand more and more, with bombs in their pockets all the while. France has been going in for socialistic legislation as a means of checking anarchy, and has succeeded only in bringing the crash on her head all the sooner.

The action of the House committee on banking and currency in tabling the bill to repeal unconditionally the 10 per cent. tax on State-bank notes is a very wise disposition of that subject. It leaves the door open to amendments of the present national banking law, but it is not likely that anything will be done in that direction at present. Congress and the country have been too much agitated by silver and greenback and "seigniorage" heresies to approach the bank question with calmness at this session. Members are prone, whenever anything goes wrong in the world of finance, to lower their heads and rush at the national banks, with the result generally of doing more damage to themselves than to anybody else. This habit will gradually wear itself out and disappear along with the silver craze. Then the bank question may be approached with some hope of a rational solution. The bill introduced by Congressman Warner, who is a member of the banking committee, and who helped to vote down the tax-repeal bill on Friday last, is a compromise measure authorizing State-bank notes under the supervision and direction of the general Government and prescribing various conditions to be enforced by the comptroller of the currency. These conditions are the very least that can be considered admissible, but it appears to us that the bill would leave to the State banks only a name—*vox et præterea nihil*—the real substance being the national-bank system. It is hardly possible that the advocates of real State banks, like Mr. Cox of Tennessee, would accept a system which was only nominally a change from the present system.

Senator Sherman rendered a real service to the cause of good government and sound finance by his speech on the bond issue last week. He showed that the law of 1875 not merely authorized but imperatively required and still requires the secretary of the treasury to sell bonds, if necessary, to maintain specie payments. This point has been argued so often that it ought not to be necessary for anybody to argue it again; but since the secretary's legal powers have been questioned, it was fitting that the foremost Republican Senator, and the one who had most to do with the framing and execution of the law under which the new bonds are to be issued, should speak decisively on the subject. There are not many men in the Senate now who were there when the bond law and the specie-resumption law were passed. It fell to the lot of Mr. Sherman not only to be actively concerned in the passage of these laws, but also to carry them into execution, since, as secretary of the treasury under the Hayes administration, he refunded the old 5-20 bonds at lower rates of interest and accumulated the $100,000,000 gold reserve for resumption purposes. His speech will blow away much of the froth of declamation that has been stirred up since Secretary Carlisle issued his bond circular; but the Senator added a little froth of his own, as is his wont.

This relates to the secretary's power to use any portion of the proceeds of the bonds to meet current expenses of the Government. Upon this point Mr. Sherman gave his opinion with the solemnity of a Roman augur, that no part of the money could be so used. It must be used exclusively for redeeming greenbacks and possibly the Sherman notes of 1890. Everybody in the Senate and out of the Senate knows that the secretary has already used about $30,000,000 of this redemption fund to meet current expenses, and that if he had not done so the Government would have been bankrupt, and might have been put in the hands of a receiver if proceedings in bankruptcy could be instituted against the sovereign power. Such proceedings are, of course, impossible, but that which happens when a Government becomes bankrupt is generally worse than a receivership, because more disorderly. Every enlightened person would, like President Lincoln, take the risk of violating the law in order to save the Government, but in the present case no such thing is necessary. We have shown in former discussions that the law of 1878, which was passed only a few months before specie resumption took place, expressly required the secretary to pay out his greenbacks after redeeming them. That law is still in force. Why do not the sticklers for regularity in both House and Senate repeal this law, instead of making mouths at the secretary? Because making mouths will satisfy the "deestricks," and will not hinder the secretary from using any money in the Treasury to meet any lawful demands on the Treasury. In order to comply with the letter of the law it is only necessary for the secretary to have somebody present greenbacks and Sherman notes of 1890 at the Treasury for gold, and then pay out the greenbacks and notes for current expenses, as the law imperatively requires. Then, of course, everybody will be satisfied, including the Roman augurs.

While our Government is issuing $50,000,000 new Government bonds at an investment rate of 3 per cent. or under, the French Government is engaged in con-

verting an old loan into an issue at a rate approximating ours. The two largest loans of the French Government pay at present 4½ and 3 per cent., the principal of the two issues being respectively $1,356,000,000 and $3,043,000,000. Early this year the cabinet submitted and carried a bill for the conversion of the 4½s into a loan of equal amount at 3½ per cent. The terms of the conversion are interesting, especially in view of our own experiment. Holders were allowed a week—ending January 29—to demand the principal of their 4½ per cents. If not demanded, the principal after February 16 is to bear interest at 3½ per cent. The 4½s have been selling between 104 and 105, and as their redemption would realize only par, nearly all holders have tacitly agreed to the exchange. This is in spite of the fact that a further reduction of interest is possible after an eight-years' interval, and that other bond issues meantime are currently expected. In the face of this conversion the 3 per cent. rentes are selling at 97. In England, by way of contrast, the 2¾ per cent. consols, reducible to 2½ in 1903, bring 98¾ on the market, and the outstanding 2½s 97⅞. The issue last named is redeemable eleven years from date, and hence will afford a fair comparison with our own new issue. Our present extended 2 per cents, on the other hand, bring 95 on the market, which is a price slightly less favorable relatively than that of the British consols. A curious feature of the French conversion, not wholly remote from our own existing problem, is the fact that when the cabinet laid its plan before the Deputies, it was objected that the profits of conversion (about $13,500,000 per annum) would be used to "fill up a hole" in the budget of Government expenditure, and the socialists therefore insisted that these profits should be reserved to abolish a part of the land tax. The Chamber was clearly in favor of this amendment, but it was beaten on the ministry's threat of resignation.

It would be interesting to know what influences were set to work to induce the Kentucky Legislature to pass resolutions instructing their Senators to vote against the confirmation of Wheeler H. Peckham as judge of the Supreme Court, on the ground that he is not a Democrat, or, to quote the language of the resolution, "who cannot establish his devotion to the organization as well as to the cardinal principles of the Democratic party." This was a most unusual step, and from every point of view was a piece of gross impertinence. In the first place, the Legislature of a State has no means of knowing whether such instructions are obeyed or not. Every Senator has taken an oath that he will not divulge what passes in executive session. Consequently, the Legislature can never learn what the effect of its meddlesomeness has been. It can never obtain any official information, and if it ever obtains any privately, such information must come from somebody base enough to violate his oath. It would be interesting to know, furthermore, through what channel the members of this Legislature learned that Mr. Peckham is not a Democrat, and also how they came to conceive that all appointments to the bench should be of the same party as the President. Mr. Harrison appointed one Democrat to the Supreme bench and two Democrats to the Circuit Court of Appeals. What would these Kentuckians have thought if, when Mr. Harrison sent in the name of Howell E. Jackson to succeed Justice Lamar, the Legislature of Ohio had passed resolutions instructing their Senators to vote against his confirmation, because he was not a Republican? So small a transaction on the part of a Northern Legislature is unimaginable—or on the part of a Southern Legislature, we should think, unless it were under the prompting of David B. Hill. We think we know the kind of judge that would suit all politicians of this class. His name is Isaac H. Maynard.

With its usual artless reasoning, the *Tribune* has set itself at work subtracting the present total of stock-market values from the total prior to the panic of 1893, and presents the difference as the measure of "cost of Democratic rule." It cannot be said that this method of striking the political balance-sheet is either novel or original; nevertheless, it will undoubtedly serve as a useful "clincher" to the arguments of those amateur politicians with whom nothing is so convincing as an imposing array of figures, however obtained. It is unfortunate that economists should scorn this simple method of settling the question, because its convenience and value, if once admitted as conclusive, would be inestimable. By similar processes, the cost of Republican rule prior to Mr. Cleveland's first term might readily be calculated by subtracting from market values before the panic of 1884 the values at the darkest hour of that distress, which came a month before Mr. Cleveland's nomination. The "cost" of Republican rule in the seventies could in like manner be tabulated by a comparison of values in July, 1873, with those of November, 1873. Judgment on Lord Salisbury's administration in Great Britain might as surely be passed by a subtraction of market values at the close of 1890 from those before the Baring panic's outbreak. We shall have to confess, however, that the process has its logical difficulties. The tremendous crash in Australian values early in 1893 must be reckoned in, it would seem, with the present "cost of Democratic rule"; which is a new extension of the creed that "the foreigner pays the tax."

One of the best remarks made by Dr. Parkhurst on Monday before the Senate committee which is investigating Tammany, was that "the legal adviser of the committee should be permitted also to hold himself free from the ordinary rules of evidence, and should be permitted to ask questions which will bring out the truth." Mr. Lexow, the chairman of the committee, objected to this, on the ground that "the rules of evidence were founded on reason and experience." This is true, but needs explanation. The English and American common-law rules of evidence are not rules of the human mind, but of our jury system. They have been slowly built up for the benefit of the class of men who form our juries, and the object is to prevent unlettered minds from being bewildered by masses of irrelevant or only slightly relevant testimony, and to keep the issue on trial clearly before them. They are, therefore, entirely unsuited to the kind of investigation the committee is called on to make. This investigation calls for the kind of evidence which the principal of a banking-house would use in ferreting out fraudulent practices among his employees, or the master of a house in getting at proof of any kind of misconduct among his servants; the kind, in short, which is in use in criminal trials all over the Continent, and particularly in the proceedings before a *juge d'instruction* in France. In all these proceedings everybody is encouraged or required to tell all he knows, and not merely as much as rules of evidence will permit, and it is left to the investigator to weigh it and sift it. There is no reason in the world why this system should not be used on the present occasion, as long as the witnesses are guaranteed against criminal prosecution for any of their admissions. If the rules of evidence are enforced, half the time of the committee will be taken up with arguments on questions of admissibility. The discretion of the committee may be safely trusted to deal with the matter satisfactorily.

Equally important is Dr. Parkhurst's remark that the witnesses will not come forward and tell the whole truth if the examination is public. We are not in favor of secret sessions as a rule, but unless some provision is made for occasional secrecy, we fear a great deal of valuable evidence will not be forthcoming. No guarantee against prosecution will secure all the testimony, because, as Dr. Parkhurst remarked, "it is not the law that the witnesses will fear, but the department." What they all shrink from is the petty persecution

which the police and their cronies among the police justices can bring to bear. Those who have taken any part in getting up anti-Tammany movements in this city know well what this persecution is. In the case of small dealers and tradespeople it can be made almost vexatious enough to drive a man out of the precinct.

When the Louisiana Lottery Company failed in its desperate effort to secure a new lease of life from the people of that State, it was supposed that the country would be for ever rid of this evil with the expiration of its charter on the 31st of December, 1893. When it was announced that a new charter had been secured by the company from the Government of Honduras, and that its base of operations would be transferred to Puerto Cortez, it was taken for granted that the United States had seen the last of it, and congratulations over our good fortune mingled with regrets for the curse thus thrust upon Central America. But it appears that the snake is only scotched, and that there is a great deal of life in it yet. The *Florida Citizen*, the new paper recently established at Jacksonville, has discovered the startling fact that the Honduras business was nothing but a blind, that the real headquarters of the concern have been transferred from New Orleans to Port Tampa City, and that agents of the company secretly "got in their work" on the Florida Legislature at the last session by securing certain changes in the State law regarding lotteries which may afford the swindlers a measure of protection.

The *Citizen* calls upon the people of Florida to resist this assault upon their good name and their prosperity. It points out that an enterprise involving such immense capital will not be content to risk its existence under the operation of doubtful and changing laws, and will seek to secure the certainty of immunity. It shows that, unless checked, its pernicious influence will be felt in every part of the State, and affect every political, moral, and social interest of the people. The whole country is, in fact, concerned in this matter. The Louisiana lottery, with its headquarters in New Orleans, was a curse to all of the other States as well as to Louisiana. Its influence will be as demoralizing and pernicious to the whole nation if its removal to Honduras is allowed to be only a blind for a reopening of operations in Port Tampa City. The public opinion of the country must be aroused in support of those Florida citizens who recognize the threatened harm to their State, and a new agitation must be started which shall not end until the lottery has really been driven out of the land.

Mr. W. D. Howells has an article in the last *North American* seeking to prove that we are all plutocrats *in posse* or *in esse*, a proposition concerning which there is much to be said. He praises the English, whom he calls "the inventors of laissez-faire," for various things, and among them for having "recognized the principle that the miners' wages must never go below a certain sum, no matter how low the price of coal may fall." Now the "English public," being a sensible business public, cannot have recognized this "principle" any more than the principle that every man ought to have $2,500 a year. If every miner got the same wages no matter what the price of coal, and the price of coal was so low that it did not pay the working expenses of the mine, of course somebody would have to supply the difference out of his own pocket. Who should he be? If the mine-owner or mine lessee, of course the wretched man's funds would soon be exhausted, and he would have to go to the workhouse. And what a life he would lead before the end came, seeing his capital wasting away, while forbidden by "public opinion" either to discharge the miners or to cut down their wages. We can recall nothing like his fate in history except that of the Roman "Curiales" under the late empire, the unhappy leading citizens who were held responsible for the taxes of their town whether they were able to collect them or not.

Bnt English opinion is not so daft as to demand anything of this kind. What it has strongly called for is some means of conciliation, in case of disputes between the mine-owners and their men, which shall prevent such enormous waste as resulted from the late strike. That strike is supposed to have cost, in lost wages and in the increased price of coal to various industries, $30,000,000, a sum sufficient to have bought out the mines and handed them over to the miners. It is a great pity the miners cannot own them, for they would then get a valuable lesson in political economy, inasmuch as they would find out the connection between the market price of coal and their own wages. The "living wage" theory—that is, the theory that a man is entitled to a certain rate of wages, without regard to the market for his goods—is another expression of the miners' notion about their wages. But it is the stuff of which dreams are made.

The rumor about Mr. Gladstone's resignation in the *Pall Mall Gazette* shows, we fear, that Mr. Astor's young men are introducing American methods into the conduct of his journal. The repetition of the tale after it had been contradicted on Mr. Gladstone's authority, with the addition that it was done with "a full sense of responsibility," is worthy of our best "newspaper men." The responsibility of such a story amounts to nothing whatever. When it turns out to be untrue, people merely say that the *Gazette* has been lying, and the world and the *Gazette* go on as before. We had an illustration of the same sort of journalism here a couple of years ago, when "One Who Knows" printed a most ridiculous composition as Gladstone's home-rule bill in one of our morning papers. He was promptly contradicted and made fun of in London, but he persisted, and challenged the British cabinet to meet him in the journalistic arena and floor him or be floored by him, and he kept up his noise for several days after he had been disposed of. Mr. Gladstone's age of course makes him a good subject of canards, but, barring a sudden breakdown in his health, of which there is no sign, we may be sure nothing would make him resign without ample notice to his colleagues. The political importance of such a step would be very great, and the notion that he would spring it on the cabinet through the columns of the *Pall Mall Gazette* is something to which nobody outside the office of that paper will pay much attention. We are inclined to think that in any event he will not retire before another election, which is looked for next fall. Should the Liberals come back from that with a good majority, he might well sing his *Nunc dimittis*.

One more proof of the fact that the silver question in this country is in the sleep that knows no waking, is furnished by the utter lack of attention to the new silver commission of Germany. This has been appointed by Caprivi to placate the agrarians, whose votes in the Reichstag are indispensable to him, and is to go at the old problem again of seeing if nothing can be done for silver. Caprivi fairly told them that he did not see how anything could be done, but assured them of his best wishes, and gave them their commission. The principle on which he acted is correctly described by Dr. Ludwig Bamberger as follows:

> "Commissions are for difficult problems of legislation what winter trips to the South are for hopeless invalids: the patients are filled with fresh courage, and their worried physician gets a rest."

But Bamberger very severely and justly condemns the German chancellor for giving any further countenance, even indirectly, to the silver delusion. To allow a bargaining for votes to come into the consideration of a question that must be settled on purely financial grounds, is a demoralizing precedent to set. As Bamberger says, Caprivi might just as well give the agrarians a commission to see what could be done for quack medicines. Bamberger's remarks also obviously apply to commissions on "the labor problem."

THE PASSAGE OF THE BILL.

MR. REED began his speech on Thursday by affirming that the Wilson bill had taken a shape agreeable to neither side of the House. The Republicans were not able to damn it, nor the Democrats to support it, as heartily as they would like. This, in his eyes, is a fatal defect. He believes in party measures which will make his opponents yell with rage and drive his adherents into a delirium of enthusiasm. That was the particular charm of the McKinley bill. Without referring to the way in which the political wisdom of the authors of that law was justified by the event, we may set over against the views of the ex-Speaker those of a statesman whom he himself quoted with approval, and the depth of whose political philosophy time and the consent of men have established beyond question. Says Burke:

"In most questions of state there is a middle. There is something else than the mere alternative of absolute destruction or unreformed existence. This is, in my opinion, a rule of profound sense, and ought never to depart from the mind of an honest reformer. I cannot conceive how any man can have brought himself to that pitch of presumption, to consider his country as nothing but *carte blanche*, upon which he may scribble whatever he pleases. A man full of warm, speculative benevolence may wish his society otherwise constituted than he finds it; but a good patriot and a true politician always considers how he shall make the most of the existing materials of his country. A disposition to preserve and an ability to improve, taken together, would be my standard of a statesman. Everything else is vulgar in the conception, perilous in the execution."

We believe that the Wilson bill, as a whole, answers to this description of safe and constructive statesmanship. It has its blemishes in plenty, from the standpoint of a scientific system of taxation, and it has its dangerous experiment, the income tax. But, all in all, considering the terrific obstacles to any reform whatever, considering the swinish outcries of favored classes and the cynical readiness of many Democrats to throw all their pledges to the winds, considering, above all, the high courage required, in the face of the unexampled industrial depression, to go so steadily on with a work which ignorance and desperate partisanship were asserting was itself the cause of distress, it is as good a bill as any reasonable man had a right to expect. Tariff-reformers will take the bitter with the sweet. If the Democratic income tax of 1894 proves as unfair and fruitless in operation as we believe it will, its repeal will be accomplished as easily as was that of the Republican income tax of 1870. Other improvements can be made as needed. The bill faces in the right direction, and further advance can be made when the necessity and safety of it can be shown. It is, in short, just such a moderate and progressive bill as the Republican party would have enthusiastically endorsed in 1884 or 1890, had its blind leaders given it the opportunity.

That one of those leaders at least, ex-Speaker Reed, now sees his mistake, may fairly be inferred from his speech of Thursday. From McKinley's speech in 1890 to Reed's of 1894 is a terrible fall in protection orthodoxy. McKinley was the ignorant and solemn fanatic whose faith knows no wavering. Protection was something supernatural in his eyes. All foreigners were devils. Political economists were traitors. But Mr. Reed is too blasé and cynical for such crudities, even in his speech bidding for the Presidential nomination. Many things that slipped from him on Thursday give color to the common opinion that he really believes in protection as little as Garfield did, and simply makes a clever argument in its favor out of political stress of weather. He admitted that the foreigner does not pay the tax, which is rank heresy. He was conscious that there are two sides to the question, which is dangerous. He gave some of the credit of our industrial expansion to nature and Providence and the wit of man, which is little short of impious. He showed some reading of political economy, which is always perilous. No apparent soundness on the main article of the creed, that by taxing ourselves lavishly all around we shall get rich, can really make up for such lapses from the true McKinley faith.

The votes in the House and in the committee of the whole must have convinced even the Republicans that the bill will pass the Senate substantially as it is, and, moreover, that the new free list has come to stay. The one straw the Republicans wildly clutched at when the McKinley deluge came upon them was the fact that they had made raw sugar free. They truthfully said that the Democrats would never dare to put that tax on again. Sure enough, they dared not, but did dare to make refined sugar also free and to sponge out the bounty, and to put many other articles on the free list which the Republicans themselves dare not hereafter take off. Free wool and coal and iron will prove as popular as free sugar, and as hard to disturb. Sound in these great fundamentals of free raw materials and duties lowered all along the line, the Wilson bill is the beginning of a fiscal revolution which Republicans themselves will soon recognize as inevitable at this stage of our nation's development, and which they will eventually help to complete.

THE HAWAIIAN "FAILURE."

THE debates on the Hawaiian resolutions in the House have added little or nothing to the general understanding of the question. The Democrats have directed their assault at points which the Republicans, as a rule, refuse to defend, but the latter have always fallen back on the retort that, whatever may be said for or against Mr. Cleveland's Hawaiian policy, it has to be confessed to be a ridiculous "failure." This suggests the desirability of summing up what has been actually accomplished by the present administration since it took up the Hawaiian affair where the Harrison administration dropped it, and asking whether the total result amounts to failure or success, not in point of partisan advantage, but of national policy and dignity.

For one thing, the facts developed by Mr. Cleveland's investigations have left Messrs. Harrison and Stevens without party defenders. Neither in the Senate nor in the House does the Republican minority of the committee on foreign affairs propose by resolution to endorse either Stevens or Harrison or the treaty of annexation. Mr. Hitt of the House committee at one time introduced such a resolution, but afterwards saw fit to suppress it and substitute one severely condemning President Cleveland for what he never did. To the latter, it will, of course, be easy to rally the Republican vote, but it would not be to the former. This has excited comment among Republicans. Senator Dolph has expressed his surprise that the Senate committee should so soon run away from its patriotic endorsement of Harrison and annexation a year ago, and now have not a word to say in praise of one or the other. Congressman Van Voorhis plaintively reminded his party colleagues on Monday that they were turning a very cold shoulder on their own President, and truthfully said that Mr. Harrison had the facts before him when he sent the treaty to the Senate, so that to condemn the treaty and the manner of its negotiation was really to condemn the ex-President. But all this has been of no avail, and Gen. Harrison is left to bear the burden of a scandalous treaty, scandalously negotiated, with his party already refusing to help lift it with one of its fingers.

Another result of the Hawaiian agitation has been to put the stamp of insincerity on Republican professions of regard for the poor and ignorant colored men of the South. From the position which the Republican party has virtuously assumed in that matter since the war, it has shamefully retreated when it became a question of poor and ignorant colored majorities in Hawaii. The case was effectively put by Senator Palmer on Monday when "Bill" Chandler was trying to rouse the flagging zeal of the Republicans in behalf of "the 1,500,000 colored voters in the United States," the sanctity of whose rights as a majority he was maintaining it was necessary to protect by a stringent election law. Said Mr. Palmer:

"We have been recently engaged in a discussion of the Hawaiian question. The total population of those Islands is about 90,000. The white American population is less than 2,000, and yet those 2,000 whites own more than 74 per cent. of the entire property

of the Islands, the natives owning but four-fifths of 1 per cent. of it. And the whites have overthrown the government and have proclaimed, or are about to proclaim, a constitution with property qualifications. I have heard one of the leaders of the Republican party in this chamber declare, a few days ago, that those men there who have overthrown the native government were to be compared with the Washingtons, Russells, Sidneys, and other devotees of freedom. This is the view of the party that now claims to be the champion and preserver of the rights of the colored race."

Many other practical results of great moment have been achieved by Mr. Cleveland's "failure." Annexation of Hawaii, or any other islands 2,000 miles from our coasts, has been killed. A majority of the Republican party in Congress could not be brought to vote for it to-day. Senator Sherman takes this safe occasion to say that such colonial acquisitions have no place in our national policy, though, with characteristic spoiling of his good positions, he thinks it might be well for the State of California to take the Islands. The vaunted "imperial policy" has been checked in its very beginnings, and it will not be heard of, aside from the professional frothings of the incurable Jingoes, for years to come. The effect on our diplomatic service, also, cannot but be excellent. It will be long before we shall again see such a vulgar conspirator as Stevens representing our Government in any country. We may have foreign ministers tempted to intrigue and meddle, as Stevens did, in the affairs of other nations, but the terrible fate that has overtaken him will stay their hands. If they do conspire, they will know enough not to announce their purpose in official letters or to give a "tip" in advance to the editor of the *Tribune*.

But, after all, it will be said, the President's plan of undoing the wrong committed in the name of our Government has failed. The provisional government of Hawaii is still in power, and the Queen remains deprived of the throne from which she was pushed by an illegal use of United States forces. But what was the plan that has failed? It was to express our national love of justice and regard for the weak and wronged. Has that failed? Did that depend upon the willingness or the refusal of the provisional government to give up their stolen goods? If anything has failed, it has been the simple purpose of the President to carry out a fundamental principle of Christianity. That, we suppose, is the reason why the religious papers exult so greatly over the "failure." But it is of the nature of a fine and just action that its merit and real success reside in the intention, not in the execution. A brutal and unjust action has no defence but outward success. The Chilian fiasco, for example, was really ridiculous, because an act of aggression, of assault by the strong upon the weak, came to lamentable failure at the very start. Only a bloody and "glorious" war could have excused that bit of international brutality. But international fairness, unselfishness, generosity, justify themselves, and are independent of the result. When the history of this Hawaiian affair comes to be written, after the partisan clamor has died out, it will be seen that Mr. Cleveland struck a fine note of patriotism and of justice. Those who maintain that this was a "failure," because the practical result he immediately aimed at was not brought about, must be prepared also to maintain that there is no moral argument but that of pike and gun, and that, because incarnate Justice came to death on the cross, it was the most stupendous "failure" in history.

A SUGGESTION FOR SOCIALISTS.

We never read any of these lucubrations of our friends the socialists, or "nationalists," without wondering why they do not go to work at once in the formation of communities like the mediæval monasteries, in which they could carry out their own theories. The monasteries owed their foundation largely to that discontent among good men with the moral and industrial condition of the world, in the twelfth and thirteenth centuries, which the socialists and their sympathizers now feel about the condition of the world in the nineteenth century. Competition of the worst kind ruled the earth. The weak and the poor went to the wall. The rich were in possession of nearly all the good things of the world, and were all the time growing richer, the poor poorer. Vast tracts of land had been lying in wilderness ever since the irruptions of the barbarians in the fifth and sixth centuries. The founders of the great orders could bear this no longer. They said to the weak, helpless, and discontented: "Come and live with us. We will dig and delve, and pray, and have everything in common; a sure living for all under the reign of a common law and a pure religion." The poor and weak and helpless went with them, and the great monasteries grew up all over the Continent and England, and flourished until human nature got the better of them.

Now this same resource is open to the socialists. They can found as many communities as they please, in which no man shall be any richer than his neighbors and friends, in which work will be apportioned to capacity and wages to needs, in which the market price of goods shall be of no consequence, in which there shall be neither lawyers, nor pauperism, nor crime, nor prostitution, in which education and libraries shall be gratuitous, and religion shall be "abreast of the times." There are all over the East and West tens of thousands of acres of lands which can be had for a song, and which under careful socialist cultivation could be made to blossom like the rose, and in which streams and coal to provide power for manufactures abound. The great advantages of such communities would be that the members would be of one mind, and full of faith in the experiment. The communities might be of any size, too, without any difficulty of management. None of them would be anything like as large as the State of New York, which the socialists say they could administer without any serious trouble, on communistic principles. In trying to convert the state into a socialist community they are trying to include in their experiment a very large body of stiff-necked and hostile persons, who would have to be forced in by law, and would do their best to make the enterprise a failure. Whenever they try to get hold of all "the instruments of production" for "the state," they are sure to encounter very great moral opposition, even if they do not have to fight for them.

In the socialistic community, on the other hand, the governing body would possess and manage them with the hearty consent of all. By setting up a little state within the state they could have everything their own way. Constant employment would be insured to all workers. There would be short hours, abundant leisure, no panics, and plenty of paper money issued by the community itself for private circulation. They might even have, if so minded, a progressive income tax. Their only connection with the wicked ones outside would be the payment of the taxes on their real estate, and we have no doubt this would gladly be made very light by the Legislature.

If it be said that they do not all wish to go to the country to carry out these experiments, that socialists, like other people, enjoy town life, and want to go to the opera and the theatre and to lectures on ethical culture, we answer that the experiment is equally possible in town. It would be very easy to acquire a large building, or a whole block, in which the new and regenerated society could be started, and in which the services of the best actors and singers could be secured, if the inmates did not choose to go to hear them in the theatres frequented by the monopolists and capitalists. In these establishments every kind of manufacture could be carried on, and every kind of trade practised. If it be asked where the markets for the goods would be found, we answer, within the community itself. There would never be any hard times or slack demand, because the demand would be regulated by the government. The paper money would prevent any currency panics like that of last summer, and nobody would be permitted to retrench. The matter of transportation in the cars and omnibuses would be

hardest to arrange, but this after all is "a mere detail." With a real desire for accommodation, a way out of the difficulty would certainly be found.

Seriously, it is in this direction that all the efforts of socialistic reformers should tend. To win society as at present constituted over to socialism must at best be the work of ages. Socialism on a small scale, which would at once exhibit to the world the virtues of the system, can be had at any time. The faithful have only to come together, pool their money, subdue their passions, and fan their faith, and the thing is done. There must be at best enormous waste of power in trying to convert the unbelievers, in persuading the rich to give up their riches, the fastidious to love promiscuity, the capitalists to surrender their capital, and the men of talent to put their talent in their pockets and live solely for the public. In a community of one way of thinking all this might be saved. Moreover, the believers themselves would in this way be able to find out the weaknesses of their system, if there are any. The "ethical man," for instance, of whose superiority to the "economical man" we have of late been hearing so much, could in such an establishment be placed under observation. At present little or nothing is known about him except what is told us in the socialist writings and lectures. To see him actually working at his trade would, therefore, be a very great advantage. Would he really resist the temptation to take more than his share at the mess? Would he keep the best cuts for himself when carving? Would he work cheerfully all day long beside patent shirks and bummers? Would he enjoy the society of the Crokers and Martins in the winter evenings? Would he carry all his tools with him when he went plumbing and never send the helper for them back to the shop? Would he enjoy making pig iron for the public? Would he cheerfully do his own washing? Would he listen patiently to the public lectures on the folly of growing rich? These are all important questions, and could hardly be answered without actual experiment.

JEFFERSON'S NOTES ON VIRGINIA.—II.

BROOKLYN, January 24, 1894.

AFTER the revision of 1787, which otherwise differs little from the text of 1784, no further revision was printed during Jefferson's lifetime. But in 1797 the truthfulness of his narrative of the death of Logan was questioned by Luther Martin, and Jefferson printed a pamphlet appendix defending his account of that affair. After a careful study of the controversy, it becomes evident that Jefferson's statement, in implicating Cresap, was unfounded in fact, and, had Jefferson confessed his error, he would have acquitted himself of any responsibility, for, as George Rogers Clarke wrote, he merely repeated what was popular rumor of the day "on a subject which I know he was not the Author of." But in subsequent editions the original version is unchanged, and, by Jefferson's suppression of proof against his view, he became truly answerable for the statement. How far this deception was induced by the personal and political antipathy between himself and Martin cannot be decided, but the whole matter was used as political ammunition by both parties, and presumably produced the usual verity that political controversy is famous for.

Yet if Jefferson would not acknowledge his error, it was later made to appear that he did, for his editor, H. A. Washington, in the Congressional edition of his writings, took the liberty of changing the text to please his own view. How far he differed from Jefferson the following extracts will show:

JEFFERSON'S TEXT	EDITOR'S VERSION.
In the spring of the year 1774, a robbery and murder were committed on an inhabitant of the frontier of Virginia, by two Indians of the Shawanee tribe. The neighboring whites, according to their custom, undertook to punish this outrage in a summary way. Col. Cresap, a man infamous for the many murders he had committed on those much-injured people, collected a party and proceeded down the Kanhaway in quest of vengeance. Unfortunately a canoe of women and children, with one man only, was seen, coming from the opposite shore, unarmed, and unsuspecting a hostile attack from the whites. Cresap and his party concealed themselves on the bank of the river, and the moment the canoe reached the shore singled out their objects, and, at one fire, killed every person in it. This happened to be the family of Logan, who had long been distinguished as a friend of the whites.	In the spring of the year 1774, a robbery was committed by some Indians on certain land adventurers on the river Ohio. The whites in that quarter, according to their custom, undertook to punish this outrage in a summary way. Captain Michael Cresap, and a certain Daniel Greathouse, leading on these parties, surprised, at different times, travelling and hunting parties of the Indians, having their women and children with them, and murdered many. Among these were unfortunately the family of Logan, a chief celebrated in peace and war, and long distinguished as the friend of the whites.

Nor is this the only blame to be attached to Washington's text. It is a tissue of typographical errors so serious as to entirely discredit it, as when it prints "recognition" for resignation, "conformable" for conformed, "it should not be deemed homicide" for it should be deemed homicide, "our rulers can have no authority" for our rulers can have authority.

Another text is that printed in the edition of 1853, taken from Jefferson's copy of the edition of 1787, and embodying his MS. corrections and additions. This is naturally an important one, though but little known. Yet even this copy did not contain all the changes of opinion he had undergone. Thus, the original chapter (xix.) on manufactures, commerce, and trade, for which Jefferson has been so severely blamed because of his expressed dislike for them, is unchanged, yet not so was the author's opinion, for, as early as January 4, 1805, he had written to Lithgow:

"I should . . . qualify several expressions in the nineteenth chapter, which have been construed differently from what they were intended. I had under my eye, when writing, the manufactures of the great cities in the old countries, at the present time, with whom the want of food and clothing necessary to sustain life, had begotten a depravity of morals, a dependance and corruption, which renders them an undesirable accession to a country whose morals are sound. My expressions look forward to the time when our own great cities would get into the same state. But they have been quoted as if meant for the present time here. As yet our manufactures are as much at their ease, as independent and moral as our agricultural habits, and they will continue so as long as there are vacant lands for them to resort to; because whenever it shall be attempted by the other classes to reduce them to the minimum of subsistence, they will quit their trades and go laboring the earth. A first question is, whether it is desirable for us to receive at present the dissolute and demoralized handicraftsmen of the old cities of Europe? A second and more difficult one is, when even good handicraftsmen arrive here, is it better for them to set up their trade, or go to the culture of the earth? Whether their labor in their trade is worth more than their labor on the soil, increased by the creative energies of the earth? Had I time to revise that chapter, this question should be discussed, and other views of the subject taken, which are presented by the wonderful changes which have taken place here since 1781, when the Notes on Virginia were written. Perhaps when I retire I may amuse myself with a serious review of this work; at present it is out of the question."

One of the controversies that the 'Notes' involved Jefferson in was his charge that in 1781 it was proposed that the Virginia Assembly should name a dictator. There can be little doubt that this statement was made with the intent of injuring Patrick Henry, who had been prominent in the attempt to impeach Jefferson for incapacity and cowardice in that year, and who had also furthered this project of a dictator. Indeed, in 1798-9, the Jefferson partisans used this in the attempt to crush Henry when he attacked the Virginia Resolutions, and the charge was openly made that Henry had intended to be dictator himself. This led to a denial, from the Henry adherents, that such a suggestion had ever been made, which naturally involved the statement made in the 'Notes.' Jefferson, therefore, sought material with which to bolster his own assertion, and among others obtained a letter from Archibald Stuart, a member of the Legislature in 1781, which has never yet been printed, though a most important historical document. It was as follows:

STAUNTON, Sept. 8, 1818.

DEAR SIR.—I presume you have seen Mr. Wirt's Sketches of the Life of Patrick Henry; and that he denies Mr. H. favored the project of Establishing a Dictator during the revolutionary War. Even doubts respecting events of such recent date tend greatly to impair the credit of History. There are many now living who witnessed the part Mr. Henry took on that subject. After the Assembly was dispersed at Charlottesville in the year 1781 it met in Staunton where Mr. George Nicholas a member of that body, proposed that a Dictator be established in this Commonwealth who should have the power of disposing of the lives and fortunes of the Citizens thereof without being subject to account. In support of this resolution he observed that the Country was overrun by the Enemy and that the Operation of the Govt. was nearly suspended:—That although the powers proposed to be confered were very great the character he proposed to fill the office would remove all apprehensions arising from the abuse of them—That this character was Genl. Washington—That he was our fellow citizen, that we had a right to command his services and that he had no doubt but that on such an Occasion he would obey the call of his country. In the course of his speech he referred to the practice of the Romans on similar occasions. After Mr. Nicholas sat down Mr. Henry addressed the Chair; he observed it was immaterial to him whether the Officer proposed was called a Dictator or a Governor with enlarged powers or by any other name yet surely an officer armed with such powers was necessary to restrain the unbridled fury of a licentious enemy and concluded by seconding the Motion.

"On the other hand it was contended by Mann Page from Spottsylvania and several other Members;—That our affairs were not desperate, That the pressure we felt was but temporary, That the Govt was still efficient,—That the spirit of the people was unbroken, That it was unbecoming in their representatives to damp their ardor by an Act of despair—That they had equal confidence with the mover of the resolution in the Integrity of Genl. Washington, but that he nor no other man ought to be armed with such unlimited powers. That they well know he would not accept the office—That if he was willing to ac-

cept it, he was better at the head of the Army than in the exercise of powers which would render him odious to the people. After a lengthy discussion the proposition was negatived.

"I was present at this discussion and could easily discover that the proposition was not relished by the people. Their feelings were of a different character; had the enemy advanced they would have risen in mass to repel them.

"I communicated these facts to you shortly after they took place.

"I am yours most sincerely
"ARCH: STUART."

PAUL LEICESTER FORD.

EARLY ITALIAN ART AT THE NEW GALLERY.

LONDON, January 6, 1894.

WHEN the managers of the New Gallery undertook to give an annual winter exhibition, they could scarce have realized the difficulties in their way. The Royal Academy long since made good its right to show, every winter, a general collection of old masters; while, from the start, the policy of the New Gallery seems to have been to ignore all contemporary work, save that of a very limited group of English artists. Its January exhibition, then, would be without reason for existence unless it illustrated a special subject or period, unless it represented a prominent man or a particular artistic interest. The resources of the Houses of Tudor, Stuart, and Guelph were speedily exhausted. Mr. Burne-Jones was made the excuse for last year's show, in many ways the most important and timely of the series. This winter the managers have fallen back upon Early Italian Art, certainly not a very novel subject.

Novelty, however, is of small consequence where art is concerned. Both the specialist to whom the tilt of a halo or the length of a finger is of paramount interest, and the student who enjoys a beautiful picture no matter to what artist it is ascribed, can always take delight in much of the work by the early Italians. Moreover, the collection appeals to sculptor and silversmith, to the book-lover and embroiderer as well, since it includes not only paintings, but examples of almost all the arts practised to such good purpose in the Italy of the Middle Ages and the Renaissance. Indeed, the exhibition is, if anything, too wide in scope: it is virtually a small museum, an annex to the National Gallery on the one side, to the South Kensington and British museums on the other, and in nearly every case artists and their work are more fully or more satisfactorily represented in the permanent collections. In the show just opened are few masterpieces of supreme note. But though the nation's treasures attract only the eager tourist and the genuine student, all London flocks to the New Gallery; so true is it, as Mr. Stevenson has said in a very different connection, that, as "long as a thing is an exhibition and you pay to see it, it is nearly certain to amuse."

The pictures, which, necessarily, are the most conspicuous of all the exhibits, represent a long period in Italian art: from 1300 to 1550—from Giotto to Correggio. There are few masters, however, who do not make a worthier showing at the National Gallery, interesting as, here and there, may prove a single example—Botticelli's portrait of Esmeralda Bandinelli, the model for the chief figure in his "Spring," which once belonged to Rossetti, to mention one noteworthy instance. The Primitives, who here occupy two of the large rooms, can never be brought together in numbers without forcing the honest critic to admit their limitations, which their followers to-day would extol as virtues. Besides, as a rule, their pictures were always painted with a definite object. They were meant to fill and ornament a certain space. From altarpiece to altarpiece one turns, wearied by the monotony of gold backgrounds, shining halos, traditional groups and poses; though each, seen in its proper place above the altar and tabernacle, with rows of tall candles flaming in front, might be altogether delightful—a masterpiece, perhaps, which one would travel miles to see. It is the same with pictures designed for household decoration. It was a capital idea to show two beautiful old gilded *cassoni*, with high back, or reredos, just as they stood in palace hall or chamber, since for the ornamentation of luxurious chests just like them were painted so many of the long narrow panels now hanging on the walls. And it is curious to find how the composition, which in ordinary frame seems tedious and bewildering, in its proper place, let in the front or back of a *cassone*, is at once recognized to be altogether right. To look at old work in modern exhibitions is really to misjudge it. It was never intended to stand the test of such surroundings. But now and then one chances upon a painting whose loveliness asserts itself despite every drawback. The catalogue may send one in search of the Giottos and Crivellis, the Lionardos and Raphaels, but the pictures at the New Gallery which charm at the most casual glance, and lose nothing by closer study, are such exquisite litttle impressions of color as Taddeo Gaddi has given in a "Death of the Virgin" and an "Adoration of the Magi," and Masaccio in an "Incident in the Life of St. John Gualbert" and a "Flying Angel"; such fine designs as an unknown artist has produced in a row of "Angels Chanting," or Botticelli (according to the catalogue) in the "Nastagio degli Onesti," a story from the Decameron, by no means typical of his methods, but one of those old combinations of architecture, landscape, and tall slim youths which always prove so eminently decorative. What matter if, in the course of ages, the names of the artists to whom these are attributed have become confused, when the paintings themselves remain to delight? But the strongest work really is in the portraits, which allowed the painters greater freedom than Scriptural and mythological subjects, so long the stock-in-trade of the studios. There is character enough in a strange portrait of a lady with severe white profile and rich brocaded gown, by Pietro della Francesca, or in another, by Beltraffio, of a stately middle-aged woman in rich attire; in both are faces that haunt one afterward. There are some half-dozen more, none of world-wide fame, which are stamped with an individuality and a keenness of observation sought for in vain in the majority of Madonnas and saints.

The number of drawings might, with profit to the student, be far greater. The old men let themselves go in their sketches with a vivacity and vigor too often sacrificed in their finished work, done no less to please their patrons than themselves. The best are contributed from the royal collections, which would be of small use but for these loan exhibitions. Not one but is worthy of special study. Fra Angelico and Botticelli, Signorelli, and Perugino, Lionardo, Raphael and Michelangelo, all are represented; but I think none exceeds in interest the many examples of Lionardo, showing as they do the contrast between his methods when putting in roughly, in chalk, a head or a figure, and when making, in pen and ink and red crayon, more elaborate memoranda of minute details in flowers and foliage. Nor have I ever seen, even in the Sistine Chapel, a composition by Michelangelo more vigorous than a drawing in crayon of men shooting at a mark: the expression of action given in these few inches of paper is tremendous, and the arrangement of muscular outstretched arms wonderfully decorative in its dramatic treatment. The drawing belongs to the Queen.

The section devoted to illuminated manuscripts and printed books reveals the wealth of many of the private libraries in England. There are manuscripts of the twelfth, thirteenth, fourteenth, and fifteenth centuries, the most gorgeous coming from the old Benedictine Abbey of Monte Cassino. And the books begin, in point of age, with some of the publications of Sweynheym and Pannartz while they still ran their printing-press at Subiaco. There are exquisite examples of the Aldine press, among them several very rare editions, notably in Aldus's series of the classics, several of these reminding one that his Greek type was not a whit less beautiful than his Roman. An unusual opportunity is presented to the student of illustrated books, for examples of all the old processes used in illustration have been given a place. The very early folios show illuminated border and initial letters borrowed from the manuscripts, few lovelier than the Bible printed in Rome by Sweynheym and Pannartz. Then there are the very primitive wood-blocks, some reproducing the drawing in bare outline, others, of a later day, venturing upon greater detail, as can be seen in some curious illustrations for a poem by Frederico Fezzi, printed at Florence, and now lent to the exhibition by Mr. Burne-Jones, he evidently being in close sympathy with the artist, whoever the latter may have been. Fortunately several metal engravings used as book illustrations also appear, providing proof unmistakable of the greater freedom and refinement possible for the artist who drew on metal than for the draughtsman who made his drawing on the wood-block and the wood-cutter who tried to follow his lines. Woodcuts printed in color attract now that M. Lepère and other French engravers are making their striking experiments in color-printing. Altogether there is no section of the show more delightful and interesting. Passed by with indifference by the general public, there is still a saving remnant upon whom its attractions are not wholly lost; a remnant presumably growing larger, if one can judge by the unexpected success of the two series of "books about books" published by Messrs. Kegan Paul and Messrs. Bell & Sons.

To attempt to enumerate all the other exhibits would be to make a catalogue. Perhaps most important are the lovely little bronzes, many of them attributed to Donatello and his school. There is a good display also of the old portrait medals, from which Ringel has borrowed inspiration for his medallions, which, in their turn, have influenced so many contemporary sculptors. Small justice is done to Italian embroidery and majolica. Of marbles and terracottas, which were the great glory of the period in question, there are all too few. Jewels, however, are shown in great number, many of them fantastic enough, and the large proportion having but recently found their way to England from the Spitzer collection. Englishmen may reveal incredibly bad taste in the purchase of modern pictures, but the annual loan exhibitions prove the supply of good old work in England to be almost inexhaustible.

N. N.

SABATIER'S ST. FRANCIS OF ASSISI.

PARIS, January 18, 1894.

THE 'Life of Saint Francis of Assisi,' by M. Paul Sabatier, has had five editions already in a short period. In our frivolous time, it is not easy at first to understand the success of a work of hagiography; but M. Sabatier's hagiography is not of the ordinary kind. He is not a Catholic priest, he is a Protestant, and he has applied to the study of Saint Francis the severe method of modern history. He has judged the thirteenth century through our modern ideas, he has perhaps not rid himself enough of these modern ideas. There is some exaggeration in his generalizations, as in these, for instance :

"The great movement of ideas in the thirteenth century is before all a religious movement, which presents a double character: it is popular and it is laic. It proceeds from the entrails of the people, and, with much uncertainty, it aims at nothing less than wresting sacred things from the hands of the clergy. The conservatives of our time who turn towards the thirteenth century as towards the golden age of authoritative faith, make a singular mistake. If it is *par excellence* the century of saints, it is also the century of heretics."

There is some exaggeration also in the affirmation that the mendicant orders formed a sort of Internationalism, stronger than the modern socialist Internationalism. Again, M. Sabatier describes the Gothic cathedrals as the expression and the triumph of communal institutions; he calls them "the lay churches of the thirteenth century, built by the people and for the people, the true communal houses of our old cities—museums, granaries, chambers of commerce, palaces of justice, depots of archives, even 'bourses de travail.'" This expression, "bourse de travail," which is eminently modern, shows that M. Sabatier was not living altogether in the thirteenth century when he wrote his history; fortunately, the historical method, the use of the original documents, has constantly brought him back to the thirteenth century, and has not allowed his imagination or his passion to wander too far from it.

M. Sabatier is right when he says that the saints of the thirteenth century played the part of the old prophets of Israel. They were apostles, like Saint Paul, not in virtue and in consequence of a canonical consecration, but as following the impulse of the spirit. Saint Francis of Assisi was preëminently a saint of this sort; he owed nothing to the Church, and always refused to be ordained a priest. Before entering upon his biography M. Sabatier has a long critical study of the documents which he has used. These are, first, the works of the saint himself, which give, to be sure, very few facts concerning his life, but which give us his ideas exactly. The opuscules of Francis, which are a sort of encyclicals to the Brothers, were not published till 1623 at Antwerp by Wadding. Then come the biographies; the first in date and in importance is that written by Thomas of Celano. There is also a certain number of diplomatic documents, Donations, papal bulls; and finally the numerous chronicles of the order. To the biography of Thomas of Celano we must add also the 'Legend of the Three Companions,' the Brothers who lived on terms of intimacy with Francis, though this legend is only a fragment of the original, which had already been mutilated.

If history has a natural tendency to transform itself into legends even in the case of kings and emperors, how much more must this tendency be marked when the hero is a man like Francis, who deals only with the moral forces of the world. Francis was born at Assisi about 1182. His father, Pietro Bernardone, sold silks and cloths and was a rich man; he travelled much and brought his wares to the great fairs of Italy and France. Francis led a very profligate life in his youth. Thomas of Celano and the three Companions speak discreetly of this part of the life of the saint, but we are led to understand that he acquired a sort of celebrity by his excesses, his prodigalities; he was vain, and tried to surpass all the young men of his age in their vices as well as in their bravery. In a battle fought by Assisi against Perugia he was made prisoner and remained a whole year in captivity. He was twenty-two years old when he returned to his native town, and he recommenced his life of pleasure, spending all his time in debauchery. He finally became ill, and this illness was probably the first step towards his reformation. When his health returned, he left Assisi in order to join at Spoleto a knight who was going to make war in the south of Italy. The evening of his departure, he had a vision which decided him to return to Assisi, notwithstanding the remarks of his companions. He now began to change his mode of life, and wandered constantly in the country round Assisi; he entered into a grotto, where he remained alone for hours weeping, full of horror at the disorders of his youth. One day he invited his friends to a repast, which lasted till the middle of the night. His guests were struck by his melancholy; one of them said: "Don't you see? He is thinking of taking a wife." "Yes," said Francis, with a strange smile, "I am thinking of taking a wife more handsome, more rich, more pure than you can imagine."

No purely ecclesiastical influence had worked on Francis; he was moved simply by remorse as well as by the spectacle of the terrible misery which continual civil wars had inflicted on his country. He was influenced also by the great and mysterious charm of nature, a charm which can nowhere be better felt than in those Umbrian landscapes which have inspired so many great painters. He made a journey to Rome, but Rome did little for him; he was shocked in the basilica of Saint Peter to see how small were the offerings of the pilgrims. He threw all the money he had at the feet of the Prince of the Apostles, exchanged clothes with a beggar, and for a whole day made himself a beggar. His ideal was now formed: it was the total abandonment of all the pleasures and goods of this world. On his return to Assisi, in order to test himself, he became a visitor to the unfortunate lepers, who were living apart. His victory over the flesh was complete.

He could live no longer in his father's house. Bernardone did not understand his transformation, and disapproved of his new style of prodigality, as Francis gave all he had to mendicants. Francis spent most of his time in the little chapel of Saint Damian, near Assisi, on the top of a small hill, amidst pines and cypresses. He had spiritual visions, perhaps hallucinations; he was in the habit of gazing for hours on the crucifix in the chapel. He decided to leave his father's roof, and first set out on horseback for Foligno. There he sold his horse and returned to the chapel of Saint Damian. He hid himself for many days, as his father was looking for him, and came with some neighbors to bring him back home by force. After a while he reappeared at Assisi, in rags, and the children ran after him, screaming, "Crazy man! crazy man!" Bernardone shut him up, and dragged him before an ecclesiastical tribunal. Francis appeared before the bishop; he retired for a moment to another room, and reappeared completely naked, holding his clothes in his arms, with a little money, which he still had. "Hear me all," said he. "I have thus far called Bernardone my father, but now I will serve God. I therefore give back to him this money for which he has tormented me so much, as well as my clothes, which I have received from him, for from this moment I will say only, 'My Father, who art in heaven.'" The bishop had to give Francis a mantle to cover him when he retired. This extraordinary scene, the seriousness, the ardor of Francis, his conversion, could not but produce a great effect in a little place like Assisi.

Francis was now free; he made it his object to restore the chapel of Saint Damian, which was falling into ruin, and afterwards another, the Portiuncula; he became a beggar for God. It is necessary to dwell on this first period of the Franciscan movement; it is the period of inspiration, of enthusiasm, when Francis said to his first disciples what the crucifix in the little chapel of Saint Damian had said to him: "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give. Provide neither gold, nor silver, nor brass in your purses; nor scrip for your journey, neither two coats, neither shoes, nor yet staves." On the little altar of the Portiuncula Francis had abandoned his own self; he had made himself a knight of a new chivalry—the chivalry which was to combat the monster egotism, the chivalry of sacrifice and of universal love, the chivalry of Christ.

After the first years of apostolate, when Francis contented himself with spreading the gospel of charity, and surrounded himself with a few disciples, carried away by his enthusiasm, there came another period of organization. Francis had to deal with the powers of the Church. The first Brothers had no "Rules," but they increased so rapidly in number that it became necessary to establish some regulations. The Bishop of Assisi interfered first; all the clergy were instinctively hostile to the new lay preachers. Francis never thought for a moment of entering into conflict with the Church, he never dreamt of a heresy; he went to Rome after he had established his "Rules," and submitted them to the Pope, Innocent III. These first "Rules" were simplicity itself; they were chiefly constructed out of certain passages of the Gospel. Francis took eleven of his disciples with him to Rome, thinking, perhaps, of the twelve apostles. Giotto, who covered with immortal frescoes the walls of the church of Assisi, chose as one of his subjects the presentation of Francis. The Pope is on his throne and looks with distrust and severity on the pilgrim. Francis was examined and cross-examined; it was difficult, however, not to approve "Rules" which were mere quotations from the Bible. The Pope approved the "Rules," and, after having tried in vain to persuade the new Brothers to enter into an existing order, he allowed them to remain independent, on condition that they should choose a Superior, to whom the ecclesiastical authority would always address itself. Francis was naturally chosen, and thus the new Brotherhood was founded. The lay creation of the first period became an ecclesiastical institution, and, in a certain sense, it can be said that the Franciscan movement was almost immediately transformed.

M. Sabatier gives with many interesting details the story of the life of Francis after his return to Assisi, of the development of the new

order, of the missions of Francis. He always liked to return to the small chapels where he had had his first visions and had felt his own transformation. One of the finest pictures of the modern school is that of Saint Francis carried by the Brethren before Assisi, when he was at the point of death. "He had expressed," says M. Sabatier, "the desire to die near the humble chapel of the Portiuncula, where he had heard the voice of God which consecrated him as an apostle. His companions, with their precious burden, took the path through the plain among the olive trees. From time to time the sick man, who could no longer distinguish anything, asked where he was. When they were half way, in front of the hospital of the Crucigeri, where he had taken care of the lepers, at a point where it is possible to see at a glance all the houses of the city, he asked to be placed sitting towards Assisi, and, lifting his hand, he blessed his native country."

Correspondence.

THE SUPERINTENDENT OF INDIAN SCHOOLS.

To the Editor of The Nation:

Sir: The retention of William T. Harris as Commissioner of Education has been noted with pleasure by the teachers of the country. This will undoubtedly, as it should, have the effect of removing the incumbency of this important position permanently from the influence of partisan considerations. Another appointment has recently been announced which deserves more than a passing notice. This will also receive the general approval of teachers, as well as of all who take a lively interest in educational progress. My reference is to the selection of William N. Hailmann, recently superintendent of the Laporte (Indiana) schools, as superintendent of the Indian schools. I believe the appointment to be an admirable one. Dr. Hailmann is well known as one of the most progressive and philosophical of the professional superintendents of the country. If the Indian schools could be entirely removed from partisan considerations, and directed for a series of years by such a man as Dr. Hailmann, the result would be immensely beneficial to the "wards of the nation." Let us hope that such may be the case. President Cleveland having shown his disregard of partisanship in educational interests by retaining Dr. Harris, is it too much to hope that subsequent administrations, whatever their party affiliations, will apply the same principle to the Indian schools?

W. P. Beckwith,
Superintendent of Schools.

Adams, Mass., January 29, 1894.

THE UNIVERSITY OF ILLINOIS.

To the Editor of The Nation:

Sir: Several times recently (once in the *Nation*) comparisons have been made between the Eastern (privately endowed) universities and those of the West which rest upon legislative appropriations. In none of these instances has the University of Illinois been mentioned. The following statistics will doubtless show that the omission is hardly just. The attendance in 1888 was 327; in 1893 it was 728, 40 per cent. of which increase has occurred within the past two years. The total income from the founding of the university in 1867 to 1890 was $449,000. The last two Legislatures have appropriated $430,000. Within five years the faculty list has increased from 29 to 61. As the university has no professional schools connected with it, this advance is satisfactory. Within the past two years, also, the courses of study have been rearranged so as to make, it is believed, the best possible solution of the question of requirements and elections. Students have options from the start, but they are kept within judicious limits both as to kind and as to the time during which such options must be pursued. The work of the university is carried on in five large buildings and several smaller ones. Last year a natural-history building was dedicated, the cost of which was $70,000, and an engineering hall is now being constructed at a cost of $160,000.

Under the circumstances it would appear that any mention of the larger and progressive Western State universities ought not to omit that of the State of Illinois.

Charles M. Moss.

Champaign, Ill.

THE TARIFF ON BOOKS.

To the Editor of The Nation:

Sir: A recent article in the *Nation* prompts me to send you the enclosed cutting, showing how the foreigner pays the tariff. In the present consideration of tariff reform little is said about the duty on English books, although I have never seen a good reason for its existence. You will observe that the American edition of Ewald's 'Diseases of the Stomach,' price $5, is sold by subscription only—that is, without discount. As nothing is said about the price of the English edition (16s.) being "net," it is quite probable it is sold with the usual English discount of 25 per cent.—I am, sir, yours truly,

George Dock.

Ann Arbor, Mich., February 3, 1894.

THE CROWN'S VETO.

To the Editor of The Nation:

Sir: In your review of Prof. Woodrow Wilson's book 'An Old Master' (*Nation* No. 1488) the following statement occurs:

"Prof. Wilson knows, though many of his readers do not know, *that the veto of the Crown has been obsolete for more than two centuries*, and that there is no power that can revise or disapprove an act of Parliament."

The statement in italics is an error, if the authorities are to be believed.

"The prerogative of the crown to withhold the royal assent has not been exercised since the 11th of March, 1707, when Queen Anne refused her assent to 'a bill for settling the militia of that part of Great Britain called Scotland.'" (See Bacon's Abridgement [Bouvier's ed.], vol. ii., p. 672.)

The error is a small one; but, inasmuch as a book review would seem to be one of those "subjects that demand a cautious pen," it may not be amiss to call attention to it.

Respectfully, A. R. Strother.

Kansas City, Mo., January 10, 1894.

[Blackstone, Story, Kent, and Paschal say that the royal prerogative was last exercised by William III. in 1692, though there is a note in late editions of Story which agrees with the citation of our correspondent. If it was, indeed, exercised by Queen Anne in 1707 (and we have no reason to question the statement), it is remarkable that such a fact should have eluded the attention of so many painstaking authors and their many annotators.—Ed. Nation.]

DESCENDANTS OF CROMWELL.

To the Editor of The Nation:

Sir: I hardly understand the letter on this topic printed in your issue of February 1. Cromwell has many descendants living. About a year ago Mr. James Waylen printed 'The House of Cromwell,' etc., and gave the names of many families descended in the female line from the Great Protector. I should say that the number is to be measured by hundreds. For example: Elizabeth, daughter of the last male Cromwell, married in 1801 Thomas A. Russell and had nine children, six of whom had issue. Anne Cromwell, daughter of Thomas, married in 1753 John Field, a prolific stock. Frances, fourth daughter of the Protector, married secondly Sir John Russell, Bart., and was the "ancestress of numerous and widespreading groups of Cromwellian descendants."

Mr. Waylen's book is ill-arranged, and I do not find the Gardiners noticed therein; but there is no improbability in the alleged descent of Prof. S. R. Gardiner. W. H. W.

Boston, February 3, 1894.

THE ANTI-FOREIGN SPIRIT IN JAPAN.

To the Editor of The Nation:

Sir: When, about five years ago, the anti-foreign spirit in Japan was becoming intense, thoughtful foreigners who had studied carefully the condition of affairs, looked upon that sentiment as only a natural reaction from the wholesale adoption of foreign civilization, the swallowing of undigested material, which followed the "opening" of Japan. They were also confident that a re-reaction would soon come, which would lead to a policy of selection, adaptation, and assimilation, and would bring about a more moderate rate of progress along the lines of Occidental civilization.

But even yet this anti-foreign spirit, instead of subsiding, has apparently grown stronger. It seems as if never, since the excessive *joi* agitation of the '60's, has this feeling been so intense. It evidently reached a great height in the recent session of the Imperial Diet, which was so disorderly that the Emperor was compelled to resort to dissolution of the House of Representatives. It is true that the disorder in the early part of the session was in connection with disciplining the President (Mr. Hoshi) of the Lower House; but, although that body allowed political feeling to carry it to the expulsion of its President, not even prorogation was employed by the Government until the House of Representatives was on the point of considering favorably an address to the throne relative to the strict enforcement of the treaties. While this subject was proper and debatable, the tone of the address was so intensely anti-foreign that it would surely have caused offence to nations whose good-will it is important to retain. The Government, therefore, twice prorogued and then dissolved the Diet, and has "publicly expresssd its determination to resist all anti-foreign bills."

It is, therefore, at the door of the present treaties, so unjust and galling to Japan in its high stage of advancement in civilization, that the continuance and the excess of the anti-foreign spirit may be laid. The intense pride and patriotism of the Japanese cannot easily endure the thraldom of extra-territoriality and other restrictions. They desire, not without some reasonableness, that the restraints on

URLINGAME
PUBLIC

foreigners be strictly enforced; and they go to an extreme, some of them, in the bitterness of their feelings against foreigners. It may or may not be good policy, but it is at least one way to demonstrate the injustice of the treaties, and the necessity, in the interest of all parties, of a revision. The anti-foreign spirit in Japan is regrettable, unreasonable, and unnecessarily violent, and it is excusable only in view of the provocation indicated above.

The elections for members of the House of Representatives will unquestionably be exciting. A friend in whose dispassionate judgment I have the utmost confidence, has just written me from Yokohama: "I fear that there will be much bloodshed." The contest between the Government and the Opposition, even though not sanguinary, will be bitter. Representative institutions are now, in Japan, undergoing a severe test, the result of which will naturally be watched here with intense interest. The Japanese must, however, "work out" their own political "salvation with fear and trembling," as other peoples have done; and, unless the true and best friends of the Japanese have mistaken their character, and have misplaced confidence, they will succeed. But it is not at all unlikely that Japan, like many another nation, will achieve its political salvation "so as by fire."

ERNEST W. CLEMENT.

CHICAGO, January 27, 1894.

Notes.

CHARLES SCRIBNER'S SONS have in press the second volume of Pasquier's Memoirs (1812-1814) and 'Basal Concepts of Philosophy,' by Prof. Alexander T. Ormond of Princeton.

A thorough working over of an older biography, by the same hand, the 'Life and Art of Joseph Jefferson,' by William Winter, and 'Social Evolution,' by Benjamin Kidd, are announced by Macmillan & Co.

Houghton, Mifflin & Co. will soon bring out 'Cartier to Frontenac,' by Justin Winsor; 'A Poet's Portfolio,' by W. W. Story; and 'In Exile, and Other Stories,' by Mary Hallock Foote.

The Burrows Brothers Co., Cleveland, have in preparation a handsome reprint of the Lincoln and Douglas debates, limited to 750 copies, sold to subscribers.

No explanation is given of the two American editions of 'The Renaissance in Italy,' abridged from the ample three-part work of the late J. A. Symonds by his friend, Lt.-Col. Alfred Pearson. That of the Messrs. Scribner is a large octavo in the English manner and of English make; that of Henry Holt & Co. is a handy duodecimo, seemingly manufactured here, but a close copy of the other, even *punctuatim*. The frontispiece portraits differ. So discursive a writer as Mr. Symonds lent himself ill to condensation, and so large a subject still less readily. What remains in Col. Pearson's summary has certainly lost the charm inherent in the amplitude of detail with which Mr. Symonds was wont to display his learning and research. By way of compensation, the section on Literature has been so purged, of necessity, that it is now *virginibus puerisque*. The result is something akin to a text-book, with an index.

M. Paul Gaulot's Life of Count Fersen, the fast friend and devoted admirer of Marie Antoinette, has been admirably translated into English by Mrs. Cashel Hoey (D. Appleton & Co.). M. Gaulot has thrown much new light on the characters of the two persons whose lives were so closely interwoven during the terrible years of the French Revolution, and his bright, rapid, easy style of writing has been excellently reproduced by a translator who has given the spirit as well as the form of the original. And what a stirring story it is that M. Gaulot has to tell; even when one knows its incidents by heart, one is attracted by a new telling of it.

George H. Richmond & Co., New York, have brought out in a dainty volume that charming story of George Sand's, 'La Petite Fadette,' translated by Miss Jane Minot Sedgwick. The translation is good, on the whole, often excellent, and the quaint, simple language of the original does not lose much by its transposition into another tongue. The promised translations of 'François le Champi' and 'La Mare au Diable' will be very welcome if they are done as well as this one. But why such a poor portrait of George Sand? It is in nowise like her at any period of her life, certainly less true than Couture's, which is easily accessible, or than the photographs taken in later life. The paper, printing, and general appearance of the book are to be unreservedly commended.

'Essais et Études,' by the late Émile de Laveleye, is the first of two and possibly three volumes, in which the great economist's widow proposes to collect some of the more remarkable articles which appeared at various times in different periodicals. This is simply continuing what Laveleye had begun in his 'Questions Contemporaines,' and the choice of articles in the present volume fully justifies their republication. The more important ones are "Le Mouvement littéraire en France depuis 1830," which originally appeared in 1862, and is well worth reading and pondering over now—Lemaitre's famous "Nous avons la piété sans la foi" is anticipated here; that on "La nouvelle Politique russe"; and that on "Le Protestantisme et le Catholicisme dans leurs rapports avec la liberté et la prospérité des peuples." The last named made a very great sensation at the time, and was translated into nearly every European tongue. It has lost none of its interest at the present day, a Japanese translation having appeared last year.

Homans's 'Banker's Almanac, Register and Legal Directory' for 1894 contains the customary complete and careful summary of banks, private bankers, trust companies, and safe deposit companies in the United States and Canada, with lists of bank capital and surplus, officers, directors, and miscellaneous information. The 'Almanac' is edited, as usual, by Mr. Albert S. Bolles.

The new volume (iii.) of the Johns Hopkins Hospital Reports, independently of its professional value, is noticeable from the fact that for the first time the name of a woman physician appears in its select list of writers. Of the five doctors contributing sixteen papers to the gynecological report (Nos. 7, 8, 9, Report in Gynecology, ii.), Mary Sherwood, M.D., is the only one not officially connected with the medical department, although the investigations for one of her papers, "Potassium permanganate and oxalic acid as germicides against the pyogenic cocci," were carried on at the Hopkins pathological laboratory. Dr. Sherwood is an encouraging instance of the value of training regardless of sex. Having graduated at Vassar in 1883, and been refused admission to the College of Physicians and Surgeons of New York (on the logical plea that "it could not be done, as it never had been done before"), she went to Europe for her medical education, and took the M.D. degree at the University of Zurich in 1890. For the past two years she has worked from time to time in the Johns Hopkins pathological laboratories, and during the summer of 1893 she held, by courtesy, a "substitute" appointment as "assistant resident gynecologist" at the hospital. A recent resolution of the medical board prevents (on the ground of present inexpediency) Dr. Sherwood, or any other woman physician, from holding a bona-fide hospital appointment—this in spite of co-education in the Johns Hopkins Medical School.

The twenty-fourth edition of Rand, McNally & Co.'s 'Business Atlas and Shippers' Guide' presents an enlargement commensurate with the growth of the country in railroads and post-offices. The maps have been materially increased in number, notably in the case of the great cities, the West Indies, and Central and South America. As heretofore, information is compactly given in each map-index as to location, railway, and mail connection, money-order and express facilities, and population. For the United States this is unquestionably the most convenient key to the census of 1890 in respect of inhabitants. It seems to leave nothing to be desired for commercial uses.

The first of the "Papers from the Historical Seminary of Brown University" is by Neil Andrews, A.B., on "The Development of the Nominating Convention in Rhode Island," in which this State seems to have been a pioneer. That the last stage was better than the first can be confidently asserted only in the particular that the masses were satisfied with the change which took nominations out of the hands of a few. A grievance (and no doubt an abuse) was removed, but nominations are still (in Rhode Island and everywhere else) the work of the few, all appearances to the contrary notwithstanding.

It is a pleasure to record the survival of the fittest in the case of *Garden and Forest*, whose sixth bound volume, for the year 1893, lies before us. Whether on the side of horticulture, landscape art, or forestry, its special objects, it shows no falling off from its high standard, and its pictorial selections continue fresh and admirable.

Apropos of the citation from Lorenzo Dow in these columns last week illustrating the use of the word "tote," we observe in the *New England Magazine* for January the thing—the mode of transporting tobacco at the South—described without the name. The relator is a Yankee, Hezekiah Prince of Thomaston, Me., and pardonably unfamiliar with the dialect of Virginia, through which he made a horseback journey just a hundred years ago. In his diary for January 1, 1794, he records: "From Fredericksburg to Bowling Green. . . . Large fields of tobacco all along the way, and the negroes rolling the barrels along the road to market."

The *Illustrated Archæologist* for December, 1893 (London: Charles J. Clark), is an excellent example of this high-class yet popular quarterly. The leading paper, abundantly illustrated, describes the excavation of one of the numerous massive Pictish round towers to be found in Scotland, and touches upon the general question of their construction and use. The paper on the Celtic brooch will attract by its beautiful specimens; here the comparison is with similar ornaments worn by the Kabyles of Algeria. Mr. W. Flinders Petrie contributes a colored drawing of parts of a painted pavement unearthed at Tel el-Amarna, and assigned to 1400 B. C. The action of cattle and of geese rising on the wing is caught with surprising skill and with real decorative feeling.

Means of publication of geological essays are certainly well provided in this country. Besides the reports of the national and the various State geological surveys, besides the proceedings of the scattered scientific societies, there is the Bulletin of the Geological Society of America, edited in Washington, now in its fifth year, the Chicago *Journal of Geology*, which we recently noticed, and the *American Geologist*, a monthly journal published in Minneapolis by an association of editors, now in its seventh year. The Bulletin is the recognized medium of publication for the Fellows of the Society, among whom only geologists of some standing are included, while the *Geologist* serves alike for beginners and more practised hands. Papers by local observers are particularly appropriate in the latter journal; one of the best of this kind is the account of the rock gorges of northern Illinois, by O. H. Hershey, in the November number.

The publications of the Geological Survey of Arkansas still proceed, although the director of the survey, Prof. J. C. Branner, has for more than a year past been resident at the Leland Stanford University. The latest volume is by T. C. Hopkins, on marbles and other limestones, with a pocket of colored map-sheets. This report is on the same extended plan as those by Penrose on the manganese deposits, and by Griswold on novaculites or whetstones; the intention of the director of the survey manifestly being to educate the people as to the utility of their mineral possessions, as well as to inform them of the distribution of useful materials.

The *Geographische Abhandlungen*, edited by Prof. A. Penck of the University of Vienna, (Hölzel), contains a recent number by Dr. J. Cvijic of Belgrade, on the *Karst*-phenomena, for which we have no suitable expression. It is an exhaustive treatment of the topographic forms of limestone regions, including sink-holes, enclosed valleys, and other forms still nameless with us. The freer employment of illustrations would greatly increase the value of these excellent essays.

The French Government has recently established a chair for instruction in colonial geography at the Sorbonne, and the inaugural lecture of the new professor, M. Marcel Dubois, is published in the *Annales de Géographie* for January. He dwells upon the claims of geography to be regarded as a department of education of equal value with history, and quite as essential for the right understanding of history. In an interesting passage at the close he attributes the comparative ill success of the French as colonists to the fact that they are not the slaves of industry and commerce, and are consequently not greedy of gain, less eager (and less prompt because less eager) to develop the resources of countries and peoples; that, consistently respecting the rights of the natives in their foreign possessions to the soil, they have sacrificed wealth to philanthropy. Among the other articles in this periodical, which are nearly all of a purely scientific character, is one upon the geology of the Alps, and one showing the changes in the French frontier in the same region since the sixteenth century, both accompanied by maps. There is also an interesting account of the efforts made to reclaim and colonize the moors of northwestern Germany.

—The February *Atlantic* is rich in matter of biographical and political interest. Senator Dawes gives his recollections of Stanton during Lincoln's administration, and others write of the late Hamilton Fish and of Tammany Hall. To be remarked, also, are Dr. Holmes's verses to the "brave, bright memory" of Francis Parkman, the last of those "that wove their pictured webs in history's loom." Mr. Horace Scudder's statement of what he calls the educational law of reading and writing will be of interest to all who have to do with the training of children in secondary schools. His thesis is that writing, *i. e*, expression, that normal sign of a child's intellectual and imaginative growth, should not be forced at any point of his training; that, as to reading, great literature, and only great literature, should be put into the pupil's hands throughout the common course, and that this should be "read for delight and not as an exercise in grammar, history, biography, criticism, or for any of the minor ends which constantly thrust themselves forward in place of this human joy in great and beautiful things." A view that not only lays such great stress upon this method of training and assisting the growth of the imagination in children, but is so emphatic about the supreme importance of emotional or æsthetic rather than intellectual growth, is strikingly in contrast with recent conceptions, also usually expressed in dogmatic fashion, of the permanent value of training in the observation and correlation of mere facts. Both ideals—the ideal of fiction and the idea of fact—will doubtless be mutually corrective. It is perhaps worth noting, however, that even now fiction plays a singularly large rôle in the reading of pupils who are beyond the secondary schools.

—Besides the usual quota of dialectical fiction the *Century* contains two stories that cannot escape comparison and contrast—the vigorously sketched tale of "Pudd'nhead Wilson," genuinely and solidly American in subject and treatment, and a ridiculous yarn, in the popular pseudo-Oriental manner, which deals with the love and adventures of no less a hero than Abraham, who performs the thrilling acrobatic feat of jumping from the top of a huge heathen altar with Sarah and a baby in his arms. It is at this juncture that Sarah, whose name is pleasantly disguised as Iskah, invents one of the ten commandments, to which Abraham (that is to say, Abu-ramu) shortly afterwards is so fortunate as to add another. This is taking Oscar Wilde at his word when he says that our only duty towards history is to rewrite it as fast as we can in forms more pleasing than the rugged facts will themselves allow. To most people it will seem better taste and better judgment to let the Bible stories alone. At a time when heads of families are still publicly persecuting such as dare to treat the Biblical records as history, it is hard to realize that the younger generation is reading with avidity versions of the same records in the form of sensational fiction *à la* Rider Haggard.

—In *Harper's* and *Scribner's* there is a good deal that is pleasant, but very little that is noteworthy. The former contains a characteristic farce by Mr. Howells, an interesting article by Dr. Samuel Scudder on the curious insects known as walking-sticks, and a beautifully illustrated sketch of Western life by Mr. Remington; the latter an article on Burne-Jones by Mr. Cosmo Monkhouse, a description of the devastation on the Sea Islands, and of the relief work, by Joel Chandler Harris, and the first part of an autobiographical account of voyages made to the West Indies in the early part of the century by Peter Grotjan, then a young German merchant in Philadelphia. Exception must be made, however, in favor of George du Maurier's continued story, "Trilby," in *Harper's*, which is the best fiction of the older school that the magazines have permitted the public to enjoy for a long while.

—Admirers of Bossuet will read eagerly the volume on 'Madame,' or memoirs of the Princess Henrietta, daughter of Charles I. and Duchess of Orleans, by Julia Cartwright (Mrs. Henry Ady). It is by Bossuet's magnificent funeral oration that the lovely Princess is best known, but that masterpiece of eloquence cannot be fully appreciated without a larger knowledge than it affords of Henrietta's singular grace, winning charms, and many talents. This knowledge Mrs. Ady's book gives. She writes sympathetically of Madame, not blind to her faults, but giving them their just weight, and no more, in the composition of the Princess's character. She has been fortunate enough to obtain the complete correspondence between Henrietta and her brother, Charles II., preserved in the archives of the French Foreign Office, and is thus enabled to give it for the first time in its original form. Students of the history of those days will be duly grateful for this part of the work; students of literature will enjoy the many glimpses of the brilliant age of letters in which the young Princess played no small part, having linked with her own the names of Corneille, Racine, Molière, and Bossuet. Mrs. Ady has carefully estimated such evidence as is at hand concerning the sudden and still mysterious death of Henrietta. In spite of the open hostility of the Chevalier de Lorraine, the favorite of the Duke of Orleans, and of the report, generally credited at the time, that, with or without the Duke's knowledge and connivance, he had caused a deadly poison to be administered to Henrietta, the authoress comes to the conclusion that death was due to natural causes acting on an enfeebled frame and aggravated by the Princess's own imprudence. Her description of the death scene is well written, but in that respect is simply on a par with the rest of the book, which is interesting from the first page to the last, and gives the reader a living picture of Madame.

—The latest issue (No. 31) of the "Sammlung Goeschen" (Stuttgart), Prof. Max Koch's 'Geschichte der deutschen Literatur,' is a marvel of completeness and cheapness. It is a neat volume of 278 pages, well printed on good paper, bound in cloth, giving a clear and condensed sketch of the history of German literature from the earliest times to the present day, and costing only eighty pfennigs (twenty cents). The first seventy-eight pages cover the pagan period and the middle ages till the year 1500; about equal space is given to the Reformation and the Renaissance (1500-1748), while the rest of the work is devoted to the eighteenth and nineteenth centuries (1748-1893). An excellent index greatly enhances the value of the whole, and in connection with each subdivision of the book is given a succinct and carefully selected bibliography, indicating the principal sources to be consulted by those who wish to pursue the subject further. We have noticed a few errors in dates, probably misprints, as, *e. g.*, when Ludwig the German is said to have died in 816 instead of 876, and Heinrich (here called Harry) Heine to have been born in 1797 instead of 1799. There are also some serious omissions: in the province of the "Dorfgeschichte" Melchior Meyr deserves a place by the side of Bitzius, Immermann, and Auerbach; and mention should have been made of such origi-

nal writers as W. F. Riehl and Franz Trautmann. There is, however, not much to complain of in this respect, and the little volume fairly sets forth the chief tendencies in German literature, including even the most recent naturalistic school, of which Karl Bleibtreu of Berlin, W. G. Conrad of Munich, the East Prussian Hermann Sudermann, and the Silesian Gerhard Hauptmann, are the most marked representatives. Unlike most manuals of its kind, this is not a dry and tedious compendium; it is written in a necessarily concise but remarkably lucid and attractive style, and may be commended as a literary masterpiece of compressed exposition.

—Wherever public collections exist they should be regarded as an integral part of the municipal or State educational system. Thus far, however, few directors of museums and galleries have been willing to make the collections under their charge really accessible to the public, by simply written, attractive handbooks showing what the art under consideration undertook to express, and what were its principal moments. The directors of the Berlin museums, with Dr. Wm. Bode at their head, are to be congratulated on being the first to show a sense of their position as disseminators of art culture. They are publishing a series of handbooks, admirably illustrated not only with reproductions of the work at Berlin, but also of such other masterpieces as throw light on the Berlin works. The handbooks are in octavo, prettily bound; and in spite of the great number of illustrations, and the excellent print and paper, most of them sell for a mark and a half each. Dr. Bode's volume on Italian Sculpture in this series is by far the best account of the subject that has ever appeared. He has happily avoided most of the mistakes that make his edition of Burckhardt's 'Cicerone' worthless.

THREE AMERICAN ORATORS.

Speeches and Addresses of William E. Russell. Selected and Edited by Charles Theodore Russell, jr., with an introduction by Thomas Wentworth Higginson. Boston: Little, Brown & Co. 1894.

Speeches and Addresses of William McKinley, from his Election to Congress to the Present Time. D. Appleton & Co. 1893.

Orations and Addresses of George William Curtis. Edited by Charles Eliot Norton. Vol. I. On the Principles and Character of American Institutions, and the Duties of American Citizens, 1856-1891. Vol. II. Addresses and Reports on the Reform of the Civil Service of the United States. Harper & Bros. 1894.

SINCE the great War Governor, Andrew, Massachusetts has had not a few creditable chief executives, and two or three conspicuously able ones, of whom Gov. Russell is by far the most interesting figure. Capacity for leadership has marked his career ever since, in 1881, at the age of twenty-four, he was elected to the Common Council of his native city of Cambridge. As alderman for the two following years; for four more years as a reform mayor of Cambridge; then for five successive years the Democratic candidate for Governor, and thrice elected Governor, after two Pyrrhic defeats, he built up out of the wreck of a dispirited party a purposeful and aggressive organization with purified aims, which has done much for the elevation of the party at large. Mr. Russell's speeches, carefully selected, in the volume before us, not only contain a faithful picture of the man, his purposes and his methods, but show how singularly high the conception of public life remains in Massachusetts.

Mr. Russell does not lack humor, as his first, and delightfully playful, address as Governor to the Harvard alumni testifies; but his usual tone is grave, lit with occasional sarcasm, the bitterer because it is never intemperate or personal. He is not flippant, he does not abuse anecdote, and he is sparing of statistical illustration, but his political speeches are always addressed *ad hominem*, with an eye to the local interests at stake, and there is hardly one which is not enriched by quotation from sources so varied as to show an enormous range of reading and study; of this his Springfield speech on the tariff, his argument for the self-government of towns in his third inaugural, and his Bennington address, are, indifferently, examples.

Mr. Russell as Governor had the unusual privilege of delivering three inaugural addresses to the Legislature, and of addressing as many times his fellow-alumni of Harvard on Commencement Day, though he says it afforded him even greater pleasure to have the opportunity of expressing the good will of the Commonwealth to the Catholic College of the Holy Cross at Worcester, because it so strikingly instanced the growth of Massachusetts in liberality of religious sentiment—a liberality which encouraged the pungent recommendation in his third inaugural for the abolition of Fast Day as a public holiday. His occasional and military addresses show him to be an agreeable, tactful, and versatile speaker, who will not sacrifice his convictions to flatter his hearers. At Atlanta he says of the war: "I should be false to myself, false to you, and disloyal to the sentiment of my State and yours, if I hesitated to say that the issue of that conflict was right" (p. 19). The lucidity and freedom from exaggeration of his political speeches are unsurpassed in the long debate over tariff reform. But it is in his three inaugurals, his veto messages as Governor, and his speech on constitutional prohibition, that the highest measure of the man is to be found. The logic of that speech, ending in the conclusion, "If popular sentiment is behind prohibition, it will at once develop in statute law; if it is not, constitutional enactment will be a dead letter" (p. 14), has a characteristic force and simplicity. His veto messages possess the same quality: "If this provision [*i. e.*, the regulation of the liquor traffic], now existing in law, can be and is enforced, it covers the case sought to be reached by this bill; if it is not enforced, and cannot be, it is not more law, but more enforcement of law, which is needed" (p. 186). And again:

> "I fully sympathize with the efforts of the Legislature to lessen the hours of labor in this [*i. e.*, the fire] department, but I do not believe in the principle that the State, even to accomplish a desirable end, should interfere with the right of local self-government by the city of Boston or any other community, or should undertake by special law to control a department thereof, or to regulate its details. . . . Nor does it obviate this objection that the Act does not take effect until approved by the mayor and City Council. If this leaves to them the same power they now have, then the Act is wholly unnecessary. If it does not, then it is an interference with the right of local self-government" (pp. 214–216).

Gov. Russell's three years' administration resulted in the reform of many old abuses, and his state papers advising the concentration of power and responsibility in the executive, and, as regards the irresponsible committees, boards, and councils which have grown up in Massachusetts to cumber the administration of the laws, advising their total abolition, or, at least, the abridgment of their powers till they survive only "as a harmless concession to a conservative antiquarian sentiment" (p. 193), deserve to be read widely beyond the confines of Massachusetts.

The sixty-five speeches and addresses of Congressman McKinley average ten pages in length, and make a stout octavo which recommends itself in the preface as a contribution to the pending tariff discussion. Scattered in, however, with those which relate to the tariff are a number of more or less formal and premeditated talks on festive occasions, as to his neighbors of the Mahoning Valley, to Mr. Bowen's neighbors at Woodstock on the 4th of July, to the celebrants of Decoration Day in New York, to the alumni of Oberlin, to the Pennsylvania New England Society, to the Youngstown Young Men's Christian Association, to the Ohio State Grange, besides many pension speeches and five memorial addresses on Garfield, Grant, Hayes, Logan, and W. D. Kelley. Perhaps, therefore, we may not unjustly regard this compilation as in its principal intent a Presidential candidate's propitiation of his fellow-citizens. It certainly affords no intellectual interest whatever. The rhetoric is that of an untrained man, with a narrow and thoroughly commonplace mind, deficient in humor, and absolutely devoid of originality or of any elevation of sentiment. Mr. McKinley is a complacent chauvinist, who holds it "a common thing to say, but a good thing to say, because it is true, that we have the best Government in the world," and who defines the Columbian Exposition as, "in its highest sense, the hallelujah of the universe for the triumph of civil liberty and Christian civilization." In extravagant spread-eagleism Mr. Jefferson Brick might have taken lessons of him. "From small beginnings," he tells the Oberlin alumni, "you have reached a rank scarcely second to the best institutions of the country or the world." "General Logan's military career," he affirms, "standing alone, would have given him a high place in history and a secure one in the hearts of his countrymen. General Logan's legislative career, standing alone, would have given him an enduring reputation, associating his name with some of the most important legislation of the time and the century. But united, they present a combination of forces and of qualities, they present a success in both careers almost unrivalled in the history of men."

Passages like these serve to lighten the dulness of Mr. McKinley's oratory; but his tariff argumentation is a melancholy proof of the effect of the protection dogma in undermining the reasoning powers of its advocates. We see the constant tendency to personify abstract ideas and concrete objects which has played such havoc with the American understanding in the case of the currency, *e. g.*: "Our protective system was never in rebellion against the United States; it has always been for the Union, and against its enemies, whether at home or abroad. It has always sustained the flag of the country. It sustained Washington and Jackson, Lincoln and Grant and their armies in their great work for the establishment, safety, and perpetuity of the Union." Any occurrence "under that tariff" (high or low as the case may be) is treated at pleasure as a result of the tariff. Unsupported statements of facts are justified as "history." All the patriotism and economic wisdom of the country is assumed to reside in the Republican party; the Democratic "is in alliance with the manufac-

turers and traders of England, who want the American market. It is the pro-British party." Throughout, we encounter that playing fast and loose with the conception of the tariff which makes it impossible to reason with men like the present Governor of Ohio, and which would inspire distrust of their honesty if atrophy of the logical faculty were not so plainly evinced. Let it be borne in mind that this collection has been "revised" by Mr. McKinley, and then observe the contradictions in the following sequence of extracts:

"What, then, is the tariff? The tariff . . . is a tax put upon goods made outside of the United States and brought into the United States for sale and consumption. . . . If a man comes to our cities and wants to sell goods to our people on the street, . . . we say to him, 'Sir, you must pay so much into the city treasury for the privilege of selling goods to our people here.' Now, why do we do that? We do it to protect our own merchants. Just so our Government says to the countries of the Old World, . . . 'If you want to come in and sell to our people, and make money from our people, you must pay something for the privilege of doing it. . . .' Now, that is the tariff" (pp. 185, 186; Oct. 29, 1885).

"We tell every man in America who wants Scotland's pig iron, if he thinks it is any better and does not want the American pig iron—we tell him, if he must have the Scotch, 'You must pay for the privilege,' and in that way we maintain that great industry" (p. 188; Oct. 29, 1885).

"Under this law [the McKinley bill] the [United States] Government cannot go abroad and buy what it can get at home without paying duty. The result will be that the Government hereafter will buy more at home and less abroad—and it ought to. [Applause]" (p. 511; April 10, 1891).

"They say 'the tariff is a tax.' That is a captivating cry. So it is a tax; but whether it is burdensome upon the American people depends upon who pays it. If we pay it, why should the foreigners object? Why all these objections in England, France, Germany, Canada, and Australia against the tariff law of 1890, if the American consumer bears the burdens, and if the tariff is only added to the foreign cost which the American consumer pays? If they pay it, then we do not pay it" (p. 579; May 17, 1892).

"Last year we paid $55,000,000 out of our own pockets to protect whom? To protect the men in the United States who are producing just one-eighth of the amount of our consumption of sugar. Now we wipe that out, and it will cost us to pay the bounty just $7,000,000 every twelve months, which furnishes the same protection at very much less cost to the consumer. So we save $48,000,000 every year and leave that vast sum in the pockets of our own people. [Applause on the Republican side]" (p. 452; May 20, 1890).

We should not stop here if our object were to confute Mr. McKinley; but we have quoted enough to illustrate the mental confusion of the great latter-day apostle of protection, the most natural, deserving, and probable standard-bearer of his party in the Presidential election of 1896—as may be intimated by the conjunction in this volume of the portraits of Garfield, Grant, and Hayes with his own. It is fair to add that the speeches before us betoken a courteous disposition, and are noticeably free from personal abuse of political opponents. A certain amount of tact is also apparent, as, for example, in Mr. McKinley's remarks at the *Tribune's* jubilee in 1891, when the aberration of 1872 had to be overlooked; but an equally adroit speaker, possessed of a nicer ethical discrimination, would have refrained from alleging that "it [the *Tribune*] has *always* been upon the side of good morals, good citizenship, and good government."

The mind that feels at home among these "Ohio ideas" of Mr. McKinley will be strangely affected by the contents of the handsome volumes enshrining the late G. W. Curtis's contributions to American political thought and reform. Discordant, incomprehensible as in a foreign tongue, will seem these definitions of patriotism, so opposed to the daily teachings at this moment of the *Tribune;* these questionings if all be for the best in the best of republics; and the whole array of arguments in behalf of independence in the voter and of non-partisan consideration in the choice of public officers. On what page of Mr. McKinley's utterances will you look for sentiments like the following?

"Right and Wrong, Justice and Crime, exist independently of our country. A public wrong is not a private right for any citizen. The citizen is a man bound to know and to do the right, and the nation is but an aggregation of citizens. If a man shout, 'My country, by whatever means extended and bounded; my country, right or wrong,' he merely utters words such as those might be of the thief who steals in the street, or of the trader who swears falsely at the Custom-house, both of them chuckling, 'My fortune, however acquired'" (i., 44).

These words had no reference to Hawaiian filibustering; they were spoken in 1856, in discussing with students "The Duty of the American Scholar." The next summer, at Union College, Mr. Curtis's subject was "Patriotism." McKinley was not yet on the horizon, but here he is shown up as in a mirage:

"The whole of Patriotism for us seems to consist at the present moment in the maintenance of this public moral tone. No voice of self-glorification, no complacent congratulation that we are the greatest, wisest, and best of nations, will help our greatness or our goodness in the smallest degree. History and mankind do not take men or nations at their own valuation, and a man no longer secures instant respect and sympathy by announcing himself an American. Are we satisfied that America should have no other excuse for independent national existence than a superior facility of money-making? . . . Why, if we are unfaithful as a nation, though our population were to double in a year, and the roar and rush of our vast machinery were to silence the music of the spheres, and our wealth were enough to buy all the world, our population could not bully history, nor all our riches bribe the eternal Justice not to write upon us, as, with fiery finger, the autumn is beginning even now to write upon the woods and fields, 'Ichabod! Ichabod! the glory is departed!'" (i., 58).

"The Public Duty of Educated Men," "The Leadership of Educated Men"—Mr. Curtis returned to the theme with admirable persistence. "The scholar appealing to experience is proudly told to close his books, for what has America to do with experience?" (i., 317). "The same party spirit naturally denies the patriotism of its opponents. Identifying itself with the country, it regards all others as public enemies. This is substantially revolutionary politics. It is the condition of France, where, in its own words, the revolution is permanent" (i., p. 274). And again, when treating of "The English-Speaking Race": "Party spirit in this country, recalling an old animosity, has always stigmatized with an English name whatever it opposed. Every difference, every misunderstanding, with England has been ignobly turned to party account" (i., p. 396).

If Mr. Curtis prophetically depicts McKinley, not less surely does he foreshadow Cleveland in the peroration of the address named at the beginning of the last paragraph (1877):

"Bolingbroke described a patriot king in England; I can imagine a patriot president in America. I can see him indeed the choice of a party, and called to administer the government when sectional jealousy is fiercest and party passion most inflamed. I can imagine him seeing clearly what justice and humanity, the national law and the national welfare, require him to do, and resolved to do it. I can imagine him patiently enduring not only the mad cry of party hate, the taunt of 'recreant' and 'traitor,' of 'renegade' and 'coward,' but, what is harder to bear, the amazement, the doubt, the grief, the denunciation of those as sincerely devoted as he to the common welfare. I can imagine him pushing firmly on, trusting the heart, the intelligence, the conscience of his countrymen, healing angry wounds, correcting misunderstandings, planting justice on surer foundations, and, whether his party rise or fall, lifting his country heavenward to a more perfect union, prosperity, and peace. This is the spirit of a patriotism that girds the commonwealth with the resistless splendor of the moral law—the invulnerable panoply of States, the celestial secret of a great nation and a happy people."

We have glanced at but a single phase of the first of Mr. Curtis's two volumes, the next most conspicuous being the advocacy of equal rights for woman. The conservativeness of our institutions is strikingly exemplified by the fact that Mr. Curtis's speech on woman suffrage in the Constitutional Convention of this State in 1867 is now reprinted on the eve of a new convention in which the same question will inevitably be brought up. None of the addresses, indeed, on this subject can be called obsolete, though, in the matter of "Fair Play for Women," every one now agrees that "it is not the duty of men to keep women ignorant that they may continue to be women" (i., p. 228). The whole of volume i. possesses an historical value, and not less volume ii., with its annual summaries of the progress of the cause of civil-service reform—a monument throughout to Mr. Curtis which any public man might envy. We need not touch upon the graces of Mr. Curtis's style or delivery, known through the length and breadth of the North at least. In the texture of his discourse, as in beauty of person and charm of manner, he most resembled Wendell Phillips, and, though of milder tongue, had also his experience with mobs, and more than his experience of gross contumely as a citizen who was a man before he was a partisan.

SCOTT'S FAMILIAR LETTERS.

Familiar Letters of Sir Walter Scott. 2 vols. Boston: Houghton, Mifflin & Co. 1894.

THESE letters unequally cover the time from 1797, when Scott, twenty-six years old, was known only as a young barrister of fair prospects and the author of some poetical translations from the German, down to 1825, the year before his earthquake of calamity They are conveniently separated into chapters, mostly of one year each; and at the beginning of each chapter is inserted a little chronological table of family events and literary achievements. The initial letter urges his suit to Miss Carpenter, whom he married on Christmas eve, three months later; and there are two other love-letters, tender, rational, and honest. Announcing his approaching marriage to one of the friends who might be useful to him, he thus describes his *fiancée:*

"A smart-looking little girl with dark brown hair would probably be her portrait if drawn by an indifferent hand. But I, you may believe, should make a piece of work of my sketch as little like the original as Hercules to me."

He wrote in 1810:

"Mrs. Scott's match and mine was of our own making, and proceeded from the most sincere affection on both sides, which has rather increased than diminished during twelve years' marriage. But it was something short of love in all its forms."

The earliest period, extending to the publication of the 'Lay of the Last Minstrel' in January, 1805, is scantily illustrated by three

old-fashioned epistles from Scott (besides the love-letters) and one note. To most of the events of this part of his life there is no allusion. His 'Border Minstrelsy' is referred to in a remarkable letter from Hogg, the Ettrick shepherd, from which we copy the first sentence:

"DEAR SIR: I have been perusing your *Minstrelsy* very diligently for a while past, and it being the first book I ever perused which was written by a person I had seen and conversed with, the consequence hath been to me a most sensible pleasure; for, in fact, it is the remarks and modern pieces that I have been delighted most in, being, as it were, personally acquainted with many of the antient pieces formerly."

In chapter ii., embracing 1805 and 1806, we find interesting correspondence with Wordsworth and Southey. The following, addressed to Miss Seward, is noteworthy because it was written when Southey was approaching his culmination as a poet without having begun his other career, or indeed having written any prose to speak of except his delightful 'Letters from Spain and Portugal,' while Wordsworth, having published only his 'Lyrical Ballads,' had in his portfolio and must have read to Scott both "Peter Bell" and other pieces that have been passionately liked by some lovers of poetry as poetry, but which have not won the suffrages either of the great public or of the fastidious few:

"My poetical friends, Wordsworth and Southey, are certainly men of very extraordinary powers. Wordsworth in particular is such a character as only exists in romance—virtuous, simple, and unaffectedly restricting every want and wish to the bounds of a very narrow income, in order to enjoy the literary and poetical leisure which his happiness consists in. Were it not for the unfortunate idea of founding a new school of poetry, these men are calculated to give it a new impulse; but I think they sometimes lose their energy in trying to find, not a better, but a different path from what has been travelled by their predecessors."

The same letter contains this:

"Many good natured country Tories (myself, for example) take great pleasure in coursing and fishing, without any impeachment to their amiabilities, and probably Jeffrey feels the same instinctive passion for hunting down the bards of the day."

There is a letter from Jeffrey about his recent loss of his wife. It is curious to see this cold and superficial mind under deep emotion. Southey's impressions are thus expressed: "Of Edinburgh society I think very little. Jeffrey . . . is a mere *homunculus*, and would do for a major in Gog and Magog's army. . . . [Compared with Coleridge and Wordsworth] the Scotch *literati* are very low indeed. But Scott is a much superior man." Scott writes to Lady Dalkeith to recommend "our Ettrick shepherd" as a valuer of sheep-land, "in which he has given great satisfaction to those who engaged him, being a remarkably intelligent, clever fellow in the line of his business." The offer being refused, Scott again writes: "I am sure that your sympathy with his situation and extreme delicacy of expression must tend greatly to alleviate his feelings of disappointment, if he, indeed, harbors any."

A letter to Miss Seward (February 20, 1807) gives a bit of criticism with a just estimate of Scott's own verse:

"As for poetry, it is very little labor to me; indeed 'twere pity of my life should I spend much time on the light and loose sort of poetry which alone I can pretend to write. Were all the time I wasted upon the *lays* put together—for it was laid out in long intervals—I am sure it would not exceed six weeks. The last canto was written in three forenoons, when I was lying in quarters with our yeomanry. I leave it with yourself to guess how little I can have it in my most distant imagination to place myself upon a level with the great Bards you have mentioned, the very latchets of whose shoes neither Southey nor I are worthy to unloose. My admiration of Chaucer, Spenser, and Dryden does not blind me to their faults, for I see the coarseness of the first, the tediousness occasioned by the continual allegory of the second, and the inequalities of the last; but, my dear Miss Seward, 'in those days were giants in the land,' and we are but dwarfs beside them."

Another letter to Miss Seward, November 23, 1807, when she was about to write a review of Hogg's poems, illustrates Scott's warmth of favor for every fellow-craftsman in poetry, and also his skill in the fine art of graceful hinting, which was surpassed only by (what, unfortunately, from the nature of things, it is impossible here to illustrate) his wonderful power of expressing a thing in such a way that, of two persons who were to read his letter, the one whom he wished should see what his meaning was and the other not. The whole of this letter to Miss Seward is good, but we can quote only the following:

"I do not at all like the task of reviewing, and have seldom myself undertaken it; on Poetry never, because I am sensible there is a greater difference of tastes in that department than in any other, and that there is much excellent poetry which I am not nowadays able to read without falling asleep, and which would nevertheless have given me great pleasure at an earlier period of my life. Now I think there is something hard in blaming the poor cook for the fault of our own palate or deficiency of appetite. . . . My reason for transporting *Marmion* from Lichfield was to make good the minstrel's prophecy of Constance's song. Why I should have taken him there I cannot very well say. . . . I am quite glad you have seen Southey. Delighted with him you must be, yet in conversation (great as he is) he is inferior to Wordsworth, perhaps because he is a deeper and more elaborate scholar. Southey rarely allows you any of those reposes of conversation when you are at liberty to speak, as the phrase is, 'whatever comes uppermost.' . . . I am a pretty hard worker when I once set about it, and, in fact, my literary life resembles the natural life of a savage, absolute indolence interchanged with hard work."

But Scott made a pretence to indolence—a Tory quality to which he was not honestly entitled.

Next following the above letter comes the first of a series of fifteen from Lady Louisa Stuart, known to the public by her admirable introduction to the works of her grandmother, Lady Mary Wortley Montagu.

'Marmion' was felt by the author as a great effort: "As turnips," he says, "come after wheat according to the best rules of agriculture, I take it that an edition of *Swift* will do well after such a scourging crop as *Marmion*." But when Lady Abercorn suggests that the poem was too hastily written, he hastens to admit it:

"No one is so sensible as I am of what deficiencies occur in my poetry from the want of judicious criticism and correction, above all from the extreme hurry in which it has hitherto been composed. The worst is, that I take the pet at the things myself after they are finished, and I fear I shall never be able to muster up the courage necessary to revise *Marmion* as he should be revised. But if I ever write another poem, I am determined to make every single couplet of it as perfect as my uttermost care and attention can possibly effect. In order to secure the accomplishment of these good resolutions, I will consider the whole story in humble prose, and endeavor to make it as interesting as I can before I begin to write it out in verse, and thus I shall have at least the satisfaction to know where I am going, my narrative having been hitherto much upon the plan of *blindman's buff*."

He tried this plan afterwards, and the result was that he found himself with a manuscript to burn up. All his novels were written in the same headlong way. Of course, they had been thought *about* beforehand; but that they had not been thought *out*, is proved by Scott's positive testimony, backed by demonstration from the rapidity with which they were composed. Another of the world's greatest historical story-tellers, Alexandre Dumas, wrote with even more railroad speed; and though some of his collaborateurs pretended, and perhaps thought, they had written his novels, it is certain none of them unaided could ever write conversations at all like his.

We may add concerning Scott's method of working, what he wrote to Lady Louisa Stuart in 1816 about 'Tales of my Landlord': "As no man that wrote so much ever knew so little what he intended to do when he began to write, or executed less of the little which he had premeditated, I totally altered my plan before I had completed my first volume." Again: "I quarrelled with my story, and bungled up a conclusion, as a boarding-school miss finishes a task which she had commenced with great glee and accuracy." In 1810, he writes: "The truth is there are weeks and months in which I do not only not use pen and ink, but have a sort of horror of the very sight of them." In 1808: "I believe no man now alive writes more rapidly than I do (no great recommendation), but I never think of making verses till I have a sufficient stock of poetical ideas to supply them." Finally: "The enclosed jangling verses are the only effort I have made in rhyme since I came to Edinburgh for the winter. They were written within this hour."

In 1809, the conduct of the *Quarterly Review*, just launched in London, in Tory opposition to the *Edinburgh*, was not Tory enough to suit Scott. He writes:

"A good deal happened when I was in London to show me that Gifford wants much of that tact which is necessary to conduct with spirit the work he has undertaken. . . . There is a lame and cowardly caution which prepares all the world for the defeat of the combatant who exhibits such a suspicious symptom. When the sword was once drawn I would have hurled the scabbard into Thames. . . . All Gifford's excellent talent, and no less excellent principle, will do little to save the *Review* unless he will adopt a more decisive tone of warfare and greater energy in his mode of conducting it."

However, after the circulation of the *Quarterly* had passed 5,000, Scott never, in this correspondence, again refers to Gifford at all. The 'Lady of the Lake,' begun, apparently, in September, 1809, and finished the following January, was composed with more care than the 'Lay of the Last Minstrel' or 'Marmion.' Yet when Scott's friend Morritt remarked that, after a great fuss had been made over the birth of Brian, it was rather disappointing not to hear of him in the dénouement, the poet makes a reply which shows the inconsiderate manner in which even this poem was written. He says:

"Your criticism is quite just as to the Son of the dry bone, Brian. Truth is, I had intended the battle should have been more detailed, and that some of the persons mentioned in the third canto, and Brian in particular, should have been commemorated. I intended he should have been shot like a *corbie on a craig* as he was excommunicating and anathematizing the Saxons from some of the predominant peaks of the Trossachs. But I found the battle in itself was too much misplaced to admit of being prolonged by any details which could be spared. For it was in the first place *episodical*, and then all the principal characters had been disposed of before it came on, and were absent at the time of action, and nothing hinged upon the issue of consequence to the fable."

Concerning the dramatization of it, he writes:

"As for the metamorphosis of the *Lady of the Lake* into drama, or rather three dramas, for the same adventure is to be tried at Dublin, London, and Edinburgh, I would not willingly have you believe either that I affect or possess stoicism enough to be insensible to the applause of a crowded theatre; on the contrary, I think that of all kinds of popular plaudits this is the manner in which an author has his most satisfactory, and perhaps intoxicating, draught of success. But I shall have no more honor, supposing any of these attempts successful, than the cook who roasted a turkey yesterday has for the caporota (I think housewives call it so) . . . presented us to-day out of the reliques of the feast."

If a *capitolade* was really called a *caporota*, that would seem to settle the derivation of the word.

In 1811, not yet moved to Abbotsford, Scott brought out the 'Vision of Don Roderick.' The Spenserian metre being objected to, he writes September, 1811: "I agree with you respecting the lumbering weight of the stanza, and I shrewdly suspect it would require a very great poet indeed to prevent the tedium arising from the frequent recurrence of rhymes." In the following January, the first two cantos of 'Childe Harold' appeared; whereupon Lady Abercorn asks Scott how he likes it. He replies: "Very much. There is more original strength and force of thinking in it, as well as command of language and versification, than in almost any modern poem of the same length that I have happened to meet with." Miss Baillie thought "Lord Byron has Walter Scott perpetually in his eye."

In December, 1812, 'Rokeby' appeared and was treated as a wonderfully great poem by Scott's Edinburgh worshippers. In 1813, he published anonymously the 'Bridal of Triermain.' July 7, 1814, was the date of the publication of 'Waverley'; and now for several years the letters fall off in quantity, and still more in quality, while Scott is fresh at his new *métier*. In January, 1815, appeared the 'Lord of the Isles,' in February 'Guy Mannering'; then a 'Memoir of the Somervilles' in two volumes, a description of the 'Field of Waterloo,' in November 'Rowland's Poems,' and in December 'The Ettrick Garland.' These, with two articles for the 'Encyclopædia Britannica' and a review of Miss Austen's 'Emma,' did not suffice for his year's work, for he also began 'Harold the Dauntless' and wrote 'Paul's Letters to His Kinsfolk' and the 'Dance of Death.' In 1816 came 'The Antiquary,' 'The Black Dwarf,' and 'Old Mortality,' with several other things. He also wrote "Pibroch an Donnuil Dhu." This will suffice as a specimen of the years when the novels were appearing.

The second volume contains four letters of Lockhart to Sir Walter, chiefly about the affair of John Scott, and the duel which resulted. There are also seven letters from Lockhart to his wife, Scott's daughter. These are full of incident if not of wit. The following is characteristic of describer and describee:

"This morning met Sir Humphry Davy, in the highest glee, and a spick and span new white waistcoat, on his way to Commerra, etc., to fish. Broad-brim white Beaver, lined green as of yore. He told a story of an Irish steward of a steamboat from Holyhead, who was endeavoring to be very polite to a distressed Lady passenger. He said the best thing was whiskey. Lady said she had an idea that whiskey *could* not agree with her stomach. 'And is that against it?' quoth Paddy; 'won't your Ladyship have all the pleasure of tasting it over again in its way up?' . . . He told *once more* the story of the late Pope asking him, in 1811, if he thought there was anything in his (the P.'s) power to do for the good of the government of England in testimony of his gratitude. Sir H. wrote Mr. W. Hamilton to tell Castlereagh now was the time if they wished to get the Pope to give the King the nomination of the Catholic Bishops of Ireland; but they were busy, and nothing done. Probably 'Sromfridevi' overrated the value of his Holiness's pretty words; but it may be otherwise."

We will close with another specimen of Lockhart's epistolary power:

"We [Scott, daughter Anne, and himself], with Wordsworth and his daughter, went to Keswick, he spouting his own verses very grandly all the way. It was a fine sunshiny day, only too hot, and we certainly saw and heard many fine things. This I remark once for all, that during all these rides, etc., the Unknown [Scott] was continually quoting Wordsworth's Poetry and Wordsworth ditto, but that the great Laker never uttered one syllable by which it might have been intimated to a stranger that your Papa had ever written a line either of verse or prose since he was born. . . . Wordsworth spoke kindly, I think on the whole, of Hogg, . . . of Byron contemptuously; of Shelley well and rightly, saving that (as is the custom of all one-edition clubs) he said Shelley was a greater genius than Byron (*i. e.*, a less successful one). . . . Wordsworth says Crabbe is always an addition to our classical literature, whether he be a poet or not."

A CRITIC OF THE CRITICS.

Founders of Old Testament Criticism: Biographical, Descriptive, and Critical Studies. By T. K. Cheyne, M.A., D.D. London: Methuen & Co. 1893.

One does not naturally go to a book dealing with Old Testament criticism to be amused, but one who takes up this book of Dr. Cheyne's with that object in view will not be disappointed. The amusing feature is an intense self-consciousness and self-satisfaction which have their illustrations upon almost every page. We find ourselves asking, Was this the Oxford professor whose essay could not be printed because the capital I in the manuscript was not correspondingly innumerous in the font? He never doubts the interest of his readers in his personal disclosures. We had a curious proof of this in the introduction to his Bampton Lectures on the Psalms, where his confidence was amply justified, so instructive was the story of his critical development. In the present volume the justification is much less complete. We cease to be amused and are just a little wearied with the Doctor's references to his own opinions and achievements; but we smile again when he takes this or that other scholar to task for not having read his books or articles, or for not having made due reference to them, or for having failed to appreciate their significance. The tone is so patronizing and superior in dealing with contemporary critics, especially with Dr. Driver, that Mr. Whistler might come here for fresh illustrations of his book 'The Pleasant Art of Making Enemies.'

We reach the height of the ridiculous in Dr. Cheyne's consciousness of a scientific courage vastly superior to that of his contemporary critics. Over and over again, dozens of times, we find him accusing Driver and others of compromising with conservatism and tradition. We must have none of this. But Dr. Cheyne makes a distinction between the compromises of scholarship and those of teaching. For the scholar no compromises are allowed; for the teacher and the preacher certain compromises are necessary. It is here that Dr. Cheyne's courage seems to halt. But to his own thinking he is still as brave as a lion and as scientific as Huxley. It was not always so. Formerly his plan "was to *adapt* Old Testament criticism and exegesis to the prejudices of orthodox students by giving the traditional view, in its most refined form, the benefit of the doubt, whenever there was a sufficiently reasonable case for doubt." He finds a good deal of this *Vermittelung*, as the Germans call it, in Driver's Introduction. He is himself persuaded that "a perfectly free but none the less devout criticism is, in short, the best ally both of spiritual religion and a sound apologetic theology." Always that dying fall. Criticising the compromisers for intruding the consideration "what orthodoxy demands" into the critical field, does not his own scientific posture lack something of completeness through his firm persuasion that a perfectly free criticism must be consonant with a progressive evangelical theology? It is true that Dr. Cheyne's evangelical theology is worn with quite a difference from that commonly so called. Nevertheless, to have one eye upon the truth and the other glancing sidewise at the prospects of "evangelical truth" or "a sound apologetic theology" is not exactly scientific, while Dr. Cheyne's concession of the method of compromise to the teacher and preacher as distinct from the student and the scholar suggests that the union in one person of critical and ecclesiastical functions is not a happy one.

The title of Dr. Cheyne's book is evidence that he does not think the higher criticism has yet reached its crowning height. If Kuenen and Reuss and Wellhausen have been only founders, there will be giants in those days when the superstructure rises splendidly on their foundations. He brings to his subject an exhaustive knowledge of the whole course of Old Testament criticism. If his skill in presenting his matter were equal to his acquaintance with its data, his book would be much better than it is. It suffers from comparison with Pfleiderer's treatment of the same line of development, the indication is so much less clear of each successive critic's contribution to the solution of Old Testament problems. At the start there is a hint of insularity, which at times recurs, in the slight mention of Spinoza and Astruc as compared with Geddes, whose Roman Catholic connection made his studies of even less account than they would otherwise have been. Passing to the German critics, we find a sign of how much the times have changed (and the orthodox manners with them) in the respect and admiration accorded to Eichhorn, whom even the Unitarian Andrews Norton fifty years ago held up to general loathing and contempt. The chapter on De Wette, which has a postscript on Gesenius, is one of the most interesting in the book, for not only was De Wette's argument for the late date of Deuteronomy the most radical departure ever made from the traditional view, but his personality was exceedingly engaging, and his experience, as that of Ewald afterwards and many other German critics, made good the saying of Christopher North, "A man who speaks the truth will find himself in sufficiently dramatic situations." It is an interesting fact that De Wette's criticism of Deuteronomy was a production of his youth, a dissertation offered for his doctor's degree in 1805, when he was twenty-five years old. His 'Introduction to the Old Testament' was translated in this country by Theodore Parker, and his 'Introduction to the New Testament,' by Frederic Frothingham, another Unitarian minister, and no German critic did so much to liberate the Unitarian body from the traditional point of view.

The account of Ewald is fuller than that of any other critic except Driver, but it is singularly lacking in articulation, and, with an

abundance of particulars, gives no general impression of Ewald's critical position. The judgment of Pfleiderer, that his influence was distinctly reactionary in the main course of critical development, is probably a judgment that will stand. His stormy nature had a painful correspondence in the storminess of his career. When Dr. Cheyne writes, "At first there was only a vague danger that a naïve self-confidence might develop into a tormenting intolerance," we wish he might apply the fable to himself, but apparently he has not in him anything like Ewald's root of bitterness. Stanley's 'Jewish Church' is dismissed in the briefest manner as a too obvious reflection of Ewald, but it was additionally vitiated to an incalculable degree by the passion for saving as homily and picture what had been critically lost.

In Vatke as in De Wette we have a real epoch-making critic. In 1835, the year of Strauss's 'Leben Jesu,' he published a work which contained the germ of Kuenen's doctrine of the late origin of the priestly legislation of the Pentateuch, and his conception of the prophets as furnishing the starting-point of Old Testament criticism. That he "even went to the extreme of refusing all readers who did not understand the Hegelian terminology," did much to limit his influence; but hardly did he seem to appreciate the value of his own discovery. The vehement enthusiasm of Ewald thrust it out of sight, but in 1834 Reuss had suggested the same things to his classes in Strassburg, though he did not develop them till much later. Two of his Alsatian students, however, Graf and Kayser, kept the sacred fire, and in 1864 it burned up in Graf's important work on the historical books of the Old Testament, and in 1876 in Kayser's study of the pre-exilic books. Before the latter had appeared, Kuenen had made Reuss's intuition that the Prophets are earlier than the Law, while the Psalms are later than both, the keynote of his 'History of Israel.' His first impulse to this view had come from Colenso's showing that "the very documents which most expressly put themselves forward as authentic, and make the greatest parade of accuracy, are in reality the most unhistorical of all." A second impulse came from Graf, to whom Kuenen successfully appealed so to change his theory that the narrative parts of the Priestly Writer should not be separated, as more venerable, from the Laws. Dr. Cheyne finds Kuenen as moderate and circumspect in his most radical conclusions as in the conservatism of his youth. He also finds him thoroughly religious, though not evangelical. What he writes of Colenso is in singular contrast with the average tone of churchmen thirty years ago. While "his positive conclusions," he says, "were always too moderate," his negative criticism served a useful end and his character was worthy of all praise.

A chapter on "The Modern Period" deals more expansively with Robertson Smith than with any other critic, and with much warmth of approbation, but the pages upon Sayce have "something against him" as straight out as Paul's rating of Peter. It is that Sayce has been popularizing his Assyriology for "the spread of theological prejudice and historical error." Strangely enough, there is only the most casual mention of Wellhausen, of whom Dr. Cheyne has a high opinion—though he is not more modern or less of a founder than others who are named. It would seem that he had been robbed of his due space in order that 125 pages might be given to Dr. Driver's 'Introduction to the Old Testament,' a space out of all proportion to its critical importance. But Dr. Cheyne's volume gains in value more than it loses in symmetry by this arrangement. He takes up the different sections of Dr. Driver's book in their order, and his criticism varies from the warmest commendation to the most chilly reprobation. If Dr. Cheyne's courage is less perfect than he imagines and his science less complete, in both of these particulars he is evidently far in advance of his colleague. Dr. Driver is to him "a very clear-headed and slowly moving scholar, who stands a little aside from the common pathway of critics." He finds him often guilty of compromising with tradition, but would Dr. Cheyne himself have been anything like so ingenious in treating of the origin of Deuteronomy if it had not been included in the canon from which, somewhat peremptorily, he excludes Ecclesiastes and Esther? Mr. Gore, one of the 'Lux Mundi' writers, suggests as a test of literary forgery that we should find out "whether the writer of a particular book could have afforded to disclose the method and circumstances of his production." Dr. Cheyne accepts this test as valid, and, measuring Deuteronomy by it, decides that it was not a forgery: "Such conduct as that of Hilkiah, [who "found" the modern book in the temple and brought it to the king as a Mosaic writing] is, I maintain, worthy of an inspired teacher and statesman in that age and under those circumstances. It is also not without a distant resemblance to the course of Divine Providence so far as this can be scanned by our weak faculties." And then we have an elaborate defence of Deuteronomy as "the Law of Moses," whipping the devil round the stump in this ingenious fashion: "In so far as it was historical it was 'Mosaic,' because the facts which it recorded were based on *traditional* records which the author *believed* to have come from Moses or his circle." Could Cardinal Newman's recipe for working up credulity into certainty be more adroitly matched? And to any one who is thoroughly scientific will not this kind of thing appear about as far from the sincerity of science as Dr. Driver's concessions to tradition appear to his courageous friend?

Christopher Gist's Journals; with Historical, Geographical, and Ethnological Notes, and Biographies of his Contemporaries. By William M. Darlington. Pittsburgh: J. R. Weldin & Co. 1893.

Most people of fair intelligence, if asked, Who was Christopher Gist? will answer, We never heard of him. But if told he was Washington's pilot on the threshold of the latter's career, when he had been sent West in 1753 to order the French to keep off the Ohio, the same persons will remember more than one crisis in the young hero's most perilous adventure when he must have perished but for Gist or a man like him as an auxiliary. Gist kept a journal of his expedition with Washington, and of two others which he had before made over much of the same routes—thanks to which experience he had acquired a special fitness for the service which Washington so much needed. These previous journeys were several times longer, both in time and in distances traversed, than that with the young Virginian major. They stretched beyond the Ohio even to the Miami, almost to the falls at Louisville, as well as through all Kentucky eastward from that point. Undertaken in the interest of a land company in which the Washingtons had a share, this exploration gave the earliest report from a competent observer concerning the agricultural capabilities of a vast tract west and south of the Ohio. These journals were compiled a score of years before Daniel Boone told his stories of Kentucky, and nearly two score before Marietta rose as the morning star of the West.

Mr. Darlington has rightly judged that these pioneer notices of two great States ought to be kept before the people. The first journal first appeared in London in 1776. We ought rather to say it was then hid away in the appendix of a folio entitled 'Topographical Description of North America by Governor Pownall,' a work so rare that an annotated copy sold for $53 in 1854. The second journal Mr. Darlington is first to print, and the third, in his opinion, had been printed only by the Pennsylvania Historical Society. It is, however, also found in the Massachusetts Historical Collections (3d s. vol. v. p. 102, *et seqq*). The value of maps contemporary with each historic era is perfectly understood by Mr. Darlington. At least seven such maps illuminate his work. Several of them were copied for him from originals in the British Museum. His notes fill more pages than the journals themselves. His biographies and other illustrative papers fill more than twice as many. Historic side-lights abound. Pennsylvania Quakers are shocked at Puritan dealings with Indians—as when Judge Sewall, in 1690, sent from Maine "a barrel marked with ink S. S., containing four Indian scalps—one for Mr. Charles Morton, one for Mr. [Rev. Increase] Mather if acceptable," etc. But as we learn from Mr. Darlington, when certain Indians, fifty-eight years after that, sent a French scalp to the President and Council of Pennsylvania, they received from that body thanks for the present. Let not the pot call the kettle black.

We remember no work enriched by so many and so satisfactory etymologies of noted Indian names, such as Ticonderoga, Muskingum, Wyandot, Kentucky, Scioto, Youghiogheny, Monongahela. In fact, Mr. Darlington's monograph is so good that it ought to be better. The text of the journals is totally without any references to the notes. Hence we read them all the while desiderating what we did not discover till the last. The references in the notes to the text would be easier to trace if made by pages and not by days. The account of Gist himself should precede his journals. Placing these first is putting the cart before the horse. The table of contents lacks a list of the excellent maps—indeed, makes no mention of any map. But the omission which we mark with most surprise and regret is that Mr. Darlington did not also print for us Washington's Journal, and that, perhaps, side by side with that of his companion Gist. Each was characteristic and each supplements the other. They would each, like lamps, or gospels, lend and borrow light by mutual reflection. Concerning their moving slowly, when Washington deals in generalities Gist says horses straggled away, or that he must kill deer for food. At Murderingtown the one learns secrets of state by grapevine telegraph, the other gets a viaticum of corn and dried meat. When horses were slow, and the major insisted on a foot-march, it is only from Gist we learn that, after a tramp of eighteen miles, Washington was exhausted and betook himself to an Indian cabin. When business demanded haste, we wonder that Washington lingered to pay court to an Indian queen; but Gist tells us that on that day no horses could be had. Nothing could be more suggestive than to compare the two narratives article by article.

A Short Account of the Land Revenue and its Administration in British India. With a Sketch of the Land Tenures. By B. H. Baden-Powell, C. I. E. Oxford: Clarendon Press; New York: Macmillan.

FEW literary works combine the characteristics of the practical handbook to a highly specialized profession with those of a more or less "epoch-making" contribution to the discussion of a great historical problem. Whether it be that Mr. Baden-Powell has interests unusually wide for an ex-official, or simply because he has known how to seize the happy minute, this is certainly the significance of his recent works on Indian land.

In 1882 Mr. Baden-Powell prepared, under the orders of the British Government, a 'Manual of the Land-Tenures and Land-Revenue Systems of British India' for the use of civil servants. Soon afterwards great changes were made in the law, and the author had also an opportunity to make further investigations into the historical side of his subject. The old book was therefore allowed to go out of print, and it was not till 1892 that Mr. Baden-Powell's *magnum opus* appeared from the Clarendon Press—'The Land Systems of British India,' in three portly volumes. To meet the wants of students, he has since prepared the 'Short Account' now before us. During the interval Mr. Baden-Powell has certainly benefited by criticism; he has realized more distinctly how the matter is likely to strike the non-professional reader, and the sort of questions he is likely to ask. The new book has, therefore, not only the advantage of brevity, but also the merit of producing a more consistent and complete mental picture of the conditions with which Indian administrators have to deal.

The 'Short Account' is, as we have already indicated, intended, like its predecessors, primarily for students preparing for the examinations of the Indian civil service. It abounds, therefore, necessarily, in details of legislation and procedure at which the general reader can only cast a hasty glance, with a growing feeling of the complexities and diversities of Indian life. We have read enough, however, to feel able to congratulate the future "collectors" and "magistrates" on the possession of a handbook so thoroughly informed by general principles, so cautious in statement, so devoid of unnecessary detail.

To the non-professional reader the interest of the book lies in its bearing on the large question of the history and development of property in land. During the last twenty or thirty years a great part has been played in popular as well as in scientific discussion by the idea that land was originally not the property of individuals, but of some larger group of persons. And indeed the phrase "tribal ownership" may serve tolerably well to describe the conditions of many savage races of to-day as well as of early society, although it would be misleading to institute a comparison between such tribal ownership and modern private property without more careful scrutiny than is commonly given to the ideas alike of "tribe" and of "ownership." But the idea of communal property has very commonly also come to assume the form of a belief in what is known as the primitive "village community" owning in common the lands it cultivated. And one of the causes which, in the early '70s, contributed to popularize this idea and give it general currency, was the discovery which Sir Henry Maine believed he had made of this sort of village community in India, and the close parallel he drew between "Village Communities in the East and West"—as the latter were described by certain authorities. Yet Sir Henry Maine had, after all, but a superficial acquaintance with Indian history and literature, and the value of Mr. Baden-Powell's works is that therein we get for the first time a detailed and quite trustworthy description of Indian conditions looked at by one who is quite aware of their supposed resemblance to the early European institutions imagined by modern theories, and also quite aware—as Sir Henry Maine could not be—of the very insecure foundation upon which those theories themselves rest.

Now what Mr. Baden-Powell makes very clear is that, putting one side certain outlying districts concerning which our information is incomplete, the villagers who till the soil do not regard themselves as in any way joint holders of a whole area, or as holding in any sense *shares* of a whole belonging to them all. They are either independent owners (in the so-called *Raiyatwari* settlement of Madras and Bombay), or the separate tenants of superior owners (as in the *Zamindari* settlement of Bengal). Where there is a village proprietary body, as in the northwest provinces, this "community" usually consists of non-agricultural castes, and the land itself is cultivated by their tenants. And there is no reason to believe that these "landlord-villages," as Mr. Baden-Powell calls them, represent a form of primeval land-tenure from which all other forms were descended. In a very large number of cases we can actually trace the way in which such a landlord community has grown up *over* the previous village of cultivators by the multiplication of the family of some person who managed to obtain rights over it, in comparatively recent times; and all the other instances are readily explicable as due to similar causes. Moreover, so far as the previous village of cultivators is concerned, there is no sort of Indian evidence for the supposition that there was ever any holding "in common." There is nothing of the kind at present among those peoples in India whom we can regard as surviving from pre-Aryan races; and there is no such indication in the earliest Hindu records.

"Whatever be the date of the 'Laws of Manu' representing the custom as established in Northern India, the only kind of village known to that author is the *raiyatwari* village. . . . The only title to land known is the right by first clearing the jungle. It is to me quite incredible that if a really earlier and universal form of village existed, in which the right was a common right, marked by periodical exchange of holdings, and that the families exercised their joint ownership by virtue of inheritance or birthright, not the faintest trace of such a common holding or such a claim or title to land should be found in Manu."

These are considerations, not perhaps absolutely conclusive, but such as no future student of "the comparative history of institutions" can safely leave out of account.

My Life and Times. By Cyrus Hamlin, Missionary in Turkey, author of 'Among the Turks,' etc. Boston: Congregational Sunday-school and Publishing Society. 1893.

THERE are not many names more widely associated with missionary work in Turkey than that of Cyrus Hamlin, but those who take up this autobiography with the hope of learning something of his specifically missionary labors will be disappointed. It may be pleasantly, for the book is interesting in its freedom from the anticipated pieties of the ordinary missionary narration, in its surprises of executive ability on the part of Mr. Hamlin, and in its revelation of his hale and genial personality in and between the lines. We are taken into his confidence to a remarkable degree, which is explained by the fact that the book was originally written for his children, and to them all with familiar, direct address. This has been changed, but many things have been allowed to stand which probably would not have been written if the book had been intended for the public from the first.

His father, Hannibal Hamlin, was the brother of Cyrus, who was the father of Hannibal, the Vice-President. These had four older brothers, named Europe, Asia, Africa, and America. After this burst of geography and history, the patriarchal Eleazar fell back on the Old Testament for the names of the other eleven of his children. The mother of Cyrus was one of eleven children. He was her third child, born in 1811 in a new clearing in Waterford, Me. The story of his boyhood, on which he lingers long and lovingly, will be the most attractive part of the book for those who can look back to a simple, hard, and frugal early life. The father died, but, of course, the boy went to college. That was the rule where there was the least to eat and wear. The college was Bowdoin, where in 1831 Longfellow was a professor, but we get nothing about him of importance. From Bowdoin young Hamlin went to Bangor Theological Seminary, and then, after a year's impatient waiting, to Constantinople. Mr. Hamlin may have been a good missionary, but, when he made himself one, he spoiled a better railroad builder or civil engineer or something of that sort. He had great fertility of invention and great energy for carrying out his plans, and, always, what he prides himself on is not his plucking of brands from the burning or the educational work to which he was assigned, but his shrewdness and economy in practical enterprises, such as building seminary and college buildings and making bread and washing clothes on a large scale. The two last-named employments were incidents of the Crimean War. He had started a bakery to give employment to Armenians under ban. He made good bread, and the English, who were getting the poorest for their hospitals, wanted it. Beginning with 250 pounds a day, he went up to 6,000 for one hospital, one of several which he supplied. All this was for the glory of God and the treasury of the Board of Missions, into which he turned $25,000. The story of the experiments he made and the obstacles he overcame is full of interest. But bread-making did not exhaust his energy. The clothes from the hospitals required washing, and there was no laundry at hand. Mr. Hamlin extemporized a mangle out of a beer barrel, and, as "the poor little church in Bardezag was in need of a church building, he proposed to wash out one for them." "It cost nearly $3,000, and yet I built it entirely out of an English beer barrel."

The building of Robert College was the great achievement of Mr. Hamlin's later years in Turkey. For a long time he could not get permission, and, when he got it finally, he could not imagine why it came. It turned out that fear of Admiral Farragut, who had been visiting Constantinople, was the moving cause. He might come over with a monitor and take part with the Cretan slow-bellies. Here was one of those "deliverances of divine Providence" which Mr. Hamlin found "so wonderful that no flesh can glory in His presence." His relation to Robert College reached at length a tragical conclusion. He had come to America to raise money for it, and was about to return, when Mr. Robert, the founder and principal benefactor of the college, told him, with many tears, that he could not go back. There is no

explanation. Mr. Hamlin had differed with his colleagues as to methods of teaching. That may have been the root of bitterness; or it may have been that a man of so much practical ability was thought unfit for missionary work. His later years have brought him much pecuniary anxiety, but he has had the best of friends, and his lines have often fallen to him in pleasant places. Evidently he has a fund of cheerfulness and courage that has served him well, and will unto the end.

BOOKS OF THE WEEK.

Barrett, Frank. The Woman of the Iron Bracelets. J. S. Tait & Sons. $1.
Baring-Gould, S. Cheap Jack Zita. J. S. Tait & Sons. $1.25.
Beers, Prof. H. A. Selections from the Prose Writings of S. T. Coleridge. Henry Holt & Co. 35 cents.
Benner, Samuel. Benner's Prophecies for 1894. Cincinnati: Robert Clarke & Co. $1.
Benson, E. F. Dodo. M. J. Ivers & Co. 25 cents.
Beresford-Webb, H. S. German Historical Reading-Book Henry Holt & Co. 90 cents.
Bierce, Ambrose. Can Such Things Be? Cassell. 50 cents.
Bindley, Rev. T. H. Tertullian's Præscriptio Hæreticorum. Oxford: Clarendon Press; New York: Macmillan.
Birrell, Augustine. Men, Women and Books. Scribners. $1.
Black, W. The Penance of John Logan, and Two Other Tales. Harpers. 80 cents.
Blackie, Prof. J. S. The Ideal of Humanity in Old Times and New. F. H Revell Co. $1.
Blümner, Prof. H. The Home Life of the Ancient Greeks. Cassell. $2.
Bourinot, J. G. Our Intellectual Strength and Weakness: A Short Historical and Critical Review of Literature, Art and Education in Canada. Montreal: Foster, Brown & Co.
Boyesen, Prof. H. H. A Commentary on the Writings of Henrik Ibsen. Macmillan. $2.
Briggs, F. H. Boys as They are Made, and How to Remake Them. Syracuse, N. Y.: C. W. Bardeen. 25 cents.
Bryant, Mrs. Sophie. Short Studies in Character. London: Sonnenschein; New York: Macmillan. $2.
Bumpus, Prof. H. C. A Laboratory Course in Invertebrate Zoölogy. 2d ed., revised. Henry Holt & Co. $1.
Cameron, A. G. Contes de Daudet. 2d ed. Henry Holt & Co. 80 cents.
Campbell, J. D. Samuel Taylor Coleridge: A Narrative of the Events of his Life. Macmillan. $3.
Carpenter, Mrs. W. B. Fragments in Baskets. J. S. Tait & Sons. $1.
Carroll, Lewis. Sylvie and Bruno, Concluded. Macmillan. $1.50.
Clark, Arnold. Beneath the Dome. Chicago: Schulte Publishing Co. $1.25.
Coffin, C. E. The Gist of Whist. J. S. Tait & Son. 75 cents.
Cook, Prof. A. S. A First Book in Old English. Boston: Ginn & Co. $1.60.
Crane, Walter. Illustrations to Shakspere's "Tempest." Boston: Copeland & Day. $6.
Crump, C. G. The Longer Prose Works of Walter Savage Landor. Vol. II. London: J. M. Dent & Co.; New York: Macmillan. $1.25.
Dawson, Sir J. W. Some Salient Points in the Science of the Earth. Harpers. $2.
Dodge, Prof. C. W. Introduction to Elementary Practical Biology. Harpers. $1.80.
Doyle, A. C. Memoirs of Sherlock Holmes. Harpers. $1.50.
Emerson, A. W. Rules for Essay-Work. Syracuse, N. Y.: C. W. Bardeen. 40 cents.
Engineering Education: Proceedings of Section E of the World's Engineering Congress. Columbia, Mo.: E. W. Stephens. $2.50.
Eve, H. W. Delavigne's Louis XI. Cambridge: University Press; New York: Macmillan. 50 cents.
Foerster, F. W. Der Entwicklungsgang der Kantischen Ethik bis zur Kritik der reinen Vernunft. Berlin: Mayer & Müller.
Forbes-Mitchell, William. Reminiscences of the Great Mutiny, 1857-59. Macmillan. $2.50.
Fortier, Prof. Alcée. Histoire de la Littérature Française. Henry Holt & Co. $1.
Fortier, Prof. Alcée. Louisiana Studies: Literature, Customs and Dialects, History and Education. New Orleans: Hansell & Bro. $1.50.

ENGLAND'S STORY BRIEFLY TOLD

History of England and the British Empire.

A Record of Constitutional, Naval, Military, Political, and Literary Events from B. C. 55 to A. D. 1890, by EDGAR SANDERSON, M.A., late scholar of Clare College, Cambridge, author of "Outlines of the World's History," etc. With tinted maps and genealogical tables. In one handsome 8vo volume, 1,134 pp., cloth, price, $3.00. (*Just ready.*)

No one of the various departments of National Life which in the sum make history, has been ignored; Literature, Science, Art, Commerce, and Geographical discovery have all come under review. An excellent series of specially prepared maps, showing the great territorial changes at different times, are placed at appropriate dates throughout.

"Mr. Sanderson has tried, he says, to make his history interesting. In this effort he has met with a surprising degree of success."—*The N. Y. Times.*

"It is to his credit that he treats the subject with breadth and does not sink Colonial topics into abeyance. . . . One glides as through the pages of a novel over this chronicle of national progress."—*Public Ledger, Phila.*

A New Novel in "The Tavistock Library."

A Liberal Education

By Mrs. GEORGE MARTYN. Pocket size, cloth, 75 cents; paper cover, 50 cents.

"It seems not unlikely that if Mr. Ruskin had ever read 'A Liberal Education' he might have found for it some of the praise he once dealt with such lavish hands to 'Francesca's' sketches. . . . One puts the little volume down with the pleasant sense of having been not unprofitably entertained."—*The Nation, N. Y.*

SURBRUG, 159 Fulton St., N. Y. City.

G. P. Putnam's Sons,

NEW YORK AND LONDON,

HAVE NOW READY:

The Christian Recovery of Spain.

Being the Story of Spain from the Moorish Conquest to the Fall of Grenada (711–1492 A. D.). By H. E. WATTS. (No. XXXIX. in the "Story of the Nations" Series.) 12mo, cloth, illustrated, $1.50; half leather, $1.75.

Ships that Pass in the Night.

A Novel. By BEATRICE HARRADEN. 16mo, $1.00.

"Ships that pass in the night, and speak each other in passing,
Only a signal shewn, and a distant voice in the darkness;
So, on the ocean of life we pass and speak one another,
Only a look and a voice, then darkness again and silence."

A story of exceptional power and originality, which has attracted wide attention from thoughtful readers in Great Britain, and which is assured of a favorable reception from similar circles on this side of the Atlantic.

Primary Elections.

A study of methods for improving the basis of party organization. By DANIEL S. REMSEN. (Being No. 77 in the "Questions of the Day" Series.) 12mo, cloth, 75 cents.

NEARLY READY:

A History of Social Life in England.

A record of the progress of the people in religion, laws, learning, arts, science, literature, industry, commerce, and manners, from the earliest times to the present date. Edited by H. D. TRAILL, D.C.L. The work is to be completed in about six volumes.

Vol. I. · From the Earliest Times to the Accession of Edward I. 8vo. $3.50.

"It has been primarily designed," says the editor, "to supply a clear and consecutive account of the progress of the people of England in the several departments and activities of human life. The subjects considered have been so framed and the material so arranged that the work can be read with pleasure and instruction by the general reader interested simply in the wonderful story unfolded by it, while it has been planned expressly with reference to the requirements of students engaged in the investigation of the history of English letters and learning, English art and science, English industry and commerce."

The Evolution of Woman.

An inquiry into the dogma of her inferiority to man. By ELIZA BURT GAMBLE. 12mo, cloth, $1.75.

**** Notes on New Books, a quarterly bulletin, prospectuses of the Knickerbocker Nuggets, Heroes and Stories of the Nations Series, sent on application.*

Historical and Biographical SKETCHES.

By Hon. SAMUEL W. PENNYPACKER,

One of the Judges of the Philadelphia Bench. 1 vol., 8vo, cloth, 416 pages; untrimmed edges. Published at $2.50. We bought the remainder of the edition, consisting of comparatively few copies, and are able to sell it for $1.00. Postage, 18 cents.

From the Author's Preface.

"About ten years ago I formed the design of writing the history of the Mennonites in America. It was for many reasons a task of extreme difficulty. It required a preliminary knowledge of the German and Dutch languages. No collection of their books had ever been made in this country, nothing of value had been published concerning them except some papers in the 'Pennsylvania Dutch,' which were descriptive rather than historical, and the structure had to be erected from its foundation. More than all, the conviction entertained by them that fame is only one of the vanities and the desire for it but a form of worldliness, has led them in the past to destroy, rather than to preserve, those materials which are the ordinary sources of historical information. When a book was written the name of the author did not appear; when a meeting-house was built, no tablet told the date; and when a man was buried no stone was raised to his memory. These difficulties and the exacting demands of a professional life have so far retarded, if not prevented, the completion of the design, and the results up to the present time have been a somewhat full collection of their books and manuscripts, and the first seven papers gathered into this volume.

"Though a torso, I believe the work, so far as it has gone, to be thorough, and if it should not progress to the end I shall at least have the satisfaction of having contributed something to the history of a people who are in every way worthy of the most careful study, and who will sooner or later attract wide attention.

"The circumstances under which the other papers were written are for the most part explained in the notes accompanying them. All those which have heretofore appeared in the magazines of the day are so described in the sub-titles, and they have all been here corrected and enlarged. Full credit has been given in the notes and elsewhere for the use made of the labors of other investigators."

CONTENTS.

1. The Settlement of Germantown, Pa., and the Causes which Led to It.
2. David Rittenhouse, the American Astronomer.
3. Christopher Dock, the Pious Schoolmaster on the Skippack, and his Works.
4. Der Blutige Schau-platz, oder Martyrer Spiegel. Ephrata, Pa., 1748. A Noteworthy Book.
5. Mennonite Emigration to Pennsylvania.
6. Abraham and Dirck op den Graeff.
7. Zionitischer Weyrauchs Hügel oder Myrrhen Berg. Germantown, 1739.
8. William Moore of Moore Hall.
9. Samuel Richardson, a Councillor, Judge, and Legislator of the Olden Time.
10. Captain Joseph Richardson.
11. Samuel John Atlee, Colonel of the Pennsylvania Musketry Battalion in the Revolutionary Army.
12. James Abram Garfield.
13. Henry Armitt Brown.
14. Charles Frederick Taylor.
15. Six Weeks in Uniform, being the record of a term in the Military Service of the United States in the Gettysburg Campaign of 1863.

Exhibition of rare books; two galleries of paintings. Admission free; no tickets required.

The Best Food For Children?

is worthy every parent's study; not only what they can eat, but what gives the most nourishment. No children are better, and most are worse, for eating lard-cooked food. If, however, their food is prepared with the healthful new vegetable shortening,

COTTOLENE

instead of lard, they can eat freely of the best food without danger to the digestive organs. You can easily verify this by a fair trial of Cottolene.

Sold in 3 and 5 lb. pails by all grocers.

Made only by

The N.K.Fairbank Company,

Chicago, Boston, New York, St. Louis, Montreal, Philadelphia, San Francisco.

THE

Popular Science Monthly

FOR MARCH.

Abolish all Prohibitive Liquor Laws By APPLETON MORGAN.

A severe arraignment of prohibition. Declares prohibitory laws to be ineffectual and inexpedient, and as standing in the way of real remedies for intemperance.

Prof. Tyndall. By THOMAS H. HUXLEY.

The scientist as a man and a friend. Recollections of a long intimacy.

The Origin of Righthandedness. By Prof. J. MARK BALDWIN.

Are we born right-handed, or are we made so? This article contains the results of experiments upon the author's infant daughter, relating to the spontaneous use of the hands.

OTHER ARTICLES ON

INDUSTRIES OF ANIMALS. By Frederic Houssay (Illustrated); FOSSIL MAN. By John G. Rothermel (Illustrated); THE EUROPEAN LAW OF TORTURE. By Amherst W. Barber; CUSTOMS AND SUPERSTITIONS OF THE MAYAS. By Mrs. A. D. Le Plongeon (Illustrated); BIOLOGY AND ETHICS. By Sir James C. Browne, M.D., F.R.S.; THE ACTION OF MASSAGE UPON THE MUSCLES. By D. Graham, M.D.; THE ICE AGE AND ITS WORK. I. By A. R. Wallace, F.R.S.; THE FOUNDER OF THE FIRST SCIENTIFIC JOURNAL. By M. J. Boyer; SKETCH OF JEAN MARTIN CHARCOT (with Portrait).

50 cents a number; $5.00 a year.

D. APPLETON & CO.,
NEW YORK.

D. Appleton & Co.'s New Books.

The Story of the Sun.

By Sir ROBERT S. BALL, F.R.S., author of "An Atlas of Astronomy," "The Cause of an Ice Age," etc. 8vo. Cloth, $5.00.

"All in all, this work is most complete and satisfactory. It fills a want which has been felt by many persons, and fills it acceptably."—*N. Y. Times.*

"Like the author's previous works, it is almost entirely devoid of mathematics, while revealing in every page the hand of the master of his science. Instead, it presents in a beautifully clear and logical form the results of the labors of astronomers, mathematicians, and physicists in their discoveries of the character, size, movements, and power of the great ruler of the day."—*Philadelphia Ledger.*

"As a specimen of the publisher's art it is superb. It is printed on paper which entices the reader to make marginal notes of reference to other books in his library, the type is large, the binding is excellent, and the volume is neither too large nor too small to handle without fatigue."—*N. Y. Herald.*

Science and Hebrew Tradition.

By THOMAS H. HUXLEY. The fourth volume of the author's Collected Essays. 12mo. Cloth, $1.25.

CONTENTS.—On the Method of Zadig. The Rise and Progress of Palæontology. Lectures on Evolution. The Interpreters of Genesis and the Interpreters of Nature. Mr. Gladstone and Genesis. The Lights of the Church and the Light of Science. Hasisadra's Adventure. The Evolution of Theology.

The Fauna of the Deep Sea.

By SYDNEY J. HICKSON, M.A., Fellow of Downing College, Cambridge. A new volume in the Modern Science Series, edited by Sir John Lubbock, Bart. With 23 Illustrations. 12mo. Cloth, $1.00.

"Our present-day knowledge of the physical conditions of the bottom of the deep sea and the animals that dwell there is by no means inconsiderable. . . . It is the object of this little book to bring together in a small compass some of the more important facts and considerations, and to present them in such a form that they may be of interest to those who do not possess a specialist knowledge of genera and species."—*From the Preface.*

A History of Germany,

From the Earliest Times to the Present Day. By BAYARD TAYLOR. With an Additional Chapter by MARIE HANSEN-TAYLOR. With Portrait and Maps. 12mo. Cloth, $1.50.

This standard popular history of Germany has been carefully revised and brought down to date. Its value for general readers and for the higher grade of schools and for colleges has been generally recognized.

The Orthoepist:

A Pronouncing Manual, containing about Four Thousand Five Hundred Words, including a considerable number of the Names of Foreign Authors, Artists, etc., that are often mispronounced. By ALFRED AYRES, author of "The Verbalist," etc. Revised and Enlarged Edition. 18mo. Cloth, $1.25.

Germany and the Germans.

By WILLIAM HARBUTT DAWSON, author of "German Socialism and Ferdinand Lassalle," "Prince Bismarck and State Socialism," etc. 2 vols., 8vo. Cloth, $6.00.

"This excellent work—a literary monument of intelligent and conscientious labor—deals with every phase and aspect of state and political activity, public and private, in the Fatherland. . . . Teems with entertaining anecdotes and introspective *aperçus* of character."—*London Telegraph.*

"With Mr. Dawson's two volumes before him, the ordinary reader may well dispense with the perusal of previous authorities. . . . His work, on the whole, is comprehensive, conscientious, and eminently fair."—*London Chronicle.*

Natural Resources of the United States.

By JACOB HARRIS PATTON, A.M., Ph.D., author of "Four Hundred Years of American History," "Political Parties in the United States," etc. Revised with Additions. 8vo. Cloth, gilt top, $3.00.

"The intention of this volume is to give the American people a concise narrative of the natural resources of their own country, in all their numerous forms. . . . Attention is occasionally directed to the immense value of the natural resources of the United States when compared with those of other countries. Truth is not a braggart, and it is proper that the fact in this relation should be known, that the American people, especially the younger portion, may appreciate more fully the natural advantages of their own country."—*From the Preface.*

The Greater Glory.

A Story of High Life. By MAARTEN MAARTENS, author of "God's Fool," "Joost Avelingh," etc. 12mo. Cloth, $1.50.

"A remarkably fine novel, vividly realistic in the best sense of that qualification, and wonderfully strong in its character drawing. The author may unquestionably be ranked among the most brilliant of living writers of fiction. He is a thorough literary artist, and in all that he does his profound study and knowledge of human nature are made manifest. The dramatic interest of the story is vigorous, and its pathos and its humor are alike admirable. Those who have read his earlier books will need no inducement to make themselves acquainted with this, the most recent of his masterly contributions to the literature of fiction."—*Boston Saturday Evening Gazette.*

History of the Indian Walk

Performed for the Proprietaries of Pennsylvania in 1737, to which is appended a Life of Edward Marshall, one of the walkers, by William J. Buck, Member of the Historical Society of Pennsylvania. 1 vol., 12mo, cloth, 269 pages. The book was printed from type and limited to 210 copies. We bought the remainder of the edition, consisting of 35 copies, and can sell them for $2.00; Postage 9c. Sooner or later it will be one of the "*Scarce* Americana."

In its beginning the Indian Walk appeared but a small affair that lay chiefly between the Proprietaries of Pennsylvania and the native Indians. With time the results of its injustice became more and more apparent, and on the part of the Indians culminated in war and the most determined efforts for the recovery of their favorite hunting grounds, of which they were defrauded by the extraordinary head-line drawn from the end of the Walk, costing the lives of hundreds of the unfortunate settlers. The Assembly of Pennsylvania, through their agent, Dr. Franklin, had the affair laid before the King and Government of Great Britain for investigation, thus claiming attention on both sides of the Atlantic, and resulting in considerable feeling. However, the excitement attending it in Pennsylvania was prepar ng the people more and more for independence. The Indian Walk had a more important bearing on the history of Pennsylvania than has generally been supposed

The Nation.

NEW YORK, THURSDAY, FEBRUARY 15, 1894.

The Week.

THE decision of the Senate committee on finance not to grant hearings on the tariff bill is most judicious and cheering. It will cut off the earnings of a lot of lobbyists and attorneys, but will injuriously affect no other industry whatever. What could the committee "hear" that it and everybody else in the country has not heard a thousand times already? It would do just as much good to all concerned if the protectionists were allowed to set up an apparatus of the nature of a Buddhist praying-machine in the committee-room, inscribe on it their well-known mottoes, "We shall be ruined," "Give us protection or we die," "Pity the sorrows of an aged infant industry," set it going, and then set themselves going on the way home. The Senate has now a fine chance to reinstate itself in public esteem and vindicate its right to be considered a body for the despatch of public business, and not merely a harbor of refuge for the filibuster and the crank. The committee on finance seems disposed to do its part, and it can securely count upon the backing of all sections of the business world in trying to force prompt action on the Wilson bill. Everybody is agreed that the bill is ultimately to pass, and even protectionist business men are clamorous for the thing to be done quickly. If the Senate cares to save the last remaining shreds of public respect which it still possesses, it will reduce the palaver and delay to the smallest possible limits.

The passage by the Senate of the House bill repealing the federal-election laws, and its signature by the President, ends a long agitation. While all of the Republicans in the Senate but one opposed repeal, there is nothing like such unanimity among the members of the party. The more candid admit that the laws in question have utterly failed of their purpose, and in many cases have led to the grossest abuses. In short, where these laws have not been useless, they have been worse than useless, and it will be a gain to the cause of good government to remove them from the statute-book.

In the year 1873 the price of silver in the London market was 59¼d. per ounce. The fluctuations were very slight, and this was the average price throughout the year. The London quotation a week ago to-day was 29⅝d. In other words, the price has fallen 50 per cent. during the past twenty years. Each of our silver dollars has the metallic value of half a dollar. The continuous decline of the metal attracts very little attention here, as our Uncle Samuel has gone out of business as a pawnbroker, and is no longer making advances on the metal. In India, however, the trouble continues because the Government undertook to make a fixed rate of exchange between the rupee and the sovereign, or, in the language of the street, it attempted to "peg the market." The task was too great. The upset price of 16d. per rupee was not maintained a week. The rate fell to 15¼d., and lingered there for some weeks, but finally the public refused to buy Council bills at that figure. Sales ceased and the Government began to borrow money for current expenses. By and by borrowing came to an end, and the authorities having charge of Indian finance were compelled to face the reality and sell Council bills for what they would bring. The price is nearly 3d. higher than the selling rate of silver would justify if the Indian mints were open. In fact, the rupee has a scarcity value, but not such a scarcity value as was anticipated for it when the demonetization was ordered. The metallic value of the rupee still governs its exchange value to a considerable extent, though not entirely. Although Indian finance is thus disturbed, we hear nothing of the crash of British finance which the international bimetallists predicted as a consequence of the decline of silver. We must do Mr. Bland the justice to say that he never "took any stock" in that crash or in international bimetallism anyway. He looked upon it as humbug from the very beginning, and so did his allies in the silver-mining States.

The debate in the House on Friday brought out the fact that the aim of Mr. Bland's seigniorage bill, so called, is to cause a suspension of gold payments in a roundabout way. The plan is to retire and cancel all the Treasury notes of 1890 and substitute silver certificates for them, and then refuse to redeem the silver certificates in anything except silver dollars. All this proceeds upon the theory that the act of 1890, which declares it to be the established policy of the Government "to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be established by law," does not include silver certificates. Gen Tracey was entirely correct when he said in the debate that silver certificates were, under this clause, redeemable in gold, the same as Treasury notes. It is true that the practice of the Treasury Department under Secretary Foster was to redeem the Treasury notes in gold, but not the silver certificates. This practice was adopted under the influence of a Treasury Department panic and with a futile idea that it would tend to check the exportation of gold. It had no such effect. The practice adopted by Mr. Foster was followed by Mr. Carlisle simply because it was an existing practice, and because the Department does not change its rulings until somebody asks it to do so. Nobody has asked it to change this ruling, because nobody has had any interest to do so, but it is plain to the simplest understanding that the clause which we have quoted from the act of 1890 makes no discrimination between different kinds of paper, but speaks only of metals. Therefore, whatever rule applies to Treasury notes applies to silver certificates. Mr. Bland's plan for forcing upon the public two different kinds of money by his seigniorage bill will fail. If it should succeed, the better kind would be in the hands of the rich, and the worse in the hands of the poor, and Mr. Bland would probably be mobbed by his victims. The *Journal of Commerce* has very positive information that the President will veto the Bland bill if it passes, and that the veto will be sustained.

The agents of the Pocahontas Coal Company of Philadelphia address a letter to the *Engineering and Mining Journal* setting forth the disastrous way in which Nova Scotia coal is going to rob American coal of "the Eastern market" in case the Wilson bill becomes a law. They state that the Whitney syndicate has issued a prospectus from which it may be inferred that Nova Scotia coal can be put on board at Louisburg at $1, despite the fact that the official Government report gives the actual cost as $1.30 a ton. The thing is to be done, it seems, by the employment of "coolie labor"; and when we add that other nefarious practice of foreigners, a base resort to "tramp steamers" for the sole purpose of getting low freights, it will be clear that the gloomy prospect of seeing coal sold at their docks at $2 a ton is now before the people of Boston. Nothing can prevent such a calamity from befalling them, as the Pocahontas agents patriotically point out, but the retention of a duty of 75 cents a ton on coal and the saving of "the Eastern market" for Pennsylvania.

But the editor of the *Engineering and Mining Journal* replies to the Pennsylvania patriots in a truly heartless fashion. He reminds them that their own coal can be mined at a cost of 50 to 55 cents a ton, with or without coolie labor, and is cruel enough to quote the boast of their own shipping agent that Pocahontas coal had been sent

to Quebec, "going past the Nova Scotia mines, and competing with them in their own market." Finally, he cites the figures of our exports of bituminous and anthracite coal to Canada and to other foreign countries, setting them beside the corresponding statistics for Canada, and comes to the conclusion that Canadian coals cannot possibly compete with ours, even under free trade, "except in a few markets near her own mines." Right there is his fatal error. In no part of the home market must a foreigner be allowed to sell his unsanctified coal, as Senator Hoar calls it. The old idea that it was a fine thing for a city to have a good harbor and ready access to foreign markets by the sea, has long since been exploded. It is right in the teeth of democratic equality. What right has Boston to get coal any cheaper than Cincinnati? Protection is the great democrat that levels up the opportunities of all cities and sections of the country, and leaves them all in perfect equality as the victims of monopoly.

The *Independent* is dumfounded at the extraordinary fact that "the religious papers which defend the President's action in reference to Hawaii seem to be representatives of the colored churches." Nearly all the white religious papers, like the *Sun* and the *Independent*, are in favor of international robbery and of disregarding the rights of the native majority in the Islands, but these perverse religious papers of the colored people are refusing to follow those who have "the right to be their trusted advisers." But it is precisely because they are acting upon the principles taught them by their trusted advisers, lo! these many years, that the religious papers of the blacks are several shades whiter morally than the religious papers of the whites in their treatment of the Hawaiian question. They are simply maintaining that it is as true in Hawaii as in the United States that human rights do not depend upon the color of the skin, and that for a handful of white men to trample upon the rights and desires of great numbers of black men is as wicked and tyrannous in Honolulu as it is in Charleston. It is the trusted adviser who has gone wrong, and has left the first principles of morality to be expounded by his former pupils.

A new development of election frauds has been reached in Michigan, where it appears that two amendments to the Constitution, voted upon in different years, were reported as carried, although in each case a majority of the ballots actually cast was against the proposed change. Each amendment contemplated an increase of salary, and in the second case two of the Board of Canvassers were officials whose pay would be raised if the change were made. In 1891 the question of increasing the attorney-general's salary from $800 to $2,500 was submitted to the people, and reported by the canvassers to have been carried in the affirmative; whereas it now appears that the returns from one county where a heavy adverse vote was cast were thrown out on a merely technical objection, and the returns from other counties were altered so as to increase the vote in its favor. In 1893 another amendment was submitted which proposed to increase the salaries of the Governor, secretary of state, and treasurer, and was returned as carried by about 2,000 majority, whereas it is now shown that there was an adverse majority of a great many thousands, the returns from twenty-five counties having been changed to produce this result. In Wayne County, which includes Detroit, the votes of dozens of precincts were changed in each year by placing the figure 1 before the true figures, so as to make 39, for instance, 139. Both parties are involved in these frauds, the Democrats having controlled the State government in 1891 and the Republicans being in power last year. The present Governor is a Republican, and he has taken prompt action in the matter, appealing to the Supreme Court to see whether the vote can be recanvassed, and calling upon the members of the State Canvassing Board, under whom the last fraud was perpetrated, to resign their offices, with the threat of removal in case of their refusal.

There is more trouble over the color line in Ohio. Six years ago the Legislature repealed the "black laws" discriminating against the negroes, and opened the public schools to white and black children alike. No sooner had this been done than a serious difficulty occurred in the town of Felicity, whose population consists of nine whites to one negro. When the negro children applied for admission at a white school, they were refused entrance, and when a negro father accompanied his children, he was roughly handled by white men. Finally the blacks were forced to accept an offer by the whites to provide separate schools for them. A year later the negroes made another effort to secure seats for their children in the regular schools, but they were again repulsed. The negroes then took the matter into the courts, and instituted proceedings against certain white persons who had obstructed negro parents when they tried to take their children inside the building; but two juries refused to convict the offenders, and the negroes had to surrender again. This time the trouble has broken out in Chillicothe. In order to keep the black children from association with the white, the board of education constructed a "shoe-string district," with the avowed intention of keeping all the colored children in one building, no matter how far they might be forced to walk to reach it. The negroes held indignation meetings and sent protests to the board, but without effect. Now they propose to appeal to the law and see if they can secure redress of their grievances. This action has provoked the whites, and has resulted in a combined movement against the blacks.

No one will suppose that the actual number of the unemployed in this city is accurately shown by the figures turned in by the police; yet we should be thankful for such an approach to accuracy as they furnish. They at once dispose of the exaggerated estimates which have been current—running all the way from 100,000 to 300,000—and give the charitable organizations of the city a more definite idea than they otherwise could have had of the problem before them. That 67,000 persons are out of work in New York city is a serious thing to consider, yet it cannot now be said that the situation here is essentially worse than in other cities of this country or Europe. In London, at the beginning of the year, 108,000 were in receipt of indoor and outdoor relief, and, of course, the numbers of the unemployed, counting in those who did not need assistance, must have been much greater. Distress of like proportion is reported from Berlin and Paris and the cities of Spain and Italy. It is no local phenomenon with which we have to deal, nor can the cause of it be merely local. Meanwhile, the immediate duty is to afford relief to the necessitous in such a way as not to impair their self-respect or deaden their spirit of self-help, and, in public affairs, to hasten action on the tariff so as to take away the uncertainty which now stands in the way of business improvement.

President Eliot of Harvard made a brief address at Boston last week in which he gave his view of the relations between Radcliffe College, as the Annex is hereafter to be called, and the University. Recalling a remark by George William Curtis in the "Easy Chair," that "it is settled that *Juliet* may study, but shall she study with *Romeo*?" he said that "we have learned in the last twenty-five years that young women are quite as capable of the higher studies as young men." He pointed out that, although there has never been any official connection with Harvard, the Annex never has had any teachers but Harvard professors and instructors, and its students have always had the same examination papers as Harvard students. He said that there were two reasons why the governing boards of the University had refused to

give the women college degrees outright. One was that the business of the University is constantly increasing, and is already a load upon the Board of Overseers and the Corporation; and the other, that the institution cannot at present offer women all the advantages that are now offered male students, and that "until the University can give with assurance a degree with its privileges to all alike, we cannot undertake to give it at all." President Eliot thought this "a prudent and conservative state of mind," which "simply says we are not ready now," but "looks forward"; and he said of the future:

"We do not yet give the degree of bachelor of arts, but we do guarantee the quality of instruction, and just as much, subject by subject, as is given in Harvard College. This relation between the Annex and Harvard University is firm, formal, and official. This is a long step forward, and it leaves the way open, very wide open, for further steps when the time comes."

While this is a denial of the petition for the granting of Harvard degrees to women upon the same terms as men, it indicates that the time is coming at no distant day when the governing authorities of the University will feel constrained to take this "further step."

Mr. Gladstone has again disposed of the report that he was about to retire from office immediately. He has returned to London in improved health. What, under these circumstances, becomes of the "full sense of responsibility" of Mr. Astor's young men, when they were telling their story, and repeating it in defiance of authorized reports from Biarritz? Is not "journalism" the oddest thing in the world? Of course Mr. Gladstone is liable to retire at any moment. A man of eighty-five lives in the hawk's shadow. In the twinkling of an eye the golden bowl may be broken and the silver cord be loosed. But everybody knows this. Nobody has "exclusive information" about it. There is no warrant in it for the assertion that the hour has come.

The English Liberals seem to have been waiting for the action of the House of Lords on the parish-councils bill and the employers'-liability bill to commence an attack in force on that body, without apparently giving Mr. Gladstone time to return to his post. He has always shrunk from an attack on the House of Lords, partly through reverence for the old traditions of the government, and partly, doubtless, through the feeling that the reform of that body was too great a job for his time of life. That the House of Lords needed mending has, ever since the passage of the Reform Bill, been acknowledged by everybody. When the Peers filled one hundred and fifty seats in the lower house and were looked up to as great men, the two houses found no great difficulty in working together. But when the House of Commons became a popular representative body, it was easily foreseen that collisions would multiply, and that sooner or later the existence of the upper house, as at present constituted, would be endangered. That they have managed to get along together for so many years — now over sixty — has been very surprising, considering that the majority in the Lords never changes its politics, no matter what changes occur in the Commons. This has always been exasperating, but the middle class would probably have borne it for another half century. The extension of the suffrage to the working classes is rapidly bringing on a crisis, which the Lords might have postponed indefinitely by simply giving up the hereditary principle. It is now questionable whether this will satisfy the Radicals—that is, whether they will be willing to have a second chamber composed of peers elected by the whole body of the peerage, which is what the Conservative reformers have always suggested. The Irish and Scotch peers are elected in this way now. But if reform comes soon, it is probably this shape it will take. If delayed, it may result in the relegation of the peerage to that region of barren and impotent titles in which the Faubourg St.-Germain in Paris has lived so long.

What the French are to do with their anarchists is doubtless a puzzling question, but there can be little doubt that the plan of executing them steadily after the commission of their crimes is one which cannot fail to wear them out. The hanging of the four in Chicago has given peace to that city ever since. The notion that the anarchists differ greatly from other men, except in love of notoriety and dislike of labor, is undoubtedly incorrect. Those who hold that they do not fear death, forget that they try to run away when they throw a bomb, and hide as vigorously as they can. They generally belong to the species we call "tramps," that is, semi-criminal loafers, who have been persuaded that "society" is in some manner responsible for their miserable condition. Not one really unfortunate man—that is, a man for whom good character and capacity have failed to obtain work—has yet turned up among them. Vaillant had been several times convicted of larceny, and had tried all sorts of occupations unsuccessfully, because fitfully, and Ravachol was little better than a wild beast. There is probably a good deal of substance in the theory that anarchism is a wave of insanity passing over Europe like an epidemic, and that it must soon exhaust itself if it be unflinchingly met. Curiously enough, however, there was for a few days a little danger that Vaillant would not be executed, a sentimental reaction in his favor having set in. One of the pleas made for him was that his motives were good, and that in throwing his bomb he really had in view the regeneration of society, so that his execution would be, in some sort, that of a philanthropist. Any yielding, however, to any such view would probably lead to terrible destruction of life and property at the hands of other reformers.

The Paris *Temps* discourses mournfully on the inroads which the office-seeking mania—that scourge of democracy—is making on the time of the French ministers. It says that in addition to the disquiet which it diffuses among the officials, it threatens to paralyze completely the most laborious and active ministers. Their ante-rooms are filled all day long with senators, and deputies, and councillors-general, to get promotion for a substitute, or a forester, or to have punishment inflicted on some functionary who has made himself obnoxious to the local electoral committee; and this goes on every day and at all hours, so that the minister is never free except when he is sitting in the Chamber or in the Senate. There is no getting away from it. Were he to shut the door on his pursuers, he would make them all his enemies, and they would "go for" the cabinet in the Chambers. Not only must he see them, but he must be pleasant and polite to them. The least sign of impatience would be taken as a declaration of "war." Moreover, the enemy does not come down on him as single spies, but in big battalions. The whole delegation of the department waits on him about the smallest matter, so that any sign of indifference would lose him eight or nine votes. This, in a body in which the majorities of the ministry are so small and fluctuating, is very serious. What is curious about the trouble is that nobody complains of it so much as the Deputies themselves, but the remedy each proposes always is that the minister should not pay so much attention to somebody else. The *Temps* itself does not see where the cure is to come from. The disease seems to be one which all democracy has to pass through, like children's measles. When the people first find themselves really in possession of the government, as with us under Jackson, their first uncontrollable impulse seems to be to get a living out of it somehow. After this has been tried for some time, they begin slowly to perceive that only very few can get a living out of it, and that the public service is being sacrificed to these few, and then we have an agitation for reform. The number of office-seekers diminishes, the absurdity of trying to live on the government becomes more apparent, and gradually the rush subsides. This has been our experience, and we presume it will be that of the French.

EIGHTEENTH-CENTURY POLITICS.

GEN. DRAPER of Massachusetts has an idea about the Hawaiian question which ought to be more generally understood. It was developed in his speech in the House on Saturday week. It embraces also his ideas of foreign trade. The General is a protectionist of the Chinese-wall variety. Still, he believes in trade with foreign countries if you can drive it into them with ironclads and drive other people's trade out in the same way. Here is a brief exposition of it:

"Samoa and Hawaii have been ripe to our hands for years. They are most advantageously situated for our needs, as bases from which our cruisers could work in time of war to protect our own trade and break up that of an enemy. The moral force of the United States is all that has kept European hands off these two groups to the present time, but should a strategic necessity for their occupation by either of those powers arise, moral force would lose its power, and we would have to be prepared to then fight for them or to retire at once from the absurd dog-in-the-manger position we have so long occupied."

Every student of history knows that these ideas dominated the politics of Europe in the seventeenth and eighteenth centuries, and led to most of the wars which disfigured and brutalized the nations in that time. The prevailing belief was identical with that which has taken possession of Mr. Draper, namely, that colonies are desirable for purposes of trade provided you can keep the ships and goods of other nations out of them. In order to do this you must have the largest navy afloat, and must seize everything that can help to make your navy efficient. In this scheme every island or convenient promontory becomes a "key" to something else, and when you have seized all the " keys " that you can hold, then you must always be armed to the teeth in order to hold them. The Caribbean Sea was reddened for two centuries with the blood of England, France, Spain, and Holland. The East Indian lands and waters were fought over for the same reasons. The American Revolution was, in large degree, a protest against the enforcement of that doctrine. The Napoleonic wars grew out of the colonial conflicts of England and France. They would hardly have been possible without the treasured hostility of a hundred years of colonial rivalry and clashing.

After sufficient blood and treasure had been wasted, and the nations were sufficiently exhausted so that they had time to think, they began to discern the truth respecting colonies and " keys." Great Britain especially found her advantage in studying the question without the smell of gunpowder. She came to the conclusion, not all at once but by slow degrees, that the exclusive trade of a colony, if you have to fight for it, is not worth having. It costs more than it comes to. She found out also, and chiefly through the American war, that colonists have rights, and that restricting their trade is a provocation to revolt. So, little by little, these colonial shackles were thrown off until now any nation may trade as freely with any British colony as Great Britain does herself. There is no differential duty and no restriction applied to French or American goods that is not applied to English goods. Therefore " keys " are no longer wanted by England to bar the door to anybody else, but only to prevent people of eighteenth-century notions (like Mr. Draper, for example) from barring the door against her.

Following the line of Mr. Draper's argument it is observed that he counts on his fingers all of England's keys, Gibraltar, Malta, Aden, and so on to Hong Kong, then around Africa and through the South Pacific, then back to the Antilles and Canada. We study his speech in vain to find out what it all comes to —what is the significance of this world-embracing chain of posts. He has not the hardihood to say that these " keys " are used to keep us from trading with any of the countries named on equal terms. Not at all. What does it all mean, then? Why all this congressional industry and display of geographical learning? Simply this, according to Mr. Draper:

"The foresighted statesmen of Great Britain have had a full understanding of the fact that the preservation intact of the circulation of British ships in the great arteries of trade is an absolute requisite to the well-being and even life of the British empire; and this it is which has guided them in the establishing around the world a complete chain of guarded stations, from which her commerce can be supplied and succored, whether peace or war prevail."

Now, if that were exactly true, we should see nothing in it except voluntary police duty on the part of Great Britain, and we should say that if she were inclined to keep so many different lands and seas in order at her own expense and oppose no obstacle to our trade with any of them, we should be much obliged. But it is not quite true. It was not British foresight which established this chain of posts. It was British blundering and blind fury in the eighteenth century—the same which Mr. Draper wants us to imitate now—that saddled the British treasury and taxpayer with the cost of fortifying and policing these posts and maintaining the navy which protects them. The posts and places being now British territory, national pride demands that they be kept, or at all events not surrendered to hostile hands. They are sometimes surrendered to friendly hands, as the Ionian Islands were surrendered to Greece and as Heligoland was bartered to Germany. What Great Britain would do now if these posts were unoccupied virgin territory we need not speculate. Of one thing we may be certain: she never would plunge into the wars of the seventeenth and eighteenth centuries in order to acquire them. No statesman of the Draper school would ever gain her ear.

THE REPUBLICAN WAR.

THE conduct of the *Tribune* in the present crisis in its party's history is so remarkable, and so mystifying to the casual reader, that we feel called upon to attempt some explanation of it. The Republican party in this State found itself, after the election of last November, in the presence of the best opportunity that had been given to it since 1885. In that year, it will be remembered, the Republicans had an excellent candidate for Governor in Mr. Davenport, and they would have elected him over Mr. Hill but for the treacherous conduct of the Blaine Republicans, under the leadership of the *Tribune*, in refusing to vote for him because the Mugwumps were supporting him. That this was the cause of Mr. Davenport's defeat was confessed with pride after election by the Hon. Whitelaw Reid, both in his paper and in private conversation. The people of the State owe to the *Tribune* and its editor the subsequent nine years of David B. Hill's degrading rule.

Now that the culmination of Hillism, embodied in the nomination of Maynard, has put the Republican party again in power, with the opportunity of increasing and retaining that power indefinitely, the same editor of the *Tribune*, working in unison with the party's other evil genius, "Tom " Platt, comes forward again to turn the party from its only honorable and successful course, and to deprive the people of the city and State of the benefits which would follow from an honest and intelligent administration of public affairs. For several weeks after the election, the *Tribune* itself was voluble with advice in this direction. It told the party that its future success depended upon its devotion to the public interests. It called for wise legislation at Albany, for a reformed ballot-law, for increased safeguards about the ballot-box, for the overthrow of bossism, for the destruction of the petty local bosses who had " sold out " the city so many times to Tammany—for everything, in short, which would make the Republican party one that self-respecting men, who were sick unto death of Tammany rule and Platt rule, could belong to and work with for the regeneration of the State.

Suddenly all this fine talk began to cease in the columns of the paper. Platt captured the organization of the Legislature and had it arranged in the interest of " deals " with Tammany rather than in the interest of good government. No protest came from the *Tribune*. There were loud demands for a thorough and sweeping investigation of Tammany Hall. Platt said he was not in favor of them. Again there was deep silence in the *Tribune*. Platt had a bi-partisan Police Board bill introduced, and at once there came from the Chamber of Commerce, the City Club, and all the representative centres of the best sentiment of this city, a pro-

test against it, and a demand for a single-headed commission. Then the *Tribune* broke silence, and came to the support of Platt with the plea that the "mandate" of the people in the election was clearly in favor of a bi-partisan board. From that time to the present, all its influence, editorially and in its news columns, has been exerted in favor of Platt's plans. A very carefully drawn ballot-reform bill has been forwarded to Albany, with the approval of all the best political and non-political organizations in the city, including the Union League Club, the Republican Club, and the City Club, but not one word in its favor has appeared in the *Tribune*.

While these events were passing, the best elements of the Republican party in this city, acting in concert with the Union League and Republican Clubs, formulated a plan of reorganization which abolished the district bosses who had so often betrayed the party in the past, and provided a new system which, they believed, would make the organization an honest and creditable and effective working force. The *Tribune* had not a word to say in favor of this plan, but at once began to give its encouragement to a rival plan put in motion by one Milholland. This plan was really Platt's, and its object was to give him the same autocratic control of the party organization in the city which he had of that in the State. In due season Platt came out openly and gave his approval as boss to the Milholland scheme. On the day that he did this, the Hon. Whitelaw Reid, who had refrained studiously from all approval of this plan, wrote with his own hand and published in an out-of-the-way corner of his paper a defence of Platt against his critics, and a plea that "Republican politics and discussion should revolve about other subjects besides Platt." This open alliance with Platt has split the party in twain from one end of the State to the other.

Milholland is a young gentleman in Mr. Reid's employ, who endeared himself to his chief by snatching from the Republican National Convention, in a moment of confusion, its nomination for Vice-President. Milholland did this with the aid of the Typographical Union, which he had brought into harmonious relations with Mr. Reid after years of conflict. The same Milholland secured through Platt, during the Harrison Administration, the office of supervising immigrant inspector at this port, and began at once to use that as a basis upon which to build up a Platt organization in this city. His indecent political activity caused Secretary Foster to remove him. In the present instance he is working as the agent of Reid and Platt, who endeavored to conceal that fact for a time in order to make their "approval" more impressive. In Monday's *Tribune* Platt persuades Reid to take the position that the Milholland movement is the regular Republican movement, and that the committee of thirty's plan is the irregular or bolting one, knowing very well that the latter was started immediately after the November election, and was well under way before the Milholland plan was devised. He persuades him to turn upon the members of the Union League Club and the committee of thirty, and rebuke them for assuming that they are better entitled to reform the party in this city than Mr. Platt of Tioga is. The passages in which the Hon. Whitelaw Reid performs this service for his partner are in his best and most delightful manner. He accuses them of "turning their backs to the common enemy," of throwing "all their energies into a rancorous and frantic attack on Republicans and friends," and asks: "What is the meaning of this sort of folly? Who are these leaders? We *hope* they will stop. We *advise* them to stop. We *warn* them to stop. Smashing heads is a foolish business for sober and responsible men to engage in—especially heads in our own ranks, instead of heads in the ranks of the common enemy—and they must reflect that in such affairs there are blows to take as well as blows to give." Platt must have fairly chuckled with delight when he read this passage, putting upon the regular wing of the party the responsibility for the fight which the firm of Platt & Reid have deliberately instigated.

THE DISMAL SCIENCE AND THE DISMAL TIMES.

It is not unusual for people who, in firm health, have had contemptuous things to say of the guesswork and quackery of physicians, to be among the loudest in crying for medical aid when disease gets its grip on them; and we believe it is the common experience of doctors that there is nothing like a widespread epidemic to heighten the general respect for their persons and their profession. Somewhat parallel has been the experience of economists during the present world-wide business depression. No class of men was more scornfully flouted during the flush times of three and four years ago. Paul Leroy-Beaulieu was nothing but a puttering old pedant when he predicted the coming crash, and the London *Economist* but a disagreeable scold. But when the immense destruction of capital in the Panama quagmire and in the Argentine sink-hole began to have its inevitable effect in dislocating credit and commerce, when our own silver madness had run its fatal course, people in general began to rub their eyes and to suspect that there was something in political economy after all.

The dismal science had, in fact, been subject to such an amount of damning and banishing to another planet during the past thirty years that, if it had had a particle of sensitiveness about it, it would have taken itself off long ago. But it is a tough and hardened science, and stayed on. Carlyle and Ruskin might show it the door with the greatest emphasis, but, like the poet's nature expelled by a fork, it always came back. An ugly presence not to be put by, it has been scowled at and cursed without stint, but has kept on about its business, refusing to be dismissed with a superior smile, until now the dismal times have brought the dismal science into something quite like repute again.

For an obvious instance of its new recognition as an authority in practical affairs, one need only turn to the modern methods of charity and poor relief. What has been put into operation in the various forms of charity organization and plans for furnishing help and work to the temporarily needy is simply the method of the economist—that is to say, careful analysis of the facts and tendencies involved and a distinct setting forth of causes and effects. The case was excellently put in the last presidential address before the British Economic Association:

> "The emotionalist is influenced by the impression made on him by what he sees and feels—the visible, the palpable, the direct. The economist looks beyond—not at the present only, but at the future—and is swayed not only by the visible and the direct, but by the invisible, the more remote. The one is mainly impressed by the fact, the other by the consequence of the fact. The economist is not less philanthropic, not less altruistic, not less concerned with the greatest good of the greatest number; nay, rather, the emotionalist may be said to be more individualistic, while the economist ranges over a wider field. There is no field of sympathy, no department of human feeling or social obligation which does not come within the range of the economist. The emotionalist is moved by an immediate impulse at the sight of poverty to indulge in charitable relief, and that charity is often exercised without discrimination. No one will blame him. But it is the duty of the economist to point out the indirect and invisible effects of such action, and this information is needed in the interests of a wider community than that to which the charity is extended. And yet, on no field of sentiment, in no department of human feeling or social obligation, has the economist been more attacked as non-ethical than in respect of charity and the poor-law; and yet his labor has been fruitful of the best results in arresting demoralization and the weakening of self-dependence."

It makes little difference whether this is called sociology or philanthropy or what else; in fact, it is nothing more nor less than an application of the methods of political economy. The facts are studied as they exist, not on the planet Jupiter, but right here on the earth. Human nature is investigated and watched in action, and no ideal theories of man, as pure angel or as pure devil, are allowed to come in to disturb the play of economic and social forces. Attention has been called to the great number of paupers in London to-day—over 100,000 were in receipt of relief from the city at Christmas time. But what is not so often remembered is, that the

number was even greater when the population of London was not half what it is now. This vast improvement, amounting to a reduction of pauperism by as much as 50 per cent., is attributed to the effects of an act of 1867 which gave London a sèparate poor-law.

How came that act to be passed? At the instance of men who had studied the problem in the spirit and by the methods of the dismal science, the Poor-Law Board, and men like Mr. Charles Villiers and Mr. Gathorne Hardy. They exposed the workings of the old poor-law, in which the emotionalist had full swing, and showed how it multiplied and intensified the very evils it was designed to abolish, how the country poor came swarming in to the feast of fat things spread for them in London, and all the rest of it. By consolidating some agencies for relief and abolishing others, by enforcing better discipline and more careful inquiry, the evil has been reduced to one-half its former proportions.

Now, the thing to remember is, that you cannot consistently approve of such methods and results and continue to curse political economy. This *is* political economy. It is only one of its many applications; but the same instruments of investigation are employed in this department of human activity as in those others known as production and commerce and finance. Yet a great many persons who think political economy repellent and its conclusions horrible, would say it was only common sense and good judgment to act in charitable relief in the ways indicated. They are economists themselves without knowing it; and if they would look into the teachings of economists in other fields, they would find there just as much common sense and good judgment. It is not really the economist, it is common sense, that stands in the way of the airy visions of some of our socialistic writers. Political economy can be nothing but a dismal science to them, and if ever they manage to get their schemes going, it will be dismaller than ever, and so will the times, for them and all the rest of the world.

WOMEN AT THE GERMAN UNIVERSITIES.

NEW YORK, February 8, 1894.

ALTHOUGH the German universities are not as yet formally open to women, nevertheless in several of them women are and have been for some time admitted to many of the courses of lectures. This is especially the case at Leipzig; but at Heidelberg, too, at Freiburg, and quite recently at Berlin, women have been permitted to pass the portals so long sacred to the male sex. The conditions under which the rule excluding women may be thus infringed—for it must be borne in mind that it is an infringement of rule—are restricted, even humiliating. The woman student is not recognized as such except by courtesy. She is not recognized at all officially. She is not permitted to take a degree; she is not allowed even to register her name on the university lists, or to claim in any way connection with it. She may even be ordered off its premises, if caught going into the lectures by any officer of the university or any member of its faculties who is hostile to the presence of women there—and in one case within the writer's knowledge this was actually done. She is usually allowed, however—though not always—to pay her fees; and when her money is accepted, the professor concerned will give her privately the regular examination that the male student is put through, and his personal certificate testifying to her proficiency. Indeed, the arrangement, in this particular at least, is not greatly different from the back-door method by which the students of the Harvard Annex, or Radcliffe College, as it is now to be called, extract their certificates from unwilling Harvard.

In the German universities the whole matter is entirely optional with the individual professor as an individual teacher, and to him, not to the university that retains him, the would-be woman student applies. If he is not personally opposed to the higher education of women, sometimes even if he is, he will readily, often cordially and kindly, consent, for the German *Gelehrter* is generally a most good-hearted man. There is, however, in this matter of admitting women to their lectures a considerable difference among professors, and it would seem to be even more a *Fach* than an individual difference, though in this case the *Fach* may express the man no less than the man the *Fach*. For instance, the professors of art, political economy, history, mathematics, literature, the classics, and philosophy properly so called, would seem to be favorable to women about in the order named, and admission to the lectures on these subjects may almost invariably be obtained, especially at Leipzig, the least difficult of any of the universities so far as admitting women is concerned. The medical lectures, on the other hand, are quite impossible for women, though there is a larger proportion of professors in favor of admitting them in this than in any other faculty. In this case, however, something more than the option of the individual teacher is necessary to set aside the rule. Law and theology are, of course, even more absolutely closed. Indeed, the lecturer on ethics in the theological faculty of one of these universities refused a woman who wished to hear him, on the ground that ethics was a subject quite out of woman's sphere. It is to be hoped that he would not maintain the same of the practical side of his subject, and hold that morals, too, are quite out of woman's sphere. It is only fair to add that the stand taken by this *Gelehrter Herr Professor* was exceptional, and is, perhaps, best explained by the remark of another professor in the same university, but not the same faculty, to whom the woman in question related the incident: "Das war ja nur zu erwarten, mein liebes Fräulein: der Kerl ist ja ein Theolog."

The consent of the professor being the *sine qua non* of her admission, the woman student's first step is to obtain it, and she must do this in person. A proxy or even a letter is almost sure to be fatal to her hopes, whereas the application in person is almost sure to succeed. This indispensable performance is sometimes, particularly to the new hand, not a little of an ordeal, but it may have its amusing features too. Repairing to the professor's house at his *Sprechstunde* (the time he devotes to such business), the woman student will generally find a number of male students there—indeed, she is more likely than not to be ushered into a room full of them—whereat an astounded silence will fall as they realize the situation, a mental gasp as it were, then one or two, perhaps even four or five, will recover sufficiently to spring up and offer chairs, and every pair of German eyes in the room, generally rendered more formidable by glasses, will proceed to "size up" the *Emancipirte*, not rudely—the German student is seldom rude—but with the curious wonder one has for the strange beasts in a menagerie. By the time the Herr Professor's study-door is opened, however, and he stands ready to receive the next visitor, the youth whose turn it is will invariably and most gallantly insist on yielding his place to the lady, and, if this be her first experience, she is apt most gratefully to accept.

Alone with the professor, the affair is simple enough. She states her errand in the best German she can command, and if she have her mother wit about her, as well as sufficient of his mother tongue—he seldom speaks hers—she may even add that she has crossed the sea for the sole purpose of hearing him, or some such phrase, which is very apt to make him look flattered and give his consent without more ado. Not always, however, does this sort of diplomacy produce such a softening effect. There is one professor, a noted psychophysicist, who, though he does admit properly qualified women to his courses, cannot be brought to anything like a cordial agreement to do so. "If you choose to attend my lectures, no one will interfere with you," is the non-committal sort of reply with which the applicant to him must be content.

After the professor come the lectures, and the first two or three are a test for the woman student, and, still more, for the Germans, whose customs, traditions, opinions, and prejudices she defies by intruding herself among them. They could have her ejected if they chose, but they do not. They simply stare, some aghast, some in wrath, some in ridicule. Then they observe her critically: if she takes notes, those who are near her look over her page. But by the third or fourth lecture they have made up their various minds about her, and she is generally left for the rest of the term unnoticed and in peace. If she happens to be pretty, the wonder lasts longer, for a German student cannot conceive why a pretty woman should want to be wise. *Blaue Strümpfe* and personal plainness are necessary corollaries to him, and it is a severe shock to his preconceived ideas to find the "blue-stocking" less plain than prejudice painted her. An American girl who happened not to be plain, coming out of her lecture one day, was met by two students, one of whom had evidently brought the other there to see her. "She a student!" exclaimed the one as the other nudged him. "Impossible! she's *pretty!*" and his astonishment, voiced in tones so loud she could not but hear, betrayed how hard it was for him to reconcile the apparent contradiction.

As a general thing the German student does not thus obtrude his remarks or himself, and his manners, both in the lecture-room and out of it, are very good. He will often, indeed, show, by little acts of kindness, genuine good feeling for the *Fräulein Studentin*. She need never, unless she wish, meet her male comrades personally at all, but such acquaintances are sometimes exceedingly agreeable as well as useful to her, and it is a very good thing for the German student to be given such an opportunity of finding out for himself that a woman may pursue the same severe course of study

that he does, and yet be a woman still – a view he does not commonly hold.

As a social being the woman student will generally receive from her professors, too, some, often a great deal of, attention. It is the proper thing for all students, male and female, to call socially at the beginning of the semester on their professors and their families; if the professor is not married, the woman student does not call. An invitation to dinner or supper—usually for a Sunday—will soon follow, as an acknowledgment of the call and an assurance that further acquaintance is desired. On these occasions the wives and daughters of the professors will be met, and very ordinary women they are. There are, of course, exceptions, but as a rule the German *Gelehrter* is content to dwell at home in the dullest sort of domesticity with his ill-educated women. As his wife is, he lets his daughter grow up to be, whereas to his son he gives the liberal education he himself has had.

To return to the more serious side of the subject, the profit to any student of a course at a German university may be immense; and though the limitations at present imposed on the woman student undoubtedly diminish hers, she nevertheless may also derive a goodly share. Perhaps in no other way is the lesson of thoroughness in things intellectual to be learned so well. The German *Gelehrter* exhausts his subject, and when you have heard him through on it, you may rest assured that you have got all that there is to get in regard to it. Often, indeed, in their insistence on thoroughness, they sacrifice completeness. Instead of condensing their lectures to fit the length of the course, they plod laboriously and conscientiously on through all the details, and leave the lectures as a whole unfinished at the end. There was a certain course of the late Professor Zarncke of Leipzig University that never had been read through to the finish, having been originally written too long even for the longer semester. But this made no difference to the genial old man, who regularly began again at the beginning with the beginning of the term, and read as far as the time permitted, leaving his students to find out the rest for themselves from the guides he gave them. These and other defects of the lectures the male student can make up by means of the *Seminar*—the real class-room of the German university—but from this the woman student's sex bars her out, and she must do all the special work of her course by herself, or with a tutor, who, however, may be a member of the *Seminar*, and thus enable her indirectly to share in its advantages. It is precisely this independent work that the woman student must do that benefits her most. Forced to rely on herself and to get what she wants under difficulties and in spite of opposition, she applies herself as she otherwise might not, and consequently her acquirements generally represent more real work than do those of the male student.

For the American woman at least—and most of these pioneer women students are Americans—the advantages of such a course are quite as great as they are for the American man, and the initiated know what that means. For her, as for him, the fact of having studied in Germany enhances—often quite disproportionately—her intellectual value in the estimation of those who have not done so, while, by those who have, it is accepted for what their own experience has made its worth to them. If she means to teach, her chances, like the man's, for a good position are by so much the more increased.

It may be considered by the conservative unwarrantably bold in American women thus to push themselves abroad as they could not at home—for instance, at Johns Hopkins or Harvard—but it is not by passively waiting for them that such things come, especially to the individual; and it is undoubtedly due, in part at least, to these pioneer women that the agitation is so general now throughout Germany in favor of admitting women to the universities on the same terms as men. J. B. S.

THE SELECT COMMITTEE ON THE IRISH LAND LAWS.

DUBLIN, January 25, 1894.

IN view of the proposed inquiry by a committee of the House of Commons into the Irish land laws, a sketch of the past legislation on this subject may be of interest. The reason for exceptional legislation in Ireland rested chiefly on the essential difference between the landlord and tenant systems in England and in Ireland. In 1845 the Devon Royal Commission reported that the introduction of the English system would be extremely difficult, if not impracticable. The difference, it said, between the English and Irish systems

"consisted in this, that in Ireland the landlord builds neither dwelling-house nor farm offices, nor puts fences, gates, etc., into good order before he lets his land. In most cases, whatever is done in the way of building or fencing is done by the tenant; and, in the ordinary language of the country, houses, farm buildings, and even the making of fences are described by the general word 'improvements,' which is thus employed to denote the necessary adjuncts to a farm without which in England or Scotland no tenant would be found to rent it."

Thirty years later, John Bright summarized the matter by saying that if the land of Ireland were stripped of the improvements made upon it by the labor of the occupier, the face of the country would be "as bare and naked as an American prairie." This fundamental difference between the English and Irish land systems has never been fully appreciated in England, where the landlord's expenditure on buildings, fences, drainage, farm roads, etc., and on maintenance absorbs a large part of the rental.

Reform of the Irish system began in 1870. Before that time little had been done to protect the Irish tenant except to forbid evictions at night, on Christmas Day, on Good Friday, and the pulling off the roofs of houses until the inmates had been removed. The Land Act of 1870 recognized, in principle, the tenant's property in his improvements by giving him a right to claim compensation if disturbed or evicted. This was not what the tenants wanted, viz., security of tenure. The results of compensation suits by "disturbed" tenants were uncertain; compensation for improvements was limited in various ways, and the animus of the courts administering the act was distinctly hostile to the tenants. Many works necessary to the existence of tenants on small farms were not improvements in the eyes of the landlord, of the law, or of the judges; it was often impossible to adduce legal evidence of costly works done little by little, and at intervals, representing the savings of labor embodied in drainage, reclamation, or fencing. Buildings and other works of a superior character might be adjudged "unsuitable" to small farms, and therefore not the subject of any compensation; moreover, it was expressly laid down that the use and enjoyment by the tenant of works effected wholly at his expense were to be accounted compensation to him by the landlord, and that, therefore, by lapse of time, the tenant's improvements became the landlord's property.

The act of 1870 tended to make capricious and heartless evictions expensive and therefore less common; but it gave no security of tenure, and left the landlord still at liberty to raise the rent of improving tenants. It left the tenant still in a state of dependence and servility; it gave him no security for his expenditure, for the landlord's right to keep the rent continually rising was freely exercised. Even if the act had been liberally administered, it would have failed to give contentment, satisfy the demands of justice, or encourage the expenditure of capital by tenant farmers. Measure after measure proposed by Irish members for further reforms were rejected by Parliament between 1870 and 1880, and discontent continued to increase.

The Duke of Richmond's commission on agriculture extended its inquiries to Ireland in 1878, and its assistant commissioners reported that discontent was "justifiable" and agitation "natural" under existing circumstances. So desperate appeared to them the condition of affairs in 1880 that they said: "If nothing is done to grapple with this question, we should not be at all surprised to see an organized attempt next spring to destroy landlords. There may be on a particular night, when the potato crop shall have been consumed, an attempt to destroy a very large number of them." This was probably an exaggerated apprehension, but that no such attempt ever took place is indirect evidence of the restraining effect of the Land League organization.

The Land Law Act of 1881 was based on the Report in 1880 of the Bessborough Royal Commission, but many of the most useful suggestions made were disregarded. This act purported to give the Irish yearly tenants (1) the right to sell their tenancies and improvements; (2) the right to have a "fair" rent fixed by the land courts at intervals of fifteen years; (3) security of tenure arising from this right to have the rent fixed by the court instead of by the landlord. The law, in fact, conferred upon those tenants who came within its provisions a perpetually renewable tenure, at rents variable every fifteen years, to be fixed either by agreement or by the Land Court. No definition of what constituted a fair rent was embodied in the act, but what is known as the Healy clause provided that "no rent shall be allowed or made payable in respect of improvements made by a tenant or his predecessors." The language of common sense could scarcely be clearer or more explicit than the words of this clause, but when the Irish courts came to interpret it, they held that the term "improvements" meant only that interest in his improvements for which the tenant might have obtained compensation under the Land Act of 1870 if he had been disturbed or evicted, and that the time during which the tenant had had the use and enjoyment of his own expenditure was still to be accounted compensation made to him by his landlord, so that by mere lapse of time the tenant's improvements became the landlord's property. As, under the Land Act of 1870, there were many improvements for which, and many circumstances in which, a tenant could not obtain compensation, so correspondingly were there many instances in which, under the Land Law of 1881, the courts held that the tenant was expressly liable to pay rent in proportion to the increased letting value which he had conferred on his farm. In fact, the right, under the Land Law Act of 1881, of a tenant to exoneration from rent on the value

of his own labor and expenditure was made to depend on the result of a hypothetical suit for compensation under the Land Act of 1870. The effect of these judicial decisions has been to maintain generally the rack-rent of farms with all their buildings and equipments made at the tenant's expense as equivalent to the fair rent under the Land Law.

In view of the continually falling prices of agricultural produce and diminishing farm profits, the operation of the land laws has not brought about peace between landlords and tenants. The latter naturally fail to comprehend the "case law" and the ingenuity which the courts have shown in interpreting the statutes so as to give them a completely different meaning from the grammatical meaning and from what was intended by the authors of the Land Law of 1881. In the course of the debates in 1881, Mr. Gladstone said that under that act "the tenant's improvements were the tenant's own property, and he would not admit the principle that the time during which he enjoyed them was any reason for their passing away from him"; again, that "it was nothing short of impossible that the court should imagine or adjudge that to be compensation by the landlord which never cost the landlord in any shape a single farthing." Nothing, however, was impossible to the Irish courts, and their construction of the Land Law has reduced many of its provisions to rank absurdities. In a well-known English leading case Lord Justice Selwyn said, "It is not the duty of a court of law to be astute to find out ways in which the object of an act of the Legislature may be defeated"; yet, whether from the natural conservativeness of lawyers or from political bias, this is what the Irish judges have done, wholly disregarding the public evils to remedy which the act of 1881 was passed.

In 1887 the Cowper Commission reported that the 200,000 rents which had been fixed were too high in consequence of the continued fall in prices. As a result of the report of this commission the fair-rent provisions of the law were extended to leaseholders holding for less than sixty years; but the courts still adhering to their former methods of interpretation, numbers of leaseholders who had made and maintained all the buildings, improvements, and equipments of their farms found themselves either excluded on narrow and technical points, or expressly rented on their own expenditure. In 1891 the fair-rent provisions were further extended to leaseholders holding for more than sixty years by the Redemption of Rent Act, under which long leasehold tenants could compel their landlords either to sell to them, or allow a fair rent to be fixed on their farms.

The successive steps in reform of the rent system thus were—

(1) In 1870, compensation for disturbance and for improvements made by yearly tenants; (2) in 1880, establishment of fair rent courts for yearly tenants; (3) in 1887, admission of short leaseholders to the fair-rent courts; (4) in 1891, admission of long leaseholders of certain classes to the fair-rent courts.

The three first reforms were preceded by waves of popular agitation; the representatives of the National party in each case protested and voted against the measures enacted, as insufficient remedies for the existing evils, and against the machinery by which they were administered; the House of Lords emasculated each measure before it became law; and judicial decisions drew the fang-teeth of the acts, insufficient as they were to affect the objects aimed at. The actual operation of the law, moreover, is very different from the theory, and is in direct contravention of the letter of the more recent statutes. Large numbers and classes of tenants are excluded from the benefits of the Land Law, on technical grounds, although the circumstances of their farms and tenure are in the main the same as those of tenants who are admitted. "Fair rents," fixed by the courts, include, wholly or partly, the value conferred on the land by the tenant's expenditure; and, owing to the continued and unanticipated diminution in farming profits, many fair rents are not earned and cannot be paid. Fair-rent suits are costly and their results uncertain, depending as they do on technical questions of "case law." Lastly, the farm tenure established is so uncertain and unsatisfactory that neither landlord nor tenant would be justified on grounds of prudence in investing money in permanent improvement of farms.

Concurrently with these attempts to place the relations of landlord and tenant on a peaceful and equitable basis, a system of State loans to enable tenants to buy their farms has been in operation. There were many persons who thought that providing facilities for litigation between the two parties would lead to no final settlement of the land question, and that the interests of landlords and tenants were irreconcilable. In 1869 the tenants of church lands were given the right of preëmption of their farms, subject to the condition of providing themselves one-quarter of the purchase money; seven or eight thousand tenants purchased under this act. In 1870, loans of two-thirds of the price were permitted to be made to other tenants buying voluntarily from their landlords. Out of £1,000,000 provided by Parliament, only £500,000 was thus applied during the ten years 1870–'80. The prices demanded were too high; legal obstacles, delays, and costs made the purchase provisions of the land act almost inoperative. In the Land Law of 1881 there was a further extension of the principle: tenants buying from their landlords could obtain three-fourths of the price from the Land Commission if the security was sufficient and the title satisfactory. In the succeeding five years only £250,000 was thus advanced; landlord sellers could generally impose what terms of purchase they liked upon their tenants, and very few tenant farmers were able to provide the necessary fourth part of the price in cash. In 1885, a Land Purchase Act was passed which enabled loans of the whole price to be made to purchasing tenants, and buyers were practically exempted from the former burdensome scale of costs. Many judicial rents having been fixed under the "fair rent" provisions of the Land Law of 1881, and the demand for landed estates by outside investors having altogether ceased, prices generally ruled lower, although landlords were still often able to extort excessive prices by pressing for arrears of rent. On the other hand, bankrupt landlords, pressed by their creditors, sometimes sold at a low figure. A new feature in the loan system introduced by the act of 1885 was the retention by the Land Commission of one-fifth of each loan, as a guarantee against loss by default in payment by the borrower. This "guarantee deposit" was invested, and the income arising from it paid to the landlord, unless default was made by the tenant purchaser. It is not repayable to the landlord until the tenant's annuity on his loan has been paid for eighteen years. Nearly £10,000,000 has been advanced under the act last referred to and subsequent extending measures. Under the different acts passed since 1869, about 25,000 tenants have become owners of their farms, subject to terminable annuities to the Government in repayment of the loans made to them. With some few exceptions, the loan annuities have been fairly paid, in spite of continually diminishing profits and low prices.

In 1891 another Land Purchase Act was passed, under which about £30,000,000 may be advanced to tenants purchasing from their landlords. Sellers are, however, no longer paid in cash, but in "Guaranteed Land Stock" bearing 2¾ per cent. interest. There are various complicated guarantees for payment of the interest on this stock, but it is ultimately guaranteed by the consolidated fund of the United Kingdom. The stock has usually been salable at about 98, and, being up to a certain amount exchangeable for consols, is only fractionally lower than the market price of that stock. Less than £1,000,000 of this land stock has as yet been advanced, and, owing to the many complicated provisions in the act, its operation is necessarily slow. A guarantee deposit is still retained out of each loan.

In 1886 the Liberal party proposed, as an adjunct to their home-rule bill, a measure which would have enabled every landlord in Ireland to sell his estate to the Irish state authority for resale to the tenants—the landlord might in fact compel his tenants to buy, but no corresponding power was given to the tenants. In 1891 the Liberals opposed the Conservative Government's Purchase Act on the grounds of the impolicy of making every individual tenant purchaser a debtor directly to the English Treasury, and of the injustice of imposing a guarantee tax on the county rates without the consent of the taxpayers.

It is now proposed to have an inquiry by a select committee of the House of Commons into (1) the principles adopted in fixing fair rents, particularly with respect to tenants' improvements; (2) the system of purchase and security offered for the loans of public money; (3) the organization and administrative work of the Land Commission—a department which has cost the country about £100,000 a year since 1881. The popular demand for inquiry and reform comes as much from the Protestant North as from the Catholic South. Although the landlords may not wholly approve of an inquiry initiated by a Liberal Government, they are nevertheless anxious to have many changes made in the existing law. In 1895 the first judicial term of fair rent will expire, and, unless some change is made in the law, every landlord may find himself a target for as many lawsuits as he has tenants. Apart from politics and agitation, economic causes have greatly reduced the revenue derivable from landed estates. If, in priority to the support of landlords, mortgagees, tenants, and laborers, a horde of lawyers, surveyors, valuers, and officials are to live on the revenue of Irish estates, the condition of Ireland, where the chief industry is farming, cannot be satisfactory. If rents are to be periodically revised, the problem for the select committee to solve is how this can be done without an expensive lawsuit in each case. Proposals are frequently made to vary rents at triennial or quinquennial periods in proportion to the variation of prices of produce, but the elementary fact that the earning of rent depends upon profits and not upon prices is overlooked. The payment of rents varied according to prices could be secure only if the initial rents to be varied were low ones, and this is not the case generally with the 350,000 rents which have been judicially fixed since 1881. The state of unrest and insecurity existing under a tenure by which rents are

subject to periodical revision on uncertain principles is calculated to prevent farmers spending money on permanent improvement, and the mere expenditure of money on valuable and permanent works may under the present law have the effect of excluding a tenant from the act, or bring an increase of rent in consequence of the expenditure.

With regard to the vast amount of money to be advanced for purchase of farms, Parliament has laid down no principle as to the security except that the Land Commission is to be "satisfied with it." The tendency has been to interpret the purchase acts as liberally as the rent acts have been narrowly interpreted. It is very much easier for officials to say "yes" than "no" to applicants for public money. Decisions as to loans approved of cannot be questioned in the higher courts, and, until repayments have been in progress for many years, it will be difficult to judge whether there has been overlending of the funds. An agreement by a landlord to sell and by a tenant to buy would in ordinary circumstances be prima-facie evidence that the particular farm was worth the price named; but, apart from cases of collusion between seller and buyer, the price may include arrears of rent, and, so far as the price includes a past loss by the tenant, who has not earned or who has otherwise spent his rent, and a loss by the landlord who has not received his rent, there is no income-producing asset at the back of the loan. The Land Commission cannot fix the price; it may refuse to lend and the landlord may appeal against a refusal on the ground of insufficient security; but the tenant-purchaser is estopped from any appeal by his own agreement, which is presumed to have been entered into voluntarily. In the existing circumstances, the select committee might usefully suggest some restrictions on improper loans and some safeguards against overlending on doubtful securities.

The inquiry will be watched with great interest in Ireland, and the findings and suggestions of the committee awaited with anxiety. Royal commissions, of which there have been many on the Irish land laws, are often only a device to shelve a question which Government is afraid to handle, but the report of a committee of the House of Commons is not so easily disregarded, and is likely to be followed up by legislation. AN IRISHMAN.

IN THE BALEARIC ISLANDS—VII.

VALLDEMOSA, January, 1894.

WITH people who are not in a hurry the fact that there is no railroad in Menorca is no cause for grievance. On the contrary, nothing could be pleasanter than to be allowed to share the driver's seat on the diligence, unless it be to amble along on a well-mannered donkey with a soft sheepskin for saddle. More than one good word should be said for the hard, smooth roads, kept in perfect repair, which help to make travelling in the Baleares a delight. For a country labelled "backward," Spain shows a remarkable forwardness in the thoroughness with which these highways are made comfortable for man and beast, and in this respect these little islands put to shame our own country, with its vastly greater resources. The noticeable absence of Roman roads after an occupation of more than five hundred years has been explained on the ground that the Balearic Romans possessed a good navy, with which they could readily transport troops from one part of the island to another. In 1715 the English Governor, Kane, completed a military road the whole length of Menorca, which has been a serviceable highway ever since, but a new and much superior road is in process of construction.

Out upon the old road our diligence clattered one bright day on its way to Ciudadela, at the western extremity of the island, passing by the ancient gate of Barberousse (which takes its name from the bold corsair who captured it, and is the only portion of Mahon's old walls now standing), along the alameda skirting the harbor, and up through the valley of the little stream whose brown waters trickle down to the bay—the rich but solitary garden spot about Mahon. Alayor, the first of the three towns on the route, lies a little to the south of the highway, on a slight elevation, and with its windmills, church towers, and white houses glistening in the sunshine, attracts attention while yet in the distance. The dashing arrival of the diligence, three horses abreast, urged into a mad gallop by the driver's wild, Arab halloo, is the daily excitement; and ten minutes' wandering about the streets, while the post bags were being exchanged, failed to discover that the town afforded much else in the way of diversion.

Beyond Alayor the country grows more fair, and when, on mounting a wooded hill, the beautiful valley of Mercadal, with the little town nestling beside its rock-bedded streamlet, came unexpectedly into view, there was a spontaneous chorus of delight. Monte del Toro to the north, crowned with a ruined monastery, is the most conspicuous feature, being the highest elevation (a little over 1,000 feet) in Menorca, and set impartially in the middle of the island. From Mercadal to Ferrerias the landscape has the gentle beauty of the Scotch lowlands—undulating, the hills clothed with pine and evergreen-oak, interspersed with patches of tall heather, pink and purple. The predios scattered here and there lack the picturesque, mediæval character of the farm habitations of Mallorca, but they have an air of homely comfort which is very attractive. They are not unlike the large colonial houses still to be seen in some parts of New England, and the shrewd, intelligent countenances of the farmers bear no slight resemblance to those familiar on any New England country road. But while so scanty a soil must needs make the farmer's life here a strenuous one, the kindly climate favors a character more open and genial than that of his transatlantic cousin.

Nature has painted the region about Ferrerias with strong contrasting colors, which the local passion for whitewash intensifies. The town takes its name from the iron-impregnated soil, of a deep, rich red, in which the Aleppo pine, with its peculiarly vivid green, flourishes. On the other side of Ferrerias the country is dull, but before descending to the plain of Ciudadela, the mountains of Mallorca rose across the blue water glowing with the brightness of the setting sun.

Until the period of the English domination, Ciudadela was the capital of Menorca, and a portion of the town retains an air of old-time dignity and quaintness. Broad arcades line the principal street, which leads past the fine thirteenth-century cathedral out to the little park where stands an obelisk commemorating the defenders of the town against a Moorish invasion in 1558. Some of the narrow streets were melancholy with the cry of quails imprisoned in tiny cages at almost every door, a fashion also prevalent in Palma. Some years ago an unwonted burst of energy broke against the city walls, and led to their demolition, but, as so often happens in these first steps in civic reform, the wave had spent itself before virtue could be given the added grace of beauty, and the line of the old ramparts is marked by dreary, treeless avenues bordered with ugly, rectangular buildings. Occupying one of these new spaces is the Fonda Feliciano, happily named. It bears no outward sign, but it needs no bush. Our minds were made up on stepping into the hall, with its polished floor and staircase, with tall clock ticking leisurely on the landing, even before we caught a glimpse, at the end, of the spotless kitchen with its tiled range and rows of shining platters, presided over by the beautiful Feliciano maidens. From its cleanliness and general air of refinement, it merits the appellation bestowed upon it by our intelligent *cochero*, of "fonda única."

The quest for prehistoric remains has such fascination for amateur antiquarians that we found ourselves before sunrise setting off on a talayót expedition which led over no royal road. Ploughed fields, and innumerable high stone walls, sometimes topped with brambles, had to be crossed before our goal was reached. Yet there were compensations other than the discovery of ancient monuments. That renewal of spring which here takes the place of the aftermath of summer that we call Indian summer, brought the violet, crocus, and jack-in-the-pulpit to play havoc with our calendar, while the soft, clear air was laden with the fragrance of rosemary, and melodious with the song of birds. This sense of vernal joy and activity was enhanced on emerging from the dark chambers whose huge stones have kept their secret for unknown ages. One of the most impressive of these grim structures is the *naveta* of Els Tudons, which certainly resembles a boat, keel upward, the sides slightly curved, the bow distinctly marked, and with an indefinable air about it which produces a singular effect. A low, square-cut doorway in the stern admits into the interior, where archæologists have found proof that these *navetas* were used as ossuaries. The stones both of the exterior and interior are of immense size. But however far the mind may go woolgathering into the past, its bodily associate has an acute sense of the present, and recalled us to the fact that we were some fifteen kilometres from dinner. As we were scaling the last wall that separated us from the highway, a peasant driving a mule and cart loaded with sweet potatoes manifested a lively curiosity and some concern about the señora. His invitation to a seat on the potato sacks was thankfully accepted, and our slow and somewhat uncomfortable progress was beguiled by the insular naïveté of the carter and his amusing struggles to locate the United States.

For Americans, Ciudadela has an historical interest that touches our own times. The archives of the city show that the ancestors of Admiral Farragut were domiciled there at least as far back as 1558, for among the four thousand captives carried off by the Turks, who made a successful inroad upon the city in that year, are recorded the names of Antonio Farragut and his whole family. The Farraguts were afterwards ransomed and returned to Menorca. The reverend custodians of the ecclesiastical records obligingly took down their time-yellowed volumes and showed us the baptismal entry of George Farragut, father of our admiral, made on the 30th of September, 1755. When quite a young man, he, with many others, emigrated to America, "instigated," as a chronicler says, "by the English, who then ruled over Menorca, and who wished

to people their vast American continent"; adding naïvely, "also compelled by necessity to abandon their dry and unproductive land." But though apparently lost in the great wilderness of the New World, the American Farraguts were not forgotten, and we were told of the enthusiastic public welcome given to the admiral on his visit to Ciudadela in 1868; how soldiers were stationed along the highway to do him honor; how the alcalde and other officials together with prominent citizens went out to meet him four miles from the city gates, and what a mighty shout went up from the people crowded on the ramparts when he finally came in sight. The whole city was given up to rejoicing. Señor Oléo, son of Rafael Oléo y Quadrada, a local historian, showed us a photograph and autograph letter carefully preserved among his father's collection of papers concerning the Farragut family, and related the anecdote that when his father and the admiral met, the embarrassment arising from their ignorance of each other's language was overcome through the medium of Latin.

Accepting an invitation to visit the predio of Torre den Gaumes, in the southern part of the island, we crossed a verdant *barranca* containing the first orange trees we had seen in Menorca. Beyond this ravine the country appeared more arid than before; the stone structures erected for the use of cattle, which imitate the talayóts, adding to the look of sterility. Lean cattle wandered about in search of pasturage, and in some places the soil that had been washed down into the gutters by the infrequent rains was being scraped up and replaced upon the fields. The farmhouse, an ancient structure, built for defence in perilous times, stands on a slight eminence facing the sea, and with three talayóts in line forms a striking picture. Its isolated position necessitates domestic independence, and a great out-of-door oven supplements the wide-mouthed kitchen fireplace, while skeins of flax hanging in the storeroom told of busy distaffs. The happy relations manifest between the cultivated family of the proprietor and that of the tenant recalled the best side of our Southern life in early days. This glimpse into family life in Menorca, where modern refinements and a simple patriarchal spirit seem to be united, was one of our pleasantest experiences.

The map of the northern part of the island looked so attractive with its headlong promontories, deep bays, and surrounding hills, that we determined to visit the fishing village of Fornells, the only one on that coast. As there is no diligence service, the problem of getting there was solved by Jaime *nou* (*i. e.*, the new James) and a strapping horse named by absurd contradiction Pequeño, between whom existed a rare good-fellowship. Jaime knew the country well, and good-naturedly permitted us to explore promising byways, where novel sights sometimes greeted us. In one field a man was ploughing with an ass and a bullock; in another, advantage was being taken of birds of passage weary with their long flight from the mainland to ensnare them in large nets. A donkey with a towering load of household furniture trudged sedately along, and women perilously seated in high chair-saddles nodded serene salutations. A driving storm set in before we reached our destination, which gave us just the opportunity we wanted of seeing "the breaking waves dash high" on that wild shore. A small village, scrupulously clean; dismantled fortifications on a height which sweeps the bay; the ruins of an historic castle on a rocky islet in the harbor—and you have the outlines of Fornells. The bay lacks but little of equalling that of Mahon in size, and, with its background of rocks and wooded hills, rivals the latter in picturesque beauty. Fornells is seldom visited by strangers, and our arrival was a welcome diversion to the weather-bound fishermen gathered at the little *fonda*. The wind, which sometimes drives the salt spray clear across the island, howled all night, but the morning broke as fair and mild as May, and we started on a pilgrimage to San Cristóbal, in whose vicinity are some curious ancient monuments. On the way we ascended Monte del Toro, over which legend has shed a sacred lustre. The chapel on its summit contains the black Virgin, miraculously discovered by aid of the bull from which the mountain is popularly supposed to take its name. A more prosaic explanation, however, is contained in the suggestion that the Moors called it El Tor, the height. The view from the top is charming, the altitude softening blemishes while not obscuring details; the whole island lying below spread out like a chart. Through the misinterpretation of a signal given from one of the talayóts near San Cristóbal we lost Jaime and Pequeño; but "it's an ill wind that blows nowhere," and we were blown by this seeming misfortune into a deep *barranca* of primeval loveliness guarded by frowning crags. It is these sudden transitions from the parched fields so painfully cultivated by man to Nature's affluence that give a rare flavor to by-way travel in Menorca. Restored to our conveyance, it was a matter of only a few hours across-country to Ciudadela, from whence an elegant little steamer runs to Soller in Mallorca. The palms and windmills, and *casas de recreo* along the sloping banks of the little port make the approach to Ciudadela from the sea far more picturesque than from the land; and as we made our slow way out the city took on a fresh interest as we remembered its survival of many vicissitudes, from fires, from invasions, by which it has earned the name of "The Immortal." Hardly are the shores of Menorca lost sight of when the mountainous coast-line of Mallorca appears, and so close does the steamer run in shore that we could clearly see every rugged detail of those grand forms, resplendent with hues of red and orange. As we neared Soller, orchards terraced the steep sides and hung over the dizzy precipices; and rounding a point we entered the narrow passage which leads to the lovely port embosomed in the mountains. S. G.

Correspondence.

THE ENNEACRUNUS AT ATHENS.

To the Editor of The Nation:

Sir: The German Archæological Institute has just completed, under the direction of Dr. Wilhelm Dörpfeld, the first of a series of important excavations, which are to determine, if possible, the situation of the *agora* of ancient Athens. Last Thursday afternoon, in a drizzling rain, just northeast of the spot near the Pnyx where the Boulevard des Philhellènes, as marked on the map in the Guide-Joanne, makes a sharp turn to the north, the workmen uncovered the opening of a great conduit tunnelled in the native rock and running from this point east. Dr. Dörpfeld confidently believes this to be the artificial channel which was constructed by Pisistratus, in the sixth century B. C., to supply water to the fountain that in the time of Thucydides, as he himself relates, was called Enneacrunus, or the Nine Conduits, but originally, before the springs were covered in, Callirrhoë, or the Fair Stream. The moment of discovery was one of lively interest; and when, after the débris that obstructed the opening had been hastily shot aside, the genial first secretary of the Institute, who is in more ways than one a large man, disappeared from view in the opening, we grew excited. When he presently reappeared, after a journey of twenty-five metres under ground, in ruined clothes but with a smiling face, who will wonder that we "gave him our hands"?

The present excavations began in January, 1892, and continued until March. They were resumed in November, and continued until March, 1893; they were again resumed in January of the present year. Their object was to determine whether the much-discussed Enneacrunus did or did not lie somewhere between the west slope of the Acropolis and the Pnyx, where the account of Pausanias ought to place it. Their starting-point was the open conduit, constructed along the face of the rock at the foot of Pnyx hill, on the west side of that part of the Boulevard des Philhellènes which lies due west of the Acropolis. This conduit is now known to have been built in Roman times. The results of the excavations, briefly summed up, are the following:

An ancient street, with a grade of 1:20, has been laid bare for 220 metres. This begins on the west side of the modern Boulevard, due west of the Areopagus, crosses the Boulevard, and runs along its east side in a southerly direction. This street was supported by polygonal retaining walls and lay much below the present level. Under it is a great elliptical tile-drain, into which thirteen smaller drains enter, on that part of the street already uncovered. Between this street and the Boulevard, buildings have been found that belong to the fifth or sixth century B. C., as is determined by their construction and by inscriptions found in them. The first is a small sanctuary, surrounded by polygonal walls and containing two boundary stones, one *in situ*, which carry the word ὅρος in sixth-century letters. Opposite the little temple that stands at the northern end of the sanctuary is a round altar of poros-stone. The street gradually rose in height in ancient times, and in the fourth century a *leschè*, marked by two boundary inscriptions, was built over the sanctuary. This extended to the west, and lies in part under the present Boulevard. Just south of the little temple, on the same side of the street, several Greek dwelling-houses have been disclosed. Inscriptions show that two of these were mortgaged.

No remains of dwelling-houses have been found on the east side of the street. The walls discovered here are retaining and enclosure walls. Dr. Dörpfeld believes that the sacred precinct of Dionysus in the Marshes lay here, towards the north, and the Eleusinium towards the south. Between these a street branches from the main street and leads directly to the Acropolis. South of this, on the main street, lies an enclosure which, from remains of buildings and dedicatory reliefs (one with an inscription naming Asclepius) found within the precinct, Dr. Dörpfeld calls Asclepieum.

West of the Asclepieum on the other side of the main street, in the axis of the Propylæa of the Acropolis, lay Enneacrunus. This consisted of an open area, west of this the "fountain" with its nine mouths, and at the foot of Pnyx hill the natural springs mentioned by Thucydides. Since the fountain lies under the modern Boulevard, it has not been possible as yet to excavate it properly. It may have

been wholly destroyed, since remains of it have been found built into a Roman house to the east. These remains are either poros or Karà limestone. One of the stones, a great slab which evidently stood upright, has two openings or "mouths" on its upper edge. To increase the supply of water from the natural springs, conduits were driven into the rock under Pnyx hill, and reservoirs were constructed in front. Seven of the former and six of the latter have been found.

This supply was not adequate, and Pisistratus built an underground aqueduct which brought water either from the upper valley of the Ilissus or from Hymettus down into the town. It passed under the present royal gardens at a depth of 13 metres, and under the south slope of the Acropolis at a depth of 20 metres. Its course carried it under the seats of the Theatre of Dionysus, where a shaft has been found that communicated with it. It ended near a great reservoir, 10 metres square, which lay south of the fountain and supplied it with water. That part of the aqueduct which was nearest the reservoir was built of great squared blocks of poros. When it reached the hill, as we follow its course back toward its source, an open passage was cut for it through the rock for some distance. The faces of these rock walls are in places three metres high. It then passed under the hill as a tunnel. It was the opening of this tunnel which was brought to light last Thursday. It was difficult to find, because a part of the lower conduit had been destroyed and its course was uncertain. The tunnel varies from 1.30 to 1.60 metres in height, and from .60 to .70 metres in width. Originally the natural rock formed its sides, but later it was faced (in places where the rock was soft) with tiles which are inscribed with letters of the fourth century. These tiles give the conduit the form of a beautiful semi-ellipse. In places they have broken and now close the conduit, but this will easily be opened, as shafts descending perpendicularly from above to the main water-course are known to have existed and will be found. From the main aqueduct two smaller conduits lead, one into the Asclepieum, the other into the big square reservoir. These are built of round tiles which were carefully jointed with lead and are almost identical with the tiles used in the construction of the aqueduct built by Polycrates in Samos in the sixth century B. C.

These excavations have laid bare a great complex of conduits, reservoirs, drains, and the remains of a fountain the age of which can hardly be in doubt. This may not be Enneacrunus, but the burden of proof would seem to be laid on the unbelievers. Athens is not likely to have had two such water supplies in the sixth century. There is one man at least in Athens who feels no doubt. Last Saturday afternoon, under the lee of the Areopagus, Dr. Dörpfeld discussed the literary evidence bearing on the question for three hours (no other man here dares to talk so long), and ended a convincing presentation of his views with the words: "Die Enneakrounos-Episode, meine Herren, existirt nicht mehr für mich—die Frage ist gelöst!"

JOHN WILLIAMS WHITE.

ATHENS, January 18, 1894.

THE AMERICAN FOLK-LORE SOCIETY.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to call attention to the plans of the American Folk-Lore Society? The quantity of material presented for publication has forced the society to undertake a series of "Memoirs," in addition to its organ, the *Journal of American Folk-Lore*. The first volume of this series, 'Folk-Tales of Angola,' by Mr. Heli Chatelain, will appear in March. This will exhibit Angolan oral literature, in original text and literal translation, accompanied by explanatory notes; the connection of the thought and life of West Africa with that of American negroes brings the work within the scope of the operations of the Society. Several other volumes are nearly in readiness for the printer, and it is much to be desired that their publication should not be delayed. The outlay is to be met by an annual subscription of ten dollars (terminable at pleasure), giving the right to receive all publications of the Society. The work of the Society, however, may also be furthered by a sufficient increase in membership (the annual fee being three dollars). There are many States in which the Society has few members or none; in all these there must be a body of intelligent persons who would be glad to assist, if the matter could be brought to their attention. The addition of 500 members would enable the Society to carry out the plans indicated.—Very truly yours,

W. W. NEWELL, Secretary.

CAMBRIDGE, MASS., February 5, 1894.

HENRIETTE D'ANGLETERRE.

TO THE EDITOR OF THE NATION:

SIR: In a notice, in the last number of the *Nation*, of 'Madame, or Memoirs of Henrietta, Daughter of Charles I. and Duchess of Orleans,' by Julia Cartwright (Mrs. Henry Ady), it is stated that "Mrs. Ady has carefully estimated such evidence as is at hand concerning the sudden and still mysterious death of Henrietta, and comes to the conclusion that death was due to natural causes acting on an enfeebled frame and aggravated by the Princess's own imprudence."

In *La Philosophie Positive*, No. 2, September-October, 1867 (a review edited by E. Littré and G. Wyrouboff), is an interesting account of the illness and death, and of the autopsy, of Henrietta, under the title "Henriette d'Angleterre, belle-sœur de Louis XIV., est-elle morte empoisonée?" by the eminent Dr. Littré, in which it is conclusively shown that the Princess died of the not uncommon disease gastric ulcer, with perforation of the wall of the stomach—a disease undescribed at the time.

F. MINOT.

BOSTON, February 9, 1894.

"TOTE."

TO THE EDITOR OF THE NATION:

SIR: I am able to furnish an earlier instance of the use in America of the word "tote" than that to which your correspondent "F. E. M." calls attention in the *Nation* of February 1. After the suppression of the insurrection headed by Nathaniel Bacon in 1676, the different counties of Virginia were asked to give statements of their grounds of complaint against the administration of public affairs which had led up to the rebellion. In the "Grievances of Gloucester County," now preserved in the British State Paper Office, London, Colonial Entry Book, No. 81, pp. 325-327, February 1676-'77, there will be found the following clause which contains a charge against Robert Beverley:

"When this county had according to order raised 60 armed men to be an outguard for the Governour, who not finding the Governour, nor those appointed Comanders, they were by Beverly comanded to goe to work fall trees and mawle and *toat* rails, which many of them refusing to doe, he presently disarm'd them, and sent them home at a tyme when this Country were infested by the Indians, who had but a little before cutt off 6 persons in one family and attempted others. They beg reparation against the said Beverly and his Majesties gracious pardon for their late defections."

The expression to "toat rails" will have a very familiar sound to all of the present day who have been brought directly into association with plantation life in Virginia.

It is interesting to note that at the time the Gloucester report of grievances was made, the negro population of the colony was very small. In 1671, Sir William Berkeley, who was then Governor, and enjoyed full opportunities of informing himself as to the number of slaves in Virginia, declared that this population did not exceed two thousand. This would seem to render improbable the supposition which has been sometimes advanced that the word had its origin with the negro race in this country.

PHILIP A. BRUCE.

VIRGINIA HISTORICAL SOCIETY,
RICHMOND, VA., February 5, 1894.

TO THE EDITOR OF THE NATION:

SIR: I am afraid the word "tote," instead of being a Southern word or a "word of African origin," like many a so-called Americanism, will have to hark back to England, for it is used in middle England, southern Yorkshire, and Lincolnshire in exactly the same way that it is used in eastern Virginia; the farm-servant there, like the negro here, "toting" a horse to water or an armful of wood into the house. The *toting* mentioned by your correspondent "F. E. M.," on p. 85, refers not to the *manner*, but to the purpose of the transportation.—Yours respectfully,

W. G. B.

LEXINGTON, VA., February 2, 1894.

Notes.

HARPER & BROS. will publish directly 'Life's Little Ironies,' a volume of short stories by Thomas Hardy; 'Studies of the Stage,' by Brander Matthews; and 'A Child's History of Spain,' by John Bonner.

Miss Adele M. Fielde's 'A Corner of Cathay'—namely, the region about Swatow—which is in course of preparation for publication by Macmillan & Co., will appear in September.

'Eight Illustrations to Shakespeare's Tempest,' by Walter Crane, are published in a limited edition of 650 copies by J. M. Dent & Co., London, and by Copeland & Day, Boston. Each proof, on thin paper, is mounted and provided with a mat for framing and a fly-leaf with title, and the whole is, with doubtful taste, enclosed in a box simulating a book. The engravings are by Duncan C. Dallas, in what is known as "Dallastype," and are certified to by Mr. Crane, the best possible judge, as "very faithful and successful." The designs themselves are by no means of Mr. Crane's best. The further he gets from simple outline and pure decoration, the more his shortcomings are apparent, and some of these drawings are wofully amateurish. He evidently seldom refers to nature, and his thoroughly conventional drawing becomes painful when anything like completion is attempted. The absurd attitude of Ferdinand with the log, and the silly hands of both figures in the chess-playing scene, are cases in point. Nevertheless, there is considerable pretty invention in background and accessories, and the "Dance of

Nymphs and Harvesters" is graceful and charming, and recalls the delightful picture-books of its author. Two hundred copies are for sale in the United States.

"Après l'Agésilas, Hélas ! Mais après l'Attila, Holà !" This epigram befits the 'Sylvie and Bruno' and, now, the 'Sylvie and Bruno Concluded' of Lewis Carroll, madder and maddest of the productions of the author of 'Alice in Wonderland' (Macmillan). The decline in humor is positively melancholy, and to read either of these volumes is nothing short of a penance. They are really sermons, or speculations about life and conduct and the hereafter, aimed at grown folks, and are most unfit reading for children. The nonsense verse in the concluding part is, with scarcely an exception, incapable of exciting a smile. Mr. Furniss, though his task as an illustrator was harder, has fallen far short of Tenniel in the immortal Alices.

Miss Edith V. B. Matthews has collected and translated, under the title 'Parisian Points of View' (Harpers), nine short sketches by Ludovic Halévy. They are typical of the author's style, though not always of his best work, they are nearly all interesting, they are well translated, and they are preceded by a capital introduction written by Mr. Brander Matthews, who has brought out just the right points in Halévy's literary character.

We have already given our readers an account of Arthur Lévy's 'Napoléon Intime,' a work sure of being translated sooner or later. The English version, by Stephen Louis Simeon, is now marketed in this country by the Scribners, in two volumes, entitled 'The Private Life of Napoleon.' The translation is of average merit only, in respect of idiom and freedom, but it will suffice, as the original work is not a masterpiece. More care might have been exercised in petty details. The accent in Joséphine might have been dispensed with, as in the case of Napoleon, and "Jerôme" is neither French nor English, as "Jéna" and "Wurtemberg" are neither English nor German, and "Strasburg" neither French nor German. But these inconsistencies are not very numerous, and would, with all other defects, be forgiven if there were but an index.

We have received from Dyrsen & Pfeiffer (F. W. Christern) the fourth edition of Paul Sabatier's 'Vie de S. François d'Assise,' which was the subject of our Paris correspondence last week. It is a solid octavo of some 420 pages, in the open character and choppy paragraphs characteristic of French books, and therefore capable of no little compression in an English version, which may be expected.

One can have only praise for the 'Handbook for Philadelphia Voters' compiled by Charles A. Brinley, who appears to be his own publisher (at 247 South Sixteenth Street, Philadelphia). While mainly of service to citizens of that metropolis, it may profitably be consulted by any student of our politics, for the organization of the local Republican and Democratic parties is set forth officially, and resembles, of course, that of the same parties elsewhere. In addition to this feature, we choose from the table of contents a few of the more important headings to give an idea of a work which ought to be widely imitated in other States: Digest of laws on citizenship and naturalization, and on the qualifications of electors; ward boundaries and areas; list of national, State, county, and municipal officers and representatives for whom an elector in Philadelphia may vote, with calendars for 1894–1896; list of important appointed officers in the State and municipality; calendar of party meetings and primary elections; constitution of the Municipal League; ballot and corrupt-practices acts; the city finances, etc., etc. Doubtless this handbook will be renewed annually or at short intervals.

We cannot speak too highly, either, of the little manual on 'The Money of the United States: Its Character and Legal Status from 1793 to 1893, etc.,' by Maurice L. Muhleman, Cashier U. S. Sub-Treasury, New York (New York: The *Safety Valve*, 55 Liberty Street). It makes no pretensions to scientific treatment of the money question, or to any treatment other than historical and statistical, but herein it is quite perfect. It presents first the legislative history of the coin and paper currency in use in the United States; second, statistical tables showing the volume of each kind annually existing since 1873; and lastly an abstract of the leading propositions looking to changes in the present monetary situation. The first and second of these presentations require technical knowledge only, but it is of a kind that few persons possess. Mr. Muhleman possesses the whole of it, and also the art of placing it before the reader without any superfluous words. Students will be glad to find embraced in his historical matter a brief account of the ante-bellum Treasury notes, issued in the war of 1812, the Mexican war, and the panics of 1837 and 1857, all of which notes bore interest and none of which were legal tender. A good index accompanies this excellent manual.

An interesting combination of meteorological research and fine book-making is seen in a little volume entitled 'Schneekrystalle,' by Prof. G. Hellmann of the Prussian Meteorological Institute (Berlin: Mückenberger, 1893). By the aid of his friend, Dr. Neuhauss, Hellmann has secured a number of microphotographs of snow crystals, here reproduced and constituting the first specimens of their kind. The text includes a history of earlier accounts of snowflakes, for the preparation of which Hellmann is peculiarly well trained; and a brief discussion of his own observations. It is found that snow crystals are larger and more of radiate form at temperatures near the freezing-point, and smaller and more disc-like at lower temperatures.

A 'Summary of International Meteorological Observations,' prepared by Major Dunwoody, has lately been published as Bulletin A of the Weather Bureau. The international plan proposed by Gen. Myer and approved by the Meteorological Congress at Vienna in 1873 was carried on from 1875 to 1887; more than 5,000,000 observations being reported from 459 land stations and nearly 600 vessels on the seas. All records were made simultaneously at Greenwich mean noon. The summary now presented contains a brief text and a series of fifty-nine large charts of the northern hemisphere on polar projection, giving illustration of various features of pressure, temperature, storm-frequency, and so on. It is noteworthy that the storm tracks seldom continue across the continent of Asia; they frequently cross the North Pacific, although rare there in the summer; they traverse North America in large numbers, especially about the Great Lakes; they pass over the North Atlantic, becoming confused and fading on entering Europe. The extreme brevity of the text makes it impossible to know surely whether allowance has been made in the charts of storm-frequency for the decrease of the size of the latitude and longitude squares towards the pole; and no statement is given as to the method of reduction of the barometric observations to sea level. Whether the temperature observations are reduced to sea level or not does not appear. The use of the term "normal temperature" seems unfortunate, inasmuch as the isothermal charts are peculiarly abnormal in combining the conditions of daytime on one side of the earth with those of night-time on the other. While this is of small moment in winter, it is of importance in summer. The charts exhibiting the change in the distribution of pressure from month to month are novel and interesting; no immediate explanation appears for some of the facts they present.

Popular Astronomy for February, published at Northfield, Minn., contains the first of a series of monthly maps of the constellations visible in the northern heavens. These are reduced from the planisphere of Messrs. Poole Brothers of Chicago. The paths of the planets for the month are marked in red.

The *Portfolio* undergoes a change of form and substance, and the January number comes to us from Macmillan & Co. as No. 1 of "The *Portfolio:* Monographs on Artistic Subjects. Edited by P. G. Hamerton." This first number is given up to "The Etchings of Rembrandt," and is written in his usual eminently reasonable style by the editor himself. He would probably not claim that it contains anything new, but it puts in a readable and attractive shape the ordinarily accepted facts of biography and criticism and a statement of the points of controversy. Tenderness for British morality has, however, prevented any reference in the biographical part to the existence of Hendrickje Stoffels, or in the critical part to the contested "free" plates. On the general question of the contested plates Mr. Hamerton seems inclined to adopt the extreme view of Mr. Seymour Haden, based on the theory that everything which, for any reason, he does not like is spurious; but he presents fairly the other side of the dispute.

The valuable bibliographical and critical Bulletin which the Italian Dante Society has published since March, 1890, under the able editorship of Prof. Michele Barbi, is now to be discontinued in favor of two other serial publications, under the direction of the same society. These are a *Rassegna Critica degli Studi Danteschi*, edited by Prof. Barbi, which will follow somewhat the lines of the old Bulletin, and a series of *Studi Danteschi*, which will contain longer articles in regard to the Society's critical edition of Dante's works and similar matters. The former will be published every month; the latter at irregular intervals.

It is announced that the sale of duplicates belonging to the Victor Emanuel Library at Rome will be begun with a lot not exceeding 10,000 volumes through some well-known bookseller or agent of the Peninsula. The selection of this intermediary will be made upon examination of the claims of such as offer themselves.

A proper memorial of the late secretary of Harvard University, Frank Bolles, has been found in a fund for the aid of needy students, which it is proposed to raise and place in the hands of the president for distribution. A tenth of the income will be set aside to increase the principal. Subscriptions (and none will be considered too small) may be addressed to Howard A. Cutler, 8 Holworthy Hall, Cambridge.

The late George W. Childs is commemorated in a photographic panel portrait by Mr. F. Gutekunst, Philadelphia, with this artist's well-known skill. The likeness is an excellent index of character.

The trustees of the Columbia University Press, after careful consideration, have made

an arrangement with Macmillan & Co. of New York and London to act as the publishers of the Press for a term of years. By this arrangement the works bearing the imprint of the Press will profit by the ample facilities of distribution possessed by Messrs. Macmillan, not only in the United States and Great Britain, but also on the continent of Europe and in the British colonies. Of late years, too, this firm has paid great attention to American authors, and they have recently published or have now in preparation works by a number of Columbia instructors, including Prof. Boyesen, Prof. Cattell, Dr. Egbert, Prof. Brander Matthews, Prof. Perry, and others. The arrangement made by the Columbia University Press is on conditions highly satisfactory to the trustees of the Press.

—Apropos of the Crown's veto in England, a correspondent writes:

"In Sir William Anson's valuable 'Law and Custom of the Constitution,' Part i., pp. 254-255, may be found exact and accurate statements as to the mode of giving and refusing the royal assent to legislative bills. He mentions 'the frequent use of the veto by William III.,' and offers some explanation of it. It is added that 'Anne exercised the veto once, when in 1707 she refused her assent to the Scotch Militia Bill. Since then the words *le roy s'avisera* have never been used.' These were the words, as Anson remarks, by which the King, unwilling to legislate, but wishing not to offend by a curt refusal, 'smiling put the question by.'"

And still another:

"Your statement that, in England, 'the veto of the crown has been obsolete for more than two centuries,' is, besides the authorities mentioned by you, sustained, also, by the 'Encyclopædia Britannica,' Article *Veto:* 'This prerogative has not been exercised since 1692, and may now be considered obsolete.' But Mr. James Bryce, 'The American Commonwealth,' vol. i., p. 56, says: 'The last instance of the use of the "veto power" in England was by Queen Anne in 1707 on a Scotch militia bill.' Mr. Tod ('Parliamentary Government in the English Colonies,' ii., p. 319) mentions that in 1858 changes in a private railway bill were compelled by an intimation to its promoters that, if they were not made, the royal power of rejection would be exercised."

—In our recent notice of Dr. Coues's laborious edition of Lewis and Clark, referring to seven journals kept by the men of the expedition, and the possibility that research might even yet recover some of these, we said: "The unexpected happens. Such a happening would be the discovery of the journal by [Robert] Frazer." This language was prophetic beyond our dreams, for such a discovery has just been made in the archives of the Wisconsin State Historical Society. The treasure-trove consists in the journal written down by Sergeant Floyd, day by day from the date of starting up the Missouri till within two days of his death. The pages in this memorial are fifty-three, each of about fifteen long lines (7½ inches), with few lines erased or obscured. It was evidently soldered by Capt. Lewis in one of the tin boxes provided "to prevent injury from wet," etc. Concerning the contents of this unexpected find we may speak at another time. They are, of course, analogous to the chronicle of Gass, but are more like what the story of Gass would have been if printed from his own handwriting and not adulterated by the Scotch schoolmaster, David M'Keehan. The genuineness of the journal is beyond controversy. The pasteboard cover bears on the inside the words, "Charles Floyd, Bought at River Debois, 13th March, 1804," written in the same hand with the narrative which fills the pages. Several pages at the beginning, perhaps filled with accounts, have been mostly torn out, and the diary commenced Monday, May 14, 1804. Sergeant Floyd died August 20, just below where Sioux City now stands. His written book was no doubt sent down the river on April 4, 1805, when a barge left for St. Louis laden with every superfluous ounce which might encumber the expeditionaries. It is probably the very volume described by Lewis as follows, in his letter to Jefferson from Fort Mandan: "I have sent a journal kept by one of the sergeants, to Capt. Stoddard, my agent at St. Louis, in order as much as possible to multiply the chances of saving something." But in the same barge there went a letter and some parcels for Capt. Clark's kindred in Louisville, and it is likely that Floyd's manuscript also was soon forwarded thither. One reason for this opinion is that Floyd was probably enlisted from that quarter, and certainly more closely connected with Clark than with Lewis.

—A generation ago Lyman C. Draper, thirty years and more secretary of the Wisconsin Historical Society, was intimate with the Clark family in Kentucky, and had such a craze for their papers that he was ready to "beg, borrow, buy, and (if need be) steal them." On the other hand, the Clarks readily humored him, knowing that whatever they gave him was placed where it was safest and most appreciated. Thus Draper came North laden with spoils—the largest collection, it is believed, in existence of manuscripts relating to the Clark family. It seems surprising that he never told anybody of his material which could correct, complete, or explain the story of the first transcontinental adventurers. The explanation is easy. The secretary was a colossal collector. His first earnings were spent on a fire-proof building where he stored his accumulations. Everything rich and rare, historically speaking, he did his utmost to shut in behind his iron door. But when it was once garnered there, and his will made bequeathing it to the Historical Society, he turned his back on it, and had no eyes save for new conquests.

—'Biltmore Forest: An Account of its Treatment and the Results of the First Year's Work,' is the title of an illustrated pamphlet by Mr. Gifford Pinchot, the consulting forester employed by Mr. George W. Vanderbilt to evolve a working plan for the development of his North Carolina estate, which lies for some six miles on both sides of the French Broad River, with a total area of 7,282 acres. The attempt which this report describes is the first practical application of forest management in the United States, "the prime object of which is to pay the owner while improving the forest." Neither the natural nor the economic situation of Biltmore is specially favored. Its output, of no high grade, competes directly with the low-class products of a large contiguous area of timber land; this output is sold at market prices in open competition, and it furnishes cord-wood to the brick works, ties to the railroads, posts to the United States Agricultural Department, and lumber for different uses, "simply because it does so at prices which make it worth while for these departments to purchase of the forest rather than elsewhere." Graphic woodcuts illustrate the condition of the forest before and after "improvement cuttings" were begun, and the treasurer's statement for the year from May 1, 1892, to April 30, 1893, will repay study by forestry commissions and all good citizens interested in the cessation of forest vandalism. The salary of the consulting forester (for satisfactory reasons) is not included in the expense account; we are also reminded that the credit side receives little benefit from work done before June 3, 1892, and that intelligent supervision and competent workmen—mainly negroes—had to be evolved by the work itself. The current expenses (of which the wage account, including salary of assistant forester, was $7,262.46) were $9,911.76, the receipts $5,607.11, with stock on hand in the shape of cut lumber, cord-wood, shingles, and telephone poles, valued at $3,912.25, leaving a balance of $392.40—a "not unsatisfactory result." The "improvement cuttings," besides paying expenses, seem to have established two facts of very great importance to the future success of American forestry, namely, "that large trees surrounded by a dense growth of smaller ones may be felled and removed with comparatively very unimportant injury to the young trees," and that the additional cost of the care necessary to preserve the trees is so small beyond that of ordinary destructive lumbering, "as to be out of all proportion to the result. . . . Its value in practice is enormous." Under the direction of Mr. Fred. Law Olmsted an arboretum has been started, with more trees and shrubs in its nursery than are to be found at Kew Gardens. Of the silvicultural character of many American trees we are densely ignorant, and the several branches of work at Biltmore are expected to help solve the problems with which American forestry is beginning to cope with awakened intelligence but limited knowledge.

—To the pretty "Muses' Library" (London: Lawrence & Bullen) Mr. W. B. Yeats has contributed 'The Poems of William Blake.' The volume contains, in moderate compass, all that anybody but the mystic or the professional student will care to read of Blake's poetry. His purely literary work is given almost in its entirety, and the extracts from the 'Prophetic Books' are judiciously made. Mr. Yeats is well known as one of the editors of the great Quaritch collection of Blake's works, and as an enthusiastic disciple and interpreter of Blake's strange mystical system. It is a pity, therefore, that he has not given more space in his notes to the elucidation of some of the dark places in the present selection. For this the reader could well have spared some pages of solely bibliographical or text-critical interest. The Introduction is in one way admirable: it gives a succinct and well-proportioned account of the life and character of Blake, emphasizing, but not unduly, the visions or illusions, whichever one chooses to call them, that were to him more important than human companionships. As criticism, however, or literary history, the Introduction takes no high rank. We miss an estimate of Blake's place in English literature—of the influences, other than spiritual, which affected him, and of the influence which he has in turn exerted, not so much on his contemporaries as on the generations that have succeeded him. In framing a text the editor has been wisely conservative, and his temper towards his predecessors is charmingly urbane.

—The *Archivio Storico dell' Arte*, being the one periodical devoted almost exclusively to Italian art, deserves for this, and for other reasons, far more attention than it receives. It is refreshing to turn to its pages after the trite information and vague criticism usually served up in art periodicals. The *Archivio* appears in Rome six times a year, is of quarto size, well illustrated, and always contains, besides the articles and reviews, a number of hitherto unpublished documents. During the last year, for instance, a number of items appeared concerning one of the most imaginative of Italian

painters, Dosso Dossi; and the editor, Count Guoli, contributed a stipulation made on October 27, 1481, by Cosimo Rosselli, Sandro Botticelli, Ghirlandajo, and Perugino, that they and their assistants would have their frescoes in the Sistine finished by March 15, 1482. This bit of information furnishes the precise date of the Sistine Quattrocento paintings, and at the same time excludes Signorelli, of whom it makes no mention, from any share in them, as indeed the latest criticism has already excluded him on stylistic grounds. Among the more important articles in the *Archivio* of last year are one by Signor Umberto Rossi, the curator of the Bargello at Florence, on the recent acquisitions made by that institution; a capital monograph by Count Guoli on Luigi Capponi, a Milanese sculptor of the fifteenth century, working in Rome; and a series of studies by Dr. Gustavo Frizzoni, on the Museo del Prado at Madrid. Although this incomparable collection of pictures has been visited by a number of specialists, including Morelli, Dr. Frizzoni is the first to furnish a complete account, from the point of view of the most advanced criticism, of its Italian masters. As literary heir and executor of Morelli, he has used the latter's notes to aid him in the searching analysis made of the works exposed, and the results at which he has arrived are likely to find universal acceptance. In Madrid, everything depends on distinguishing between what, for want of a better term, must be called autographic pictures by a given master, and such as are merely of his school, or are attributed to him by pure accident. Signor Frizzoni reduces the number of genuine Titians from forty-two to twenty-four, the Veroneses to two, the Raphaels also to two. No greater service can be done to the reputation of an artist than to relieve it of the second and third-rate works attributed to him, and the same process puts the public out of danger of squandering its emotions on bad art.

EARLY MAGNETICAL SCIENCE.—I.

William Gilbert of Colchester, physician of London, on the Load-stone and Magnetic Bodies and on the Great Magnet, the Earth: A New Physiology, demonstrated with many Arguments and Experiments. A translation by P. Fleury Mottelay. John Wiley & Sons. 1893.

THE lodestone, which Mr. Mottelay will write load-stone, is a mass of oxide of iron of the approximate composition Fe_3O_4, which is susceptible to magnetic induction, but only very slowly, and which has lain for such eons in the telluric field of magnetism as to have become polarized, often most intensely. Almost all iron ore of this low degree of oxidation, which alone is magnetic, shows more or less polarity. The properties of a lodestone are sensibly different from those of a steel magnet, owing to its great resistance to magnetic induction—a circumstance which simplifies some of the phenomena.

If the scientific stage of experimental inquiry be considered as commencing with the application to it of special apparatus, then the earliest scientific magnetician was Petrus Peregrinus, a Picard, and elder contemporary of Roger Bacon. His treatise on the lodestone was printed in 1558, but that volume is excessively rare, and the contents of the work are not generally known even to specialists. We shall refer here to the text of a MS. of the thirteenth century in the Bibliothèque Nationale (MSS. latins 7378, certainly older than a date often assigned to the composition. The ancients had noticed that lodestones would pick up iron and draw it from a distance, and that one piece of iron hanging from a lodestone would pick up another. But they did not remark the poles, nor that iron could be magnetized. But before Peregrinus wrote, the use of the magnetic needle had begun to come into use with sailors. His treatise (*Epistola*) is addressed to a friend. It begins: "Amicorum intime! Quondam magnetis lapidis occultam naturam a te interpellatus," etc.—in English as follows:

"Inmost of friends! Having been formerly interrogated by thee, I will in a rude narration disclose everywhere the occult nature of the lodestone. For among philosophers nothing is pleasant without participation of knowledge, and the nature of good things is bereaved and clouded in darkness until it is lifted up into the light of mutual surrender. For the love of thee I will write things that to the mob of students are utterly unknown. Nevertheless, of nothing but what is open to observation (*manifestus*)* shall we in this letter deliver knowledge, in that this delivery will be part of the treatise in which we shall treat of constructing physical instruments. To treat of the occult properties of this stone concerns the art of sculpturing stone, and though I call the works of which I have inquired open to observation, still they will be inestimable, and to the vulgar they are as illusions and fancies, and therefore in respect to the vulgar they are secret; but to astrologers and naturalists† they will be sufficiently open to observation; and to them they will be a solace and for sailing travellers no slight assistance."

Truly, the scientific spirit and insight of this and other passages of the epistle are surprising. Apart from the affectionate warmth which has in all ages been characteristic of scientific men, but is almost incomprehensible to outsiders—well-nigh incomprehensible, for instance, that Agassiz, greatly injured as a scientific leader, and, indeed, worn nearly to death by his long and vehement dispute with Darwin, should, though a strong hater when occasion was, welcome with the utmost delight, "for their father's sake," the young Darwins, whose father had, as a matter of course, recommended them to Agassiz—apart from this, there are other little traits, veritable shibboleths among the race of *Naturforscher*. We remark that the above passage contains a sort of definition of what was meant by an "occult quality" among the mediæval physicists. It means a quality not deducible from the Aristotelian doctrine of hot and cold, moist and dry, and not discoverable except by experiment, and therefore a secret to all who do not make experiments, though "satis manifesta" to those who do. We also remark that the present treatise is regarded as an instalment of a larger one which is to treat of what?—of the "construction of physical instruments"; and directly after follows a passage (imitated, in form, from Geber, but far superior to the original in matter), to the effect that a physicist ought to be a mechanician, because it is not by mere thinking but by handiwork that he is to discover the natures of things ("Scito verissime quod oportet hujus artificem scire," etc., with which compare Geber's "Scias, carissime," etc., and "Oporteat artificem huius operis in scientiis philosophiæ naturalis eruditum esse," etc. There were many mediæval imitations of the same chapter of Geber, but none to compare with this).

Accordingly, the first thing that Pilgrim Peter does is to put a lodestone into a lathe, or in some way (to be explained in another work) reduces it to a spherical form. A happy thought that. Then he lays a bit of iron wire (*acus*) upon the ball, and finds it at once turns round in a definite direction. He marks this upon the stone, and pushes the needle along in the same line. This is done at several different places on the stone, and the different lines so drawn are found, on being continued, to intersect at two points only. At those points alone the wire stands up at right angles to the surface of the sphere. They are called by Peter its *poles;* they have retained that name ever since. He next floats the lodestone with its axis horizontal in a little round boat, and finds that a certain one of the poles always turns to the north. "Si millesies amoveatur, millesies ad suum locum revertetur nutu Dei." The pole pointing north he calls the north pole, and *vice versa*. Next, taking a second lodestone, he finds that unlike poles attract, while like poles repel, one another. Next, he shows that an oblong piece of iron touched at its end by a pole of the lodestone acquires the properties of a lodestone. He also shows the effect of breaking the stone across its axis, and that of uniting two stones in the way which satisfies their attractions. He thus recognizes magnetization by contact, but not induction at a distance.

So far, he has done his thinking, apparatus in hand; he has hardly so much as made suggestions; certainly, the conclusions were those of nature's own mind. But now he tries a little thinking with his individual brain. He concludes that the poles of the magnet direct themselves to the poles of the heavens. If he had only tried letting his lodestone sphere sink through water or some more viscous fluid, he would have discovered the magnetic dip, and would have refuted his error. But his mediæval mind was beginning to chafe under the harness of experiment. The poles of the lodestone point, he declares, to the poles of the heavens; and "no doubt every part of the lodestone points to an appropriate part of the heavens." So he suggests that his correspondent should try the following experiment: Let a spherical lodestone be so mounted between bearings as to turn freely on its axis, and be in equilibrium in every position, while the axis is held parallel to the axis of the heavens. "Then," he says, "if the stone turns with the revolution of the heavens, you may rejoice to have discovered a wonderful secret. But if not, it is to be imputed rather to your want of skill in mounting the stone than to any defect of nature." Is not this human?

After Peregrinus, three centuries and a half elapsed without the invention of any new apparatus, and consequently without any important discovery. That of the variation of the compass (the consequence of that invention) seems to have been made by navigators without reclamation. Its different amounts in different places are shown on the maps of the Venetian Andrea Biancho, made in 1436. The dip was first clearly proved by Robert Norman in his book, 'The newe Attractive, containyng a short discourse of the Magnes or Lodestone, and amongst his other vertues, of a newe discovered secret and subtill propertie, concernyng the Declinyng of the Needle touched therewith, under the plaine of the Horizon. Now first found out by R. Norman Hydrographer' (2 parts, London, 1581, 4to; other editions 1585, 1596, 1611). Norman was led to this discovery from having constructed a very accurately balanced needle.

William Gilbert came of an ancient family.

* The use of the word *manifestus* in this sense, which is almost peculiar to modern physicists, and that without explanation, seems to indicate the existence of a sufficiently large class of physicists early in the thirteenth century to have developed a diction of their own.

† Another word betraying the existence of a large class of natural philosophers.

seated at Clare, in Suffolk, on the border of Essex. His father was a prominent and apparently wealthy lawyer in Colchester. The boy attended the grammar school, and in 1558 obtained the scholarship in St. John's, Cambridge, belonging to that school. He arrived in Cambridge just at the beginning of one of the religious revolutions there. St. John's, then altogether the most distinguished college in England, had for its master, when Gilbert first went there, an excellent scholar, George Bullock, who, on account of his Romanism, was within a year displaced by a still more learned man, and a wise one, James Pilkington, an ardent Calvinist, later Bishop of Durham. The Cambridge undergraduates were at that time coarse enthusiasts for Calvinism; but the dons mostly looked upon the church as a union to uphold holy living and put down evil, and thought theology was a secondary matter. They changed about from Protestantism to Catholicism and from Catholicism to Protestantism, without enthusiasm and without reluctance, at the royal bidding. It is rather a remarkable fact that Gilbert's great work contains not a single direct reference to God. In Book VI., cap. iii., he refers to the waters above the firmament "of the divine Moses," merely to explode the idea. Being a strong Copernican, he does remark that the Holy Scriptures recognize no *primum mobile* nor rotation of the entire firmament. But this is the only reply he condescends to make to the theological objections to the Copernican opinion, except that in one place he exclaims, "Excutiant theologi et spongiis deleant aniles istas" (Let theologians shake off and wipe out such old woman's nonsense). He speaks of "the divine and perspicacious genius" of Aquinas; but to translate "Divus Thomas," where *Divus* is simply the title of his grade of official sainthood, by "the godlike Thomas," as Mr. Mottelay does, is hardly warranted. However, these expressions pretty clearly show that Gilbert was a convinced Anglican, or, as we may say, Elizabethan, in religion.

Gilbert showed an early bent for chemistry. The latest novelty in that line was then Giambattista Porta's 'Natural Magic,' first published in Naples in 1558; and though this work was written when the author was only fifteen years old, it had an immense popularity, and was soon translated into Italian, French, Spanish, and Arabic. It was republished, greatly enlarged, in 1589. (We shall refer to the corrected edition of 1591.) But a passion for chemistry would imply readings in Ripley and in Paracelsus. Accordingly, we find in the 'De Magnete' several passages of Paracelsist leaning. During Gilbert's first year in Cambridge, he had, in accordance with the statutes then in force, to devote himself chiefly to the study of arithmetic, although the commission of 1559 changed this to rhetoric. Gilbert's writings amply attest his unusual accomplishments in both directions, but more particularly in mathematics. It is true that, in the last chapter of the 'De Magnete,' Mr. Mottelay (p. 354) makes Gilbert sneer at mathematicians; but the use of *hi*, "the latter," shows that not the mathematicians, but the philosophers, are meant. During his second year at the university, he was required to devote his studies to logic. Sir T. Wilson's 'Rule of Reason' was the only book on the subject that had been printed in England, but Gilbert certainly went deeper than that; his writings show it unmistakably. He was graduated in 1560, and obtained a fellowship. If, as Anthony à Wood asserts, he studied also in Oxford, it was most probably about this time. In 1565 he was mathematical examiner in St. John's, in 1569 he took his degree in medicine, and was appointed Senior Fellow.

On leaving college he went to travel on the Continent. He returned in 1573, and established himself in London. His house was on St. Peter's Hill, between Upper Thames Street and Little Knightrider Street. Mr. Mottelay locates this in Colchester; but the street (in the parish of St. Peter Paul's Wharf), called St. Peter's Hill, a continuation of Sermon Lane, appears on the old maps of London, and exists to this day. Upon being appointed principal physician to Queen Elizabeth, Gilbert seems to have moved to Whitehall. This broke up a society, the precursor of Gresham College and the Royal Society, which had for a long time met at his house. During his years in London he filled several offices in the Royal College of Physicians, those of censor, treasurer, consilarius, and finally, in 1600, the year of the publication of his great work, that of president. He died November 30, 1603, which was a plague year.

Gilbert is described as tall in stature. If we may trust to his portrait, he was robust and of energetic bearing. His head was square, his forehead square and smooth, his chin long, his physiognomy that of a practical man. At the same time, his appearance is refined and somewhat delicate. He was probably handsome. He never married. He was of a calm and cheerful disposition, "reserved but not morose," says Thomas Fuller. His book abounds in irascible expressions concerning certain classes of writers: "May the gods damn all such sham, pilfered, distorted works, which do but muddle the minds of students" (Book II., chap. xxxv.). He occasionally speaks rather haughtily of individuals. Thus, Jean Baptiste Besard (whose name Mr. Mottelay twice writes Bessard), certainly a very distinguished physician, is referred to as "one Besardus, a Frenchman." Although in 1600 Francis Bacon had not published anything about science, he had, no doubt, talked about it with Gilbert, and he is not improbably alluded to among the *rabulis*, or "pettifoggers," to whom the magnetic philosophy will not prove acceptable. Bacon, when his turn came, spoke contemptuously of Gilbert; but he gave dignity to what he said by making it quite true: "Gilbert has not unscientifically introduced the question of magnetic force. But he has himself become a magnet. That is, he has ascribed too many things to that force, and built a ship out of a shell."

ANOTHER LIFE OF GEN. THOMAS.

General Thomas. By Henry Coppée, LL.D., Professor in the Lehigh University, and formerly an officer of artillery in the United States Army. D. Appleton & Co. 12mo, pp. xiv, 332. [Great Commanders Series.]

THE tone of Prof. Coppée's Life of Gen. Thomas is in refreshing contrast to some other publications on the same subject. He has found it easy to eulogize his hero without vilifying others. There is, perhaps, only a single instance in which his reference to others is questionable, and that is where he speaks of Thomas as "beset" by the authorities at Washington in December, 1864 (p. 258). He apparently forgets that Lincoln and Stanton did not send despatches to Thomas, but expressed their fears and their criticisms to Gen. Grant, who was always measured, if he was emphatic, in his orders and despatches. The author's characterizations of Gen. Thomas are happy, both in the development of the man in the earlier chapters, and in the summary near the end of the book. The military preëminence which is attributed to him over all his contemporaries will not be accepted as the final verdict, but is so much in the vein of special biographies that we must expect each of the subjects of the Commanders Series to be in turn set on the same pinnacle. We shall have to judge for ourselves, after all, among these clashing preeminences.

In one respect, however, we had the right to expect from the author another sort of workmanship than that which he has given us. It certainly would not be asking too much to demand that a résumé of campaigns should be accurate and intelligible. The errors in the present one are so numerous and so serious that it is not going too far to say that the more familiar the reader may be with the military operations of 1864, the more he will be puzzled in reading these pages. To justify this judgment it is necessary to give examples.

The period named covers Sherman's campaign of Atlanta and Thomas's campaign of Nashville. The battle of Resaca occurred on the 14th of May. After a sketch of it the author proceeds to "the next great step in the campaign, which was the turning of Allatoona Pass. The same tactics were employed as before." Instead, however, of the manœuvres to turn Allatoona, we find another sketch of the movements at Resaca, and one which is contradictory of that before given. In the former, Thomas and Schofield "formed the left of Sherman's army" (p. 205); now they form the right (p. 208). Yet Johnston is described as making "a desperate effort to turn the left of Schofield"; but as Schofield is just described as being "in line on Thomas's right," Johnston's effort could not be "to turn" Schofield, but to pierce the line between Thomas and Schofield. The two sketches cannot be made to hang together, and neither is the second consistent with the first, nor would any change of names make it apply to Allatoona.

The combat of New Hope Church is said to have been (p. 209) "one of the most terrible battles of the war," but the description which follows is that of the affair at Pickett's Mill, which occurred at another time and place. Hooker's corps had the prominent part at the church, Howard's at the mill. Hooker's men are not mentioned, and the sketch is wholly made up of incidents of Howard's engagement. The movements of Sherman's army between May 25 and June 14 are summarized without specifying dates, the 9th of June being the one last named, when (p. 210) we are told that "at three P. M. Hood made an attack in triple line." This can refer only to the combat at Culp's Farm, which occurred not on the 9th but on the 22d. Immediately following the last is the incident of the death of Gen. (Bishop) Polk on Pine Mountain on the 14th of June, eight days before the engagement at Culp's, which in the sequence of the narrative is just before it.

Johnston was removed from the command of the Confederate army on July 17, and Hood succeeded him on the 18th. We are told that on assuming command "Hood made two successive attacks"; but the first, at Peach Tree Creek, is said to have been on the 18th (p. 214). It was, in fact, on the 20th, and the incidents given are those of the 20th. On pages 216 to 219, under a regular title of the Battle of Peach Tree Creek, we have a fuller account of what purports to be the second of these attacks, but it is the identical one which was partially described as of the 18th, though the correct date is now given. The same engage-

ment of parts of the Fourth and Twentieth Corps is specified, and the same personal direction of the artillery by Gen. Thomas. The second of Hood's attacks was, in fact, on the 22d, and was the battle of Atlanta, McPherson's Army of the Tennessee being assailed and that distinguished officer losing his life. This is not mentioned at all by the author in this connection. He passes at once by an italicized sub-title to "Jonesboro," and describes (p. 220) Hood's attack upon the army of the Tennessee (now under Gen. Howard) at this place, twenty-odd miles south of Atlanta, on August 31. The author then incidentally returns (p. 221) to the battle of Atlanta and McPherson's death, apparently only to account for the transfer of Gen. Howard to the army of the Tennessee, which he says was "much to the dissatisfaction of Gen. Hooker, who considered himself overslaughed and ill treated, and who threw up the command of the Fourth Corps, to which Gen. Stanley was at once promoted." Hooker did not command the Fourth Corps, but the Twentieth. It was Howard who was replaced by Stanley. Hooker was succeeded by Slocum.

In following the investment of Atlanta, we are told (p. 222) that

"there was a very severe fight at Ezra Church, just outside the city, and it was evident to Sherman that, with the very strong fortifications and heavy guns, it was proof against assault, and must either be taken by regular approaches or else he must have recourse to his former tactics and turn the position. He chose the latter and raised the siege in front of the town."

The battle at Ezra Church (July 28) was not an attack by Sherman on the Atlanta fortifications, and had nothing to do with proving that they could not be taken. It was an assault on Sherman's lines of investment by Hood, who got terribly punished. Sherman did not raise the siege or make the turning movement till a full month later.

We have next a repetition of the assault by Hood on the army of the Tennessee at Jonesboro, which is now placed "on the 31st of July," following up the last error and showing that the author connected it closely with the affair at Ezra Church. There were not two such attacks near Jonesboro, but only one, and that on the 31st of August.

We then learn that the causes which induced Hood to evacuate Atlanta were the cutting of his southern communications, and the fact that the town was "vigorously shelled in front by Thomas" (p. 223). The town was not shelled at that time. The Twentieth Corps had retired northward to the Chattahoochee entirely out of artillery range, and Thomas, with the rest of the army of the Cumberland, was at Jonesboro, twenty miles south of the city.

When Hood showed signs of a purpose to move northward on Sherman's lines of communication at the beginning of October (the date given is probably a misprint), the statement is made that "Thomas was directed to occupy Chattanooga with the army of the Cumberland, while the armies of the Ohio and the Tennessee were directed to move in concert and cover his rear." Less than a quarter of the army of the Cumberland was sent to Chattanooga, all three of the armies operated actively under Sherman against Hood, and Thomas in person went to Nashville, as the author subsequently notices on p. 309.

It is next stated that "on the 20th of September, Hood moved from Lovejoy Station, following on the heels of Thomas" (p. 228). Lovejoy station was nearly forty miles south of Atlanta, in and about which the whole of Sherman's army was, during the interval in the campaign. Thomas and his army were in Atlanta itself. They rested quietly there during September. Hood moved west from Lovejoy to Palmetto, not north, and when the active work of October began, the army of the Cumberland, with the other armies, was on his heels - he was not on theirs. Then it is said that "when Sherman was about to start on his famous march" to the sea, Thomas was instructed "to fall back rapidly towards Nashville and there put himself in condition for a new advance" (p. 229). Thomas had no such instructions. He was told to concentrate his forces at or near Columbia, fifty miles south of Nashville, and "go at" Hood.

On page 231 the army of the Ohio is said to be a different organization from the Twenty-third Corps. The corps was part of that army. On page 244 we are told that Thomas's first thought on October 3 had been to hold the line of Duck River in middle Tennessee against Hood, "but the enemy was so close at his heels that the scheme was abandoned," and he determined to await Hood at Nashville. The fact was that it was not till the last week of November that Hood approached the line of the Duck River. The mistaken notion that Hood was chasing Thomas from the time he left Lovejoy Station here reappears. There was a lively little campaign in Georgia, not Tennessee, in October.

Again, in the same connection, we are told that "on October 30 the Twenty-third Corps had begun its march to join Thomas at Nashville, and Hood followed in what proved to be a very rapid pursuit." Hood thus seems to be on everybody's heels; but it is a mistake. Schofield started with the Twenty-third Corps from Georgia when Hood was at Tuscumbia, near the Mississippi line, with the whole breadth of the State of Alabama between. Schofield moved directly towards Hood, not away from him, some two hundred miles. It would be difficult to confuse the events of that period more completely than the author has done. The Fourth Corps had immediately preceded Schofield in this same movement towards Hood, and the two corps were united under Schofield at Pulaski, thirty-three miles south of Duck River, before Hood crossed the Tennessee. They in fact made their first stand at Duck River from the 24th to the 29th of November, where the author places Thomas with Hood close at his heels in the beginning of October.

It is assumed (pp. 244, 245) that the Fourth Corps was with Thomas at Nashville, that Schofield collected "the Union troops which had been scattered throughout" southern Tennessee, and with these and the Twenty-third Corps retreated to Columbia, where he was joined by the Fourth Corps (p. 246). Instead of this, the Fourth Corps was first at Pulaski, Schofield joined it with part of the Twenty-third Corps, and did not collect the scattered troops (post garrisons), for he was not authorized by Thomas to do so.

On page 247 it is said that when Schofield's army reached Franklin, the field of the bloody battle of the 30th of November, "with both flanks posted on the Harpeth River, Schofield's forces occupied the old intrenchments there." There were no old intrenchments there, and Schofield's men made their own. There was a small enclosed work on the north side of the river, which had been built the year before to protect the railway bridge, but this cut no figure in the battle, which was fought on the south side. The suppression of the part of the officers and men of the Twenty-third Corps in the battle was a *suggestio falsi* begun by Van Horne. More recent publications have given the opportunity for correction, of which the author has not availed himself. The approaching publication of the forty-fifth volume of the Official Records will end this perversion of history.

On pages 267-268 events are given as part of the first day of the battle of Nashville (December 15) which, so far as accurate, belong to the second day. The same, in a somewhat different version, appear on p. 271 in the account of the fighting on the 16th, where they belong.

It will be seen that the things we have thus pointed out are not trifles or possible slips of the pen. They go to the very essence of a consistent conception of the campaigns. When the author is thus at sea in his collection of authorities and abridgment of more voluminous accounts, he destroys the weight which otherwise his judgments might have when he concludes that Thomas's military grasp of the situation and capacity as a commander were greater than Grant's or Sherman's. No one can affirm that whose comprehension of the military events is not accurate, lucid, and consistent. Such a one must necessarily appear to be only the echo of the opinions of a coterie of extreme partisans.

The Private Life of the Romans. With numerous illustrations. By Harriet Waters Preston and Louise Dodge. Boston: Leach, Shewell & Sanborn. 1893.

An elementary book on the private life of the Romans has long been needed for the use of schools and the lower classes in colleges. There has been practically nothing in English (except the dictionaries of antiquities) later than Metcalf's translation of the first edition of Becker's 'Gallus,' and the more recent works in German are unfortunately sealed books to most of our young students. In the present little volume the editors have followed Marquardt pretty closely, although they have also used Friedländer as well as Göll's revision of the 'Gallus.' The subjects of the six chapters are the Family; the House and Everyday Life; Children, Slaves, Guests, etc.; Food and Clothing; Agriculture; and Travel and Amusements. Tables of weights, measures, money, etc., are also given. No pretence is made to originality or completeness, but the object of the book is to offer useful and interesting information upon a variety of topics without going deeply into any one, and (most difficult of tasks) to make the Romans seem to the boy living beings like ourselves, instead of creatures who spent their lives in constructing syntactical puzzles. The editors may be congratulated upon a work well done. Their book, in spite of its condensed treatment, is no mere marshalling of facts; it is readable, interesting, and in the main reliable. It deserves a place in the library of every good classical school, and, standing alone as it does in its field, it will probably enjoy a large sale. This is why we shall depart from our usual custom in the case of elementary works, and, instead of noticing it briefly, point out some blemishes which should be removed in the next edition.

To begin with the illustrations. Of these there are a dozen full-page photogravures and forty woodcuts in the text. The former are all pretty well executed except the view of the Roman house (after Schill), in which it is impossible to read the names of the different parts. Among the cuts two or three are indistinct in outline and features. For all these, new pictures should be made. The cut called a "Ro-

man Bath from an Ancient Painting" should be struck out altogether. It is not ancient at all, but was long ago shown to have been drawn in the sixteenth century. This brings us to the sources of the pictures in general. More than half of them come from Rich's Dictionary, and it was scarcely worth while to reproduce so much from an old book in such common use. Moreover, Rich hardly ever gives his sources with exactness, and one often entertains the gravest doubts about the authenticity of his pictures. To refer to Rich, therefore, as the editors do in the case of about half of their cuts, is of little use to the earnest teacher or student who wants to know the exact place in which the ancient work was found. For the other half (with four or five exceptions) no sources whatever are given. These matters are easily remedied, and it would not be difficult to replace many of the cuts from Rich with others of more interesting and more ancient works. It is a pity, too, that the editors should help to perpetuate the old myths that the seated female statue in the Capitol represents the elder Agrippina, or that the Torlonia Livia is anything more than an idealization from a Greek work centuries older than the time of the first empress.

Coming now to the text, we find in the description of the marriage procession the statement that of the bride's escort (the *patrimi* and *matrimi*) "one carried her rock [why not say *distaff*?] and spindle, while the other two bore torches." But Festus, our only informant, says that one carried a torch while the other two led the bride. The spinning implements were carried by other attendants. From Festus also it is clear that it was rather a *coif* than a *net* which was used to confine the bride's hair on the night before her wedding. Another liberty is taken with an author's language when the editors say that Tacitus tells us that the ancestors of Drusus *walked* in his funeral train. The word of Tacitus is *spectarentur;* we know of only one passage in an ancient writer that lends any support to the common belief that the ancestors went on foot instead of in vehicles. But Propertius is hardly to be set against Polybius, Silius, Servius, and probably Tacitus himself, who uses *antelatæ* in his account of the funeral of Junia. Then, again, is there any ancient authority for the statement that the wearers of the *imagines* "strove to impersonate the distinguished dead in speech and action"? Are not the editors thinking of the Mime who sometimes impersonated the dead man at his own funeral? And why is it not clearly stated that this whole business of the *ius imaginum* was a very limited prerogative?

In three or four places where prices are mentioned, the amounts in Roman money are reduced to our standard, and upon this is based comment upon the comparative value of the articles in question then and now. This is the method of procedure common in such books, but it is extremely rough and often misleading; for the cheapness or dearness of an article is of course relative to the cost of other articles at the time in question, and hence the value of money can be determined only by comparison of many prices—lines of argument which the editors seem to have overlooked. For instance, they call the dollar a month paid by pupils in primary private schools a very mean sum. But on another page they show that all the privileges of the magnificent Roman baths could be had for about half a cent. A consideration of what can be got nowadays with one two-hundredth of the monthly payment made by a pupil in a private school makes it look as though the Roman schoolmaster was not at all badly paid, and shows that the interesting question is what the money will buy, not the intrinsic value of the coin.

A few briefer criticisms: there is no ancient authority for the statement, made three times, that the *solea* was ever worn by horses, though we know that it was worn by other beasts of burden and draught. It is at least doubtful whether *atrium* is derived from *ater*. The abbreviation HS. and the term *nummus* are used (pages 52, 118), but not explained. Of misprints we observe *ass* twice for *as* (page 140), *aatim* for *datatim* (page 155). The provincialism "gotten" appears on page 30. The editors' intention is to mark the quantity of every long vowel in Latin words; we note that long *o* final is left unmarked half-a-dozen times, as well as the *a* in *mansio* on page 138. One subject on which hardly a word is said is that of religion. It deserves a few pages, for one never thinks of a Roman house without its household gods. The index should be made much fuller.

The Land of Poco Tiempo. By Charles F. Lummis. Illustrated. Charles Scribner's Sons. 1893. 8vo, pp. 310.

With but few exceptions, the eleven sketches of which this volume is composed are descriptive of certain phases of life among the different classes or races that make up the native population of New Mexico. To one of these classes, the phrase *poco tiempo* ("pretty soon"), or, rather, the idea it conveys, is supposed to be peculiarly applicable; and there seems to be no doubt that it paints, in a word, the indifference with which our Spanish-American fellow-citizen is said to look upon any attempt at what we regard as an improvement of his condition. At all events, like *mañana* in Spain, it is his answer to any request that calls for exertion of mind or body; and to this extent it is certainly descriptive. But, while admitting this, it is well to remember that these nineteenth-century philosophers can be found only in one portion of the population, and that even in it the exceptions are by no means rare. Outside of it, we have the Pueblo, who, judging from his style of living, cannot be included in the list; and the same is true of the Apache, and, we may add, of his Navajo kinsman, of the former of whom we are told (p. 185) that "he is now a peaceful farmer, learning the lessons of civilization as fast as the aboriginal man can learn them."

In all this portion of his work our author follows Bandelier; and save for an over-indulgence in the use of superlatives, and an occasional hasty generalization, he is thoroughly satisfactory. His theme, in a general way, is Indian civilization, and his sketches of some of its phases are of interest as social studies, aside from their ethnological value. Especially is this true of the account of the condition, form of government, etc., of the Pueblos—those "home-loving tillers of the soil" who were "farmers, irrigators, and six-story-house builders" long before the time of Columbus, and whose trade (p. 37) in salt, buffalo hides, turquoise, cotton mantles, etc., extended, even in those early days, from Eastern Kansas to Northern Mexico. Republicans, too, they were before our government was established; and though they have been citizens (p. 8) of the United States since the treaty of Guadalupe Hidalgo, in 1848, they still keep up their old forms and have not yet become politicians and office-seekers. Literally (p. 45) the office, among them, seeks the man, and, when he is found, it is sometimes necessary, even in the case of a governor, "to throw him into the *calaboz* for a few days" by way of persuading him to accept the high position to which he has been chosen. In a word, considered socially and politically, these people seem to have built up in a rude fashion, and by a path far removed from communism, a number of miniature republics in which crime (p. 41) and poverty (p. 29) are practically unknown. Probably nowhere else on the globe can there be found nine thousand people, selected at random, of whom as much can be said, or among whom the average of physical comfort is so general and so high.

Besides these papers, there are others, as, for instance, those upon Folk Songs and the Penitent Brothers, which treat of certain features in the life of the Spanish-American portion of the population. With the former of these sketches we do not propose to concern ourselves, for the reason that the songs, interesting no doubt as the expression of feelings that are common everywhere and to everybody, can hardly be classed as "folk" songs, using that term in its technical sense. The account of the Penitent Brothers, however, cannot be dismissed in this summary fashion, as the order or brotherhood is, in its present condition, a practical survival of the Flagellants; and in so far as it copies their methods it furnishes a sad example of the depth to which a worthy order may sink. As originally constituted, it was a branch of the Franciscans, and its object was religious study and conversation, but in the years that have elapsed since its introduction into New Mexico, it has fallen so far from its high estate that the scourge, the cross, and other penitential devices of like character are made to take the place of conduct as a means and an evidence of sanctification. At one time the order was numerous, but, coming under the ban of the Church, it has dwindled away until there is now but one hamlet in the territory—San Mateo—where the observances are kept up with anything like their ancient severity; and even here the victim is tied on the cross and not nailed to it (pp. 84, 99, 106), as was customary as late as A. D. 1890.

As might be expected in an order of this character, its rules are kept secret, though some of them have become known. Thus, for example, crimes against the persons or property of strangers are unnoticed, but if a Penitent injures a brother in any particular, he is severely punished. Sometimes this supervision extends to the domestic affairs of a member, and an instance is given in which a certain individual was "buried up to his neck" during the whole of one night for having beaten his wife. Another rule, which might be introduced with advantage elsewhere in our country, permits no married man to become a member without the consent of his wife. She cannot join, though a few years ago she could have done so. But, though women are no longer eligible, and consequently do not use the scourge, walk on cactus thorns, and otherwise publicly "discipline" themselves, they are allowed to take part in the processions; and it is of interest as showing the hold the institution has upon the people, as well as being "a cynical commentary upon our mission work," that one of the most conspicuous figures in the procession described by our author (p. 95) was the Mexican wife of the Presbyterian missionary then stationed at San Mateo.

In conclusion, it gives us pleasure to call attention to the handsome style in which this volume is published. The paper is good, the type large, and the illustrations, of which there

are a number, are taken from photographs, and, what is more to the point, they illustrate. In the accounts of Acoma and of the different sites of Cochiti, they are used to great advantage; and, last but not least, they help us to a clear idea of the ruined Tabira—the legendary Gran Quivira of the early records—and the other "cities that were forgotten."

The Partridge. [The Fur and Feather Series. Edited by Alfred E. T. Watson.] Longmans, Green & Co. Illustrated.

THE term partridge, as applied in this country, is susceptible of different significations according to locality. In the Northern and Western states a ruffed grouse is called a partridge, while in the States of the South that title is accorded to the quail. The English or European partridge is a distinct bird not indigenous to this continent; in size it occupies a position between our Northern quail and ruffed grouse. To the present volume three writers have each contributed a paper—the Rev. H. A. MacPherson on the natural history of the partridge, A. J. Stuart-Wortley on its shooting, and George Saintsbury on its cookery. The two first, while admirable in their way, offer nothing which has not been recorded time and again.

The third paper—that of Mr. George Saintsbury, on the cooking of the partridge—may arouse a languid interest among our gastronomic connoisseurs, inasmuch as, within the past few years, there have been large importations of English partridges into this country; one single invoice during the winter of last year amounting to 400 dozen, or 4,800, of these birds. It is unfortunate that Mr. Saintsbury was not better equipped, technically, for the undertaking of his performance. Like most of his countrymen, he has wisely and promptly abandoned the culinary formulas of his own land and sought inspiration from those of the French; yet in these he has chosen badly, as he has suggested for the cooking of the partridge methods which are not only entirely beyond the resources of average English and American households, but even of those which aspire to a higher plane of culinary achievement. The flesh of the English or European partridge is essentially dry. To supplement this, without impairing the natural aroma of the bird, through the most simple and direct treatment, is the culmination of gastronomic endeavor. In no wise does Mr. Saintsbury indicate how this may be accomplished. He has suggested only in a vague and perfunctory manner ways of cooking the bird, with no details as to their direct application. Under these conditions, Mr. Saintsbury's contribution to the book under notice is of no practical value whatsoever.

The illustrations which accompany the text are of superior merit.

BOOKS OF THE WEEK.

For sale by all Druggists.

The Principles of Philosophy:

Or, Logic, Psychics, and Physics

Considered as a Unity, in the light of the Nineteenth Century. A Series of Works in Twelve Volumes. By C. S. PEIRCE.

The whole forms an exposition and vindication of that method of thinking, called Synechism, which depends upon an incessant application of the conception of continuity.

The first volume, entitled "A Review of the Leading Ideas of the Nineteenth Century," will go to press shortly.

Each volume, being a distinct work, may be subscribed for separately. Prospectus and syllabus on application Address

MR. C. S. PEIRCE,

"Arisbe," Milford, Pa.

The following are a few among the many valuable expressions of eminent students of mind, students of nature, and teachers of religion (the names in each class alphabetically arranged) which have reached the author:

From Students of Mind.

DR. FRANCIS ELLINGWOOD ABBOT writes: "I want you to put me down at once as a subscriber. It is not a question of 'agreement' as to results, or even as to methods. I must have your volumes because I know you to be one of the very few Americans who have manifested a genius for speculation, and because I want all the light I can get from those few. We have had parrotry in philosophy *ad nauseam*, and I want your books because I am certain to find in them the working of a deep, acute, and powerful mind, instead of contortional attitudinizing and cheap philosophical gossip."

PROF. ELLERY W. DAVIS writes: "Your ideas have been among the most valuable I have received. There are others of your pupils at the Johns Hopkins who have a like feeling. The interest has been recently revived."

MR. JOHN FISKE writes: "The sight of the prospectus of your Principles of Philosophy filled me with delightful anticipations, such as I had not known for some years. The glimpses which I have got from time to time during the past twenty-five years in talking with you, and in hearing or reading an occasional paper of yours, have made me very eager to see a comprehensive exposition of your whole scheme of thought. It is certain to be of immense value to me, and all the more so because you approach such problems in a way different from that to which I am most accustomed."

PRESIDENT G. STANLEY HALL writes: "I have read your prospectus with very great interest, as I have done everything you ever wrote. If you are able to carry out such a scheme as this, it will be of great importance for both the philosophical work and representation in this country."

PROF. WILLIAM JAMES writes: "I am heartily glad to learn that you are preparing to publish the results of your philosophizing in a complete and connected form. Pray consider me a subscriber to the whole series. There is no more original thinker than yourself in our generation. You have personally suggested more important things to me than, perhaps, any one whom I have known."

PROF. JOSIAH ROYCE writes: "I have long wished to see the task of whose first results you have already given some very important, though still, as I know, but fragmentary indications, put into adequate and permanent form. What has so far appeared has been so novel, so stimulating, so profound in many of its general conceptions, so ingenious in its combinations, that I only express my natural appreciation of your genius when I say that I deeply desire to see the finished product; and I am sure the enterprise deserves the support of every lover of philosophic progress in this country. In saying this I do not, as you know, mean to express, either in advance, or as to what has already appeared, any unqualified agreement."

From Students of Nature.

Prof. S. P. LANGLEY writes: "I have read with interest the announcement of your proposed work. . . . The manner in which you have assimilated what is most material to your purpose in the past, has in no way encumbered the activity of your own mind. . . . I shall expect a valuable addition to the thought of the past and to that of the present."

Prof. O. C. MARSH, President of the National Academy of Sciences, writes: "I am very glad to know that this great work on which you have spent so much time and thought is so far advanced towards publication."

PROF. SIMON NEWCOMB writes: "I am persuaded that whatever you might write on the subject of scientific philosophy would be provocative of thought and discussion, and therefore interesting, whether one accepted your conclusions or not. You may, therefore, put me down as a subscriber to your proposed volumes."

From Teachers of Religion.

DR. PAUL CARUS writes in the *Monist:* "Mr. Peirce is inclined to look at the world through the spectacles of that new and extremely specialized branch of logic which he is at present about to invent. . . . I do not take any stock in it. . . . He has a special talent of rendering issues involved."

RT. REV. FREDERICK D. HUNTINGTON, D.D., Bishop of Central New York writes: "With such judgment as I am able to form of the past and present work of Mr. Peirce, . . . I commend his proposed publication to thinking and studying men."

Recent Books.

Ships that Pass in the Night.

A Novel. By BEATRICE HARRADEN. 16mo, $1.00. Paper, 50 cents.

"Ships that pass in the night, and speak each other in passing,
Only a signal shewn, and a distant voice in the darkness;
So, on the ocean of life we pass and speak one another,
Only a look and a voice, then darkness again and silence."

"'Ships that Pass in the Night' has made its success by purely legitimate methods. . . . The author has a story to to tell, a theory to work out, a belief to impart, and that is all—except the important item that she is a good writer, keen and wise in observation and style, liberal and sympathetic in temperament. . . . I sat up half the night to finish the book."—*Jeannette L. Gilder, in the World.*

7th 1,000.

The Religion of a Literary Man.

By RICHARD LE GALLIENNE. 12mo, $1.00.

"Mr. Le Gallienne has produced a book well worth reading, particularly (to at least we should say) by those who are most disposed to differ with him. . . . The author treats of the hereafter with great courage, and says a good many things well worthy of the utmost attention. . . . The book is certainly a remarkable one, and we urge our readers not to trust to any second-hand account, but to make themselves acquainted with its contents by the ancient method of perusal."—*London Speaker.*

"Probably the sunniest book on religion ever published"—*London Star.*

6th 1,000.

A Literary Courtship.

Under the Auspices of Pike's Peak. By ANNA FULLER, author of "Pratt Portraits." Fourth Edition. 12mo, illustrated, $1.00.

"An altogether charming little story."—*Cleveland Plain Dealer.*

"The brightest, breeziest, most satisfactory bit of fun and romance which has come to our notice in many a day."—*Chicago Interior.*

"It is a book to read and enjoy, either alone or with pleasant companions, and to make the reader glad that the author has given us such a charming combination of humor, naturalness, and originality."—*Public Opinion, Washington, D. C.*

5th 1,000.

Pratt Portraits:

Sketched in a New England Suburb. By ANNA FULLER. Third Edition. 16mo, paper, 50 cents; cloth, $1.00.

"One of the richest and most worthy contributions to American literature of the past decade. With a pen positively photographic, this skilful writer has limned the portraits of this New England family. Pratt by name and so thoroughly New England by nature."—*Rochester Herald.*

3d 1,000.

Harvard Stories.

Sketches of the Undergraduate. By W. K. POST. Second Edition. 12mo, $1.25.

"Mr. Post's manner of telling these tales is in its way inimitable. The atmosphere of the book in its relation to the localities where the scenes are laid is well nigh perfect. The different types of undergraduates are clearly drawn, and there is a dramatic element in most of the stories that is very welcome. It goes without saying that Harvard men will find keen pleasure in this volume, while for those who desire a faithful picture of certain phases of American student life it offers a noteworthy fund of instruction and entertainment."—*Literary News.*

Descriptive prospectuses of the "Story of the Nations" and the "Heroes of the Nations," and quarterly "Notes," giving full descriptions of the season's publications, sent on application.

G. P. Putnam's Sons,

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

"He is WELL PAID that is well SATISFIED."
—Merchant of Venice.

The Verdict
OF ALL WHO

Is that it
SATISFIES EVERY DEMAND
of the careful housekeeper for frying and shortening purposes. It is far cheaper than butter, more economical than lard because it goes twice as far, and is sure to produce good results without waste. Therefore

IT PAYS WELL TO USE

History of Dartmouth College

AND THE TOWN OF HANOVER, N. H., by FREDERICK CHASE. Vol. I. to the outbreak of the college controversy. Large 8vo, cloth, $3.50 net; postage 24 cents. Sent on receipt of price by
JOHN K. LORD, Hanover, N. H.

Charles Scribner's Sons' New Books

LIFE AND CORRESPONDENCE OF DEAN STANLEY.

By R. E. PROTHERO. With the coöperation of Dean BRADLEY. With Portraits. 2 vols., 8vo, $8.00.

"The book in every way fulfils the anticipations that were aroused by the announcement of it."—*Chicago Tribune*

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many wellnigh indispensable."—*Boston Journal.*

"One of the most profound, scholastic, and brilliant biographies ever written."—*Chicago Daily News.*

The Barbary Coast.

By HENRY M. FIELD. Illustrated. 8vo, $2.00.

"Alert and interesting travel observations. It abounds in picturesqueness of description and illustration of nearly all portions of the once great empire of the Moors."—*Brooklyn Eagle.*

Men, Women, and Books.

By AUGUSTINE BIRRELL. 16mo, $1.00.

"Augustine Birrell has won for himself an enviable reputation as an essayist, and his new volume will add to it His pen sketches are wonderfully graphic."—*Boston Advertiser.*

REMBRANDT.

His Life, His Work, and His Time. By ÉMILE MICHEL. Edited and Prefaced by FREDERICK WEDMORE. Richly illustrated with reproductions from Rembrandt's Works. 2 vols., Royal 8vo, $15.00.

"Let us say at once that the book is admirable, and, considering what it contains, astonishingly cheap. M. Michel is one of the leading authorities on Rembrandt and his works, and has written a monumental, and, we should think, nearly definitive life. Hardly too much can be said in praise of the illustrations."—*The Nation.*

The Pasquier Memoirs.

Edited by DUC D'AUDIFFRET-PASQUIER. With Portraits. 3 vols., 8vo. Vol. I. now ready. $2.50.

"Since the record of Madame de Rémusat's observations was given to the world, no light so copious and searching has been thrown upon the Napoleonic era as is cast by this volume."—M. W. HAZLETINE in *N. Y. Sun.*

Civilization During the Middle Ages.

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2.50.

"Prof. Adams's work is lucid in plan and style, comprehensive in its survey of the field, and has the additional merit of being highly interesting."—Prof. GEORGE P. FISHER.

PHILOSOPHY OF HISTORY—FRANCE.

By ROBERT FLINT, D.D., LL.D., Professor in the University of Edinburgh, author of "Theism," "Anti-Theistic Theories," etc. 8vo, $4.00.

"The volume makes up a large octavo of 705 pages, and is replete in interest to the philosophical student of history. It is both historical and critical, and it aims to show the rise and progress of reflection and speculation in human developments. It is a valuable and entertaining book. The thoughtful scholar will find the volume a rich mine of thought."—*Chicago Inter Ocean.*

The Jacobean Poets.

By EDMUND GOSSE. University Series. 12mo, $1.00, *net.*

Mr Gosse's little book directs critical attention to all that was notable in English poetry from 1603 to 1625, bringing fresh light to bear upon this great period of English poetry.

In the Footprints of Charles Lamb.

By B. E. MARTIN. With bibliography by E. D. NORTH. Cheaper edition, revised. Illustrated. 12mo, $1.50.

"Such a book as Dr. Martin's will come like a personal favor to each of Lamb's lovers."—MR. HOWELLS, in *Harper's Magazine.*

NEW IMPORTATIONS.

THE PRIVATE LIFE OF NAPOLEON.

From the French of ARTHUR LÉVY, by STEPHEN LOUIS SIMEON, translator of "The Youth of Frederick the Great," etc. In 2 vols. Demy 8vo, $10.00.

"Among the many important books which have recently appeared in France relating to the first Napoleon, a high place must be given to the work of M. Lévy on his private life. . . . He has produced a book of fascinating interest."—W. E. H. LECKY.

Pastorals of France—Renunciations

A volume of stories comprising "A Last Love of Pornic," "Yvonne of Croisic," "The Four Bells of Chartres," "A Chemist in the Suburbs," "A Confidence at the Saville," "The North Coast and Eleanor." By FREDERICK WEDMORE. Crown 8vo, $2.00.

The Lyrics and Ballads of Sir Walter Scott.

Edited with an Introduction by ANDREW LANG. With Etched Portrait and Two Illustrations. Printed on hand-made paper, rough edges, 18mo, silk cloth, $1.75.

CHARLES SCRIBNER'S SONS, 743-745 Broadway, New York

MACMILLAN & COMPANY'S
NEW AND RECENT PUBLICATIONS.

JUST PUBLISHED.

Pain, Pleasure, and Æsthetics.

An Essay concerning the Psychology of Pain and Pleasure, with special reference to Æsthetics. By HENRY RUTGERS MARSHALL, M.A. 8vo, $3.00.

Social Evolution.

By BENJAMIN KIDD. 8vo. *Just Ready.*

Sources of the Constitution of the United States.

By the Rev. Dr. C. ELLIS STEVENS. 12mo. *In the Press.*

JUST PUBLISHED.

THE KING OF SCHNORRERS.

GROTESQUES AND FANTASIES. By I. ZANGWILL, author of "Children of the Ghetto," "The Old Maids' Club," "Merely Mary Ann," etc. With numerous Illustrations. 12mo, $1.50.

*** In *The King of Schnorrers* Mr. Zangwill attempts a delineation of the Jewish 'Schnorrer' of tradition—a personage "as unique among beggars as Israel among nations." The author conducts his hero through a number of amusing adventures, recounting these in that vivid style familiar to his readers. Some of the shorter stories in the volume are tragic and some comic, Mr. Zangwill playfully delegating to the critic the task of "determining which is which."

The Lovers' Lexicon.

A Handbook for Novelists, Playwrights, Philosophers, and Minor Poets; but especially for the enamoured. By FREDERICK GREENWOOD. Crown 8vo. $1.50.

Second Edition Now Ready.

Seventy Years of Irish Life.

Being the recollections of W. R. LE FANU. One volume, crown 8vo, cloth, gilt top, $1.75.

PROFESSOR BOYESEN'S NEW BOOK.

A COMMENTARY ON THE WRITINGS OF HENRIK IBSEN.

By H. H. BOYESEN, Professor of Germanic Languages and Literature at Columbia College, author of "Goethe and Schiller," "Essays on German Literature," etc. Crown 8vo, cloth, gilt top, $2.00.

NEW VOLUMES IN THE DILETTANTE LIBRARY.

Oliver Wendell Holmes.

By WALTER JERROLD.

With a Portrait. 16mo. Crocodile cloth. Price, 90 cents.

Richard Jefferies.

A Study. by H. S. SALT. With a Portrait. 16mo. Crocodile cloth, 90 cents.

*** Limited large-paper edition, with Portrait and four Illustrations. Price, $3.00.

PROF. J. NORMAN LOCKYER'S NEW AND IMPORTANT WORK.

THE DAWN OF ASTRONOMY:

A STUDY OF THE TEMPLE WORSHIP AND MYTHOLOGY OF THE ANCIENT EGYPTIANS.

With numerous Illustrations and full-page Plates. By J. NORMAN LOCKYER, F.R.S., author of "The Meteoritic Hypothesis," "The Chemistry of the Sun," etc. Royal 8vo. $5.00.

"This work of the great English astronomer is of most fascinating interest, and it is profusely and appropriately illustrated. The field which is covered is a new one, but it is one which should be fully investigated. The style is clear and graphic, and the publishers have given this great work a fitting setting."—*Boston Daily Advertiser.*

Dictionary of Political Economy:

Containing Articles on the Main Subjects usually dealt with by Economic Writers, Short Notices of Deceased English, American, and Foreign Economists, and their chief Contributions to Economic Literature, etc.

Edited by R. H. INGLIS PALGRAVE, F.R.S. Volume I. Medium 8vo. $6.50.

*** *May also be had in six parts. Price, $1.00 each.*

The Distribution of Wealth.

By Professor JOHN R. COMMONS of the University of Indiana. 12mo, $1.75.

"Clear and vigorous in style. . . . It is a valuable addition to the economic literature of the day."—*Boston Daily Advertiser.*

A History of Mathematics.

By FLORIAN CAJORI, formerly Professor of Applied Mathematics in the Tulane University of Louisiana, now Professor of Physics in Colorado College. 8vo, cloth, $3.50.

COMPLETION OF "SYLVIE AND BRUNO."

By the Author of "Alice's Adventures in Wonderland."

Sylvie and Bruno, Concluded.

By LEWIS CARROLL. With forty-six Illustrations by Harry Furniss. 12mo, cloth extra, gilt, $1.50.

By the Same Author. Uniform with the above.

Sylvie and Bruno. Part First.

With forty-six Illustrations by Harry Furniss. 12mo, cloth extra, gilt, $1.50.

BOOK REVIEWS.

A Monthly Journal devoted to New and Current Literature. Single Numbers, 5 cents. Annual Subscription, 50 cents.

*** The March number will contain an article on Benjamin Kidd's forthcoming volume, "Social Evolution."

MACMILLAN & CO., 66 Fifth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 22, 1894.

The Week.

EIGHT of the twelve New England Senators—all Republicans—voted against the confirmation of Peckham on Friday. Four of these voted or paired for Hornblower, but went over to the Democrats to beat Peckham. Hawley did not vote either way when Hornblower was under consideration, but voted against Peckham—reading, the *Sun* says, arguments from the *Sun* in justification of his course. The result is, of course, mainly if not wholly the personal triumph of the basest and most corrupt politician in the Union, and the discouragement of men like Mr. Peckham who have stood by good causes in evil days, and made sacrifices for the public good. In the whole vote against Peckham, there were fifteen Democrats and twenty-four Republicans. His rejection was, therefore, Republican work.

The only rag which the leading Republican organ can fish out of its political ash-barrel to cover the shame of the Republican Senators who put themselves so readily at Hill's service, is what it calls the "disclosure" that Mr. Peckham had "declared a protective tariff unconstitutional." This, it says, was "so startling that we are not surprised so many Republican Senators refused to vote for him." These poor startled innocents can never have read the Democratic platform of 1892, which said: "We declare it to be a fundamental principle of the Democratic party that the federal Government has no constitutional power to impose and collect tariff duties except for the purpose of revenue only." According to that, no Democrat, not even Judge Maynard, whom the Republicans would otherwise be delighted to vote for, could go on the Supreme bench with Republican consent. Hornblower presumably held the same doctrine as Peckham, yet Hoar and Lodge voted for him. Their sudden discovery of conscientious and constitutional scruples in Peckham's case was most suspiciously timed. Hill had to have their votes, and they furnished them, along with their scruples, on demand. Mr. Peckham, as he has since publicly given out, does not hold and never "declared" the doctrine now imputed to him. Messrs. Hoar and Lodge could easily have satisfied themselves of this if they had been as anxious to find out the truth as they were to serve the devil.

The appointment of Senator White of Louisiana to the long vacant place on the Supreme bench, considered upon its merits, is to be highly commended. He is a lawyer of marked ability; he has seen service on the Supreme bench of his own State; he is versed in the civil code of Louisiana, which plays an important part in many cases coming before the court; he is only forty-eight years old and in vigorous health, so that he may very likely serve for a quarter of a century. During his three years in the Senate, he has made a high reputation as a constitutional lawyer and a clear and vigorous thinker. He has displayed marked independence more than once, as in his opposition to the anti-option law and to the free-coinage lunacy, both of which were very strong in his State. Nor should it ever be forgotten that the whole country owes him a debt of gratitude for his leadership in fighting the lottery gang when they dominated the politics of Louisiana. His appointment gives the Gulf tier of States the first really efficient representative it has had on the Supreme bench since John A. Campbell of Alabama resigned his place to "go with his State" in 1861.

The conviction of McKane is a gain for the cause of good government which fitly supplements the defeat of Maynard's nomination for a judgeship of the Court of Appeals. Both Maynard and McKane, in different ways, assailed the integrity of our form of government by tampering with elections and their results. Maynard's case was submitted to a jury of the whole people; McKane's to a jury of twelve men. The verdict of both tribunals was the same. Ex-Secretary Tracy has done his duty in the recent trial. He deserves warm praise for the part which he played in it, and we would not detract in the slightest degree from the credit which is his due. But Mr. Tracy is himself one of the men who are responsible for the growth of McKaneism to the terrible proportions which it finally reached. He knew five years ago that McKane was a rascal. He knew that the alleged conversion of Gravesend from a Democratic into a Republican stronghold was a fraud. He knew that McKane was a man who ought to have been kicked down the steps of the White House when he had the impudence to call there. But so long as McKane swindled for the benefit of the Republican party, neither Harrison, nor Tracy, nor Fassett, nor the editor of the New York *Tribune*, nor any other Republican leader had a word to say against him. No more had the Democratic managers previous to 1888, when he counted Gravesend for them.

There is an amusing competition between the *Herald* and the *World* as to which of them convicted McKane. The *World* says that "it is a triumph for the *World*," but the *Herald* says "it is the *Herald's* work," and cites Judge Gaynor in support of this startling proposition. Now if either assertion be true, McKane is entitled under the Constitution to a new trial, for the Constitution says he shall be convicted only by a jury, and shall not be deprived of life, liberty, or property "unless by the law of the land and the judgment of his peers." If either of these newspapers has convicted him, therefore, a great wrong has been done, and the Court of Appeals will surely discharge him, trial by newspaper being unknown to our system of jurisprudence. The question will remain, however, Are trial and conviction by a morning newspaper "jeopardy" in the sense in which the term is used in the Constitution? That is, can a man after such conviction be again put on his trial before a jury? We venture no opinion on this, but the point is evidently a nice one. There is another difficulty not less serious. Can trial by newspaper be prevented? McKane's jury was guarded with extraordinary strictness, and Judge Bartlett is supposed to be above reproach, and yet McKane was being tried all the while by two newspapers, both daily. Can this be prevented?

In the hearing before the Senate judiciary committee last week, touching the injunction granted by Judge Clute, the county judge, restraining the clerk of the Senate, Mr. Kenyon, from calling the name of Mr. Wolfert, whom the Senate had seated in place of McCarty, it came out that ex-Judge Maynard was really at the bottom of the whole affair. Judge Clute testified that Maynard drew the papers and brought them to him, and said they were all right, and asked him to sign them, and as he was busy in drawing a jury, and had no time to look into the matter, he did sign them. Afterwards he sent for Maynard and told him that unless he could show him some authority for what he had done, he would vacate the injunction. Maynard then said he would look for authorities, but soon came back and said he could find none, so the injunction was vacated. As Maynard ought never to have been put on the bench of the Court of Appeals, and would never have been put there by any Governor but Gov. Flower, we will not express our astonishment that any man who had been a judge of the Court of Appeals should suppose that a county judge, or any judge, could restrain the clerk of the Senate from calling the roll of that house. That such a thing should get into the head of any lawyer, and that

Maynard (after all that has happened) should be willing to appear in such an affair, looks as if much trouble had deranged his mind. If on examination he can be cleared of the charge of insanity, it is he, and not Judge Clute, whom the Senate should punish for contempt.

Those who still think the scheme of annexing Hawaii was not hatched in this country, would do well to ponder some statements recently made by Mr. W. N. Armstrong in a speech before the Annexation Club in Honolulu:

"While he was with Kalakaua in Vienna in 1881," the report of his speech says, "he met his old friend William Walter Phelps, then American minister to Austria, and they discussed the question of the future of Hawaii. Mr. Phelps advocated annexation, and insisted on his (Mr. Armstrong's) seeing Mr. Blaine on his return to Washington, and took the trouble to write to Mr. Blaine on the subject. He (Mr. Armstrong) did see Mr. Blaine, and found that he took a warm interest in the matter, but President Garfield died at that time and Mr. Blaine left office."

A great many brilliant schemes of foreign policy, with nitrate and sugar attachments, were brought to naught by that same leaving of office.

It is safe to say that nobody outside newspaper offices, and very few inside them, will read the portentous document which is given out as President Dole's reply to Minister Willis, and which is variously described as overwhelming, scorching, irrefutable, and the like. This does excellently for headlines, but the man who, for his sins, is forced to read the letter itself will discover, in the first place, that it was not written by Dole at all, but by the more valiant and less discreet Thurston, that it is largely based upon irresponsible newspaper chatter, and that nearly every specification contains a positive disclaimer of any intention of "charging you or your Government" with what was, in fact, most distinctly charged in the letter of December 27. President Dole penned that heroic epistle for use in this country, and, after refusing for more than two weeks to make good his assertions of fact, turned the job over to Thurston, who now practically avows that the whole thing was only a bit of political humbug, and hopes that nobody's feelings will be hurt.

That attempt to arouse sympathy in this country for the endangered patriots in Honolulu having served its purpose and been laid aside, there is now a revival of royalist plots to affright the civilized world. This time there is to be a wholesale use of dynamite and poison, with the British minister and British marines darkly in the background; and though the dynamite explosions have thus far been limited to a cartridge dropped by a patriotic but nervous soldier, and the poison to cheese and macaroni in deadly proportions, "there is no question that this plot has been arranged, and that if there is any opportunity it will be carried out." Of course, when a government is in daily peril of being blown up or poisoned, it will not occur to any one to inquire too curiously whether it is taxing people without representation, or masquerading as a republic in so transparent a disguise that even the American League in Honolulu has tired of the imposture, and now cries loudly for some "representative form of government."

The international law of the last Administration got another black eye last week, when the mixed commission on Chilian claims decided that the United States had no "probable cause" for detaining the *Itata* at San Diego, and must now pay damages for that illegal action. As this is merely confirmatory of the prior decision of a United States court, we presume that Gen. Harrison and ex-Secretary Tracy will not care to argue the matter further. The affair will take its place alongside the ignominious overturning by the Paris tribunal of the other grotesque piece of international law which was set up in the Bering Sea controversy.

The Texas men in Congress are "red-hot" for an income tax, but there could not be a more vigorous protest against the policy than that which appeared the other day in the most prominent journal of Texas, the Galveston *News*. It characterizes the measure as "a tax on the enterprise, industry, and earning capacity of the citizen"; says that "it means, not equal and uniform taxation, but discriminating class taxation"; and, more than this, is "a direct and dangerous departure from the policy of the Democratic party and from the principles upon which free and equal republican government is based." The *News* emphasizes the brutality of the scheme in the provision which authorizes an indefinite multitude of officers and agents, spies, and informers to ransack the private affairs of any citizen having $4,000 or over of income, or purporting to have over $3,500 and less than $4,000, which authorizes them to assess at discretion a penalty of 50 or 100 per cent. additional tax for such a citizen's alleged misstatement of his assets on oath, and which, in effect, makes their reports and findings conclusive against him without a chance to have the proceedings judicially reviewed or the wrong and extortion which they may involve averted or redressed. It recalls a declaration by the Supreme Court some years ago when it overruled a similar provision of an administrative customs law which is exceedingly pat:

"Any compulsory discovery by extorting the party's oath, or compelling the production of his private books and papers to convict him of crime or to forfeit his property, is contrary to the principles of a free government. It is abhorrent to the instincts of an Englishman. It is abhorrent to the instincts of an American. It may suit the purposes of despotic power, but it cannot abide the pure atmosphere of political liberty and personal freedom."

Advocates of the assessment of personal property by means of the listing system will find little encouragement in the "Report of the Tax Commission of Ohio," presented to Gov. McKinley on December 23, 1893. Ohio has "the most efficient and minute scheme of bringing upon the duplicate all classes of property which has been devised in any State." Not only is the citizen bound under oath to fill out a complete return of his personal property, but the law in addition empowers each county to contract with "tax inquisitors," who may be paid 20 per cent. of the tax upon all previously unassessed personal property entered through their efforts upon the tax duplicates. Even under the operation of this drastic provision, "the general property tax has become in the cities to a very considerable extent a tax upon tangible property only." In the State at large intangible property pays 9.4 per cent. of the taxes. But, in the five counties containing the chief cities of Ohio, intangible property pays only 5.2 per cent. of the taxes; Hamilton County, including Cincinnati, returning but 3.4 per cent., and Cuyahoga County, including Cleveland, but 5 per cent. In short, the general property tax is, in Ohio, as in New York, flagrantly unjust in its operation.

Turning their attention to its reform, the commission not only recognize that, although nominally a tax upon property, it is and must be in fact paid out of income, but even go further, and assert that income, and not the value of property owned, is the true index of ability to aid in bearing the burdens of the State. Especially upon businesses of a quasi-monopolistic character taxation should be proportionate, therefore, rather to their earnings than to their property. An interesting investigation as to the relative pressure of taxation, State and local, upon the incomes derivable from various sorts of property and business leads to the conclusion that, in Ohio, whereas railways pay of their net earnings from 5 to 12 per cent., banks pay from 17 to 23 per cent., and choice city real estate pays from 14 to 25 per cent. of its gross rental. The commission therefore suggest an annual franchise tax on corporations, including railways, and the extension of the corporate organization tax to foreign corporations doing business in the State. Some further portion of the intangible property that now escapes taxation they propose to reach by an extension, and an increase in rate, of the inherit-

ance tax, and by a privilege tax upon transfers of property, and upon appeals, writs of error, etc. Although not without its questionable features, for example the last-quoted recommendation, this Ohio report is, as a whole, deserving of more attention than commonly falls to the lot of documents of its class.

No charge has been more indignantly denied by good Republicans than that protection is essentially and viciously socialistic. But ex-President Harrison, in his reluctant emergence as a Presidential candidate at Indianapolis on Wednesday week, innocently "gave the whole thing away." Said the good man: "It is generally accepted now as a right principle that our city councils, our county commissioners, our State legislatures, should legislate to create work for the unemployed." And he added: "The Republican theory has been all along that it was right to so legislate as to provide work, employment, comfort to the American workingman. We believe that the national Government has a duty to perform in this respect as well as the city council and the board of county commissioners." That is to say, protection and socialism are one in principle. Any one who attentively considers the theory of those two forms of interfering with individual initiative and liberty will see that they spring from a common root. Any one who observes the way protection and socialism have gone hand in hand in Germany and France for the past ten years will be convinced of their identity of spirit. And now Gen. Harrison admits that identity in the most unmistakable terms.

In this he is at one with his two rivals for the Presidential nomination. Reed and McKinley have already taken the position that it is the duty of the national Government to provide work and good wages for all applicants, and from this time on it will doubtless be a close race between the three to see which one can promise the most work and the highest wages. So far as this is not demagogy, it is rank socialism. Suppose the Republicans should carry the next Presidential election on the strength of such promises, where could they stop? Wages would not go up or work be multiplied, except in accordance with the law of supply and demand, and how irresistible would then be the appeal of the deceived workingmen for Government workshops, old-age and accident insurance, the nationalization of railways and telegraphs, with easy work and good pay for everybody, and the rest of the socialistic programme? It would not do for McKinley to draw back on the score of expense, for all he would have to do would be to clap on cruel taxes, make the foreigners pay them promptly, and have plenty of money for everything.

Dr. Stanton Coit has an apparently authorized interview in the *Sun*, in which he gives in detail his plan of city improvements. It includes an expenditure of $20,000,000 by the city within the next six months, and, if necessary, an expenditure of $100,000,000 in pulling down the backs of tenement houses and converting them into "parks," and the employment of all people out of work, by the State, until such time as private employers call them off. He also wants an underground railroad to be constructed and owned by the city, and lots of "swimming pools," "private baths," "water-closets," and "halls" to be constructed at public expense for the people. In the whole interview there is not an allusion to the source from which the money for these things is to come. In fact, the compartment which ought to be devoted to "receipts" seems wholly wanting in the doctor's head. He overlooks, too, completely the effect which these city luxuries are to have on the rural population. It is a fact that even now few farmers within 100 miles of New York can get any one to work for them; this shows, we fear, that Dr. Coit's sociology is a very lobsided science. The interview richly merits the *Sun's* heading:

> "The People of the City Are to Lift Themselves by Their Bootstraps Out of the Slough of Hard Times by Taxing Poverty to Pay for Employing the Poor."

Col. T. W. Higginson, in a recent lecture before the Nationalist Club in Boston, is reported by the Boston *Herald* to have spoken of an old claim, "now kept up by the New York *Nation*," that "what is done by the public is never so well done as by private capital, which has been exploded over and over again." No such claim was ever made by the *Nation*. If Col. Higginson had substituted "hardly ever" for "never," he would have come somewhat nearer the truth. The post-office illustration which he used will do him no good. The *Nation* has always said that *some* things were better done by Government than by individuals, and especially things which individuals would not do at all because they would not pay; and the post-office is one of these. No private company would undertake to cover the United States with post-offices any more than to maintain military roads, because the returns would not meet the expenses. The Government this year is $7,000,000 out of pocket in carrying on the post-offices. In New York city, however, we could get a much better postal service from an express company than we get from the Government. All service is apt to be bad in establishments where it is not necessary that the income should meet the outgo. This fact affects everybody from the chief down. It makes discipline slacker, makes the selection of employees less strict, and the accountability for service less severe. In drawing the line between the things which should be done by Government and the things which should be left to private enterprise, we have, as in all other transactions of life, to use judgment, and pay attention to human experience, just as a householder does. He never draws up a list of things which nothing will induce him to buy and which he must make for himself at any cost, no matter what anybody says. Mr. J. S. Mill is not as much of an authority now as he used to be, but his definition of the limits of the province of government has never been improved on, and the Nationalists would do well to look at it.

Thus far all efforts (if they may be called efforts) to bring together the Senators at Trenton in one body and so to take the brake from the wheels of legislation, have failed. The result will be the passage of a good many measures, some of them very commendable, by the Assembly and the Republican Senators sitting by themselves, the refusal of the Governor to receive or sign these bills, and a contest more or less expensive and prolonged in getting them passed upon by the highest courts. It is not difficult to foretell where the punishment for this condition of affairs will be applied by the people. It is the Democratic minority in the Senate who have produced the deadlock, and they will be held accountable for the result without the credit of any honorable motives. When, as in this case, Senators present themselves to be sworn in, whose seats are not even contested by their opponents at the polls, the people are not going to stop to discuss nice points of parliamentary law raised in order to find an excuse for depriving such Senators of their places.

The question whether the game of football ought to be encouraged was discussed in Philadelphia last week by two college professors—Woodrow Wilson of Princeton, who took the affirmative, and Burt G. Wilder of Cornell, in the negative. Prof. Wilson made the familiar plea that the game develops moral qualities, but Prof. Wilder met this very neatly when he asked, "If football be so noble a game—if it be a game which has such possibilities for the training of youth—why then does an ex-football captain, under his own name, state that an umpire in the shape of a perfect sport should be employed to keep the young men in order?" We think the defenders of the game as now played would do well to omit the "moral-qualities" argument. It is really a little too much.

TAMMANY AND REPUBLICAN BOSSES.

DR. PARKHURST made the following observations at the meeting of the City Vigilance League on Saturday night:

"We do not want to be run by any religious clique, any political clique, any man, nor any body of men. We want leaders, but we do not want bosses. I do not care a rap what the political affiliations of bosses are. I would rather be run by a Tammany Hall boss than a Republican boss, for the more pretensions of decency a boss makes, the more dangerous he is. I speak of this with a good deal of feeling at this time, for the possibilities of evil that are wrapped up in the political boss have recently been brought home to me."

Nothing truer or more timely has been said of late in this State. Bossism—that is, the practice of waiting to hear from one man how to vote, and how to legislate, and how to nominate—is killing, here and elsewhere, the state of mind on the part of the bulk of the people which is necessary for the maintenance of a really republican form of government. It is truly the beginning of the end, for, after a people has for a series of years been directed by its bosses how to vote and how to legislate, the transition to a régime in which the boss would save it the trouble of voting and do all the work of government himself, seems simple and easy. Already we may well ask, What is the use of the Legislature in Albany, with all its talk and expense, if it cannot act without Platt's directions? Why not let Platt act without the intervention of the Speaker, and the references to committees, and the three readings, and the committee of the whole, and the sham debates, and all the rest of the antiquated machinery of the earlier days?

Under the present system, too, the responsibility is divided, in the public eye, between Platt and the Legislature, whereas it ought to be concentrated on Platt. People cling to the old notion of Silas Wright's days that the legislators come up to Albany with open minds, and are won over by the arguments they hear in debate and from deputations who appear before committees; the fact being that they get a "tip" from the boss as to what line the majority is to take this year on all great questions of the day, and that line has no more to do with the welfare of the people of New York than of the people of Ohio. This is all wrong. Whichever form of government we have, we ought to have it openly and in the light of day. We ought to be governed either by the Legislature or by the boss, and not by the boss skulking behind the Legislature. And from this point of view one boss is about as good as another. Croker was the boss of the last Legislature, and differed from Platt as a boss only in acting more openly, and probably in filling his own pockets, which we do not believe Platt does. But he was no worse enemy of republican government than Platt is. Both of them are enemies of the state of mind among the people which makes republican government possible. The notion that republican government can last long among a people who have got into the habit of acting under the direction of leaders who control them, not through speeches and writings—that is, through the arts of persuasion—but through secret orders, is a chimera.

Equally important is Dr. Parkhurst's statement that he would "rather be run by a Tammany Hall boss than a Republican boss, for the more pretensions to decency a boss makes, the more dangerous he is." And this remark covers not only our local boss, but all Republican public men. It covers especially men like Senators Hoar and Lodge. It is far worse morally, far more mischievous in its influence on our political manners, for such as these to help Hill to punish men for defeating his scheme of putting a dishonest man on the bench of the Court of Appeals, than for Hill to concoct the scheme and try to carry it out. People expected nothing better from Hill, the spawn, as he is, of the village caucus and grogshop; but when the names of Hoar and Lodge are mentioned, we all think of Boston culture, of Harvard College, of Garrison and Phillips, of Emerson and Parker, and wonder whether they rest easily in their graves if they hear of what the successors of Charles Sumner have done.

To appreciate fully what they have done, we must recall our rejoicings over the action of the Bar Association in Maynard's case. We must remember how much the Bar Association had been reproached for its cowardice in dealing with forensic and judicial corruption. We must remember with what surprise and delight the public hailed the formation of a committee of its foremost men of both parties to examine the charges against Maynard, and the still greater surprise and delight with which they read the sweeping condemnation that this committee unanimously passed on Maynard's practices. We do not believe we exaggerate when we say that it caused a widespread feeling that a new force had appeared in our politics, and had appeared on the side of purity and order. Our leading lawyers seemed to have recovered their courage and their interest in public affairs, and to have placed them at the service of the state.

And, lastly, we must remember that what Hill was trying to do, and what they were largely instrumental in preventing his doing, was something for which we think the history of modern civilized states has no parallel. He was trying to put into the court of last resort of a great community a man fresh from the commission of a gross fraud, which he attempted neither to palliate nor to deny. For that offence Hill has never expressed the smallest regret. On the contrary, he has made no secret of his intention to use his office in the Senate to punish every man who had helped to foil him, and especially "the namby-pamby fellows," as he called them, of the Bar Association, who had convicted Maynard. It was for this reason he fought against the confirmation of Hornblower, who was one of them, and against that of Peckham, who was another of them. To vote with him on either of these occasions was, therefore, to strengthen his power for evil both in Washington and in New York, to furnish him with fresh weapons for the destruction of honest and patriotic men.

But it was something far worse than this. It was, coming from Republicans, and especially from Massachusetts Republicans, a direct and mortifying discouragement to every respectable man, and especially to every respectable lawyer, who, all business and excuses being laid aside, comes forward in troublous times to save or help the state. What a spectacle it was for the young men of the country to see twenty-four Republican Senators, headed by Hoar and Lodge, ranged beside Hill to discredit Peckham for having rendered a great public service. It is not too much to say, as Wendell Phillips said of the man who defended the Alton riots, that it would have served them right if the "earth had yawned and swallowed them up."

THE SECRET OF PLATT.

THE following comes to us from a member of the Harvard Law School, and is a sample of queries from other quarters:

"Can you tell me through your paper (1) just how Platt gained his power in the Republican party; (2) how he has recovered it after rebuffs; and (3) how he is able to hold it now?"

(1.) Platt had not figured as a party leader when he first came into public prominence by being elected to the United States Senate in January, 1881. He had been a quiet worker for the party for many years, content to serve under the leadership of Cornell and Conkling, carrying out their orders with indefatigable zeal, and running to and fro over the State on their political errands. He thus acquired a personal acquaintance with the politicians of the party which was of great value to him when Mr. Conkling decided to make him his "Me Too" in the United States Senate. His candidacy for that position was not regarded seriously when first disclosed, but as the canvass proceeded the peculiar elements of his strength began to appear. He had been a disbursing agent of offices for Cornell, who became Governor in 1880, and the *Tribune*, in analyzing his support for Senator, said on January 3, 1881, that "Mr. Platt is thought to have derived much strength from his influence with Gov. Cornell in the appointments of last winter of health officer, etc." Being himself Chairman of the Republican State Committee, he had the whole power of the Conkling machine

working in his favor, including the Cornell administration, and on January 12, 1881, the *Tribune*, in its Albany correspondence, said that, "counting State officers of all grades, high and low, with their deputies, assistants, and clerks, there were 100 workers for Mr. Platt" about the Legislature. On the following day he was nominated in the Republican caucus, and the *Tribune*, in explaining his success, said on January 14: "If a distinctive representative of the machine was to be chosen, then, doubtless, this is the best result attainable. . . . He owes his nomination to the warm friendship felt among Republicans, in almost every county of the interior, for the man whom they have long known as one of the most active and effective working Republicans of the State."

Having thus gained a seat in the Senate as a machine man, pure and simple, he distinguished himself during the two months in which he was a member by his servile subjection to Conkling. He resigned as Senator on May 16, literally amid the ridicule of the whole country. He had little to do in the Blaine campaign of 1884, but in the following year he, in conjunction with the editor of the *Tribune*, used his power over the State Republican machine to "knife" Davenport, the Republican candidate for Governor, and allow Hill to be elected.

(2.) His recovery of power dates from this election of Hill. He at once began to "deal" with Hill; and with the patronage thus secured, combined with that of the Quarantine and Health Office of the port of New York, which he controlled by virtue of Gov. Cornell's appointment of himself and some of his cronies for commissioners, he was able to regain his hold upon the party organization. There was not a great deal of Republican patronage to be had, but all that there was came through him. He held over as quarantine commissioner, and his associates held over with him, because he controlled the State Senate and would not allow appointees for the succession to be confirmed. His great opportunity came in the campaign of 1888, when, in the famous words of the *Tribune*, he was able to sell to Mr. Hill the Governorship of New York in return for the Presidency for Mr. Harrison. If we had not the *Tribune's* high authority for saying that this sale was made, President Harrison's conduct after taking office would of itself be ample proof. He turned the whole federal patronage for New York over to Mr. Platt for disbursement, not giving a particle to Warner Miller or any other of the anti-Platt elements of the party. With this wealth of political "pap" at his command, he had no difficulty in completely establishing himself as the boss of the Republican party of New York.

(3.) He is able to retain his power now because of the habit which the politicians of the party have got into of looking to him for direction, and because all of them who are in office owe their nomination and election to him. He is the only man in the party who has made it his business for years, day in and day out, to control its affairs. His personal acquaintance with its politicians in all sections of the State, studiously cultivated for nearly or quite a quarter of a century, is paralleled by that of no other Republican. He meets them all as a personal friend, tells them all that is going on, and from time to time gives them nominations for office, or a bit of patronage, or a promise of favors to come if they work hard for the party and "keep in line." He knows a great deal more about men and affairs than they do, and they get into the way of following his direction without question. He always has power enough over primaries and conventions to "turn down" a politician who is not so docile as he should be, and in this way it has come to be known that no man can get a nomination for office unless he has the boss's favor.

It is because of this power that he is able to control the Legislature and its organization. Every aspirant for Speaker or other position, who wishes to advance to a nomination for Governor or other State office, knows that unless he submits to Platt's wishes, and puts on what is known as the "Platt collar," he is certain to be defeated. He will not only fail to get the Speakership, but he will fail to get a nomination for any office whatever in the future. The boss will "give the word" that some other man is to have the coveted place, and the fractious aspirant's political future will be ruined. Strict discipline of this kind, known as "pulling straight," is recognized as the fundamental principle of all machine government, and it is as rigorously observed in the Platt machine as in Tammany Hall.

The chief result of this system is to exclude from the machine all men of character and force above the average. There is no place in a machine for a man of independent views, high purpose, and moral courage. He is "turned down" at the first symptom of disobedience, and the entire machine acquiesces in his fate. Membership in the machine being thus confined to men of inferior ability and low or dull ideas of politics and public duty, it is a comparatively easy matter for a man like Platt to maintain his boss-ship. He never allows a member of the party of first-rate ability and high character to get a nomination for office except in cases in which there is no apparent prospect of an election. He never distributes any patronage to such a member, but gives office and patronage alike to the men who follow his orders.

Above and beyond all, he devotes himself all the time to the business of bossing. It is the absorbing passion of his life, partly because his taste lies strongly in that direction, partly because he enjoys the power which the position gives him, and partly because it is the one thing which makes him a public character and insures consideration of himself and his doings in the newspapers. As an ordinary man of business he would attract no attention whatever, and as a statesman no attention except that of contempt. He has chosen the rôle which best suits his talents, and he will play it successfully until his party so deeply realizes the disgrace of his self-imposed leadership that it will rise in a body and throw it off. This cannot be done by a few men giving a few weeks' thought to the matter now and then. They must work, as he does, the year round, and not let go for a moment.

BEAUTIES OF THE INCOME-TAX LAW.

NEARLY all the discussion of the income tax in Congress and in the press has turned upon the general principle of that measure, and comparatively little attention has been given to the actual details of the bill as it passed the House. An examination of its text, however, shows that it is drawn with extraordinary looseness, one section often invalidating another, and that it invites at every turn evasion and false swearing and bribery and intolerable espionage.

The first section declares that the tax is to be collected from "any citizen of the United States residing abroad" on his income "derived from any kind of property, rents, interest, etc., or from any profession, trade, employment or vocation carried on in the United States *or elsewhere.*" According to this our deputy collectors would have to run over to Hawaii and make our planter fellow-citizens there help support the Government whose protection they claim while upsetting their own. But when we read on and come to section 58, we find that cheerful prospect dashed by the provision that non-residents shall "only pay on that part of the income which is derived from any source *in the United States.*" Another fine muddle is to be found in the provisions for deducting certain items in reckoning income. All local taxes may be deducted, as also "all interest actually due and paid within the year on existing indebtedness." Yet in section 62 it is made the duty, under heavy penalties, of "every corporation which pays to any employee a salary or compensation exceeding $4,000 per annum" to "report the same to the deputy collector of his district and *pay the tax*, . . . and such payment shall be charged against the amount due such employee." But suppose such employee is entitled to deductions actually bringing his income below $4,000? There is the order to the corporation to pay his tax irrespective of any such consideration. Parallel with this is the tax which corporations are to

pay upon "dividends, interest, coupons," etc., in such a way that a widow with an income of only $1,000 from bonds would practically be taxed despite the evident intent of the law to exempt her.

But it is in its constant use of undefined terms that the law opens the widest door for abuses. Tremendous latitude is given to the judgment of the collector. He is to reckon-in interest due any taxpayer "whether paid or not," provided he considers it "good and collectible." He is to reckon-in a person's share of dividends in any corporation, "whether divided or otherwise." He may increase the amount of any man's return "if he has reason to believe that the same is understated," and may make up a list of any individual's income "according to the best information he can obtain." If a taxpayer feels aggrieved, he has a right to make oath and give evidence as to his real income, "but such oath and evidence shall not be considered as conclusive of the facts," and the decision of the collector of the district, "unless reversed by the commissioner of internal revenue, shall be *final*."

Similar ambiguity is seen in the description of the deductions which may be made from income in making out a return. "Necessary expenses" in carrying on business may come out, but who is to decide what they are? So may "losses incurred in trade," but who is to determine what they may have been? So may "debts ascertained to be worthless," but ascertained by whom? These are only a few of the temptations and opportunities set before a lax conscience all through the bill, and of the uncertainties which would bewilder the most honest of men in making their return.

But the most offensive and dangerous features of the law are those which give inquisitorial powers to the deputy collectors. They can compel a merchant to submit his "books and accounts" to them at any time, and to disclose "any other evidence" of his income which may occur to them. The hatefulness of this may be fairly inferred from a single paragraph, which amends section 3172 of the Revised Statutes so as to make it read:

> "Every collector shall, from time to time, cause his deputies to proceed through every part of his district and inquire after and concerning all persons therein who are liable to pay any internal-revenue tax, and all persons owning or having the care of any objects liable to pay any tax, and to make a list of such persons and enumerate said objects."

Now who are, and are apt to be, deputy collectors? Are they the angels who alone could administer such a law without making it oppressive, and a source of endless blackmail and bribery and political corruption? Unfortunately, we know that, under our wise political system, they are men who would hail such an opportunity to make themselves a political power and to grow rich in a single term of office, with as much avidity and delight as a Tammany police captain. We should promptly have our "tenderloin" income-tax districts, just as we now have our police districts, and the "protection" money which would be within reach of the deputy collectors would make a police captain green with envy.

THE ALBERT MOORE EXHIBITION.

LONDON, January 20, 1894.

MANY recent events have again called special attention to the Royal Academy and its methods. The election of no less than five new associates was a matter predestined to invite criticism. The choice of two really good men was so welcome a novelty that the Academy might well have been congratulated, had the remaining three been chosen with a shadow of the same discretion. It is long since painters of such distinction as Mr. Sargent and Mr. Swan have been counted among associates. Indeed, it seems difficult to understand why they have been elected, when equal honors have been lavished upon Mr. Arthur Hacker, a painter of great pretension but small accomplishment, and Mr. Frank Bramley, who uses a technical ability far above the academical level to paint anecdotes in strict accordance with the academical spirit. Mr. Frampton, the fifth, is, to be sure, a young sculptor of promise. But the claims of the architect and engraver, above all of the water-colorist and the illustrator, were much more pressing. Whether Mr. Sargent and Mr. Swan will be able to influence the Academy for good, or whether they, like many others, will be influenced by it for evil, remains to be seen. In the meantime, it is interesting, just at the present moment, to consider the work of an Englishman who died but lately, and whose neglect by the Academy has so often been made a reproach against it. I mean Albert Moore, a collection of whose pictures and studies forms one of the chief attractions at the winter show of the Grafton Gallery, opened to-day.

This gallery is doing good work in London. As I have pointed out before, already in the one short year of its existence it has introduced many of the most distinguished Continental artists to the bewildered Londoner—artists varying so entirely in methods as Khnopff and J. Maris, as Von Uhde and Aman-Jean, as Raffaëlli and Alfred Stevens. It has appreciated Mr. Whistler and understood the advantage of securing him among its exhibitors. It has encouraged the Glasgow men, who, for many years, were homeless in London. Mistakes it has made, perhaps; mediocrity it has not wholly forsworn. But, on the whole, its aims are in the right direction, and it has done excellent service in the cause of art. Of this winter's general show, fine as it is, I will say nothing. For, in the first place, I want to speak more in detail of the Albert Moore collection, which hangs in a room apart, and, in the second, many of the foreign canvases have been seen before in the Champ de Mars, while the Glasgow men do not make nearly so impressive a showing as they did a year ago. The notable new work comes from Mr. Whistler, who contributes three exquisite marines, studies in dark blue and silver and violet and silver, the harmony carried out with consummate knowledge and subtle refinement, the effect suggested with the breadth and simplicity which give to his work, as to that of all the greatest masters, its dignity and serenity.

To turn from Mr. Whistler to Albert Moore is, I think, to understand better the measure of the latter's accomplishment. Hitherto his canvases have seldom been seen save at Burlington House, where they invariably stood out in prominent relief from the artless trivialities surrounding them. In them was none of the striving to emulate the camera in accuracy of superfluous detail, which is the stumbling block of the Newlynite; none of the desire to tell pretty anecdotes of short-waisted maidens and bewigged and beruffled men, the chief ambition of the Academician; no pretence of strange and hidden meanings, nor parade of effete symbols, after the fashion of the little group who ape the Primitives. In a word, in his pictures was none of that tedious quality which critics (who love it for the sake of the "copy" it yields) call "literary." Not one but was concerned solely with some artistic problem of color or arrangement. His low-browed, full-throated women he used as the Greeks did their beautiful youths, as Titian did his luxuriant golden beauties; that is, as a fine motive for decorative schemes. With color and line he experimented, as a poet plays with words and rhythms. It was because his work was solely and entirely artistic in intention that it could assert itself so well on walls where art is all but an unknown quality.

However, now that his pictures and studies are brought together, now that they must stand the test of comparison with the modern masterpieces that hang in near rooms, their shortcomings are no less evident than their merits. Albert Moore was not an accomplished draughtsman; he had no great technical skill. His small studies (in chalk on brown paper) of the nude reveal the feebleness of his drawing: it is strange that a man who for ever sought the beautiful in the female figure could, when draperies were thrown aside, draw it so ill, giving straight, clumsy lines for the lovely curves that delight in a Venus by Velasquez or Titian. Again, in his painting of the nude, his difficulty in rendering flesh is but too apparent. His drapery helped to disguise his most serious defects, and yet it is astonishing how little variety he gave to the arrangement of its folds and flowing lines. There is striking monotony in his many compositions. Indeed, the most obvious truth proved by the present collection is that he failed far oftener than he succeeded. For him, apparently, it was easier to find his problem than its solution. How much he was concerned with decorative schemes—the one legitimate end of art—is shown in the fact that they preoccupied him even at the outset of his career, before he had discovered his low-browed model, when he painted in a very different key of color. Among the larger canvases is one called "Elijah's Sacrifice," probably belonging to a very early date, as sombre and brown as an ill-used Old Master, with something Blake-like in its conception; and here already, in a group of brawny men kneeling with heads bowed low, is expressed the same decorative feeling which inspired him in the grouping of the four fair women of "A Summer's Night," now the property of the corporation of Liverpool. But though from the beginning his motives were ever to be commended, these at times could lead to discord of color and incoherence of composition—a fact most pronounced in his very last canvas, never before exhibited, "The Loves of the Winds and the Seasons," which is one of the largest he ever attempted and one of the least successful, since in it is not even the suggestion of a well-balanced scheme of decoration. When he did succeed, however, he produced harmo-

nies at once stately and satisfactory. There is one upright panel, "Canaries," the usual tall woman in the long, clinging draperies, in which pale yellows and whites are used to produce as fine and exquisite an effect as eye could desire; and another, "Jasmine," where deep rose and carnation are wrought into a rich and splendid symphony. These represent him at his best, but, unfortunately, their contrast with his lesser achievements reminds one that he was quite as apt to show himself at his worst.

Indeed, when all is said, it is in his small studies and sketches for pictures that his most perfect accomplishment is to be found. Many of these are very lovely notes and impressions of color: at least one, "King Cups," with its blossom-strewn grass, has in it something of the grace and delicacy that enchant in a good Botticelli. But, to the sustained effort of working out his invariably fine motive on a large scale he was not always equal. It is often regretted that he had not the chance to decorate great wall spaces—the chance enjoyed by Puvis de Chavannes and Besnard in France. The only work of the kind which he ever did was in the Queen's Theatre, Long Acres, since burnt down, so that no proof of his powers remains. But careful study of the present collection makes one doubt whether he really had the necessary qualifications for so ambitious and extended an undertaking. In almost every case his single figures are more effective than his groups, his studies than his finished pictures. He was an artist keenly sensitive to the poetry of paint, but with no great technical facility in expressing it. In harmony of tints, in loveliness of line, he delighted, but not always could he embody this delight on canvas. Infinitely the superior of the average Academician (to whom his exclusion from the Academy must ever remain a disgrace), he is still hardly to be ranked with the Whistlers of modern art. N. N.

BARDOUX'S MADAME DE CUSTINE.

PARIS, February 2, 1894.

M. BARDOUX has given himself up to the study of society at the end of the eighteenth century. He has written books on the early life of Lafayette, on M. de Montlosier, on the Countess Pauline de Beaumont, famous for the affection which she entertained for Chateaubriand. In this period, the end of the last and the beginning of the nineteenth century, tragedy sometimes comes in contact with idyl; the French Revolution disturbs everything, and the field of observation becomes excessively varied. After Pauline de Beaumont, there is no more original or finished type of the feminine aristocracy of the end of the eighteenth century than Mme. de Custine, who has been chosen by M. Bardoux as the central figure of one of his studies. She, too, was one of the worshippers of Chateaubriand, and has her place near Mme. Récamier in the feminine circle which surrounds the memory of the melancholy "René."

No biography is published nowadays without a portrait, and it must be confessed that in the case of Mme. de Custine the attraction thus produced is immediate. She is represented with powdered hair, arranged like that of Marie Antoinette or of Mme. de Lamballe in the portraits of the time, with large and beautiful eyes, an exquisite face, a thin muslin thrown over her shoulders. The general effect is extremely striking, and the portrait does much credit not only to the model, but also to the painter, Campana. Louise Eléonore Mélanie Delphine de Sabran was born in Paris, March 18, 1770. The name of her mother, Mme. de Sabran, is well known; I have spoken in your columns of her correspondence, of her long affection for the Chevalier de Boufflers. Mme. de Sabran lost her husband at the time of the coronation of Louis XVI.; she was left a widow of twenty, with two young children, Delphine and Elzéar. Delphine was married at the age of seventeen to the son of the Comte de Custin, Maréchal de Camp, Governor of Toulon and of Dieuze in Lorraine. Her husband was only nineteen years of age. After the wedding breakfast all went down into the garden, where a crowd of shepherds and shepherdesses came to compliment the bride. Each sang a little song. The ball was then opened by General de Custine and Mme. de Sabran; then came a great repast. The festivities lasted a whole week. These were the days of "sensibility," the days of J. J. Rousseau. During one of the fêtes the young people found in a cave (a pretended cave) Philemon and Baucis, representing conjugal fidelity and felicity.

These happy days were not to last long; the Revolution was preparing while young Custine was taking his wife to his regiment. They had a son, Astolphe, and, as a true disciple of Rousseau, Delphine would nurse it. The Comte de Custine was elected a member of the States-General when they were summoned by the King; the nobility of the bailliage of Metz remembered that he had commanded the regiment of Saintonge infantry in the American war and had distinguished himself before Yorktown. Boufflers was also elected, but he soon became discouraged and emigrated, at the instance of Mme. de Sabran, who had not been slow in following her friends the Polignacs. The two Custines remained in France, and Delphine with her husband. Her father-in-law had ranged himself among the most ardent Constitutionalists, and had taken a great part in the organization of the national guards. His son was in the army of Lückner; he himself received a high command on the frontier, but was soon denounced and arrested. Delphine, who was living quietly in a village in Normandy, returned to Paris, and visited her father-in-law several times in his prison. Custine was condemned by the Revolutionary tribunal and executed on September 4, 1793.

After the father, the son was imprisoned, merely because he had written a defence of his father. Delphine tried in vain to save him; he was executed on January 4, 1794. She found herself a widow, at the age of twenty-three, and no wonder that she resolved to leave France and to join in Berlin the Comtesse de Sabran and her brother Elzéar. She was arrested in the midst of her preparations, and thrown into the Carmelite prison, where she found many of her acquaintances, Mme. Charles de Lameth, Mme. d'Aiguillon, Mme. de Jarnac, Josephine de Beauharnais, who was to become the wife of Napoleon. There too was Mrs. Elliott, the friend of the Duke of Orleans, who has left us such curious Memoirs. She says, in these Memoirs, that Mme. de Custine and her husband were arrested at the same time and were in prison together, and that she never saw anything so touching as their separation, when he was taken to the guillotine. "I thought for a moment that Mme. de Custine would break her head against the walls. Mme. de Beauharnais and myself did not leave her for a moment for three days and three nights; but she was young, full of imagination; she was French, and, after six weeks, she had recovered her courage."

Mrs. Elliott also was evidently a woman of imagination, as M. de Custine was arrested before his wife and was not in the same prison. It is true that they were allowed to see each other the day before his execution, but their meeting did not take place at the prison where Mrs. Elliott was, but at the Conciergerie. Shall we believe Mrs. Elliott when she tells us that M. de Beauharnais and Mme. de Custine were in love with each other? The attentions which Beauharnais paid to "that charming little Mme. de Custine" were, at any rate, soon interrupted, as Beauharnais was sent to the guillotine. Josephine had never been on very good terms with her husband, and had, in fact, been separated from him for several years when she found him again in prison. "Her husband," says Mrs. Elliott, "had never shown her any attentions. As for the other lady [Mme. de Custine], she never smiled again after the death of Beauharnais." This would lead us to think that Delphine had really a great passion for Beauharnais, but we must take with some grains of allowance what Mrs. Elliott says of French ladies.

The 9th Thermidor saved Mme. de Custine; she left the Carmelite prison with Mme. de Beauharnais, Mme. d'Aiguillon, and Mme. de Lameth. She had great difficulty in recovering a part of her property; she was fortunately helped, in this endeavor, by Boissy-d'Anglas and by Fouché, who were both probably influenced by her great beauty. Fouché was no longer the terrible Terrorist who had destroyed the rebel city of Lyons; he was already minister of police and in relations with the future wife of Napoleon. Everything around Delphine was changed. She was very anxious to bring back to France her mother, Mme. de Sabran, who had become Mme. de Boufflers; but Boufflers was on the list of the émigrés. When Josephine became the wife of Napoleon, she used her influence in favor of Mme. de Custine, and Boufflers was struck off the list; he came back to France with his wife, no longer the brilliant colonel of old times, but happy to accept the modest functions of assistant librarian at the Mazarine Library.

In 1803, Mme. de Custine made the acquaintance of Chateaubriand, who had just published his 'Génie du Christianisme' and accepted the place of secretary to the French embassy at Rome. Chateaubriand says in his memoirs that he was anxious to go to Rome on account of Mme. de Beaumont, who was in a consumption. "The daughter of M. de Montmorin was dying; the climate of Italy was thought favorable for her. If I went to Rome, she would consent to cross the Alps; I sacrificed myself in the hope of saving her." In reality, he wished to have a reason for separating himself from his own wife, and his passion for Mme. de Beaumont was not so great that he could not make love to Mme. de Custine. He says but little of her in his Memoirs. With the remainder of her fortune, she had bought in Normandy, near Lisieux, the château of Fervacques (where Henri IV. once spent a few days). "I was invited," he says, "to the châteaus which were reopening. Among the bees which composed their hive was the Marchioness of Custine, who had inherited the long hair of Margaret of Provence, the wife of Saint Louis, whose blood relation she was. I saw her entrance into Fervacques, and I had the honor of sleeping in the bed of the Béarnais." M. Bardoux gives us some letters written by Chateaubriand to the lady of Fervacques, before his departure for Rome. His passion for her was of short duration, and he

concealed it carefully from Mme. de Beaumont and from all his friends.

The relations of Mme. de Custine with the famous Fouché will be to most readers more interesting than what M. Bardoux has to say about Chateaubriand. The great writer has told us all we care to know about himself; the 'Mémoires d'Outre-Tombe' have made us familiar with all Chateaubriand's circle. Mme. de Custine was among the open enemies of the imperial régime, but Fouché had always covered her with his protection. She left France during the first invasion, and returned at the moment when Fouché, arriving from Illyria, whither Napoleon had sent him, entered into communication with the Bourbons. Bardoux gives us several letters from Fouché to Mme. de Custine, written from Ferrières, which was Fouché's country-place; they show a great degree of intimacy and make us acquainted with a Fouché very different from the terrible historical prefect of police. Fouché understands at once the danger when Napoleon comes from the island of Elba; he sees that everything depends upon the army. "I confess I fear the blindness of the soldiers; if our people are not careful, they will decide the question against us." Fouché, it would result from these letters, did not conspire with Napoleon at the time; this did not prevent his accepting from him the post of minister of police when Napoleon reoccupied the Tuileries. "I like the *positive* in politics as well as in affection" (letter to Mme. de Custine of March 10, 1815). This declaration is rather suggestive, and was made at the moment when Napoleon entered Lyons.

Fouché said of Napoleon: "He is come back from Elba madder than before he went there; he has only three months before him." He kept up his relations with the Royalists, and Mme. de Custine was one of his many ambassadors. Fouché became one of the principal actors in the second Restoration. When Louis XVIII. came back to Paris between Talleyrand and Fouché, Pozzo di Borgo said: "I should very much like to hear what these lambs have to say." If one of our modern historians should care to write a biography of Fouché, he would find useful documents in this volume of M. Bardoux's.

The correspondence with Mme. de Custine continued a little while after Fouché was obliged to leave France. He tells her in his letters that he is writing his memoirs. (These memoirs were published, and are now very rare.) Mme. de Custine died at the age of fifty-six at Bex in Vaud. Chateaubriand was with her at the moment of her death. "I saw," he wrote in his memoirs, "the woman who had faced the guillotine with the greatest courage, whiter than death, in black, emaciated, her head adorned only with her silken hair, smile at me with her pale lips and her pearly teeth. . . . I heard her coffin go through the solitary streets of Lausanne during the night to pass to its eternal resting-place at Fervacques."

Correspondence.

MUNICIPAL REFORM THROUGH POPULAR NOMINATION.

To the Editor of The Nation:

Sir: Among the suggestions for municipal reform which have followed upon the Philadelphia meeting, I notice that especial attention has been called to the prime necessity for first arousing public spirit or patriotism for good city government. Through my connection with a number of local efforts at municipal economy which have been fairly successful, the conviction has forced itself upon me that it will prove hopeless to attempt to arouse an active and continuously effective public spirit by the old methods. If we are to have a real and enduring reform, the stream must be purified at the source in the *nominating* system. The caucus system is a failure, and must be wholly abandoned. It is corrupt and will always be corrupt. Here in Ohio we have the Baber Law, and use it at times in both parties; and while it makes an orderly procedure of the nominating, conducting it after the manner of an ordinary election, it is often a more complete tool of the political machine than the packed or haphazard caucus. If a method could be put in practice which would protect the voter in the independence of his nominating vote as it protects him here in his electing vote (through the Australian ballot), the foundation for better government in our American cities would be laid. It comes too late when he is given a secret ballot only at the polls, with a choice merely between two corrupt nominees.

It has been suggested that the first step toward permanent reform lies in the separation of municipal from State and national elections, exerting as these do a powerful partisan influence over municipal selections. Upon this groundwork I would suggest the following plan for making nominations, the form of which is somewhat similar to the London system for the nomination of members of its County Council, by which, as is well known, the very best results are attained in the formation of a governing body. Briefly stated it is as follows: Let the date for the closing of the registration be fixed at least forty days prior to the day of election; and upon receipt of the registration books let the Board of Elections issue to each registered voter an official nominating form, having printed upon it the title of the office necessary to be filled at the approaching election. Space should be allowed on these forms for the voter to write the names he desires to have balloted upon, which should be three for each ward officer and five for each general city or county officer, from the mayor down. These ticket forms should be accompanied by a stamped and printed envelope for return to the Board of Elections, and be numbered consecutively so as to prevent any cut-and-dried imitation being substituted by the political machine of either party.

These tickets, properly filled, should be returned so as to reach the Board of Elections not later than twenty days prior to the day of election. They should then be tabulated, and the three names found to have received the highest number of votes for the ward offices, and the five receiving the highest number for the general city or county offices, should be officially declared the nominees. The question of a provision for withdrawals comes in here, and could be readily met by the substitution of the next in number of votes; but the law ought to contain a provision compelling the nominees for the Common Council at least to stand for election.

It would seem wholly advisable that this official ticket should not be made public until ten days prior to election, to reduce to a minimum the opportunity for setting up a successful political combination of any kind.

Under such a system, the voter, making up his ticket in the privacy of his home or his office, would be entirely free and untrammelled in his choice of men, and find a new liberty which he would gladly welcome. Many would take an especial pride in naming an ideal ticket. Every man, no matter what his station, being more or less jealous of his independence (even to those who sell their vote and then vote as they please), would welcome the opportunity thus offered. The abuses of the caucus, with its browbeating and over-riding, would be wholly escaped and a thing of the past. The better element in the community, which now takes little or no part in the nominating, would again take an active part and would predominate in influence and numbers, as they do in most communities whenever thoroughly aroused by some stirring public need.

To all, I believe, such an opportunity for independent choice would appeal with unusual and salutary effect. From its nature non-political, through it party lines could be made to absolutely disappear in municipal affairs, and an avenue of escape be found from the power which is debauching the public service of our American cities.

S. P. Jermain,
Chairman Municipal Committee.

Chamber of Commerce,
Toledo, O., February 15, 1894.

A PRECEDENT FOR THE GEARY ACT.

To the Editor of The Nation:

Sir: In an unpublished opinion by Judge Sprague, delivered in June, 1851, in the United States District Court for Massachusetts, in the case of James Scott, who was accused of assisting in the rescue of the fugitive slave Shadrach, I find the following quotation of an act passed by Massachusetts, March 26, 1788, after the ratification of the Federal Constitution by that State. It will be seen that it is a precedent for the Geary act in two respects: (1) in expelling from the State all colored persons with certain exceptions; (2) in requiring an official certificate to prove that any particular colored person was within the exceptions:

"Section 6. Be it further enacted, &c. That no person being an African or negro, other than a subject of the Emperor of Morocco, or a citizen of some one of the United States (to be evidenced by a certificate from the Secretary of the State of which he shall be a citizen) shall tarry within this Commonwealth for a longer time than two months; and upon complaint made to any Justice of the Peace within this Commonwealth, that any such person has been within the same more than two months, the said Justice shall order the said person to depart out of this Commonwealth; and in case that the said African or negro shall not depart, as aforesaid, any Justice of the Peace within this Commonwealth, upon complaint and proof made that such person has continued within the Commonwealth ten days after notice given him or her to depart as aforesaid, shall commit the said person to any house of correction within the county, there to be kept to hard labor agreeably to the rules and orders of the said house, until the Sessions of the Peace, next to be holden within and for the said county; and the master of the said house of correction is hereby required and directed to transmit an attested copy of the warrant of commitment to the said Court on the first day of their said session; and if, upon trial at the said Court, it shall be made to appear that the said person has thus continued within the Commonwealth contrary to the tenor of this act, he or she shall be whipped, not exceeding ten stripes, and ordered to depart out of this Commonwealth within ten days; and if he or she shall not so depart, the same process shall be had and punishment inflicted, and so toties quoties."

Philip Patterson Wells.

New Haven, February 12, 1894.

CROMWELL'S DESCENDANTS.

To the Editor of The Nation:

Sir: At the risk of continuing a protracted discussion, I would call your attention to page 34 of 'Oliver Cromwell,' by Frederic Harrison (Macmillan, 1888), in the "English Statesmen" Series, where it is stated that the following distinguished persons, among others, are descended from Cromwell: "Marquis of Ripon, Earls of Chichester, Morley, Clarendon, Cowper, heir presumptive to the earldom of Derby, Lord Ampthill, Lord Walsingham, . . . Sir John Lubbock, . . . the late Sir George Cornewall Lewis." "During the present century at least seven persons descended from the Protector have held office under the Crown, including one prime minister, Lord Goderich; one foreign secretary, Lord Clarendon; two lords lieutenant of Ireland, and a viceroy of India." "The following married descendants of Cromwell: the Earls of Darnley, Lytton, Lathom, Lord Stanley of Preston, Sir W. Harcourt, M. P., Sir A. Bostwick, M. P., Mr. Samuel Whitbread, M. P."

Mr. Harrison doubtless writes with competent authority. He notes these facts as a curious example of the persistence of the English ruling families and of their close intermarriage.

Yours, etc., C. K. Williams.

Sioux City, Iowa, February 10, 1894.

WOMEN AT THE GERMAN UNIVERSITIES.

To the Editor of The Nation:

Sir: The letter in your last number regarding "Women at the German Universities" will probably call forth others. Perhaps a few more words upon this subject may not come amiss.

To my knowledge, a studious woman *was* admitted to lectures (on anatomy, I think) in Leipzig; and when male students made audible protest, the professor gave them a most unexpected lecture on manners, and unqualified praise of a brave woman's work in medicine, much to the gratification of a young American student present, who, a little later, related the facts to us at supper.

University instructors in Germany have been so kind and helpful to lady students that few will forget it who have been recipients of such favors, by no means rare; and this kindness brought sometimes quite trying results. For instance, at Leipzig it became known that certain lectures were opened to ladies, not officially, but by permission of the instructor; to these quite a number of ladies came who had no such permit, who could not understand German, much less the subject treated, who came simply "to learn German," "to see what it was like," etc. These ladies sometimes talk in loud voices before the lecture begins, causing every one to turn around to look at them, whisper during the lecture, observe folks and things going on in the street, and otherwise disturb the delightful quiet of the place. Of course these ladies were suffered to remain; yet this abuse did close to women one lecture-room at Leipzig which had been opened to them before.

A young girl, pretty or not, going in and out of university halls and lecture-rooms which for centuries have been occupied by men alone, when she is very self-conscious, trying evidently "not to mind," *is* out of place; and the fact that many come unchaperoned, which they certainly would not do in such places at home, unless they had officially their place in such work, makes the matter worse. Nice young American girls, even while they are attending university lectures, often feel this to the quick, as I more than once had occasion to observe when such girls responded to an older lady's kindly word with "Please do let me sit beside you, it is so hard to be here alone." When asked why they had come thus, the answer always was: "I thought I ought to come, and had no one to come with me."

Many instructors are not averse to having woman students, and are ready to help open university doors to them, but do demand gravely and decidedly that such students come with at least the same preparatory knowledge which is expected of the men, and insist that quiet, thoughtful work is essential, as well as that reserve which every well-bred girl and woman has when among strangers. The manner with which the American woman accepts such permissions—enters such open doors—and her work while there, will open or close German university courses to women, at least from foreign lands, and may greatly hinder the needed admittance of German women, which sooner or later is sure to come. M. F. K.

Northampton, Mass., February 16, 1894.

Notes.

D. Appleton & Co. have in press the late Wolcott Balestier's 'Benefits Forgot,' and a translation of Ebers's latest novel, 'Cleopatra.' They announce the approach to completion of Edgar Stanton Maclay's 'History of the United States Navy,' which will be brought down to the present year.

Harper & Bros. have nearly ready 'Our English Cousins,' by Richard Harding Davis.

Next month T. Y. Crowell & Co. will bring out 'The Englishman at Home: His Responsibilities and Privileges,' a detailed account of the English political system, by Edward Porritt.

In April the Century Co. will publish 'Roger Williams, the Pioneer of Religious Liberty,' by Oscar S. Straus.

Houghton, Mifflin & Co. have taken over from the Century Co. the four-volume Life of William Lloyd Garrison by his children, and will soon offer it with their imprint at a substantial reduction in price.

There is nothing to indicate the beginning of a series in the title-page to 'Officers of the Army and Navy (Regular and Volunteer) Who Served in the Civil War' (Philadelphia: L. R. Hamersly & Co.), a handsome quarto volume consisting entirely of portraits, with an index. The incompleteness of this gallery, embracing 858 portraits, is obvious at a glance, and, as one turns the pages, he finds sifted in several war governors, cabinet officers, Vice-President Hamlin, and even Jay Cooke. Still, this is undeniably an interesting collection, and all the more because some of the characters in it have acquired greater distinction in their civil capacity—not always to their lasting credit. The likenesses are not all from life, though by far the great majority are, and many have a unique value. Particularly striking are those of Lincoln, Banks, Garfield, and Kit Carson, and admirably caught is that of the late Gen. Armstrong of Hampton.

We have on our table the sixty-sixth bound volume of the *Youth's Companion*, least lovely in appearance of all the most successful periodicals for the young, but really a mixed weekly journal, addressing itself to "the family" generally, and hence embracing contributions from well-known writers for grown folks. The illustrations are below the level of those of *St. Nicholas* or *Harper's Young People*. The publishers are Perry Mason & Co., Boston.

From Messrs. Harper come two more volumes of their *Monthly Magazine*, Nos. 86, 87, the 37th of their *Weekly*, and the 26th of their *Bazar*. The *Monthly* we have taken note of in its current issues. Bound up, it has a commemorative aspect in its articles on George William Curtis, Lowell, and Whittier, as well as in the novel, "Horace Chase," from the pen of the now deceased Constance Fenimore Woolson. From it, too, have emerged at least three books, the novel just mentioned, Mr. Platt's 'Italian Gardens,' and Col. Dodge's 'Riders of Many Lands.' The Columbian Exposition naturally dominates the *Weekly* for 1893; but some attention is given also to Hawaii, to Brazil and its revolution, to yachts and naval vessels, and to the general life of this metropolis. The list of portraits is, as usual, long and valuable. As liberal a supply of what are called "comics" is observable in the *Bazar* as in the *Weekly*, and a much greater allowance of prints from recent paintings. The specimen gown from Worth in each number is displayed on a flesh-and-blood figure, in agreeable contrast to the old-fashioned plates. Both in letterpress and in illustrations there are few echoes from the world at large, with which, however, Mr. T. W. Higginson still furnishes a channel of communication in his "Women and Men" papers.

Mr. H. T. Folkard, librarian of the Wigan (Eng.) Free Public Library, sends us a copy of his index catalogue of books and papers on mining, metallurgy, and manufactures (1880), which he wishes to enlarge into a general bibliography of these subjects in a new edition of the same, and asks the coöperation of some half-a-dozen persons who would agree to send him slips in return for a copy of the catalogue. A good bibliography of works in the English language on these subjects is very much needed. Haferkorn's 'Handy List of Books on Mines and Mining (U. S.)' is an improved form of publisher's circular, but far from being sufficiently exhaustive to constitute a bibliography, nor is it always logical in its arrangement or complete in its references. Names of some of the best authorities on these subjects do not appear in it at all. Mr. Folkard's system of cataloguing would be improved by adding short subject-abstracts, and in every case the date of publication should be given. It is not every one who is competent to make a bibliography, and the first essential for such a work is a technical familiarity with the subject.

Under the title 'Physiology Practicums,' Prof. B. G. Wilder of Cornell publishes "explicit directions for examining portions of the cat, and the heart, eye, and brain of the sheep as an aid in the study of elementary physiology." The work consists of seventy-seven pages of text and twenty-seven plates unbound and enclosed in a portfolio. It will no doubt be found valuable to teachers giving instruction similar to that of the author.

In our recent notice of Prof. Marshall's 'Vertebrate Embryology' we inadvertently misnamed the American publishers, who are the Messrs. Putnam.

To students of art, Dr. Lippmann, the director of the Berlin Cabinet of Engravings, presents a valuable handbook on Copper-plate Engraving. This is the second number of the series of handbooks published by the Royal Berlin Museums. The book, while primarily intended for the use of students in the Berlin Cabinet, is a general handbook, aiming to present an historical account of engraving and its

masters. The treatment is thoroughly German, but direct and lucid. Dr. Lippmann aims to keep before the mind the different methods of engraving, and not the least instructive chapter is the introductory one on technical processes. The value of the book is greatly enhanced by the illustrations. Of the numerous examples, but one is reduced in size; the others are chiefly details from plates too large to be reproduced in full. The technique of the various schools is thus fully displayed, in notable contrast to more pretentious and expensively illustrated histories of engraving. As a forthcoming volume in the series, Dr. Lippmann promises a book on Wood-Engraving.

The Continental art reviews for January are more than usually empty. The *Gazette des Beaux-Arts* contains nothing of value but a short study by M. Ary Renan (son of the great writer) on "Orientalism" in modern painting. The *Archivio Storico dell' Arte* wastes space on a discussion of certain copies of Giorgione's masterpiece at Vicenza, "Christ bearing the Cross," which the writer prefers to the original; but a comparison of Alinari's photograph of this authentic work with the reproduction of the "replica" given in the text reveals how merely personal is this preference. Lützow's *Zeitschrift für Bildende Kunst* is more fortunate in a short discussion by Dr. Frizzoni of certain female portraits attributed to Leonardo; particularly of one in the Ambrosiana at Milan, already ascribed by Morelli to the Milanese painter, Ambrogio da Predis, and of the so-called "Belle Ferronnière" in the Louvre, in regard to which Dr. Frizzoni declares himself of the opinion pronounced by a number of different students in the last few years, that it is by Leonardo's close follower, Beltraffio.

The *Geographical Journal* for February opens with an account of a recent journey in Kurdistan by Captain Maunsell, in which he dwells especially on the great agricultural resources of the country, now undeveloped for lack of population and means of transport to the markets of the world. The introductory paper of a series on the geography of mammals, by W. L. Sclater, treats mainly of the regions into which zoölogists have divided the world, and describes the six which the author has adopted. An article on the southern plateau of Bolivia is noteworthy mainly for the frequent intimations of vast undeveloped mineral wealth contained in this region. Of more general interest is the letter of Captain Wiggins from Siberia, describing the successful voyage of a fleet across the Kara Sea last summer, carrying, among other things, rails for the Trans-Siberian Railway. He writes rather discouragingly of the probability of Dr. Nansen's having been able to pass the northernmost promontory of Asia, Cape Chelyuskin, because of the drift-ice which was very close in shore, adding: "I never before saw the ice in that vicinity so late in the season." There is a notice, with a portrait, of the late Sir Samuel W. Baker; the maps are of Kurdistan and of the globe, showing Mr. Sclater's six regions.

The London *Times* gives a remarkably interesting account, by Mr. Salter Pyne, who has recently returned from Cabul, of the progress of the Afghans in certain industrial arts. He went to Afghanistan at the request of the Ameer in 1885 to establish workshops and set up machinery. Buildings were erected, and first a plant of wood-working machinery, brought from England, was started. This was followed by the establishment of a mint, the coins being designed and the dies cut by Afghan workmen. Then came a manufactory of cartridges, and a steam-hammer and a forge were set up, from which "last year some fifty muzzle and breech-loading field guns were turned out." Other manufactures are candles, soap, boots (for the use of the army), furniture, carriages, and brandy distilling. "The latest addition is an enormous plant for rolling cartridge metal. Most of this was made in the Cabul foundries, where castings of six tons have been turned out." These are all Government works, carried on for the avowed purpose of civilizing and refining the people, and, as Mr. Pyne says in concluding his report of what he has accomplished in eight years, their effects "upon the future of Afghanistan cannot be overrated."

The distinguishing feature of the January Bulletin of the Boston Public Library is an admirable list of the works which the library contains on Africa, with the exception of Egypt, filling some forty-five pages and containing the most recent publications. Those upon Egypt were given in the Bulletin for October, 1893. There is also a list of the historical fiction relating to France, and lists of works on the Alps and the steam-engine. Three facsimiles of broadsides and a map of especial interest to Bostonians are added.

In the year 1896 the Montenegrin Government proposes to celebrate the 200th anniversary of the accession to the throne of the first member of the present reigning family, the Prince-Bishop Danilo I. In connection with this celebration a prize of 5,000 francs is offered for the best history of the country for these two centuries. There is no restriction as to the language employed, but the manuscripts must be submitted to the Montenegrin Government before December 31, 1895.

Another celebration is that of the 500th anniversary of the birth of Prince Henry the Navigator at Oporto in March. Not a seaman himself, he contributed largely by his studies and patronage to the sending out of the Portuguese expeditions which led eventually to the doubling of the Cape of Good Hope and the discovery of India. There will be a civic procession, a river pageant with a caravel, the inauguration of a statue, and some other public ceremonies.

We have received a copy of the charter, by-laws, and list of members of the new Geographical Club of Philadelphia, of which the president is Prof. Angelo Heilprin, and the secretary, F. Lynwood Garrison. Both sexes are represented in the board of directors.

The January number of the *Pennsylvania Magazine of American History* contains an interesting article by Mr. William M. Meigs, on "Pennsylvania Politics Early in this Century." Incidentally it exhibits the growth of the nominating convention in that State, which (contrary to the claim lately put forth for Rhode Island) Mr. Meigs considers the cradle of the system, both State and national, in this country.

We welcome the annual 'Comparative Summary and Index of State Legislation [in New York],' for the past year, just issued by the University of the State of New York at Albany. As we have before stated, this guide to our law-making is of use to legislators everywhere.

The Scottish Association for the Medical Education of Women reports, as its principal gain for 1893, an important extension of clinical instruction, "on terms rather in excess of the demands made," to the Edinburgh women medical students, now 37 in number. This new concession came from the managers of the Royal Infirmary, the hospital where the medical students of the University of Edinburgh receive most of their clinical instruction. "In recognition of the fact that women students had been admitted to qualifying clinical instruction in the wards of the Royal Infirmary," certain friends of the women promptly presented $1,500 to the hospital. While graduation in medicine can be secured by students of the Scottish Association for the Medical Education of Women at the University of St. Andrew's, the University of Edinburgh still "hesitates" to open its medical classes to women. This report expresses the sanguine hope that the experience gained in the university's arts classes (where are 68 women), as well as the fact that the opening of the Royal Infirmary to women students had *not*, "as was expected in some quarters, caused any decrease in the number of male students," will encourage the Senate of the University of Edinburgh to make the necessary arrangements for the admission of women to its medical department. It may be stated, for the encouragement of timid or prudent educational bodies, that, "so far from any injury having been done to the Royal Infirmary through the falling off in the number of male students, the institution has this year [1893] received a larger amount in fees from students, male and female, than last year."

The announcement of the sale of the late Prince Lucien Bonaparte's library will arrest the attention of librarians and of their generous friends in this country. It embraces some 17,000 items, and is offered *en bloc*. Its philological range is very extended, as might be expected from both the studies and the resources of that well-known student of language, and it is particularly strong in the French and Italian departments. The sale will be effected privately through H. Sotheran & Co., 140 Strand, London, W. C., who supply the catalogue.

—Any one who has investigated the subject knows that there never was a census of American slaveholders, but that the estimates of their number even by their own partisans did not exceed 350,000, including the hirers of slaves. The *William and Mary College Quarterly* for January publishes a list of the "names of Princess Anne County [Va.] slaveowners who, during the year 1810, owned ten or more slaves," 118 in all; but nothing is stated as to the number or proportion of smaller owners, nor as to the source of the list given. If this enumeration could be extended by the *Quarterly* or by the Virginia Historical Society, it would be very instructive. In the same issue, Mr. Brock, secretary of the society just named, publishes a letter of 1682 touching New England's supply of slaves to Virginia, and deduces from it the then valuation of slaves as expressed in tobacco at £12, £16, and £20, according to age. "These prices," says Mr. Brock, "had nearly doubled at the period preceding the American Revolution, when boys and girls commanded from £20 to £30, and adults from £40 to £60. . . . At the close of the eighteenth century these last values had again about doubled." In 1856, when slave property was perhaps at its highest, and when the revival of the slave trade was being prepared, prices averaged $700, according to the Richmond *Enquirer*. The most curious document in the *Quarterly* is a reprint of St. George Tucker's heavy satirical reply (1795) to the disparaging account of Williamsburg in Jedediah Morse's 'American Universal Geography.' The writer was

far more in his element when composing, at about the same time, his 'Dissertation on Slavery; with a Proposal for the Gradual Abolition of it in the State of Virginia' (Philadelphia, 1796). The reprint is followed by a hitherto unpublished letter from Judge John Tyler, father of the President, dated July 10, 1795, in praise of Tucker's pamphlet. In it occurs the passage, "To be sure, how many dirty efforts are made by these Northern cattle to reduce the consequence of Virginia. Every circumstance of human Life (both civil and political) proves how unfit the States were for such an Union as ours." Sentiments like these, at the date in question, indicate how little the abolitionists were chargeable with Southern contempt for the North or Southern proclivity towards secession.

—In the *Academy* for February 3 Mr. Grant Allen makes, we think, a substantial contribution towards the interpretation of Botticelli's famous picture at Florence called "Spring." This consists in regarding the three right-hand figures as symbolizing March, April, and May respectively, May being the beflowered nymph commonly called Flora. Mr. Allen hampers himself with his literary sources, relying overmuch on Horace's fourth ode (Book I.), and hence insisting on making a Favonius of the unmistakable Mercury on the extreme left, at the same time that he establishes his identity with the winged god by reason of the obscure instrument in his right hand, a caduceus. Not only, however, is the attitude quite unsuggestive of a "west wind," but the action of the whole figure is incompatible with the work assigned to it of "dispelling a mass of clouds which occupy the extreme upper left-hand corner of the composition"—like Coleridge's "gust of Autumn," that "crowds And breaks the busy moonlight clouds." In fact, the youth is intent on leisurely dislodging a fruit; and the windy hypothesis is much less rational than one that would make of the youth and dancing nymphs a decorous "Judgment of Paris." Mr. Allen conjectures the painting to have been one of four designed for as many panels, and each illustrating a season by its central figure and the accessory months. In citing Crowe and Cavalcaselle's non-committal description of the "Spring" as a "safe" one, we wonder he does not point out the gross errors of fact in it. Cupid is not bearing a torch but drawing his bow; and the figure emblematic of Fertility (Mr. Allen's April) has not a bow in her hands, or anything else: she needs them to get loose from the clutches of March.

—The Smithsonian Institution has just published the memoir by Prof. S. P. Langley, on the "Internal Work of the Wind," to which we made a brief reference a month ago. The fact which is here established is very simple, and naturally to be expected, namely, that all wind is very puffy, and a high wind more so than a gentle breeze. Although the author's apparatus had too much inertia to show how very great the real changes were, yet he got such results as this: On a certain day and hour, the wind, having a "velocity of twenty-three miles an hour, . . . rose within ten seconds to a velocity of thirty-three miles an hour, and within ten seconds more fell to its initial speed. It then rose within thirty seconds to a velocity of thirty-six miles an hour, and so on, with alternate risings and fallings, at one time actually stopping, and passing through eighteen notable maxima and as many notable minima, the average interval from a maximum to a minimum being a little over ten seconds, and the average change of velocity in this time being about ten miles an hour." It must evidently be practically impossible to put air into motion without setting up waves of condensation and rarefaction; therefore, the fact of the puffiness of the wind is not surprising. But the use to which Prof. Langley puts this fact is quite unexpected. His title indicates that he conceives air in such an oscillating condition as being substantially heated, though the heat is of a peculiar kind. However, he points out that in this case it is possible to violate the second law of thermodynamics; and he advances the hypothesis (which he puts very nearly if not quite out of doubt) that this is the way birds sail in the air. Namely, imagine a bird with outspread wings nearly motionless. Let it incline the plane of the wings so that the wind shall strike the under side. Then, Prof. Langley shows, from previous experiments of his own, that, owing to the inertia of the bird's body, instead of being carried on, it will at first be lifted. Gradually, however, the velocity of the wind will be communicated to the bird. But as it begins to feel the pressure on its wings diminishing, it either tilts the plane of the wings, or wheels, so that in the lull of the wind it will slip back upon an inclined plane to its first position. When the next puff comes, its wings are inclined as at the beginning, and its momentum is actually against the wind. This is not the whole story; but we must refer our readers to the memoir itself, which is much clearer and easier to understand than our attempt to state the matter. In fact, the perspicuity of expression in it is almost as remarkable as the perspicacity of thought. How great that is is shown by the failure of all previous attempts to explain the flight of birds.

—Mr. Leader Scott, the well-known writer on Florentine antiquities, in a little book aptly called 'Echoes of Old Florence' (Florence: Barbèra), has tried to strengthen these echoes, and to make them repeat what they once said clearly, and to yield up their human associations. How copious these are, everybody knows who has walked in the streets of Florence and had his eye caught at every few steps by a tablet on a palace front telling him that it had once been occupied by such and such a person famous in some line of human achievement. Excepting Athens, moreover, no other town has been so conscious of itself as Florence. Every little thing that happened to it as a state, or to any one of its citizens, seemed worthy of record, and there are very few events even of a perfectly parochial, not to say domestic, nature that have not been gleaned by the *novelliere* when they escaped the chronicler and historian. Florentine literature is, therefore, as no other whatever, autobiographic, and although this rather diminishes than increases its claims to universal interest, its value as a source of actual information is unrivalled. So true is this of Florentine literature that it is next to impossible to study it belletristically, its interest as an historical document always tending to get the upper hand; Dante himself forms scarcely an exception to this rule. It is this literature which Mr. Leader Scott has ransacked for his book: Dino Compagni, Villani, Sacchetti, Manni, manuscripts in the author's possession, and later historians, all being made to give up what was of pathetic and romantic as well as historical interest. He has made a little book for which the resident as well as the tourist can be grateful.

—'Tennyson: Poet, Philosopher, Idealist,' by J. Cuming Walters (London; Kegan Paul; New York: Charles Scribner's Sons) is further described on the title-page as "Studies of the Life, Work, and Teaching of the Poet Laureate." This is a solemn announcement and it announces a solemn book. Mr. Walters is no critic. He has a variety of critical phrases at his command, and these he applies with more judgment than his preliminary rhapsody on "the poet of yore" warrants us in expecting; but he shows little delicacy of discrimination and little skill in arranging what he has to say. That he lacks a sense of humor the book gives evidence *passim*, but one delicious bit of testimony must be extracted: Tennyson, we are told, "only voted once in the House of Lords, his support being given to the County Franchise bill; and, *had his health been better*, he intended to vote for the Deceased Wife's Sister bill, of which he heartily approved." (The italics are ours.) The book is much padded with extracts from familiar poems and with bombast from Mr. Walters's own manufactory. Worse than padding is the astounding statement that, in "The Foresters," Tennyson "has not departed to any extent from the main lines of the legend which lives in that fine old English ballad, 'A Lytell Geste of Robyn Hode.'" Yet, after all, the book is not useless. It is the fruit of a sort of enthusiastic industry, and, despite its heaviness, its disorder, and its critical superficiality, it contains a great deal of valuable material. The student and the literary historian will not consult it in vain.

—The ancient Oxford custom providing that a university sermon on "Humility" be preached towards the beginning of Lent was duly observed in St. Mary's Church on the first Sunday in February of this year. An apparently unprecedented coincidence made that same Sunday the day for the yearly Assize sermon, at which the Lord Chief Justice on Circuit—representing under those circumstances nothing less than the sacrosanct person of the Queen—has to be officially present, and also appointed that this year's preacher should be the Archbishop of Canterbury, who outranks the Lord Chief Justice on other occasions. It is not recorded that the secular and spiritual powers in England have ever before been confronted in just this way; certainly their two accredited representatives have never before vied in the public and professed exemplification of Christian humility. It is, therefore, hardly to be wondered at if time-honored means for outwardly marking that virtue failed to cover completely the demands of so unforeseen an emergency. The official representatives of the University could leave off their scarlet robes and appear, as they very properly did, in humble black as inglorious Masters of Arts; but the pomp and retinue of the royal Judge of Assize could not be laid on the shelf, and, that being the case, the head of the Church could hardly dispense with the obsequious attendance of a procession to conduct him to the pulpit. Precedent would have warranted a less exalted dignitary in finding his way thither early and unattended, there to be found humbly awaiting his auditors, and so it has often been done. The particular form of humility adopted this year for his Grace of Canterbury was a processional entrance much more imposing than is usual for University preachers. When this was over, the Vice-Chancellor heard a tucket from without, and the procession issued forth in order to escort the trumpeted lowliness of Lord Coleridge to a seat of honor. At the close his Lordship was

attended to the Judge's carriage, and his Grace waited until that was over before leaving the pulpit. This concession was made to the secular arm, although the preacher might from his sermon be said, in the phraseology of the Judge of Assize, to have changed the "venue" of humility from this world to the next, since he defined it as "a spiritual sense of spiritual proportion."

A VETERAN REFORMER.

Frederic Hill: An Autobiography of Fifty Years in Times of Reform. Edited, with additions, by his daughter, Constance Hill. London: Richard Bentley & Son. 1893.

EVERYBODY has heard of Rowland Hill, who in 1840 achieved his darling idea of penny postage. A life of him has been written by his nephew, Dr. Birkbeck Hill, the editor *par excellence* of Boswell. His oldest brother was Matthew Davenport Hill, whose life has also been written; his youngest brother (save one who died early) was Frederic, the subject of the present memoir, and now the sole survivor of five very remarkable men, Edwin and Arthur being the other two brothers. Mr. Frederic Hill is now in his ninety-first year. We realize his age when we read that he well remembers his great-uncle, John Hill, who enrolled himself as a volunteer against the Pretender in 1745, and that he himself has shared in two royal jubilees—that of George III. in 1810 and that of Queen Victoria in 1887. He remembers also his maternal grandfather, William Lea, who rescued a reputed witch from a moat into which she had been flung by a mob; and he was a boy of fourteen when a murder was committed in Birmingham for which impunity was secured by the murderer's appealing to the wager of battle before Lord Ellenborough and the full court of Queen's Bench. He saw the pillory in use; he had a hand in abolishing the treadmill in prisons, and that not so very long ago. He tells of one of his acquaintances "who was subject to occasional fits of insanity. When these occurred, he was taken to the lunatic asylum of his district, and there bound to a seat on a pivot, which was whirled round and round till he became insensible." "Within my lifetime," he reminds us, "Men were hanged for stealing five shillings' worth of goods." Born in the midst of the Napoleonic wars, "Boney" was a terror to him, and not less the press-gang, which caused the boy to run at night through the streets of Birmingham, though in no danger, on account of his youth. He shared in the rejoicings over Napoleon's abdication and again over Waterloo. When he visited Paris in 1824, "the Rue de la Paix was the only street which was provided with a footpath; at night the city was lighted by dim oil-lamps, which were suspended by ropes across the streets."

In this narrative by one who, in spite of his great age, is still a man of the time, the survivals seem more ancient than the genuine antiquities. When we read of "a curious old Scottish Act of Parliament by which the killing of plovers was made punishable, 'because,' as the Act set forth, 'they fly over the Border and feed on the lands of our natural enemies, the English'"; or again, "At Banff [in 1835] I met Mr. Cameron, the Provost. . . . He told me he could distinctly remember going with his father's grieve into the Highlands to pay 'blackmail' to the chieftain of the district as a security against the 'lifting' of his father's cattle. This 'blackmail' was paid in kind, chiefly in oatmeal"—does that seem as far off as the following, dated Lincoln, 1850?

"I was remarking to Mr. Fardell on the youthful appearance of most of the county magistrates at the meeting last week, and was surprised to hear from him that most of them had been put into the Commission of Peace when they were mere infants; and that till lately this was a common practice, just as children used to have commissions in the army and navy."

And again, it is hard to believe that duelling has been unlawful in England for only half a century—*i. e.*, since 1843, "when the death of Col. Fawcett, by the hand of his brother-in-law, produced so great a revulsion of feeling that public opinion would no longer sanction such outrages."

The main interest of this work, in which there is not a dull page, lies in its illustration of British philanthropy—not of the Exeter Hall variety, if that sneering term must be confined to those whose active benevolence was unconfined and non-insular; but animated first of all by the spirit of domestic, however broad its sympathy with universal, reform. As individuals, the Hills were but a type of a class which, for warm-heartedness, self-consecration, energy, and generosity in giving has hardly any parallel outside of Great Britain. As a family, however, they must have been exceptional even apart from their variety of talent. Parents and children worked together with a surprising unanimity and yet without domination or leadership. Their common private interest was the famous school at Edgbaston, exemplifying Rowland Hill's "Hazelwood system." In 1831, on the eve of the final struggle over the Reform Bill, a sacrifice seemed necessary.

"The period," says Frederic, "being one of national crisis, we held a family council to determine what action duty to our country called upon us to take. All agreed that one member should be spared from the work of the school and set at liberty to take an active part in the coming struggle. I was chosen for this purpose. Without loss of time, therefore, I enrolled myself as a member of the Political Union, an association which had been started in Birmingham as early as January, 1830."

Such sacrifices may have suggested the idea of insurance in the manner described in the following extract:

"In the year 1832 we established what we called the 'Family Fund.' Its object was to secure every member of our family (five of whom were now married) from pecuniary anxiety. The necessary expenditure of each branch of the family was assessed, and half the remaining surplus income, in each case, was handed over annually to the 'Family Fund.' Its management, together with the selection of investments, was intrusted to me. This fund continued in being for twenty-four years; at the end of which time the general condition of our family had so far improved that all pecuniary anxieties had disappeared. The balance, which had much increased in amount, was then divided; each person's share being in proportion to his original contribution."

Four of the brothers entered the public service, for the public good.

"I determined," says Frederic, "on Matthew's advice, to be called to the bar to facilitate my entrance into the Civil Service, and to that end entered my name as a student of Lincoln's Inn. Being 'called' in those days was a very different affair from what it is now. No study of the law was required, and there was no examination. When, some time later, the last of the prescribed dinners had been eaten, I was conducted to the upper end of Lincoln's Inn Hall, and introduced to the benchers. A manuscript was then placed in my hands containing the opening part of a trial, and I was desired to read it aloud. I had scarcely, however, uttered a few words when the bencher made me a slight bow, which indicated his perfect satisfaction in my legal acquirements, and was also a sign that the ceremony was concluded."

Two years later Mr. Hill was appointed an inspector of prisons by Lord John Russell, then home secretary; and the chapters which relate to the discharge of his duties, first in Scotland and afterwards in the north of England and Wales, are among the most valuable in this autobiography, and contain his monument as a benefactor of his countrymen. We have not space to examine them in detail, even to extract from them the curiosities of evil custom and legislation which he helped to abolish, or to dwell on the principles which guided him. As the inventor of the "indeterminate sentence," his portrait fitly adorns our own Elmira Reformatory; and his cardinal doctrine that all prisoners should be provided with employment, and all paid at market rates for work done beyond the allotted task, deserves to be studied in its consequences wherever the poison of the trades unions has clouded the popular understanding on this subject. Mr. Hill's sojourn in Scotland brought him in contact with well-known personages, legal and literary, who contribute their share to the capital anecdotes with which these pages abound. He was afterwards associated with his brother Rowland in the post-office, and effected many improvements in the money-order department; and it was while thus engaged (in 1855) that he refused to mount the roof to view the grand procession escorting the Emperor Louis Napoleon to the Guildhall. "I replied that I had been so long an inspector of prisons that the sight of a rogue had ceased to be any novelty to me."

It is in keeping with the family feeling that pervades this delightful book that the portraits of three of the brothers are by Miss Ellen G. Hill, a sister of the editor; and they are faces of distinction. Edwin, who was in the stamp department, possessed a great deal of mechanical contrivance, but he was also a thinker on financial and economic topics. He held, we are told, that "criminal enterprise requires capital for its development as much as honest labor, and that if those who harbor criminals and receive stolen goods were effectively dealt with by the law, theft and burglary, as an organized business, must fall to the ground." That a criminals' insurance fund might be the product of circumstances like those which make our city government a den of thieves, will readily be believed by those who observe what goes on in our criminal courts, both as respects the ready employment of counsel and the reliance upon "pulls."

We conclude with a passage which marks the difference between America and England in respect of traditions of administration. Our readers do not need to be told why our salvation—at present at least—lies in the very measure which Mr. Frederic Hill deprecates. He says:

"Another matter in which my brother [Rowland] and I agreed (indeed, I do not recollect anything in which we did not agree), related to the competitive examinations by the Civil Service Commissioners. We regarded the introduction of these examinations into the Post-office with much regret. Their tendency, we were convinced, is to fill the ranks of the officers with mediocrity; mediocrity, that is, as regards the qualifications which are essential for zealous and efficient action. They are opposed to the great principle that those who are responsible for the success of any business should have the choice of its officers; seeing that they have the greatest interest in a good selection, and possess the fullest knowledge of the qualifications required."

EARLY MAGNETICAL SCIENCE.—II.

William Gilbert of Colchester, physician of London, on the Loadstone and Magnetic Bodies and on the great Magnet, the Earth; A New Physiology, demonstrated with many Arguments and Experiments. A translation by P. Fleury Mottelay. John Wiley & Sons. 1893.

THE immediate success of Gilbert's book on the lodestone was surprising. No doubt it astonished the author. He had said in his preface, *paucis philosophandum censuimus*, "we have resolved to philosophize for a few" (which Mr. Mottelay translates, We have held that philosophy is for the few), and it is said that the first edition consisted of but a small number of copies. Yet a burst of the most valuable admiration followed the publication. Kepler refers to it twice in his *magnum opus*, and in many other places, with the highest praise. Galileo said it excited his envy. Even Descartes, with his French indisposition to build up any other man's reputation, referred to it with approval. It is true, as might have been expected, that Descartes was able very much to improve upon Gilbert's conceptions. All this applause was somewhat more than the work really deserved. Those from whom it came were not acquainted with Peregrinus, and did not know that, notwithstanding his reclamatory asterisks, much of what so delighted them was not original with Gilbert. Still, today, with all the facts before us, we cannot but admit that the book displays a wonderful Faradayesque power of carrying along experimentation and cerebration, hand in hand. If we ask what positive new principle Gilbert defined, we must admit that there is nothing except that of induction at a distance; but that is a good deal. He also has a vague conception of curved lines of force, which, imperfect as it is, is of inestimable value. Furthermore, he is the author of the theory that the earth is a magnet. His apparatus consisted of spherical lodestones imitated from Peregrinus, and also of the versorium, or small compass-needle, of which Peregrinus made no use. Gilbert's discoveries were inevitable consequences of his improved apparatus. When he has gone successfully as far as his apparatus will carry him, he begins to theorize in a way that merits Bacon's strictures. He wishes to account for the invariability of the direction of the earth's axis and for the rotation of the earth, by magnetism. He thinks that magnetic polarity is an essential character of the pure chemical element, earth. That is almost as unscientific as Peregrinus, towards whose vagaries Gilbert betrays some leaning.

Although Dr. Gilbert had the honor of giving its name to electricity (that is, he invented the adjective *electric*, from which the abstract noun followed as a matter of course), yet his electrical experiments are contemptible. The reason was that he made no electroscope, but used only an unmagnetic versorium. The consequence was that almost everything escaped him, even to electrical polarity, and even to repulsion, which one does not clearly see how he could help noticing. In short, he left electricity just about where the ancients left magneticity.

Celebrated and lauded as the 'De Magnete' always has been throughout Europe, it is singular that it has been printed only twice. The first edition is in folio. Twenty years ago, for an exceptionally fine copy, the exorbitant Quaritch would make a man pay 25 shillings, and now the multiplication of rich electricians has made $25 cheap for it. The second edition, which first appeared in 1628, is in quarto. It bears the imprint, "Excusus Sedini typis Gotzianis." Mr. Mottelay easily concludes that the town meant is Stettin; indeed, he might have pointed out that the volume contains some laudatory verses signed "Gregorius Westphal. super. Dicaster. Pomeranus, Advocatus et Schabinatus Sedinensis Assessor." Here is plainly a Sedinum in Pomerania; and it would be extravagant to doubt that it is the Sedinum of the title-page. Some copies of a quarto edition printed at the same place bear the date 1633. One of these is in our hands. The horizontal water-lines in the first sheet are distant from one another 24 millimetres; in all the rest of the book their distance is 32 millimetres. In short, the paper of the first sheet is different, and the printing of it (including, of course, the title-page) was presumably executed at a different time from the rest. On the whole, it seems probable that this is nothing but the edition of 1628 with a new first sheet substituted, a common bookseller's device. If any person owning a copy bearing the date 1628 will look at page 219, tenth line from the bottom, he can verify or overthrow this surmise. That line, in the edition of 1633 reads: "verint] in contrariam sophantium quorundam stupor, qui cum," from which some words have clearly dropped out. The quarto text is somewhat more accurate than that of the folio; many of the illustrations are incomparably finer; it has the advantage of an index of 23 pages, and it can be had for a reasonable price. The only objection to it is that it omits the asterisks of two sizes which Gilbert put in his margin to draw attention to matter which he claimed as original. But these can now readily be supplied from Mr. Mottelay's translation. A new edition of the Latin, accompanied by a translation and full annotations, is a desideratum. It requires for the execution of it a competent acquaintance with mediæval and Paracelsian philosophy and with the writings of the medical men of the sixteenth century.

Gilbert treats every part of his subject historically. Thus, in his first chapter, he refers to fifty, sixty, or more authors. The reader naturally wishes to know who these were, in a general way, at least, and something of their characteristics; and the passages referred to should be put before him. Mr. Mottelay supplies a few notes which sometimes contain welcome information. But really it was not needful for him to state who Thomas Aquinas was, nor to offer a judgment upon him; nor are we particular to be referred to the page of Webster's, or Worcester's, or Ogilvie's dictionary where some term of ancient astronomy may be found defined, for better or for worse. It is no use telling us to "consult" works of which not half-a-dozen copies exist, and those in another quarter of the globe. Nor do we see the value of such references as this: "Beati Alb. Magni, Ratisboniensis, . . . lib. viii., Lugduni, 1651," where the name of the book is omitted apparently to make room for the long name of the archbishopric. When we are advised to "consult Vincentii Burgundi, *Spec. Mai.*," as we are several times, we understand that the writer usually called Vincentius Bellovacensis is meant. At least a dozen times, Brown's 'Pseudoloxia Epidemica' is quoted, instead of 'Pseudodoxia.'

We notice only a small proportion of the faults which have chanced to catch our eye. On p. 4, several authors' names are wrongly given, as Brasevolus instead of Brasavolus, Hermolaus Barbatus instead of Barbarus, Hannibal Roserius Calaber instead of Rosetius; while Aëtius of Amida is omitted. For Hali Abbas the translator writes "Abohali (Hali Abbas)" in severa places. Now Hali Abbas is the usual designation of a very famous physician, Ali-ibn-al-Abbas, and Abohali is no part of his name. On the other hand, on p. 76, where the Latin does read Abohali, we have in the translation (it is the word *carab*, meaning amber, that is under discussion):

"In Arabic *carab* means oblation, not *rapiens paleas* (snatching chaff), as Scaliger would have it, quoting from the Arabic or Persian of Abohali (Hali Abbas)."

The fact that Gilbert does not know whether the language is Arabic or Persian shows that he does not know who it is that Scaliger (J. C., of course) means by Abohali. The "Hali Abbas" is Mr. Mottelay's gloss. But the writer Scaliger meant was no other than *Abu-Ali*-al-Hasan-ibn-Abdallah-ibn-Sina, usually called Avicenna. For in this physician's Canon, Lib. II., tr. ii., cap. 364, we read, in the translation of Gerhardus Carmonensis: "*Karabe*, scilicet, rapiens paleas Persice." The translator sometimes writes names in their Latin forms, sometimes in the vernacular, without any rule. Thus, Pietro d'Abano is twice so called, and once, Petrus Apponensis. When we read of "Marbodæus, a Frenchman," we have no idea who is meant; but when we see the name written "Marbodeus Gallus," we recall that eleventh century poet, surnamed Peliciarius. Looking out Marco Polo, in the index, we are referred to p. 11, where we read of Baptista Porta learning some obvious properties of the lodestone "from Messer Paolo, the Venetian." Now, the original has (in the ablative) "R. M. Paulo Veneto"; and the "R. M.," or *Reverend* Master, might have sufficed to show that Marco Polo was not meant. Besides, that traveller, in the text used by Yule, says never a word about the lodestone. Turning, however, to the preface to the seventh book of Porta's 'Natural Magic,' the book treating of magnetism, we read:

"At Venice we knew intent upon the same study 'R. M. Paulum Venetum,' at that time provincial of the order of Servite monks, now the very worthy procurator, from whom far from blushing to have learned some things, we glory in it; for we have never come across a man more learned nor more intelligent than he, born for the Encyclopedia, the splendor and ornament not of the city of Venice only, nor of Italy, but of the world."

This description suits Sarpi alone, who, though his baptismal name was Pietro, was *Fra Paolo* in religion, and who was elected provincial of the Servites in 1579, and was appointed procurator in 1588.

The translator's English is certainly very graceful. Perhaps it might, here and there, be advantageously brought nearer to the author's meaning. When Gilbert writes "nihil præter errores et caligines in tam excellenti cognitione commonet," would it not be better to render this, "he suggests nothing in this lofty inquiry but errors and obscurities," instead of "he does but add errors and obscurities to his otherwise excellent treatise"? On p. 17, we read: "hence one loadstone is male, another female." The Latin is: "mas num sit an femina," which seems to ask, "Is it then male or female?" *Plumbum album* is constantly translated "zinc," but it is certain that George Agricola meant tin by *plumbum candidum*, and we do not see how zinc will answer. It is not white, to begin with. It is easy to suppose that Gilbert, like many writers, meant by *stannum* pewter or some alloy. On p. 47, the translator speaks of things "arranged *according to artificial conditions*." The Latin is "artificiose," better translated

"scientifically." On p. 58, by way of antidote to poisoning by iron, the translator represents Avicenna as recommending "a drachm of loadstone taken in a draught of the juice of *dog's mercury*." Gilbert says *mercurialis*, by which he must have understood the French mercury, not the poisonous dog's mercury. But we cannot find that Avicenna really made any such recommendation. He proposes that lodestone should be mixed with iron filings when they are prescribed, and should be taken in "melicratum," or mead, not *mercurialis*. Is there not some clerical error? Page 63, Mottelay: "loadstone is *chiefly* earthy." The Latin is *maxime*, and should certainly be translated "in the highest degree."

On page 94, the translation reads, "So, too, a dry body does not run to the dry rim of a vessel containing water; but, on the contrary, a wet object does." The Latin is: "Ita nec ad limbum vasis siccum appellit humidum, sed humidum petit limbum," which may be rendered, "So a wet object does not approach the dry side of a vessel but seeks the wet side." On p. 87, *gemma Vincentii* is translated "vincentina," but what is that? On p. 97, the translation is: "Electric bodies attract the electric only, and the body attracted undergoes no modification through its own native force, but is drawn freely under impulsion in the ratio of its matter (composition)." The Latin is: "Electrica corpora alliciunt tantum, allectum non immutatur insita vi, sed materiæ ratione sponte appulsum incumbit." Perhaps this might be rendered; "Electric bodies only attract; the attracted body is not changed in its native force, but by reason of matter, being invoked, willingly exerts itself." Gilbert certainly thinks the excited amber by something very like human persuasion induces things to come to it. On p. 123, the translation reads, "And as light—so the opticians tell us—arrives instantly, in the same way *with far greater instantaneousness* the magnetic energy is present within the limits of its forces." The words we have italicized are, in the original, *multo magis*, "much more." That is, we have much more reason to think magnetic induction is instantaneous. Mr. Mottelay's translation would make Gilbert deny the absolute instantaneousness of illumination, which he never dreamed of doing. The phrase *multo magis* is often used in the sense of *a fortiori*. On p. 169 occurs the word *halinitro;* but this is not English. It would be better to speak either of "halinitrum (carbonate of soda)" or of "mineral alkali."

We could easily multiply the number of such criticisms by ten; but the general rationale of the course of experimentation is not affected by such slips. We wish, however, before closing this notice, to make some remarks upon some ruling practices of the translator. *Manifestus* is almost everywhere rendered by "manifest." Now, we have no objection at all to an effort to so turn the meaning of the English word; only the peculiar acception should be explained. *Manifestus*, in the language of physicists, means open to direct observation after making the appropriate experiment. It does not imply that the thing is evident *unless* the experiment is made. For instance, on p. 217: "Here we must express wonder at a *manifest* error of Baptista Porta, . . . to wit, that iron rubbed with diamond turns to the north." Even when the translator selects a different word, he fails to convey the peculiar meaning of *manifestum*. Thus, on p. 212: "It is *plain* (*manifestum*) that all the bars so hammered out toward the north and so laid down while cooling will rotate round their centres, and when afloat will move about in water, and will point north." It is not plain that they *will* behave so; but if the experiment be made, it *will* become plain that they do so behave.

An admiring translator of an old author very naturally and almost excusably falls unawares into a way of slurring over his author's cruder conceptions, and of representing him as more modern in his ideas than he really was. We have seen how Mr. Mottelay, by a most forced rendering, would lead his reader to think that Gilbert believed in the finite velocity of light. Gilbert's ignorance of forces was profound. At a time before Galileo's achievements were known, Gilbert could not be expected to have a knowledge of dynamics, but one might suppose that so perspicacious a mind would have a not altogether erroneous instinctive idea of force. If we compare Gilbert with Dr. John Dee, whose period of activity antedates the 'De Magnete' by thirty or forty years, we find the older man, for whom posterity has had only contempt, to be far better equipped with conceptions of mechanics than the younger. Gilbert comes, in the course of his book, into conflict with each one of the three laws of motion, but most frequently with the law of action and reaction.

Between the words *potestas*, *dominium*, *potentia*, *vis*, *virtus*, *robur*, *vigor*, he draws no clear distinction, as can be seen in book ii., chapter xxix., first paragraph, where all these words occur in the same sense. Yet Mr. Mottelay throws a garb of modernness over his translation by an incessant use of the word "energy." Take, for example, the following definition. The original reads, "*Verticitas*, vigor polaris, non περιδίνησις, sed περιδινείσιος δύναμις: non vertex aut πόλος, sed virtus convertens." The obvious translation is, "*Verticity*, polar vigor, not a rotation, but a tendency to rotation; not a pole, but a property of turning." But Mr. Mottelay translates as follows: "*Verticity*. Polar strength—activity (or what in Gilbert's day was understood as energy); not gyrating, vertiginous, but turning power; nor is it polar revolution, but a directing virtue, an innate turning vigor."

Where, in the original, does he find anything about its being *innate?* It is difficult to understand the clause in parenthesis. If Mr. Mottelay means to say that in Elizabethan English the word *energy* was used to translate *vigor*, he is mistaken. The word *energy* was not in use at all, except in the sense of liveliness in writing. The reason it was not used was that the Greek word was perfectly translated by the Latin *actus* and English *act*. As Sir William Hamilton well says, "Energy, act, operation, are convertible terms." Everybody knows that "energy" was the precise contrary to δύναμις, the word which Gilbert selects to express what his verticity *is;* so that energy is particularly adapted for *avoidance* in translating it. But if Mr. Mottelay means that the word energy will convey to electricians and other modern readers the conception in Gilbert's mind, we venture again to dissent. We admit that the converse is true. If one wanted to give a single word which should convey in Latin to the prescientific man the nearest idea possible to that of our energy, *vigor* might perhaps be the best choice. But when, on the contrary, the purpose is to put the modern man into the state of mind of the prescientific man—the Gilbert—the word "vigor," if it be at fault, is so because it conveys a too scientific idea. "Energy" ought not to be thought of for an instant. Mr. Mottelay seems really to be at some pains to conceal a thing which it should have been one of his chief concerns to bring to light, the contrast between Gilbert's conceptions of magnetic action and those of any scientific man of our time. Nevertheless, we are very much obliged to him for the translation. The book is more than amply worth its price.

The History of Illinois and Louisiana under the French Rule; embracing a general view of the French Dominion in North America, with some account of the English occupation of Illinois. By Joseph Wallace, counsellor at law, etc. Cincinnati: Robert Clarke & Co. 1893.

Mr. Parkman is quoted by name in this book twelve times. The occasions on which he is the real authority must be twelve times twelve. Many incidents in the narrative have also been gleaned from the collections of State historical societies, or monographs on counties and towns, and some from public archives. Still, a volume like this of Mr. Wallace's was needed to bring the history of the Mississippi Valley during its first century within the reach of the great mass of students. In his work there is much to commend. The details are well selected, related, and grouped. We trace with growing interest the progress, decade after decade, of discovery, exploration, and occupation. The obstacles to advancement, owing to the face of the country, climate, conflicts with savages or between civilized nations, and blunders in economics, are fairly presented. The careers of Marquette, with many other missionaries as self-sacrificing—of Joliet, La Salle, Tonty, Iberville, Bienville, and later of several English and Spanish leaders—give a continuity to the historic chain. Everything is set forth from a Western or Mississippi Valley standpoint. The primitive geography at every point possible is brought in touch with that of the living present. Popular errors on this matter are corrected, as where Kaskaskia is shown to have been at first not at its present location, but far up the Illinois River and near Starved Rock.

The two chief lessons, however, of Mr. Wallace's book seem to be these: first, the inferiority of the French settlers of the West to the English who settled the Atlantic slope. The latter were largely a sort of martyrs who had dared dissent from opinions prevalent where they were born, and had pluck enough to suffer for the faith that was in them. The former were not of this class; no Huguenots were allowed among them. The second lesson is that French colonization, even though it had been tolerant of Huguenots and had brought over a half a million of them, must have been a failure. It furnished no school of self-government like New England town-meetings, nothing analogous to the intellectual discipline afforded by Puritan common schools. Hence, at best, it could have developed only a lower type of civilization than that, formed at the East, which overflowed the Alleghanies and fertilized the West. Anglo-Saxon predominance in the great valley is a clear survival of the fittest.

Mr. Wallace's index of seventeen pages is not a mere list of names, but it explains in most cases what those names indicate. The title of his book is too long. Titles and epitaphs cannot be too short. His vocabulary inclines to be verbose and grandiose. His book would be more readable if various documents and statements were either greatly condensed or relegated to an appendix. He seems to know just enough French to misquote, for he

prints *Le* État, *Le* Baye, etc. He is incredulous about the discoveries of Radisson, but is ignorant how to spell his name. Many proper names he prints with variants in spelling. We find not only Zenobe, and Zenobius, but *Zenobious* (p. 85). Nor are other words better printed. "The King granted Tonty three hundred *livers*" (p. 84). Errors of this sort, either scriptorial or typographical, are inexcusably common. Space forbids noticing more than one mistake in fact. According to Mr. Wallace, Joliet, on returning from the Mississippi, "passed down Lakes Huron, Erie, and Ontario" (p. 66). But Joliet himself says that on that journey he passed down *forty-two* rapids. This he could not do on the lakes and St. Lawrence; therefore he came down the Ottawa, in which they are multitudinous, and which afforded a route far shorter and safer than that by the lakes.

Barlaam und Joasaph: Eine bibliographisch-literaturgeschichtliche Studie, von Ernst Kuhn. Aus den Abhandlungen der k. bayer. Akademie der Wissenschaften. I. Classe. XX. Band. Munich. 1893.

Few works of the legendary sort appeal to so many different interests as 'Barlaam and Josaphat' (or *Joasaph*, to use the better form). Its importance to patristic students has only been emphasized by Mr. Armitage Robinson's recent discovery that the Greek version contains a large fragment of the Apology of Aristides. It is of considerable value to the historian of dogma. To the Orientalist it offers a number of attractively knotty problems. The investigator of mediæval literature finds much that is instructive in the study of its transmission from people to people, and, in particular, of the enormous vogue which some of its parables attained—notably the Trumpet of Doom, the Man in the Pit, the Fowler and the Bird, the King for a Year, and the Three Caskets. The amateur of the curious will always respect a document which effected the introduction of Buddha, as a Christian saint, into the Roman Menology and the Greek Menæa. The enthusiast who dreams of a universal religion may well find aid and comfort in the ease with which a Buddhistic legend adapted itself to the edification of Mohammedans and Christians alike.

It is therefore with no common satisfaction that we welcome a thorough discussion of this work from so well equipped a scholar as Ernst Kuhn. The careful treatise of Zotenberg, which appeared so recently as 1886, was quickly made obsolete by the discovery of unknown texts—including one in Arabic and one in Georgian. Hommel's appendix to Weisslovits's 'Prinz und Derwisch' (1890) discussed these texts and summarized the investigations of Baron von Rosen, but arrived at results which merely signalized the need of further study. His acceptance of the theory that the Greek was translated from the Georgian was almost a challenge, and many of his own conjectures were of the boldest. Kuhn has gone over the whole ground afresh, and has reached conclusions which are vastly more satisfactory than Hommel's—conclusions which may, to be sure, admit of modification in details, but can hardly be shaken in the main unless by the turning up of further material.

Kuhn rejects the theory of Von Rosen and Hommel that the Greek text is derived from the Georgian, and upholds the date (seventh century A. D.) assigned to it by Zotenberg. Both the Greek and the Georgian, he maintains, are derived from a common original, which may probably have been written in the Christian-Palestinian dialect of Aramaic. This original, in common with the non-Christian Arabic forms of the legend, he derives in its turn from a lost Pahlavī version. This last he supposes to have been composed by an Iranian Christian who took his materials, not from any written life of Buddha, but from current traditions with which he was familiar. The purpose of the work is conjectured to have been to counteract Buddhistic proselyting. The bold, but hardly improbable, conjecture is ventured that two Arabic biographies of Buddha, mentioned by the Fihrist, were, in their Pahlavī form, the very treatises which the author wished to oppose. The Greek 'Barlaam and Joasaph,' Kuhn continues, is no mere translation, but a free working-over of the legend with large additions of a theological cast. These inferences are drawn after a searching examination of the documentary evidence, and are supported by an array of testimony not more remarkable for its learning than for the acumen with which it is interpreted.

Nearly half of the monograph is taken up with what may be called the modern history of the legend. By translations from the Greek and more especially from the mediæval Latin version of the Greek, 'Barlaam and Josaphat' was made a part of almost every literature of the world, and these translations are catalogued and classified by Kuhn with a clearness and a fulness of bibliographical detail that will make the second part of his book indispensable to students of mediæval literature. The separate parables also receive elaborate treatment. The attention of Chaucerians may be called to page 82, where "The Pardoner's Tale," an analogue of which is contained in Ibn Chisdai's Hebrew adaptation of 'Barlaam,' is richly illustrated. Two or three additions might be made to this page, but they are of small consequence. Of somewhat greater moment is the omission of the Croissant episode in the romance of 'Bauduin de Sebourc' from the list of Old French versions of 'Barlaam,' but this is an omission which all previous investigators seem also to have made. The curious rhyming chap-book, 'The Heathen's Conversion, the Life of Jehosaphat,' has, naturally enough, also escaped the notice of Kuhn.

An excursus on the appearance of Barlaam and Josaphat among the saints of the Church closes this remarkable monograph, for which no praise can be too high.

The Interpretation of Nature. By Nathaniel Southgate Shaler. Boston: Houghton, Mifflin & Co. 1893. 8vo, pp. 305.

The chapters of this volume were delivered as lectures to the students of a theological seminary. By way of concession to the special interests of the audience, the emotional and the moral and religious traits in the characters of the lower animals and men are given particular attention. A correct interpretation of nature should be a synonym for the ordinary term natural science; this discussion is somewhat broader and treats of the science of the day in connection with religion, laying stress on the relations between knowledge of nature and religious theory. The book is a good conservative summary of present results in science, with speculations on future scientific progress and on consequences in religious development.

Excessive caution and suggestion rather than positive assertion are everywhere patent. The training of a naturalist seldom induces readiness to accept and teach conclusions founded on faith. The differences recognized by this author between the scientific and the theologic explanation of nature are intimated in the remark that the latter "necessarily dwells on large matters which are to be accepted on the basis of faith alone." It is not easy from these pages to determine the exact condition of Prof. Shaler's religious belief, yet a tolerable idea may be secured from statements in substance like the following: Man should find his heaven about his doors in this world; the admonitions from the world of fact in favor of right doing and against evil are as mandatory as any which have been received from the realm of the supernatural, but the voice of nature appeals to trained ears, while a blind faith is found among all men; in a belief based on experience there is but one kingdom, one order, one control in the universe; materialists and spiritualists may eventually be expected to harmonize through the growing conviction that all matter is but a mode of action of energy; the practical unification of religion and science appears inevitable, though the steps may not be foreseen; the investigator, having exhausted the field covered by his narrow vision, resorts to supposition more or less mystical concerning the actions or purposes of the forces of nature, and is thus led into the paths of the theologist, into the domain of faiths, where approximation to truth must lead to harmony; the primary effect of union will be abandonment of the conception of two distinct realms, the natural and the supernatural, and the acceptance of the belief that the universe is one great field through which the spirit of man is to range with ever increasing freedom; it is by no means certain that the fit harvest is personal immortality, but, so far as we can see, the unknown continuation of the known is best satisfied by the hypothesis that life is in some way perpetuated with all the personal profit which has been attained by that greatest of all natural results, the individual soul. The author evidently feels that there is something uncertain and insecure in the foundations of our science: this is the feeling of most scientists, and it may be added that many of them have a similar feeling in regard to religion.

A wide range is traversed by Prof. Shaler in the discussion of topics like appreciation of nature, critical points in the continuity of natural phenomena, the place of organic life in nature, the march of the generations, the bond of the generations, the natural history of sympathy, and the immortality of the soul from the point of view of natural science. On topics like heredity, selection, curiosity, love of nature, altruism, sympathy, fear of death, and sorrow, there are sure to be differences of opinion. In a comparison of the mind of the Greek with that of the Roman, it might be preferable to treat Aristotle more as an exception, since his influence on his countrymen, as on their neighbors, was very slight. It might be questioned, also, whether the fear of death is really so great or sorrow so excessive as might be inferred from the text. As for the science of these pages, originality is, perhaps, more apparent in the manner of presentation than in the matter. Quick at recognizing the virtues of the most recent, the author has not permitted newness to interfere with a careful estimate of real values. As much of novelty is found in the chapter on "critical points" as in any; in it, without denying the continuity of causation, provision is made for the unexpected. To illustrate: critical points appear when water is so cold that it can no longer remain a liquid, or so hot that it must assume a gaseous condition. As all matter is

208 Broadway, New York, N. Y.

BENJ. F. STEVENS, President.
ALFRED D. FOSTER, Vice President.
S. F. TRULL, Secretary.
WM. B. TURNER, Asst. Secretary.

Office of the H-O (Hornby's Oatmeal) Company,

71 Park Place, New York City.

The following are the By-Laws of the above-named Company regulating the election of Directors and Officers:

ARTICLE I.—DIRECTORS.

Section 1. The number of Directors of this Company shall be five, all of whom shall be elected, by ballot, by the stockholders who shall attend in person or by proxy at the annual meeting of the Company, and each Director shall be elected to serve for the term of one year.

Section 2. Vacancies in the Board of Directors occurring during the year shall be filled by a majority vote of the remaining members of the Board at any regular meeting of the Board or at any special meeting called for the purpose of filling such vacancy.

ARTICLE II.—OFFICERS.

Section 1. The Board of Directors, immediately after each annual meeting, shall elect, by ballot, the officers of the Company for the ensuing year, and a majority vote of the whole number of directors shall be necessary for the election of each of said officers.

Section 4. In the absence or incapacity of the President and Vice President, the Board of Directors may elect one of their number to act as President *pro tempore*, who, during such absence or incapacity to act, shall have the powers of the President.

Section 7. Vacancies among the officers of the Company during the year may be filled by a majority vote of the directors at any regular meeting of the board, or at any special meeting called for the purpose of filling such vacancy, of which at least five days notice by mail shall be given.

ARTICLE III.—MEETINGS.

Section 1. The annual meeting of the Company for the election of directors shall be held at the office of the company on the first Monday in April of each year, at twelve o'clock, noon, and the Secretary shall send through the post-office, at least ten days before such meeting, a notice thereof, addressed to each stock holder at his last known post-office address. Should said first Monday be a legal holiday, then such meeting shall be held on the next business day at the same hour.

ARTICLE IV.—INSPECTORS OF ELECTION.

Section 1.—Two Inspectors of election shall be chosen at each annual meeting of the Company to serve for one year, and if any inspector shall refuse to serve or shall not be present at the time of election, the meeting may appoint an inspector in his place. For the first year of the Company's business, such inspectors shall be appointed by the Board of Directors.

Dated NEW YORK, February 17th, 1894.

WATSON'S ANNALS.

Annals of Philadelphia and Pennsylvania in the Olden Time;

Being a collection of Memoirs, Anecdotes, and Incidents of the city and its inhabitants, and of the earliest settlements of the inland part of Pennsylvania, intended to preserve the recollections of olden time, and to exhibit society in its changes of manner and customs, and the city and country in their local changes and improvements. By JOHN F. WATSON, Member of the Historical Societies of Pennsylvania, New York, and Massachusetts. Enlarged, with many revisions and additions, by Willis P. Hazard. Profusely illustrated. Three octavo volumes, handsomely bound in cloth. Our price for the three volumes, $5.00.

Every person who is interested in the history of Philadelphia should have a copy of Watson's Annals. It is the only book that is an authority on the early history of this great city. We have purchased the stereotype plates and copyright of this well known book, made a new edition, three volumes, octavo, containing over 1,700 pages and upwards of 70 illustrations of old Philadelphia Landmarks, which we sell at Five Dollars for the entire set of three volumes. It would be a desirable gift to any resident or former resident of Philadelphia.

Letter from George W. Childs.

PHILA., May 12, 1893.

My Dear Mr. Gutekunst:

I have this day received from you one of the most valued presents of my life, the Pastel Life-size Portrait of myself. My friends all say it is the best portrait of me that they have ever seen. It is to be hung in my new office, to go down to posterity with my choicest treasures.

Sincerely your friend, GEO. W. CHILDS.

THE F. GUTEKUNST CO., 712 Arch St., Philada.

AMERICAN HISTORY.

Important Works of Reference.

The Writings of George Washington

Including his Diaries and Correspondence. Edited by Worthington C. Ford. Complete in fourteen royal octavo volumes, handsomely printed from type, uniform with Bigelow's edition of Franklin's Works and Lodge's edition of Hamilton's Works. Limited to 750 sets. 8vo, half leather, gilt tops. The set, 14 vols., to subscribers, $70.

"Under Mr. Ford's able editorship we have at last an edition of the Writings of Washington worthy of the man, his cause, and his country."—*Phila. Times.*

The Writings and Correspondence of Thomas Jefferson.

Edited by Paul Leicester Ford. Uniform with the sets of the "Writings" of "Hamilton," "Franklin," "Washington," and "Jay." To be complete in 10 vols., 8vo, half leather, gilt tops. The set, $50.00.

Volume III. now ready.

Limited edition, 750 copies, printed from type.

"The importance of the edition does not lie wholly in the form in which it is published or in the care with which the contents have been brought together and annotated. Mr. Ford has included in it a large mass of matter either new to print or new to an edition of Jefferson's writings."—*New York Times.*

The Writings and Correspondence of John Jay,

First Chief-Justice of the United States. Edited by Edward P. Johnston, Professor of American History in the College of the City of New York. Complete in four volumes, octavo, uniform in size and style with the editions already issued of the writings of "Hamilton," "Franklin," and "Washington." The edition is, like these, printed from type, and limited to 750 copies. 8vo, half leather, gilt tops. The set, 4 vols., $20.

"The extraordinary value of a correspondence of this nature need not be urged. It is of an importance not second to the writings of George Washington."—*Cleveland Leader.*

Of the limited editions of the above three works, a few copies still remain to be subscribed for. The companion editions of the Writings of Hamilton and Franklin are out of print and have very materially appreciated in value.

The Life and Correspondence of George Mason of Virginia.

Edited by Kate Mason Rowland. With an Introduction by General Fitzhugh Lee. With portrait of Mason and facsimile of the Bill of Rights. 2 vols., 8vo, $8.00.

In Course of Publication.

The Writings of Thomas Paine.

Political, Sociological, Religious, and Literary. Edited by Moncure Daniel Conway. With Introduction and Notes. To be complete in four volumes, uniform with Mr. Conway's "Life of Paine." Price per volume, $2.50.

Volume I. now ready.

Mr. Conway is fitted for the task of editing Paine, as is perhaps no other man in this country, both on account of his intimate knowledge of the details of Paine's life and times, as well as by his varied opportunities both here and abroad of searching among the libraries and archives for anything which could be justly considered as the work of Paine's pen.

The Life and Correspondence of Rufus King.

His Private and Official Papers, for the first time made public. Edited and annotated by his grandson, Dr. Charles R. King. Complete in five octavo volumes. Limited edition, printed from type. The set, half leather, uniform with the Writings of Jefferson and Washington, to subscribers, $25.00.

The task of collecting and editing these very important historical papers was early attempted by his son, Charles King, then President of Columbia College, but little more was accomplished than collecting the scattered material, and it remained for his grandson to edit them and make them public.

Send for Descriptive Prospectuses of any of the above works.

G. P. PUTNAM'S SONS,
27 and 29 West 23d St., New York.

GINN & COMPANY PUBLISH:

THE PSYCHIC FACTORS OF CIVILIZATION. By LESTER F. WARD, author of Dynamic Sociology. 8vo. Cloth. xxi+369 pages. Price, $2.00.

This book is a new presentation of the whole subject of social progress, past, present, and future, written from a scientific standpoint, but in a popular style, and carrying the reader from the most fundamental principles up to their application to the living issues of the times. It seeks to base our civilization on MIND instead of brute force. It breathes a thoroughly liberal, progressive, and American spirit, and cannot fail to be of great interest to all who wish to be acquainted with the advanced thought of the age.

Public Opinion: "It bears a fundamental relation to the great social problems that are now forcing themselves on public attention, and no one who would properly prepare himself adequately to grapple with these problems can afford to neglect Professor Ward's latest contribution to the elucidation of their underlying principles.

MECHANISM AND PERSONALITY. By FRANCIS A. SHOUP, D.D., Professor of Analytical Physics, University of the South. 12mo. Cloth. xvi+341 pages. Price, $1.30.

This book is an outline of Philosophy in the light of the latest scientific research. It deals candidly and simply with the "burning questions" of the day, the object being to help the general reader and students of Philosophy find their way to something like definite standing-ground among the uncertainties of science and metaphysics.

GEO TRUMBULL LADD, *Professor of Philosophy, Yale University:* "I find it an interesting and stimulating little book. Written, as it is, by one whose points of view are somewhat outside of those taken by professional students of philosophy, it is the fresher and more suggestive on that account."

ETHICS OF HEGEL. (Ethical Series.) Edited, with an Introduction, by Professor J. Macbride Sterrett, Columbian University. 12mo. Cloth. xii+216 pages. Price, $1.10.

This volume contains selections from the *Philosophie des Rechts* and other works of Hegel. The introduction gives the relation of Hegel's theory with the ethical thought of his immediate predecessors, and a popular exposition of his own theory.

W. T. HARRIS, *United States Commissioner of Education:* "It is one of the most important additions to the literature of ethics accessible to English readers that has been made in many years."

HUME'S TREATISE OF MORALS: AND SELECTIONS FROM THE TREATISE OF THE PASSIONS. (Ethical Series.) With an Introduction by James H. Hyslop, Ph.D., of Columbia College, New York. 12mo. Cloth. vii+275 pages. Price, $1.10.

THE PHILOSOPHICAL REVIEW.

Edited by J. G. SCHURMAN, Dean of the Sage School of Philosophy in Cornell University, and Prof. J. E. CREIGHTON of Cornell University. Crown 8vo. About 128 pages in each number. Annual subscription (six numbers), $3.00; single number, 75 cents.

The domain of this journal is the field of General Philosophy: that whole which includes along with the older subjects of Logic, Metaphysics, and Ethics, the newer subjects of Psychology, Æsthetics, Pedagogy, and Epistemology, both in their systematic form and in their historical development.

Any of the above books sent, postpaid, on receipt of price. Special terms for class use.

We have an announcement in the *Nation* every week, here or just after Schools.

Ginn & Co., Publishers, Boston, New York, Chicago, London

LONGMANS, GREEN, & CO.'S NEW BOOKS.

BY CANON NEWBOLT.

Speculum Sacerdotum:

Passion-tide Sermons

Crown 8vo. $2.00.

Easter in St. Paul's

Sermons bearing chiefly on the Resurrection of our Lord. New and Cheaper Edition in one volume. Crown 8vo. $2.00.

BY WYLLYS REDE, M.A.

The Communion of Saints

By the Rev. WYLLYS REDE, M.A. With a Preface by Lord Halifax. Crown 8vo. $1.25.

"Mr. Rede, as whoever reads the dedication and author's preface of this volume will discover, writes from the promptings of natura affections and deep personal experience. The theological ground covered by these lectures is as old as the Christian Church; but this persuasive, popular presentation of the subject, utterly free from technicalities, gives an irresistible and peculiarly human charm to the familiar truth. . . . We have no doubt that there are still many thousands among our own communicants who will be edified and comforted by the message conveyed in this attractive little book."—*The Churchman.*

BY R. M. BENSON, M.A.

The Final Passover:

A Series of Meditations upon the Passion of Our Lord Jesus Christ.

By the Rev. R. M. BENSON, M.A., Student of Christ Church.

Vol. III. The Divine Exodus. Part I. and II. Crown 8vo. Each, $1.75.

"It is a book which may be used with the greatest advantage by Christians of every school and creed without any fear of being jarred by the conflict of views at variance with their own. For it is not a book of views or opinions, but of deep and profound spiritual devotion."—*Pacific Churchman*, San Francisco.

BY CANON BODY.

The Life of Love

A Course of Lenten Lectures

By the Rev. GEORGE BODY, M.A., D.D., Canon Missioner of the Diocese of Durham. 12mo. $1.00.

LONGMANS, GREEN, & CO., Publishers, 15 East 16th St., New York.

The Nation.

NEW YORK, THURSDAY, MARCH 1, 1894.

The Week.

THE attorney-general's opinion, officially rendered to Secretary Carlisle, that silver certificates are mere warehousing receipts, and not "lawful money," knocks the bottom completely out of Mr. Bland's proposed seigniorage certificates, which are to represent an imaginary gain where in fact there has been a loss to the Treasury. A silver certificate says: "This certifies that there have been deposited in the Treasury of the United States —— silver dollars, payable to the bearer on demand." Now what kind of inscription would he put upon one of Mr. Bland's seigniorage certificates? No silver dollars have been deposited in the Treasury to correspond with them. The bullion bought by the Government under the Sherman act is not worth as much as it cost by 25 per cent. The bullion in the silver dollar is worth only 50 cents. If the Treasury stock were offered for sale, the price would probably fall 25 per cent. more. Now seigniorage represents a gain to the Government over and above the value of the coin produced, and always takes the form of coin. It cannot have any other form. Thus, under the Bland-Allison act the Government bought, say, 100,000 ounces of silver bullion at one dollar per ounce and coined $129,000 out of it. The extra $29,000 was seigniorage, but it existed in a tangible form, and the public bought those dollars and paid gold for them, dollar for dollar, then redeposited them and took silver certificates. Mr. Bland's seigniorage certificates can never "materialize." If his bill should pass, they would be only a shadow of a shade. It does not seem likely that his bill will pass.

The slough of despond into which the Democratic majority of the House has fallen on the question of getting a quorum affords much comfort to ex-Speaker Reed and his friends. They gleefully predict that the Democrats will yet have to come to the method of "counting" a quorum. Many Democrats are said privately to admit the likelihood of this. But a party cannot get along even by the method of counting a quorum unless it can keep a quorum of its own members on hand. The Republicans now sit contemptuously silent in their places, but if they were in danger of being counted to make a quorum, they could easily stop that and compel the Democrats to muster a quorum of their own, by absenting themselves from the hall. The Democrats did that under the Reed rules. Who does not recall the campaign document of 1890, consisting of a picture of the empty Democratic benches? The Republicans passed their laws, not by dint of counting a quorum, but by dint of having a quorum of their own present to vote. The Democrats would be no better off under Reed rules than they are now, if they could not get a voting majority of their own party into the House. Under any rules the thing comes down to getting a majority to vote before it can pass a law.

Mr. Hewitt accounted for the boldness of his remarks at the Southern Society's banquet on Thursday night by saying that he could no longer be suspected of political ambition. That was one of the most biting things he said. Fearless utterance of the truth has become a lost art with the truckling and time-serving breed of politicians, who are most offensive precisely because they dare not run the risk of offending anybody. If abandoning all political hope is the secret of courage like Mr. Hewitt's, a society ought at once to be formed on that principle for the unlocking of honest men's mouths. Then from others than the ex-Mayor we might hope to get that thrill of civic pride which comes from hearing ignoble men and measures nobly denounced. Mr. Hewitt branded Senator Hill full on the forehead as "a mere petty politician, without statesmanship, without breadth or power of intellect, without character, without the right to speak for the great State of New York." The Southern men at the banquet could find no satisfactory answer to his charge that the public men of the South to-day are degenerate successors of Benton and Calhoun, nor can the Southern Congressmen in Washington. His description of Mr. Bland's latest folly as an attempt "to coin a vacuum," or rather "a negative quantity on the other side of the vacuum," was as truthful as was his assertion that the Southern support of such madness is due to "ignorance, crass ignorance." Mr. Hewitt has shown once more that he does not need to hold public office in order to render a great public service.

Mr. Hewitt's frank and searching remarks have created unpleasant emotions among their subjects at Washington, and the chief sufferers by them are declaring, with what he aptly styled that "ignorance which goes forward with the dangerous strength of its own convictions," that he is in his "dotage." One of them says that Mr. Hewitt has "joined that gang in the East who are trying to put their hands into other people's pockets, to rob the people of the West and South." Hitherto the contention of these champions of the people of the West and South has been that their pockets were empty, and that what the champions were in search of were means whereby some of the money of the gold-bugs of the East could be deflected into them. You cannot rob a vacuum any more than you can "coin a vacuum." Neither can you borrow money from a man whom you call offensive names. There are men in the West and South who are able to comprehend these fundamental truths of the business and financial relations of the South and West to the East, but only a few of them appear to get into Congress.

A correspondent asks what is the meaning of the word "coin" as used in the recent issue of United States bonds. There has been so much solemn fooling with this subject by Congress during the past twenty years that any one may be excused for doubts in relation to it. These bonds are issued under the act of July 14, 1870, which declares that they "shall be redeemable in coin of the present standard value, at the pleasure of the United States after ten years from the date of their issue, and bearing interest payable semi-annually in such coin at the rate of five per cent. per annum." The coin then recognized by law was both silver and gold at the coinage ratio of 16 to 1, but practically it was gold only, silver dollars having been expelled from circulation by the laws of 1834 and 1837. In 1873 Congress demonetized silver by forbidding the coinage of the standard dollar at the mint, and by limiting the legal tender of other silver coins to five dollars in one payment. In 1878 Congress, by the Bland-Allison act, restored the silver dollar to the list of legal-tender coins, but provided that silver should be coined only for the Government and in limited amounts monthly. In 1890 Congress repealed so much of the last-mentioned act as required the monthly purchase and coinage of silver bullion, and substituted in lieu thereof the purchase of certain amounts of silver bullion and the issue of legal-tender Treasury notes for the same, and declared that it was the established policy of the United States to maintain the two metals at a parity with each other. In 1893 Congress repealed the purchasing and issuing clauses of the last-mentioned act.

The result of all this is that the new bonds are payable, principal and interest, in silver dollars or gold dollars, at the option of the Government, but that this option is of no consequence, since the duty of keeping the two kinds of dollars

at par with each other is incumbent on the secretary of the treasury, and since the means are placed in his hands for doing so. The very bonds in question were issued for this purpose. This is no hardship for the Government, since it has received the value of 100 cents gold for all the silver certificates and silver dollars outstanding. It was enabled to exact this price by virtue of the limitation placed upon coinage and issue, private individuals not being allowed to take silver to the mint and have it coined for their own use, as they might and still may do with gold. All apprehensions may, therefore, be dismissed regarding the coin in which the bonds are payable, unless it is feared that the United States may repudiate some part of its debts. It should be remarked that all the outstanding bonds (except the Pacific Railroad currency 6s) were issued under the same act of Congress as the new 5s, and are subject to the same interpretation. The Government paid its maturing debts, principal and interest, in gold coin, even during the darkest hours of the war, unless they were specifically payable in some other kind of money. A dollar of Government debt not specially described always meant a gold dollar at the Treasury counter. Amid much folly and some dishonesty this precious heritage has come down to us, and nobody now living will ever see it violated.

The many men of many minds who make up the Senate committee on foreign relations have turned in their several and conflicting reports on the Hawaiian affair, apparently in the amiable desire to please all tastes and fancies. Chairman Morgan, for so ardent a swashbuckler, is singularly moderate. A year ago he was enthusiastic for annexation and loud in praise of Harrison and Stevens. He still thinks those two gentlemen were wise and patriotic and constitutional in all they did, but he thinks, as well, that the flat reversal of their policy by President Cleveland and Minister Blount was also wise and patriotic and constitutional. They are all honorable men, in fact, according to him, except the Queen, upon whom he is very severe as "the author and promoter of a revolution in Hawaii." Why the revolution went on after she had "postponed her determination" to have one, is not very clearly explained by Senator Morgan. The sceptical, however, will see some light thrown upon this mystery by the extracts published from Mr. Blount's testimony before the committee. He told of being approached two years ago by Thurston, when he (Blount) was chairman of the House committee on foreign affairs, to find out whether the Democratic party could be brought to favor the annexation of Hawaii. Even more significant was Secretary Foster's going to him with Stevens's famous letter of November 20, 1892, heralding the "golden hour near at hand," with the request that Mr Blount would try to bring his party to support the scheme of annexation. After this, the virtuous surprise of Secretary Foster, three months later, at the "unexpected" revolution and intrigue for annexation was about as fine a bit of comic acting as the annals of the stage can show any Presbyterian elder ever to have achieved.

What the *Tribune* has certified to be "the prosperous republic" of Hawaii, would appear from its own Honolulu correspondence of Thursday to be neither prospero us nor a republic. President Dole is said to recognize the fact that the provisional government has "outlived its usefulness," and to be engaged in drafting a constitution. What this is to be is explained more fully in the *Sun's* correspondence, where we read that there is certain to be a denial of universal suffrage in the election of "the members of the upper house and of the general Government." "This may not seem republican," says the correspondent gravely, but then we ought to remember, he adds, that "a republic in the full acceptation of the term is no more practicable in Hawaii than it is in India." In addition to these troubles relating to the form of government, there is a tremendous row going on already about "the offices." A great many patriotic Americans are on the spot, some of them late arrivals, who view with deep disgust the action of the oligarchs in keeping all the offices for themselves and their friends, and who are clamoring for some more representative government—in other words, one which will give them a good place on the pay-roll. They very properly call themselves the American League, and their ranks are said to be recruited every steamer by patriots out of a job in this country. They are united and determined, they are right up to date in the methods of American politics, and are bound to make the old-fogy members of the provisional government divide the spoils with them or quit their fooling altogether. On top of all this there is a burning Chinese question, a Japanese question still hotter, and a Portuguese question fully as hot. Taking all the indications together, it is clear that the era of theatric government in Hawaii is rapidly drawing to a close, and that the revolution must either go forwards or backwards. It cannot stick half-way down the slope much longer.

Full returns of the recent election in Pennsylvania show that Grow's majority for Congressman-at-large closely approaches the phenomenal figures of Cleveland's majority over Folger for the Governorship of New York in 1882. The Democratic candidate in this State twelve years ago received 192,854 more votes than his opponent, while the lead of the Republican candidate in Pennsylvania last week was 187,819. There was a falling off of about one-fifth in the total vote from the figures of the corresponding election for Congressman-at-large in 1892, but the Republican vote is well up towards the record then made. The showing for the two parties is as follows:

	Rep.	Dem.	Rep. maj.
1892.....	512,557	448,714	63,843
1894.....	486,028	298,209	187,819

Everything indicates that many thousands of Democrats are so much disgusted with the record of their party to date that they went to the polls and voted for the Republican candidate, while many thousands more refrained from voting altogether.

Senator Hill makes known the fact that he does not desire or intend to run for Governor of New York this fall, as rumor has been saying he did, and that he expects to see Gov. Flower renominated. It would be a very poor year for Mr. Hill to run, since there would be nothing for him to "trade off" in return for Republican votes. Then, too, the Maynard incident and the rejection of Messrs. Hornblower and Peckham are still fresh in the public mind. If, under these conditions, Mr. Hill were to seek an expression of popular opinion upon himself as a statesman, he might get one very similar to that which his friend Maynard received. His withdrawal is a sad blow to Republican hopes, for it deprives them of the weakest opposing candidate that they could expect to have. They will need to have a very weak candidate against them if Platt's leadership is continued till the next campaign, as now seems inevitable. He has succeeded already in greatly damaging the brightest prospect his party has had for a quarter of a century; and instead of having a "sure thing" of this State in the next election, which everybody thought it had after the last election, it has merely a fighting chance, dependent entirely upon the factional quarrel in the Democratic ranks.

A curious illustration of the ignorant comment often made upon public affairs is found in these remarks by a Republican organ in New Hampshire, the Manchester *Mirror*:

"It is a parody upon justice when John Y. McKane is sent to the penitentiary for election frauds, and the man in whose interest these frauds were perpetrated and whose success was accomplished by them acts as President of the republic. Cleveland should pardon McKane at once and appoint him to an honorable office, or resign."

These frauds were really committed in

the interest, not of President Cleveland in the election of 1892, but of the Democratic candidates last fall for judge of the Supreme Court in the district containing Gravesend, and for judge of the Court of Appeals, both of whom were defeated by great majorities. The suggestion that Cleveland should appoint McKane to an honorable office recalls the fact that Harrison did appoint McKane's man to the office of United States marshal, whose duty it was to supervise the administration of the federal election laws for the prevention of election frauds! McKane turned the Democratic majority of 372 in Gravesend in 1884 into a majority of 436 for Harrison in 1888.

The bill incorporating the "Provident Loan Society of New York," which has been introduced at Albany, ought to become a law without opposition. Its object is to empower some of our most charitably-minded and public-spirited citizens, including Mr. Hewitt, Mr. Fairchild, the Rev. Dr. Greer, Mr. John S. Kennedy, Mr. William E. Dodge, Mr. Charles S. Smith, and Mr. Seth Low, to establish pawnbroking agencies for the benefit of the poor. The object is to give loans on the most reasonable terms possible to persons in distress who may be vouched for as worthy to receive such aid. The business will be conducted on humane principles, and money will be lent on the most generous terms consistent with business considerations, and in such ways as to encourage repayment and redemption of the personal property pledged. Payments will be allowed in instalments, and in various ways the society will endeavor to aid deserving people who are in distress through sickness or enforced idleness, to tide over the period of temporary misfortune with the least possible permanent loss and with entire self-respect. It would be difficult to conceive of a more deserving form of genuinely helpful charity than this is, and we presume that there will be no opposition to it among the members of the Legislature.

"This is a very religious community," wrote a traveller in the remote West to his friends some fifty years ago; "the people carefully observe the scriptural injunction which says, 'Let God be true, but every man a liar.'" This scriptural injunction must have been in the mind of the writer of a report on the Wilson tariff bill for the Portland (Ore.) Chamber of Commerce, which begins as follows:

"The Wilson Bill.—The so-called Wilson bill, more nearly a free-trade measure than has been the law of the land for more than forty years, has already passed the House of Representatives. The only chance of defeating it is in the United States Senate. It not only strikes at nearly every mining and manufacturing interest, especially in the Northern States, but it absolutely sounds the death knell to several interests in which the State of Oregon is deeply interested."

Forty years! That term, of course, includes the Morrill tariff of 1861 and the tariff of 1857. As the report of this romancer goes on to describe the approaching death of the wool industry in Oregon, we will compare the Wilson bill with those tariffs as to wool and woollens:

	1857.	1861.	Wilson bill.
Wool	virtually free	3c. per lb.	1c.
Blankets	15%	6c. & 25	25
Flannels	19%	25	35
Carpets	24%	30	30

There was no duty on coal in the tariff of 1857. There was no duty on iron ore or on copper or copper ore in the tariff of 1857 or in that of 1861. In fact, the Wilson bill is, on the whole, more protective than the later Morrill tariffs of 1862 and 1864, if we take into account the internal taxes on manufactures which then existed but have since been repealed.

Much of the football furore, both in the colleges and among the public, has been due to the popular passion for *excess*, which the newspapers all cultivate, and which most instructors of youth do little or nothing to repress. A disposition to "hysterical excitement" is, in fact, in many quarters cultivated as a peculiarly American and very valuable quality. President Eliot of Harvard, in his annual report, says of athletic sports in colleges, when "exaggerated":

"They induce in masses of spectators at interesting games an hysterical excitement which too many Americans enjoy, but which is evidence, not of physical strength and depth of passion, but of feebleness and shallowness."

This is lamentably true. The typical "good American" of the newspapers and public dinners is nearly always in a state bordering on frenzy about everything which interests him, and he cultivates this tendency as a sign of something new and great in the moral and intellectual world; the fact being, as President Eliot points out, that it is a sign of weakness, and, he might have added, of barbarism. The savage is the most excitable of men, and he cools down as he becomes more civilized and faces life with more and more composure. After a football match, the victors, far from seeking to display a modest stillness and humility, a manly Greek horror of excess, seek to indulge in every form of extravagant rejoicing—yelling, howling, jumping, drinking, singing, and dancing, till the college yard resembles an Indian village after a successful raid. In some colleges these saturnalia are encouraged and even promoted by the faculty. They come out on balconies and rejoice to see their students converted into an uproarious mob. They even furnish wood for the bonfire. The man who displays least self-control is the hero of the hour, the most thoroughly "American" of the crowd.

The effect of this sort of training on our politics is very unfortunate, and particularly in our foreign relations. It makes all rational—much less, informed—discussion of foreign complications very difficult, and in some cases impossible. The minute a difference arises with a foreign power, "the good American" falls to jumping, howling, singing and dancing, and waving the flag, and thinks it disgraceful or unmanly to reflect upon the matter, or see what the law is. This is often true of college graduates; it is doubly true of plain people all over the country. They feel that their first duty to their country is to keep alive a state of excitability and unreasonableness, and they suspect those who advise calm and consideration, of secretly plotting against their peace and dignity. But the really great things of the world have been done by self-contained peoples who kept their emotions within bounds. The Greeks, the Romans, the English, and now the Germans, are all peoples who have had the great art of keeping cool, and who have made the greatest figure in civilization. The hysterical, the boastful, the noisy surely go to the wall in the great struggle of the nations. Moderation in all things ought to be taught in all our colleges, and the things which make for extravagance and violence and tomfoolery and the suppression of the reasoning faculty, to be discouraged.

New Zealand is trying to bring to justice a set of pious swindlers worthy to be named beside Jabez Balfour, whose extradition from Argentina has been so eagerly sought by his enraged victims in England, and apparently will be granted. The leading members of the New Zealand firm of Harper & Co. were two brothers, sons of the bishop of the colony, who were particularly devout churchmen and kept up great establishments where exclusive society and charity went hand in hand, and where aristocratic tourists from England were handsomely entertained and as handsomely let into "good things" for their money. The smash came last year, when the firm failed for $1,250,000, with $250,000 secured to favored creditors, and no other assets whatever. Among the unsecured creditors figure many well-known Englishmen, like the brother of Sir John Gorst, who is down in the schedules for $95,000, and the Right Hon. A. J. Balfour, for $45,000. The combination of high interest and eminent piety had proved too much for these credulous investors, and the million dollars which they turned over to the firm is now reported by the committee of creditors to be "absolutely lost." One of the bishop's sons has fled, and the indictment against the other is quashed. They may yet set up in London or New York and resume operations on a larger scale. Certainly the stock of the gullible in either city is by no means exhausted.

NO QUORUM.

THE state of affairs in the House of Representatives is this: A considerable number of members, under the leadership of Mr. Bland, desire, and have through all the month of February desired, to pass a bill. They constitute a majority of the members present. At every possible opportunity some member opposed to the bill raises a question of a quorum of the House being present. A count is thereupon ordered; less than a quorum answer to their names; a call of the House is ordered; the Speaker's warrant to arrest absentees is issued, and the sergeant-at arms, through his deputies, proceeds to hunt them up, in town and out of town, and arrest them and bring them to the bar of the House. When they are caught and brought in, they deny the legality of their arrest, or denounce it as an abuse, or give excuses, sometimes penitent and sometimes humorous. There may be then show of punishment in the temporary infliction of a fine, with the understanding that all fines will be remitted when the session ends. As a rule, an invariable rule, no one is ever punished. When a quorum is thus procured, the House resumes business. The business consists for a time in dilatory motions. Then there is another absence of members, another count, another call of the House, more arrests, more excuses; and so the thing goes on.

This state of affairs in the House of Representatives is not new. There has never been a Congress, so far as the memory of man runs, in which it has not occurred. It certainly has happened often, and it certainly will happen again. Tradition has preserved innumerable stories of the shifts of old stagers in avoiding arrest, in coining excuses, and the like. The experienced member, like a sensible man, does not spend the weary night in the fetid atmosphere of an ill-ventilated hall. Neither does he go to bed in his own house or hotel or lodgings, where the sergeant-at-arms can find him and ruthlessly order him to get up and dress and come out in the chilled night air and be laughed at when he is marched up to the Speaker's desk. He goes to some friend's house, or gets a friend to take a room at a hotel and register while he slips up and occupies the friend's room; he takes a train and goes to Baltimore, where he enjoys the hospitality of an inn, and the next day expresses his regrets to the House that he had been misinformed by the people of Baltimore, and led to believe that there were no return trains to Washington after sunset.

At the same time in the Legislature of New York there has been no such state of affairs, and, so far as the memory of man runs, there never has been. There may have been a call of the House to bring in members to vote for a bill, but never to vote against one. It is in the House of Representatives that the leader of a victorious column raises recruits for the enemy. Why this difference between the national and State legislatures? The members of the latter are not men of greater ability or wisdom than those of the former. They are certainly men of much less legislative experience, and consequently are more under the control of their party leaders. Why is it that in one legislative body there is this frequently recurring condition of affairs, and that in the other it never exists?

The reason is that, in the State of New York, laws can be enacted only by the majority; but in Congress we are subjected to what may be termed the legislation of the minority. There are 128 members in our Assembly, and it requires the votes of 65 to pass a bill; in the House of Representatives a bill may be passed not only by a minority, but actually by one-fourth of the members of the House plus one. For simplicity of illustration, let it be assumed that the House consists of 200 members. Of these, 101 will constitute a quorum, and 51 will be a majority of the quorum and sufficient to enact the most important, the most far-reaching, the most injurious statute that partisanship or folly could have framed.

The principle of the Constitution, a principle which we have all been taught to respect, is undoubtedly that the majority shall rule; but a minor provision, in what might be called a code of procedure for the practical working of Congress, unfortunately contains a brief provision which enables a minority to rule. The fifth section of Article I. says: "Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day," etc., etc. It will be observed that the Constitution does not say that the majority of a quorum may enact laws, but that undoubtedly follows from general usage and parliamentary law. It is singular that in the Convention the drift of discussion was the other way. Mr. Gorham "contended that less than a majority in each house should be made a quorum, otherwise great delay might happen in business." Mr. Mercer "was also for less than the majority"; "he was for leaving it to the Legislature to fix the quorum, as in Great Britain, where the requisite number is small and no inconvenience has been experienced." Mr. Gouverneur Morris moved to fix the quorum at thirty-three members in the House and fourteen in the Senate. Mr. Gerry "seemed to think that some further precaution than merely fixing the quorum might be necessary"; "he proposed that the number for a quorum in the House of Representatives should not exceed fifty, nor be less than thirty-three." At that time the prospective numbers of the two houses were in the Senate twenty-six and in the House sixty-five. The fear of not having members enough to do business was a case of well-founded apprehension. The first Congress had to wait from the 4th of March to the 28th of April before a quorum appeared. The fear of legislation by a minority did not disturb the Convention.

It cannot be denied that the case is involved in those moral perplexities which confuse men's minds and leave the less scrupulous of them free to do that which will best serve their own side. One party is trying to accomplish something according to the forms prescribed by the Constitution, and the other is trying to maintain the general principle of the Constitution that this something must be accomplished by a majority of the House and not by a minority. It is not really a case of minority against majority, but of minority against minority. On one occasion Mr. Bland secured 164 votes in favor of the bill, yet could not pass it. If he could have brought in fifteen members to vote *against* it, it would have passed.

This is certainly an anomalous state of affairs where the opponents of a measure can be coerced into assisting to pass it. No men ever have been or ever will be willing to be used by their opponents; and men who resist such attempts generally feel that they have right on their side, and resort to all manner of technicalities or subterfuges to escape bearing a burden which they believe should not be placed on their backs. If Mr. Bland could secure 179 persons to draw his silver-car through the House, there would be speeches and votes against its triumphal progress, but no factious opposition. The good sense, the reasonableness of the American mind would say, "In this country the majority rules, and the minority, having done its best, gives way." But Mr. Bland's 164 men are not able to drag the car through the House; it sticks there, and so he sends out and brings in fifteen men who are opposed to the progress of the car, and who, if left to themselves, would hold it back; and he harnesses them to it and bids them pull as effectively as his own followers. This they will not do. They balk, and as soon as the sergeant-at-arms takes his hand off their shoulders they run away again. They feel doubly bound to do this, partly because they are opposed to the car being wheeled over to the Senate, and partly because it is a matter of honor with them not to be placed in a false position—that is, in a position where, when voting "no," they may be suspected of covertly voting "aye." If fifteen New York members, for instance, were secretly in favor of the bill, they might go in and vote "no" in order to satisfy

their constituents, knowing perfectly well all the while that those fifteen votes in the negative would be just as effective to pass the bill as if they had been changed to the affirmative. No man likes to be placed in a position where his acts and motives are suspected; and in many minds the obligation to pay a debt is greater when it is a debt of honor than when there is a bond in the case. Certain it is, that one minority cannot command the respect of the other minority, and that minority legislation will always be the parent of "obstructive tactics," or "anarchy," or whatever we choose to call it, such as we have seen during the present month.

The evil will require a constitutional amendment to cure it. Such an amendment will be opposed by the men in Congress who have bills to pass, and especially by those who have bills to pass during the short session and in the last days of the session. But such an amendment would stifle many an unworthy job, and would make the country tolerably secure, and would prevent the enormous waste of legislative time which we have seen and shall see again, and would secure the majority of the people against legislation by the minority. One part of the legislative machinery of the general government is defective. It has creaked and rattled and got out of gear, and stopped the movement of the machine often before, and must again. It is always thus with a defective part. The creaking and rattling and obstructing must necessarily recur until the defect be remedied. The plan of counting a quorum, and the plan of fining a member, and all other plans will fail. Men will not be coerced into supporting a measure to which they are opposed. If measures of such importance as will arouse such opposition are to be passed, let them be by a majority of our Representatives and Senators in Congress.

NEO-BIMETALLISM AT BOSTON.

THERE are two distinct novelties in the letter on the above subject from Gen. Francis A. Walker which appeared in Saturday's *Evening Post*. The first new thing we discover is, that bimetallism does not demand the concurrent circulation of the two metals, but is satisfied with an alternate circulation, *i. e.*, with two kinds of monometallism, as was the case in France from 1803 to 1873. The second new thing is, that the neo-bimetallism of Boston is designed to quiet "the feelings of wrong and anger in the West and South so unpleasantly manifest of late years."

It quite takes our breath away to learn that concurrent circulation of the two metals is not an essential feature of bimetallism. We have been attentive observers of the controversy as it has taken place in three international conferences, as well as in Congress and on the hustings *passim*, and we affirm that without such concurrent circulation bimetallism has no popular standing whatever, if indeed it has any other kind of standing. Possibly some people have cherished in their bosoms the idea of an alternate standard as an advantageous thing for the world. We know that Jevons once had such an idea, although his last word on the subject of bimetallism was decidedly adverse to it, either nationally or internationally, as was also the last word of Bagehot. Gen. Walker was himself a member of one of the international conferences referred to, but neither he nor any other member of it alluded to an alternate standard as a desirable thing, so far as the official report informs us.

Now, a word about the West and South. It is a matter of record that the West and South, considered as one group, voted in the House of Representatives for the silver-repeal bill. If no votes at all had been cast by any State north of Maryland or east of Ohio, the repeal bill would still have been passed by more than twenty majority. Neither the West nor the South (nor the East for that matter) makes nice distinctions on this subject. To the great mass of the people the silver question has but one complexion. Only here and there can a person be found who knows what you mean when you talk about a ratio of coinage. Even college graduates who have not given special attention to the subject are puzzled to know the difference between a concurrent circulation and an alternate circulation. "What is the meaning of all this talk about 16 to 1?" said a member of the University Club to a group of his fellow-clubmen one perspiring day last summer when Congress was all ablaze with the subject. Only one member of the group was able to tell him. Very likely this man could tell the difference between ohms, volts, and amperes in electrical science, while the one member of the group who did know what was meant by 16 to 1 did not know and perhaps could not be made to know the difference between those electrical terms. Hence we must not absolutely condemn persons who consider the silver question all one thing and do not divide it up nicely as Gen. Walker does.

The point of all this is, that when Gen. Walker presents the West and South to us as a region to be soothed, he overlooks the fact that they have already had their own way as to the only silver question that the vast majority of them now understand, or ever can understand. Moreover, the organs of public opinion thereaway which were most influential in bringing about the change in their Congressional vote, took decided ground against the alternate standard which Gen. Walker favors. It was precisely because of the danger of slipping to the silver standard that the Chicago *Tribune* insisted, day after day and week after week on the repeal of the Sherman act. So it was with most of the newspapers West and South which favored the repeal, and so it will be now if Gen. Walker brings to their attention a plan for getting on to the silver standard and taking the chances of getting back to the gold standard at some future time. The idea was well expressed by ex-Speaker Reed in a debate with Bland, when he said that what he objected to was not having the double standard, but getting on to the silver standard by inadvertence. Gen. Walker thinks that the West and South will be charmed with the prospect of an increasing supply of money. How such increase is to be had with a system which gives us gold at one time and silver at another, according to the old French model, he does not show. The only present danger as regards the West and South is, that Gen. Walker and his following may persuade them that they have a grievance which they would not otherwise be aware of.

POLITICAL ECONOMY AND THE PEOPLE.

THE fifth part of Palgrave's 'Dictionary of Political Economy' contains, under the head of "Definitions," the following very just observation:

> "It must not be forgotten that the practical usefulness of political economy depends chiefly on its wide diffusion; so that the formation of an economic language understood only by the specialist is highly undesirable. For the promotion of the material welfare of a people few things can be more useful than patient inquiry into the actual meaning of terms like wealth, income, capital, rent, wages, and profits, when used in common language by ordinary people. As soon as ambiguities and inconsistencies are commonly perceived, language may be trusted to find some way of ridding itself of them without the assistance of formal definitions."

This is the deliverance of Mr. Cannan of Balliol College, Oxford, and a very good deliverance it is. It leads us to ask what usefulness political enonomy can have except "practical usefulness." What end can it serve in our day, except that of sharpening the wits of its professors, unless it has wide diffusion among the people and is accepted by them as authoritative teaching? And as a mere sharpener of the wits, in what way is it superior to the schoolmen's philosophy?

In the same number of the "Dictionary" we turn to the economist's new mode of measuring economic quantities —quantities of utility, of desire, enjoyment, price, hire, and so on—and we find this from the Rev. P. H. Wicksteed:

> "When the elements of the theory of dimensions have been thoroughly grasped, it will be easy to apply it to economic questions; and it will be found an invaluable check in the more intricate problems of coördination and analysis. Thus, if the unit of value-in-use or utility be taken as fundamental and regarded as having the dimension U, and if the commodity we are considering be taken as having the dimension Q, then DEGREE OF UTILITY (q. v.) of the commodity, being the rate at which satisfaction is secured per

unit of *commodity* consumed, will have dimensions UQ^{-1}, and will be readily distinguished from rate of enjoyment accruing to the consumer per unit of *time*, with dimensions UT^{-1}. *Price* determined by *marginal* or final DEGREE OF UTILITY (q. v.) will have dimensions UQ^{-1} or P, and *hire*, being price per unit of time, will obviously have dimensions PT^{-1} or $UQ^{-1}T^{-1}$."

We need hardly say that there is very little chance of hire, or price, or satisfaction in consumption, or value-in-use being popularly ascertained in any such way as this. Unhappily, there is still less chance of conclusions reached by such processes as this being generally accepted by the people. And yet the tendency in nearly all the colleges and among all the various schools is to study political economy in this way, by mathematical processes, and to clothe its simplest facts in ingenious definitions, and in truth, as far as possible, to give it the air of a recondite science. The consequence is that we fear its "practical usefulness" is fast disappearing. As long as the people, in these days of democracy, care nothing about it, and do not even pretend to follow its discussions, it can hardly have any more human interest than speculations on the politics of Saturn. It is pleasant to see that so many of our young men are getting good mental exercise out of it, but its influence on human affairs is likely to prove *nil*.

For the discovery of an ethical law of distribution all the younger economists are now supposed to be working eagerly, with diagrams, symbols, tables, and all the other tools of their trade. Its revelation would be worth any money to the civilized world. For, as Mr. J. B. Clark of Smith College, Northampton, informs us in the Dictionary:

"Among a self-asserting people industry loses fruitfulness whenever the belief is widely diffused that products are shared according to an unjust principle. If it were a general conviction that social evolution is in the direction of iniquity—that distribution already robs the workers and will rob them more hereafter—no force could prevent a violent overturning of the social order."

Now, what the economists are contributing to the sum of popular beliefs is, we fear, "the belief that products *are* shared according to an unjust principle." What the "just principle" is they promise to tell us by and by, but decline to state how it is to be discovered. "Ethical science," says Mr. Clark, "has not furnished a clear standard of justice in the double apportionment." We must take leave to doubt whether it is ever likely to do so, and whether any "law" of distribution which the economists bring to light will ever be accepted by the multitude. The rule of distribution which the world has hitherto followed is to pay every man the sum necessary to secure his services—the capitalist what would induce him to invest, the superintendent what would induce him to superintend, and the laborer what would induce him to labor. This is as near as the human race has been able to come to giving people their deserts, and is apparently as near as it can come without the direct interposition of a divine ruler. For no matter what rule "ethical science" (that is, the speculations of a few philosophers) may furnish, the difficulty of forcing men to live up to it will still remain. We shall have to compel capitalists to save and invest, and inventors to invent, and captains of industry to plot and plan, and laborers to work contentedly for less than they think they ought to have. The most hopeful reformer the world has seen has never yet said that he would be able to content everybody. Consequently, besides all our other devisings, we must devise a plan for making everybody do his best against his will.

PROTECTION AND DESPOTISM.

SENATOR HAWLEY interposed in the Senate debate last week to object to haste in passing the tariff bill. He did not believe that the business interests of the country would adjust themselves to the Wilson bill, and intimated that there were thousands of people in his State whose "board and clothing and house-rent depended upon the wisdom of this bill." He affirmed that "to them there was something more important than haste, namely, a small homœopathic dose of justice and mercy."

The Connecticut Senator chose rather an unfortunate day to speak of the industries of his State as in a condition of suspended animation, inasmuch as, at the very time he was speaking, despatches were being sent from his own city, Hartford, and other Connecticut towns giving accounts of the opening of many closed mills. If such things can occur with the date and rates of the new tariff still uncertain, what a genuine business boom might reasonably be looked for with the tariff legislation actually disposed of, any business man could tell Senator Hawley. It is no doubt true that business is terribly hampered by the remaining uncertainties connected with the tariff law. As far as that goes, most business men would agree with Gen. Hawley; but very few of them would agree with him in saying that if the tariff bill were promptly passed as it is, it would be all up with them.

What is most striking in Senator Hawley's view, however, is his tacit admission that we in this country have practically gone over to the despotic theory of government. That is to say, we have come to confess that our prosperity and happiness depend not upon our own industry and enterprise and virtue, but upon the beneficence and wisdom of our rulers. Like so many cringing Orientals, the business men of this country, if Senator Hawley's description of them is correct, are prostrating themselves before the authorities at Washington, as before so many Moguls, Sultans, or Grand Viziers, and begging them to do for them what they can by no means do for themselves. "It is not by our machinery or invention or abundance of raw materials, O Vicegerents of Allah," they cry in chorus, "that we can manufacture and get gain, but only by gracious aid of your Serene Highnesses and Almightinesses." That is the language of slaves addressing a despot, yet it is practically the language which the freest people on earth have come to employ.

The hardiest would scarcely maintain that this attitude, whether wise and necessary now or not, is in keeping with the traditions and the early tendencies of our government. In the last number of the *Yale Review* we find some just and timely remarks, well worth quoting, on the great change that has taken place in the last few years in our ideas of "the relation between the Government and the people":

"We have been taught that the people themselves were primarily responsible for their own happiness or misery; and that while the Government could do something to help them, it could not take this primary responsibility off the shoulders of the freemen themselves. Of late this healthful sentiment has changed. The freeman's view of the functions of Government has given place to that of the serf. We are being taught by many speakers that wages depend not upon the efficiency of the laborer, but upon the action of Congress. We are given masses of special legislation to promote the happiness of all sorts of people; and we are by implication telling these people that, if they are not happy, it is the fault of Congress, and that the remedy is to be found in seating a different man in Congress, who will pass a different kind of law."

How vast this change is since Washington's time may be seen by reading the pleas he was forced to make for sufficient power for the federal Government to enable it decently to exist. In those days there was nothing the people dreaded more than over-government. The strongest argument against the Constitution of 1787 was that it opened the way for Congress to meddle intolerably with the liberty and the property of the individual citizen. What would those jealous freemen say to the spectacle presented by their descendants running to Congress year after year to ask for legislative control of their private business? Could they understand it in the slightest degree? We do not think they could unless they were familiar with the protective legislation of the last thirty years, which has gradually taught a whole generation to believe that it is the duty of Congress to have a fatherly care of every man's business, which, without it, will go speedily to ruin. We recognize the sincerity of many of our excited manufacturers in their delusions about the tariff, but delusions we are sure they are under, and will soon find out themselves. They are like men drowning in two feet of water and calling loudly for help, when all they need to do is to stand upon their own feet.

One of the greatest blessings of the passage of the Wilson bill will be that it will make our manufacturers thoroughly ashamed of their abject professions of helplessness without a tariff.

WOMEN AT THE UNIVERSITY OF PARIS.

NEW YORK, February 18, 1894.

PARIS is the paradise of students, and the University of Paris may be called the paradise *par excellence* of the woman student. It is open to her on precisely the same terms as to men. A diploma from a college, or from a proper preparatory school, or an examination at the university itself, is all that is necessary to admit her to an equal and acknowledged place among the thousands of other students, male and female, on its rolls. Indeed, if she is not studying for a degree, she need not present any testimonials of fitness at all, but may follow any course of lectures or as many courses as she may choose without any preliminaries whatever, and with no more trouble than finding out where the lecture-rooms are, and walking into them, entails. Scores of women, many of them elderly, some even very old, follow the courses in this way, making up, anonymously as it were, their lack of early training, and getting for themselves at least an idea of the higher education they hear so much about.

This is particularly the case at the Sorbonne proper (the original University) and the Collège de France, where the lectures on literature, languages, history, and the like are given. Here the women, both regularly matriculated *étudiantes* and the simple listeners above described, flock in such numbers that the more popular and "ornamental" courses, as, for instance, the History of French Literature in the Eighteenth Century, or "Le Romantisme français et allemand," or "L'Histoire de l'Art en Grèce," are sarcastically called by the angry male students who find themselves crowded out of the best seats, or out of the room altogether, *Cours des Dames*. Often it is the lecturer rather than the lecture that attracts. A brilliant, eloquent speaker, a striking or interesting personality, almost always gathers the women about him by the dozens. Even in such courses, however, as the lectures on Psychology of Professor Ribot (editor of the *Revue Philosophique*), women, old and young, form a large majority of the *assistance*. Many of them are, of course, earnest and capable students, but many others, especially the no longer young French women, are not, and the real "woman student" herself cannot but consider them queer characters for a classroom. Yet there is a pathos about these belated ones too: their presence expresses a need the opportunity to gratify which has come too late. It should also be added that they have their male counterparts to bear them company. The *bemoostes Haupt*, male as well as female, flourishes in these free Paris lectures, which any beggar from the streets may enter and enjoy if he will—and he sometimes does, of a cold or stormy winter day, for the *salles de lecture* are nicely warmed.

This loose and liberal management of the university lectures, though a great advantage, a blessing even, to many, as we have seen, is a very serious disadvantage from a scholarly point of view, for by admitting such a mass of unwinnowed mediocrity—it is not only the women who are referred to now—it lowers the whole standard of instruction. The lecturer who wishes to have his *salle* filled—and what lecturer does not?—is often led into popularizing and embellishing his "style" at the expense of his stuff. To a student coming, as the writer did, from a German to the Paris University this fact cannot fail to be strikingly apparent. There is less earnestness, less depth, less everything that is really worth hearing. Of course, there are profound scholars among these professors of the *cours publics de Paris*, men who have a great deal to teach, and who will not, in imparting it, water their intellectual stock with catching phrases and *jeux de mots* to tickle the general ear; but they are very apt to be left to dispense their unadorned learning to empty seats. An amusing experience related to the writer by the American woman who was the heroine of it is a good illustration of this:

She was a retiring little person, without any pretensions whatever to scholarly attainments and no ambition in that direction. Having chanced to hear, however, through a professor friend, a great deal about a certain distinguished Orientalist who lectured on the ancient Eastern languages at the university, she concluded to go once and hear, or rather see him. Overtaken by a storm one day in the vicinity of the Sorbonne, she bethought herself of this and resolved to improve the opportunity if perchance day and hour should coincide. As it happened they did, and after considerable searching she found the *salle* assigned to him—up two flights of rickety stairs in the oldest part of the old buildings. The room was dingy and very small, but there was a big stove in it, and close to the stove sat a dirty, bedraggled old woman who had evidently come in there to get warm. The only other person present was a fashionably dressed, frivolous Parisienne, whose motive could be only curiosity. The American woman sat down for politeness' sake on a front bench, and a moment later the famous Frenchman entered: an elegant little old man in full evening dress and pearl-colored kids, with the badge of an officer of the Legion of Honor in his buttonhole. He looked through his glasses at the shabby woman by the stove, at the dainty *boulevardière*, and—addressed his lecture to the quiet little American on the front bench. She, of course, followed him respectfully and as intelligently as she could, though his long citations from languages whose very names she did not know were all alike Sanskrit to her ears. When he was through, he addressed her directly in the most kindly and courteous manner, telling her how it touched his heart to find a student, and a woman student at that, so deeply interested in his subject, and promising to advance her in it as far as he could before the semester was over—it chanced to be in the early weeks of the winter term. She had not the courage to be ungraciously frank and tell him that she was there only out of curiosity, and neither knew nor wanted to know anything about those horrible Eastern tongues. She tacitly acquiesced in his assumption that she was a student, and gave him her name and address when he asked them. Next day she received a package of books from him, his own books and rare editions of other works on his subject, and a scheme of study to be carried on in connection with the lectures she would hear from him. Of course, she felt obliged after that to attend his next lecture, when she was the only auditor, the *boulevardière* and the shabby old woman having vanished, not to reappear. And this went on from lecture to lecture to the end of the term, no one else ever coming in. For five months she slaved away at the subject she had been thus forced into with the famous old Academician as self-constituted special instructor. "He was so lovely," she said in extenuation of her cowardice, "that I had not the heart to undeceive him." But she never dropped into another lecture at the Sorbonne just to see a distinguished man.

It is in the *cours publiques*, or "open" courses, of the Faculté des Lettres that these peculiar and decidedly lax conditions more especially obtain. The *conférences*, which are similar in function to the Seminar of a German university, and the *cours fermés*, are much more strictly regulated and are much more serious in themselves. Only matriculated students are admitted, at least nominally, but in reality the rules governing even these are not strenuously enforced, and almost any one wishing to do so may share in their advantages without the required matriculation. Particularly for foreigners is this the case. Both in France and Germany, if the native students themselves are to be believed, the foreign student gets round all such regulations more easily than the native. There is undoubtedly much truth in this statement; and for this reason, and others, a foreign diploma does not always represent as much as an equivalent degree from one of our two or three real universities. The *name* of it is often half the value.

In the more strictly technical schools, as law, medicine, the natural sciences, the conditions are quite different from the *entrez par où vous voulez* of the Faculté des Lettres, and the proportion of women falls at once. A year ago there was but one woman matriculated in the school of law to more than 2,000 men; and in the school of medicine there were about 150 women to over 2,500 men. The number of women auditors (*i. e.*, non-matriculated students) diminishes proportionately, owing to the greater difficulty of getting in. Yet even in these technical courses the door of entrance swings open with an ease unparalleled anywhere else. Many of the lectures, indeed, are free and open to the public, and they draw, though to a very much less degree, the heterogeneous crowds the literary lectures bring together. The laboratories, however, and the clinics of the medical schools, are closed to all but authorized persons. Yet here too the rule does not always hold, and any quiet, studious-looking woman, especially if she have a *serviette de notaire* under her arm, may walk into hospital or clinic without fear of challenge; and of course the surveillance is even less strict for a man. The clinic of the late Dr. Charcot, the famous specialist on nervous diseases at the Salpêtrière, was regularly attended by outsiders of many grades and callings, who followed with intense interest the *tragédie humaine* presented every Tuesday morning in the amphitheatre of the great hospital.

These being the conditions, it is a little odd, perhaps, that that all-pervading female element of Paris, the *demi-monde*, does not find its way in among the many women, more or less serious, who attend the University. It does not happen, however, though they swarm throughout the *quartier* of the schools; and from the writer's observation it would seem that it is the male students themselves who see that it does not. One day at a lecture on anatomy two such women came in and seated themselves quietly enough on the very last bench; but a student down in front saw them and set up a shout, and another took it up, and then another, till finally half the men present were on their feet, yelling, hissing, howling remarks, and stamping their feet till the *demi-mondaines* rose in confusion and fled. In-

stantly quiet was restored, and the professor, who was waiting to commence his lecture, was permitted to proceed. There were twenty or more women, matriculated students and auditors, in the amphitheatre at the time whose presence was no more noted than that of the men themselves. Against the women who have the right to be there, or who show by their manner that their object is the legitimate one for the place, the Frenchmen have no demonstrations to make, and — when there is plenty of room left for themselves—apparently not the slightest objection. Once only in the writer's experience was this rule broken, and then the reason was personal, or rather political.

It was at the time when the Franco-Russian friendship was beginning, and the French students were Russian-mad. While waiting for the professor to arrive, they would amuse themselves by singing, or rather shouting, the Russian anthem. They were doing this one day when a little Russian Jewess came in. She was a regular student, but she was a nihilist, too, and had but lately been arrested by the French police for complicity in some plot against the Czar. Of course the other students had heard of this, and they rose now as one man, hissing and yelling as they had hissed and yelled to drive the *demi-mondaines* out. But this little woman had a right to be there, and she stood her ground, very pale indeed, but unflinching, and looking steadily from one to another till out of very shame they subsided into their seats, and left her to gain hers.

This was an exceptional occurrence. As a general thing the French student conducts himself extremely well toward the women who study with him. He has accepted coeducation, and, barring certain national and individual rudenesses which presumably he is not innately polite enough to be conscious of, his manner to his woman comrade may be said to be perfect. There is no attempt at gallantry, nothing to show that he thinks at all of her sex. In the dissecting-rooms and certain of the clinics where coeducation is put to the supreme test, the Frenchman shows himself in the best sense equal to it. J. B. S.

SOME ITALIAN NOVELS.

ALASSIO, January, 1894.

I HAVE just been reading several Italian novels, chosen a little at random; the effect produced is anything but gay. Two end with the suicide of the hero—or protagonist, if you please, as there is little of the heroic in the conduct of either of them—leaving broken hearts behind; in a third, it is a poor maid-servant who is driven to death in a hospital, while the fourth manages to culminate in a combination of suicide with murder.

The books in question are: 'Il Processo Montegù,' 'Baby,' and 'Tiranni Minimi,' of Gerolamo Rovetta, and 'Ermanno Raeli' of Federico De Roberto. Not many months ago I called the attention of your readers to 'L'Illusione' of this latter author as a work showing rare powers both of conception and execution. Since then, I have taken occasion to read one or two other volumes of his—'La Sorte,' a collection of short stories written, at the age of twenty-one years, apparently under the influence of Verga, and 'Processi Verbali,' another collection, of which I shall speak further on. The present volume bears a tormenting resemblance to the work of Paul Bourget. The likeness may be pardoned to so young a writer—he published 'Ermanno Raeli' at the age of twenty-three—and yet the indulgence is not altogether easy. Leaving the merits of Bourget out of the question, the long drawn-out descriptions of the morbid states of two young persons, both refined, to the point where disgusts are more frequent than pleasures, are a trial to the patience, especially when you doubt if two such beings could really exist, and are sure that, if they did, they could not have been worth all the fuss made over them. To crown the general unpleasantness, the work in this moral clinique is done in the mellifluous style peculiar also to Bourget. As a matter of taste, the honeyed tones, the "pussy-cat" ways of the professor combine ill with the forms, the hues, the odors of disease. For heaven's sake, throw open the window, let in a little daylight and fresh air, and let your charnel-house subjects be treated, with sympathy?—yes, if you like, but also with straightforward common sense.

There is, fortunately, no need of insisting on this criticism in the case of De Roberto. 'L'Illusione,' of which an account was given in the *Nation* a few months ago, shows that the novelist has the right stuff in him, and that he has grown out of the ferment of youth into a healthy manhood. At the age of twenty-two he was melancholy as night out of mere wantonness; three or four years later, if not gay, his seriousness is that of a sound-minded moralist. His subjects are still taken from the fashionable and aristocratic world at Palermo, and their joys and sorrows are, of course, such as human nature undergoes in the circumstances of that society—that is, the pleasures are largely out of the reach of poorer people; hard work, ambition, and a fixed purpose exercise less of restraining influence on the passions and appetites, and there is more of a tendency to turn love-making into a business than among the middle classes. Such society has a glamour for the eyes of youth—for most men, in fact, who are not unusually unworldly or surfeited with grandeurs. It is much to the praise of De Roberto that, while still in the age of infatuations, he could write a novel as coolly unbiassed as 'Vanity Fair,' and without the "sour-grapes" flavor that, according to the standpoint of the reader, gives piquancy to or mars the pages of Thackeray. De Roberto is a judge rather than an advocate.

We are, however, leaving 'Ermanno Raeli' rather too much out of sight—unless it be, as I think, that it is already sufficiently described by implication. It may be taken for granted that the book will be read with more pleasure by the admirers of Feuillet and Bourget, and that, if the age of the author at the time of writing be considered, it may frankly be praised as a work of exceptional promise.

Before the appearance of 'L'Illusione,' even, that promise had been already in part fulfilled. There is lying on my table a book of short stories, entitled 'Processi Verbali,' published only a year after 'Ermanno Raeli,' and a complete contrast to that in every respect except as revelation of talents. No flavor of Bourget in 'Processi Verbali'; if it suggest any model, it is some of the more rapid sketches of Guy de Maupassant, in their brevity and point rather epigrams than stories. There are a dozen such in this volume, scarcely one of which is more than the narration of a single incident, turning at times on a surprise, or presenting some sharp contrast between human acts and professions. And these are told with a freshness, a vigor, a lifelikeness, that makes of each one a little gem.

Their freshness and fascination is, in part at least, the effect of a system adopted for their narration. The title of the book suggests police-court reports, but in his preface the author thus explains it:

"*Processo verbale*, in common parlance, . . . means a simple, rapid, and faithful relation of an event taking place under the eyes of a disinterested spectator. I call *Processi verbali* tales that are the naked and impersonal transcription of little comedies, of little dramas taken from the life (*colti sul vivo*)."

He then goes on to say that, in order to be impersonal, the author must obtrude nothing of himself, no descriptions, no reflections, no analysis of mental states, which can be nothing but more or less happy hypotheses, but must simply let his personages speak and act for themselves. Write a tale as you would write a comedy—merely dialogue and the stage directions that are absolutely unavoidable. De Roberto has adhered strictly to his programme in 'Processi Verbali.' We know that the cleverest scheme will not of itself produce a stirring drama, and this one only prevents the action from being retarded by superfluous properties —impedimenta, in short. But the dialogue, which never relates to anything but the affair in hand, is of wonderful crispness and naturalness, and the effect of these little "reports" is startlingly lifelike. The scenes and personages are all, with a single exception, in humble station. The ignorance, bigotry, and superstition that determine much of the action are of the forms peculiar to Sicily, and yet the human nature displayed is always so true, and therefore universal, that, as with a portrait by Holbein, it is good anywhere.

Is this enough to convey a notion of the freshness and animation of these little "reports"? They have other qualities: they are sometimes touching—once, in the first of the series, of a force of satire that is even terrible. It is to be hoped that their author will be moved to give us another series upon the same lines, especially as a companion volume issued about the same time upon an exactly opposite system—of internal analysis, that is, of motives, with descriptions and the usual paraphernalia of stories—appears to me distinctly inferior to 'Processi Verbali.' This volume, called 'L'Albero della Scienza,' partly because it stands out less from the general run of stories, and partly because it is less indicative of what I find peculiar and charming in the work of De Roberto, I have thought best to leave out of our present discussion.

Gerolamo Rovetta has for a long time pleased his public, not only with novels and stories, but also with plays, the most successful of which, "Scellerata," has been translated into German and represented on the stage of the Burg Theater in Vienna. Some also of the tales and novels have attained to the honors of translation, 'Mater Dolorosa,' the best known of his books, having appeared in both German and Spanish. It has had, too, an exceptional sale in Italy. Now "the rose that all are praising" may very well be "not the rose for me." It is precisely the one that can best afford to dispense with my admiration, and Rovetta's roses are in no want of appreciation. Indeed, it would be hard to refuse them a tribute of praise. They are fine, well-grown flowers, creditable examples of the florist's art. Dropping the metaphor, these novels are well written, the worst of them is clever, and all are pleasant reading. One of them, 'Mater Dolorosa,' may be recommended as one of the best worth perusing among the Italian novels of the day. The Duke, who with but scanty outfit, both in head and heart, makes such a brave show as statesman and leader of opinion, and his daughter, an arrant coquette, vain,

selfish, and empty-headed, are excellent portraits. Others of the personages, in fact, all of them, are clearly discriminated, forcible, and lifelike—at least those are who make but little claim upon our sympathy and respect. The humble youth upon whom the *duchessina* first tries the effect of her charms, and who, after being used and thrown aside, develops into a newspaper writer of radical politics; the same lady's lover during part of her married life; and some of the minor characters, strongly engage our interest.

As I have already hinted, it is to those who are held up for your admiration that you assume a cool and critical attitude. The novel-reader's heart is prone to prefer sinners to saints, and I would not visit our bad taste upon the head of Rovetta were it not that his superior people do even more than usual to injure the effect of his books. The rank and file of the characters are drawn from originals whom we recognize, while the heroes and heroines are moulded of a superfine porcelain clay, such as served for forming the all too exquisite figures of Octave Feuillet. In his days they imposed upon the world, and to those who have known them from their youth up, they may still shine in memory as types of the grace and distinction that one likes to believe once adorned society. But since photographic novels have come in, these exalted creatures have gone out, and bring a somewhat lumber-room air with them on the occasions of their appearance before a sceptical generation. The difficulty with Rovetta is merely that, while he is in general so much of his own time, he is not so frankly and consistently throughout. In 'Mater Dolorosa,' the duchess whose character and sufferings furnish the title to the book is as beautiful as any of those high-born damsels whose portraits adorned the keepsakes of half a century ago, and as self-sacrificing as the pelican or Père Goriot. She is quite as much out of place in her modern surroundings as would be, though in a very different way, *Lady Teazle* at a five o'clock tea of an æsthetic club.

In the 'Processo Montegù' the characters are better assorted. The action takes place in the higher society of Milan. The hero is recognizably a flesh-and-blood creature like ourselves. He is a young man of noble family who ruins himself by an absolute disregard for pecuniary limitations. Otherwise he is a very likable and even admirable fellow—simple, straightforward, with a delicate sense of honor—in short, the fine flower of the virtues called aristocratic. All this does not save him from ruin, and barely from disgrace; in fact, though the world acquits him on the score of the latter, he cannot acquit himself. And it is here that the note of exaggeration begins to be evident. In his despair he not only refuses the happiness offered him by the woman whom he loves and who loves him, but he leaves her desolate by committing suicide. One may allow that the circumstances were such as almost to excuse the morbid state of mind that brought about the catastrophe, but——.

There is another story. An innocent coquette, with pretty, inconsequent ways that secured her the name of "Baby," was the spoiled child of the society of Verona. The ladies petted her, the gentlemen paid court to her, and she was alike graciously indifferent to all. Then finally comes back to his native city the Count di Santasillia, a hero of the refined and disdainful type dear to the soul of Bulwer, bringing with him a heart lacerated by the one love affair of his life—of course, a tragic one. As might be expected, he finds in the society of Baby at first balm, and gradually a new passion, with which she is at the outset amused, and then, as it becomes serious and exacting, bored. This passion, unlike most others, grows from want of food, until the patient is quite convinced of its hopelessness, when, with the magnificent scenic setting of a mediæval castle perched high above the lake of Garda, he drags the lady of his love with himself from the top of a precipice into the waters beneath.

There is a certain brilliancy about the telling of the story, but the melodramatic ending is of a sort so threadbare with use that it cheapens the effect of the whole. It even takes away the touch of pathos from the suicide of Montegù, making it, too, look like a bit of worn theatrical finery, or a needless sacrifice to the convention according to which the romance, if it be at all serious, must end with death or a convent plus a broken heart.

Convention for convention, I think the English ending is preferable: better the altar than the halter. But there is no use in fighting the literary canons of a people, and the tragic dénouement has its rights like the other; only, to be effective, it must be worked by a strong hand and with conviction. The feeling, after reading two or three novels of Rovetta, despite the interest he excites and the real talents displayed, is that the fine people whom he delights in representing are, after all, a wearisome company. The fault of this is partly inherent in them, but is also in still larger measure due to their introducer. Like many others who have been influenced by false ideals, he can make his puppets very lifelike on occasion; but with the principal characters, it is precisely conviction that is wanting. Rovetta made the Duchess d'Eleda so beautiful, so pure, so inhumanly unselfish not because he believed she was all that, or at least to any such degree, but he wanted to create a saint and martyr, and that seemed the way to do it. Grace, distinction, virtues are all perfunctory. With the Count di Montegù he is more in sympathy—up to a certain point he believes in him; but the exaggerated scruples, the selfish suicide, are again perfunctory. Still, 'Montegù' is a good novel, not so strong as 'Mater Dolorosa,' more so than 'Baby,' and nearer than either of these to being a work of genuine feeling. S. K.

Correspondence.

POST-OFFICE, EXPRESS, OR TELEGRAPH.

To the Editor of The Nation:

Sir: I note in your last issue a reference to some remarks of mine before the Boston "Nationalists' Club," in which remarks the *Nation* was mentioned. No speaker can be held responsible for any report of his speech unless revised by himself, especially where, as in this case, an hour's talk is condensed by the reporter, after his own fashion, into a few lines. The statement on which you comment, as amended by yourself, is, however, near enough to what I said; and I referred to the *Nation* only as the ablest exponent of the view from which I dissented—namely, that private service is usually done better than that of the public. Let me add that I was not speaking as a Nationalist, for I should not be recognized as having a full right to that name, but only as an individual observer seeking the truth.

My object was simply to show that, within my observation, and after some personal experiment, I had found the public service to be better done, on the whole, than the private. Of this the post-office was one and the most familiar instance; and I purposely took a case where the public and private service came directly into competition, namely, the transportation from Boston to Cambridge, Mass. My house is about four and a half miles from the heart of Boston. If a friend wishes to send me a message in a hurry, he can send it either by telegraph or by mail. If he sends it by telegraph, he is limited to ten words and they cost thirty cents; that is, twenty cents to Harvard Square, and ten cents for delivery at my door, this last being three-quarters of a mile from Harvard Square. But if my friend simply mails his letter with a special-delivery stamp at the Boston post-office, he can put in any number of words, it costs but twelve cents, and—which is the essential point—I get it quite as soon. That is, the delays incident to preoccupied wires at the telegraph office, interrupted wires on the way, and the like usually quite balance the delay incurred by the longer time taken in sending the mailbags from Boston. This is a competition in which, as any one may see, the mail transportation is heavily handicapped, and yet it does its work as efficiently, so far as I can see, and far more cheaply. Moreover, it does it more and more cheaply as time goes on; whereas the telegraph company has raised its price five cents between Boston and Cambridge within some six years, and may at any moment spring upon us a further advance.

Nor does the fact you mention, that the Post-office Department is run at a loss, sufficiently explain the difference. I have not the post-office statistics at hand, but, as I understand it, Massachusetts—where my instance lies—more than pays for its own postal privileges; and the deficit occurs in maintaining postal routes through thinly settled regions, where the express and telegraph services hardly exist at all, or are too expensive for common use.

I know that in sending parcels to such thinly settled regions as, for instance, Colorado, Alabama, and Texas, I am always urged by my correspondents not to send by express, but by mail, as the cheaper and speedier communication. A friend of mine in one of the highest mining settlements in Colorado does much of her shopping in Boston or New York by mail, and gets in that way all the tea she drinks. As to speed, I had occasion, the other day, to send two books to a friend in a small country village in Massachusetts. One went by mail and the other by express, on the same day. The book by mail arrived two days earlier and at less than half the cost. It is true that the express companies nominally make themselves responsible for losses, while the Government does not; but I have personally found it so vexatious and difficult to obtain from them any redress for injury, that this guarantee seems very trivial. But let me venture to ask the *Nation's* own testimony as to the comparison of methods. The *Nation*, like other New York newspapers, when sending out small parcels of books for review to Cambridge, for instance, usually sends them by mail and not by express. If the express service is really better than the mail, why is this done?

T. W. Higginson.

Cambridge, Mass.

[Because the mail is more convenient, inasmuch as (1) there is but one post-office, while there are several express

offices; (2) there is an hourly messenger service to and from the post-office; (3) the postal tariff is determinable by a pair of scales, and is the same for all distances, which the express is not; (4) there is no giving or taking of receipts, in the case of parcels having but a nominal value; (5) time does not, as a rule, enter into consideration.

We will now tell our little story as to the competition of telegraph and special delivery. A gentleman doing business in this city while residing in a thriving suburb within twenty-five miles of Wall Street, recently found unexpectedly that he should be kept from returning home for two or three days. To inform his wife, he chose the special delivery rather than the telegraph, and on the third day rejoined his wife to find her distracted by his absence. The postmaster had withheld the letter, on the ground that the special-delivery stamp stood for postage due!—Ed. Nation.]

To the Editor of The Nation:

Sir: In the last number of the *Nation* (No. 1495) you truly state that, "in drawing the line between the things which should be done by Government and the things which should be left to private enterprise, we have, as in all other transactions of life, to use judgment and pay attention to human experience, just as a householder does." I believe that it is possible at the present stage of economic science to lift the findings of experience under this head into a general principle, and to give to that principle the form of an explicit and scientific statement, according to the varying ratios of value-in-use and of value-in-exchange. Where products or services have a value in exchange which suffices to insure a public supply that shall be adequate to meet the public demand, we have the conditions under which such products or services may be best left within the domain of individual enterprise. But where the value-in-use of a given product or service is inestimably great as compared with the value-in-exchange, insomuch that the public welfare is liable to suffer damage from a dearth of production or service, we have the conditions under which the public administration may or must be invoked, and may or must supersede a dependence on private enterprise.

For it is important to observe that no hard-and-fast line can be drawn at all stages of political and economic evolution between the things which should be done by Government and the things which should be left to private enterprise. The line will vary according to the varying ratios of value-in-use and value-in-exchange as applied to different commodities and services at different stages of social culture and of economic development. Moreover, the purely economic aspect of the question will advance or recede according to the advancing or receding stages of political intelligence and probity in the public service. The politicians who sneer at "civil-service reform" in municipal, State, and national government are clogging the wheels of economic progress under governmental supervision, because they are minimizing the conditions under which it will be either profitable or safe to enlarge the jurisdiction of Government over the things which now fall within the province of private capital. James C. Welling.

Washington, February 24, 1894.

OLD-TIME PENAL JUSTICE.

To the Editor of The Nation:

Sir: In our natural pride at the great advance of humanity in our own times, do we not talk a good deal of nonsense about the older ones, and thus not only do them injustice but debar ourselves from understanding them? I notice in the review of Frederic Hill's autobiography (*Nation*, No. 1495) that Mr. Hill speaks of living in a time when "men were hanged for stealing five shillings' worth of goods." I do not believe any man was ever hanged in modern times for petty larceny, as such; he was hanged as an habitual criminal, a nuisance and danger to the community, and the theft was only the legal pretext. That stock literary "property," the man who was hanged for stealing a loaf of bread for his starving family, is a myth so far as otherwise decent but distressed laborers are concerned, I imagine. Nobody wants to bring back the old barbarities; everybody honors those who suppressed them; but we only damage our own insight by excited distortions of their nature and motive. The world has always been a juster place and safer for decent citizens than most people allow; and the worse any one aspect of it looks, the surer we may be that there were unseen compensations. F. M.

February 23, 1894.

[It is true that the acts in question were not the cause of many executions, since juries could seldom be induced to convict. It is true, also, that most of the persons so convicted were habitual criminals. But Romilly's 'Life' (ii., 336) mentions cases where no previous offence was alleged and the only evidence was negative, *i. e.*, no witnesses were produced to good character; and the impression of bad character created in the minds of judge and jury might often be devoid of sufficient cause. As Dr. Parr says in a letter to Romilly ('Life,' ii., 370*n*), "Dislike from party, quarrels with servants or neighbors, offence justly or unjustly taken in a quarrel, jealousy about game, and twenty other matters of the same sort, frequently induce men to wish to get rid of a convicted person. . . . The rich, the proud, the irascible, and the vindictive are very unfit to estimate the value of life to their inferiors."—Ed. Nation.]

WOMEN AT THE GERMAN UNIVERSITIES.

To the Editor of The Nation:

Sir: I am glad to hear through the letter of "M. F. K." in the *Nation* for February 22 that women *are* being admitted again to the medical lectures at Leipzig. At the time I was a student in that University (89-'91), I was told by a prominent member of the medical faculty that women were not and could not be admitted to the medical lectures, and for the following reason: Some years ago—eight or ten, he said—women were admitted quite generally to the medical as they have continued to be to so many of the other lectures, and a number of Russians took advantage of the opportunity to follow a course of study for which, as is well known, they have a special predilection. Among these women, however, came one who was not only extremely beautiful, but also extremely light-minded. She quite upset the sober German students, and that, too, with deliberate intent—as a woman myself, it is with regret I write it. Whenever she was present, the lecturer found his audience disturbed and distracted by the handsome and coquettish Slav. Moreover, from flirtation with the many she soon proceeded to more serious entanglements with a few, and at last drove one of her admirers to such a frenzy of jealousy that he shot and killed himself. The unfortunate affair made a fearful scandal, of course, and the result was that the medical lectures were closed to all women, by order of the Cultusminister at Dresden.

The professor who is my authority for this story is himself personally in favor of admitting women to the study of medicine, but he, nevertheless, would not admit me to his lectures at the time I mentioned, because, as he said, he could not, in face of the order from Dresden. He, however, repeated for me *privatissime* the same course he was holding in public, giving me freely of his precious time and special instruction. It is such deeds of kindness as this that one who has been the recipient of them never forgets, as your correspondent truly states.

I must differ from your correspondent, however, in regard to chaperones. It seems to me that the need of a chaperone is the very negation of coeducation, and the girl or woman who feels it ought not to attempt to attend lectures with men. The presence of a chaperone under such circumstances is a confession no self-respecting woman should make, *i. e.*, that she is not capable of taking care of herself, or fears the men may think so. Her work should be, and always is when she is in earnest about it, an all-sufficient "chaperone." J. B. S.

New York, February 23, 1894.

GOETHE AND ULRICH VON HUTTEN.

To the Editor of The Nation:

Sir; The English 'Dictionary of National Biography,' in its notice of Anthony Aufrere, in common with a good many other books of reference, ascribes to this writer a translation of "A Tribute to the Memory of Ulric von Hutten, from the German of Goethe." I am unable to find in any edition of Goethe's works such a piece as this, or in any library catalogue accessible to me Aufrere's translation. There are one or two bibliographies of Hutten, but I have not access to them. I should like to be put on the track of Goethe's estimate of "Germany's Juvenal"; perhaps some one better supplied with sources of information will guide me. W. I. F.

Amherst College Library, February 17, 1894.

[The essay mentioned by Mr. Fletcher is probably a translation of Herder's 'Denkmal Ulrichs von Hutten,' which appeared unsigned in the July number of the *Teutscher Merkur* of 1776, and was reprinted in vol. iv. of a spurious edition of Goethe's writings which appeared in Berlin (Chr. F. Himburg) in 1779. It is now found in Herder's 'Werke,' ed. Hempl, vol. xv., p. 355. (Cf. ed. Suphan xvi., pp. 133 and 273.)—Ed. Nation.]

Notes.

Skeat's Chaucer, the first complete modern edition of this writer's works in prose and

verse, with an exhaustive commentary, is to be published in six volumes at brief intervals by the Clarendon Press. The American publishers, Macmillan & Co., also announce a 'Student's Text-book of Botany,' from the competent hand of Prof. Sydney H. Vines.

Ginn & Co. have undertaken, in their "Athenæum Press Series," to represent the course of English literature from Chaucer to the present day by means of selections in prose and verse, edited in separate volumes, and sufficiently annotated for use in the higher education. The editors are Prof. George Lyman Kittredge of Harvard and Prof. C. T. Winchester of Wesleyan, and their scheme of collaboration involves English as well as American scholarship. A beginning has already been made with Jeffrey's 'Essays,' edited by Lewis E. Gates of Harvard. 'Old English Ballads,' by Prof. F. B. Gummere of Haverford, 'Selections from the Poetry and Prose of Grey,' by William Lyon Phelps of Yale, and 'A Book of Elizabethan Lyrics,' by Prof. F. E. Schelling of the University of Pennsylvania, are in press.

The Proceedings of the recent conference for good city government held in Philadelphia are to be printed by the Municipal League of that city at a price not exceeding one dollar per volume. Orders should be addressed to Mr. Clinton Rogers Woodruff, 514 Walnut Street.

Mr. Oswald Seidensticker has compiled for the German Pionier-Verein of Philadelphia 'The First Century of German Printing in America, 1728–1830' (Philadelphia: Schaefer & Koradi). A bibliography of the writings of Daniel Pastorius is prefixed, and the subsequent matter is arranged chronologically as to time, and alphabetically as to place, of publication. Indications of collections containing copies of the several works are given where possible. A facsimile of one of the three German works printed by Franklin in 1730 serves as frontispiece, and for other reasons this catalogue belongs with any collection of Franklíniana. Mr. Seidensticker shows in his preface that three German Bibles were printed in Germantown before any English edition was attempted in this country, and that a German version of the 'Pilgrim's Progress' similarly preceded the reproduction of the original on this side of the water. Pennsylvania naturally, from the character of its immigration, surpassed all the other colonies in the productiveness of its German press. The compiler has very usefully annotated his entries and appended a list of printers and publishers.

Dr. Shedd's 'Orthodoxy and Heterodoxy' (Scribners) is rightly called "a miscellany," and is remarkable chiefly for the small size of the fragments thought worth being gathered up to make a volume. But if, say, the four pages on "The Dangers of Office-holding" seem too trivial for preservation, the thirty-one on "The Union and the War" seem too antediluvian. The sermon bearing this title was preached in this city November 27, 1862—that is, after Lincoln had announced his intention to proclaim liberty to the slaves. Dr. Shedd not only made no reference to this immortal act, but argued against immediate emancipation, and insisted on the right of the Southern States, and of them alone, to deal with the slavery question even after the defeat of armed secession. We know that Lincoln was, even at that time, ready to save the Union with slavery intact, but this folly forms no part of the Lincoln legend; and Prof. Shedd's then orthodoxy in this particular has now become rank heterodoxy.

Mr. W. J. Linton's 'Life of John Greenleaf Whittier' in the "Great Writers Series" (London: Walter Scott; New York: Scribners) is an avowed compilation mainly from two imperfect American biographies, and it hardly challenges criticism that is not directed rather against the editors of the series than against Mr. Linton, who writes with the sympathy we should expect, and with more than the literary grace of his predecessors. The public will now do well to await patiently the appearance of the authorized Life of Whittier by his literary executor, Mr. Pickard.

Harper & Bros. add to their uniform edition of William Black's novels 'The Penance of John Logan' and 'The New Prince Fortunatus.'

The synchronous editions of the Waverley Novels advance with 'Quentin Durward' and 'St. Ronan's Well' in the Dryburgh (Macmillan), and 'The Pirate' in the International Limited (Estes & Lauriat). Mr. Lang, in his preface, compares 'The Pirate' with Scott's Diary, and shows the cramming process which accumulated both local color and character types for the story during his tour among the Orcades in company with the grandfather of Robert Louis Stevenson.

We have already commented at length on the second volume of Taine's 'Modern Régime,' and need do no more than note the fact that his American translator, Mr. John Durand, has rendered his last service to the dead historian in the case of this volume, which bears the imprint of Henry Holt & Co.

Swan Sonnenschein & Co., London, have issued the fifth volume of their 'Public Schools Year-Book,' embodying the usual thorough information concerning the larger foundations, upwards of sixty in number, with appendices naming the successful candidates for military and naval cadetships, the winners of entrance scholarships, the select preparatory schools, etc., and reporting headmasters' conferences and school-anniversary festivals, etc. This knowledge it may sometimes be convenient for American parents to have within reach.

We are glad to see the helpful "Riverside Literature Series" of Houghton, Mifflin & Co. promoted to cloth bindings, very tasteful in every respect. Thus, Nos. 1, 4, and 30 are clapt together, uniting Longfellow's "Evangeline," Whittier's "Snowbound," etc., and Lowell's "Vision of Sir Launfal," etc.; while the "Sir Roger de Coverley Papers" are embraced in the junction of Nos. 60, 61.

The first edition of Sir Archibald Geikie's 'Text book of Geology' (Macmillan) was most favorably reviewed in these columns a little more than a decade ago, and the book has ever since stood in the first rank as a standard of reference throughout the world. The third edition, now before us, is a far larger work than the first, and is in almost all respects thoroughly up to the present state of development of the science. In one point it leaves much to be desired. Though a vast mass of facts and opinions is marshalled in a most orderly and attractive manner, it is comparatively seldom that the author expresses his own conclusions. In avoiding dogmatism he has become quite too non-committal when it is considered that he is well entitled to express his opinion as a first-rate investigator and not a mere compiler.

Dr. James Ellis Humphrey has rendered a real service to science by translating Dr. Zimmermann's 'Botanical Microtechnique' (Henry Holt & Co.). The work is really a treatise on the best methods of microscopic investigations of plants and plant-structures and secretions. It describes in clear language the various processes of investigation, such as maceration, clearing, staining, sectioning, and mounting, devoting about forty pages to these subjects. The rest of the book concerns mostly microchemistry and the investigation of the vegetable cell and its contents. An appendix is devoted to methods of investigation of bacteria. The book is not intended for class-room study; but as a work for reference in botanical laboratories of the higher class it will prove exceedingly useful. It seems strange that neither Dr. Zimmermann nor his translator appears to know of the dropping-bottle provided with a hollow stopper prolonged into a pipette, working by expansion of the air contained in the globular top of the stopper—a most convenient contrivance which is in common use in American laboratories.

Prof. Elmer T. Merrill's edition of Catullus (Ginn & Co.) is a college text-book of more than ordinary merit. The notes are generally judicious and accurate, and we are glad to observe the absence of that prevalent and pernicious fault which consists in suggesting "free" and, too often, inaccurate translations of the text, with the usual result of giving the average student incorrect notions of the real values of words, apart from their use in the passage under consideration. Parallel passages are indicated in reasonable measure. Some few passages of peculiar difficulty might profitably have received fuller treatment, and some traditional misconceptions of a delicate point have been repeated. But the commentary, taken as a whole, is extremely well done. The introduction, though somewhat prolix (50 pp.), is valuable. The book is furnished with a useful critical appendix and with indices. It deserves to rank with the best American work of its kind.

The Department of History in the University of Pennsylvania has put forth number one, a thin brochure, of "Translations and Reprints from the Original Sources of European History," edited by Prof. Edward P. Cheyney. These sixteen duodecimo pages deal with the Early Reformation Period in England. Another series, edited by Prof. James H. Robinson, will illustrate the Modern History of Continental Europe, and a third, edited by Dana C. Munro, will be concerned with Mediæval History. It is, of course, too early to pass judgment on the execution of this design, which can easily be made very useful.

In the October Proceedings of the American Antiquarian Society at Worcester, Mass., Senator Hoar convincingly corrects a charge that his predecessor, Senator John Davis, talked out a session in which the Wilmot Proviso would have been passed as it came from the House. Von Holst has adopted this, and Senator Hoar apologizes for his and Mr. Bryce's occasional errors on the score of "the influence upon their judgment of the class of persons with whom they have chiefly associated here." In the same Proceedings Mr. Franklin B. Dexter has a very curious and valuable paper on "Social Distinctions at Harvard and Yale" in the early days when the catalogue was not arranged alphabetically, and when family, wealth, or other social consideration determined precedence and privilege. Noteworthy is his statement that "there was never any disposition [at either college] to exalt the ministerial order above laymen of distinction." In the Harvard class of 1653, "Joshua Long, son of an innkeeper in England, takes precedence of Samuel Whiting, the son of a clergyman, who was in turn son of a Mayor of Boston"; and the innkeeper was exalted as late

as 1667, but the calling afterwards seemed to lose caste.

The Proceedings of the State Historical Society of Wisconsin of December last contain the announcement that a catalogue of the nearly 7,000 bound volumes of newspapers owned by the society will be ready in the spring. It has been a novel undertaking, and presented special difficulties.

The current *Hartford Seminary Record* attempts an estimate of the Müller Semitic library lately acquired by the Seminary, and pronounces it fit to rank, in printed books (chiefly Arabic), with any similar library on this side of the Atlantic.

The second number of Mr. P. G. Hamerton's *Portfolio* is devoted to "Malta and the Knights Hospitallers," by W. K. R. Bedford, M.A. The illustrations, as might be expected from Mr. Hamerton's experience, are attractive and instructive, although the aquatints scarce have sufficient variety of tone. The letterpress is a curious jumble of topography, antiquities, and history without order or method. Not much can be expected from a writer who solemnly tells us (p. 5), "The fields in March are red with clover blossom; the orange groves are in flower or fruit all the year long, yet there is no vacuity or want of energy about the people." Still, we might hope for accuracy in historical details which are readily accessible; but even in this we are disappointed. The military organization of the Knights of St. John was contemporary with that of the Templars, and was not postponed until after the latter had acquired "so prominent a rank in the warlike concerns of Christendom" (p. 15); nor was it only after the capture of Rhodes in 1310 that the Hospitallers first "began to attract recruits from different countries" (p. 15). When Mr. Bedford says (p. 16) of the unfortunate Djem, the brother of Bajazet II., that "he was transferred to the protection, first of the King of France, and then of the Pope (Borgia), by whom he was poisoned in 1495," he commits two blunders. It was from the hands of Alexander VI. that Djem passed into those of Charles VIII., and the story of his poisoning, though largely believed at the time, is now almost universally discredited. It is to be hoped that Mr. Hamerton will be more fortunate in the selection of contributors to future numbers.

Antarctic exploration is the subject of the first two papers in the February number of the *Scottish Geographical Magazine*. They embody the results of observations made by officers of the Dundee whaling-fleet which spent the winter of 1892-93 in these regions. Among the most important is the remarkable uniformity of temperature which prevailed; 20.8° Fahr. being the lowest, 37.6° the highest, with an average for the three months of 30.76°, the result of four hundred and twenty-nine readings. There is also a paper on the British sea fisheries, by W. L. Calderwood, containing many interesting facts, as well as suggestions as to their proper regulation; and one advocating the teaching of geography by combining physical and social facts.

The veteran African traveller Gerhardt Rohlfs sounds a note of alarm in the Cologne *Gazette* at the recent occupation of Timbuctoo by the French. He fears that the fall into Christian hands of a place second only to Mecca in the estimation of African Mohammedans will lead to a widespread agitation throughout Northern Africa, and possibly to a religious war. No traveller will now be able to cross the desert, and the construction of the trans-Saharan railway is for the present impossible. The true policy for the French to pursue is to declare that they have occupied the city only temporarily in order to re-establish the Government, and that as soon as this is accomplished, they will voluntarily abandon their conquest.

A strikingly graphic account of the closing incident of the Matabele war, the massacre of Major Wilson's force, is given in the London *Times* by Mr. F. C. Selous, the well-known hunter and explorer. It is derived principally from the report of two American scouts named Burnum and Ingram, who, he says, "have rendered most valuable services to the expedition." These men accompanied Major Wilson in his daring pursuit of the king and retreated with him, when attacked by overwhelming numbers, to the spot where he made his last stand. Before the final assault they were sent to seek aid from the main body of the English who were encamped on the opposite bank of the Tchangani, within hearing distance of the battle-ground. It was a desperate task, as they were already surrounded by bodies of natives armed mostly with rifles, but it was safely accomplished, though all in vain.

The new *Revue de Paris* (New York: F. W. Christern) is another rival to the *Revue des Deux Mondes*, and it seems more promising and important than the *Nouvelle Revue*. Its typographic appearance is most enticing. It is edited by M. James Darmesteter and M. Louis Ganderax (formerly dramatic critic of the *Revue des Deux Mondes*). The opening number contains letters by Balzac to the lady he married fifteen years later, Renan's essay on Philo Judæus, the beginning of a story by "Gyp," and a vigorous analysis, by M. Émile Faguet, of the new editor of the *Revue des Deux Mondes*, M. Brunetière. Among the announcements for the forthcoming numbers are serials by M. Paul Bourget, M. Ludovic Halévy, and M. Alphonse Daudet, shorter stories by MM. Henri Meilhac and Henri Lavedan, notes of the table-talk of Victor Hugo by M. Jules Claretie, and reminiscences by M. Sarcey and M. Sardou.

The list of Private Libraries in America now being compiled by Mr. G. Hedeler of Leipzig already includes 500 considerable libraries, but he still desires to obtain, from owners with whom he has been unable to communicate, brief details as to the extent of their treasures and the special bent of their collections. Mr. Hedeler's address is No. 3 Poststrasse.

It appears that the civil service-reform club which has just been formed at Harvard College, derived its inspiration from the collected volume of reform addresses by the late George William Curtis. The impression made by these on a student who assisted Prof. Norton in passing them through the press, resulted in the very encouraging movement to which the Harvard officials have lent prompt countenance. We improve this opportunity to note that the statement, in the volume in question, that Mr. Curtis did not deliver his last address before the Civil Service Reform League in person, is incorrect. He did so on April 28, 1892, and spoke again at the banquet in the evening in his happiest vein.

Many readers will have observed the slip by which, in our Note last week on 'Echoes of Old Florence,' we prefixed "Mr." to "Leader Scott," the *nom de plume* of Miss Lucy E. Baxter.

—No less than one-fifth of President Eliot's Harvard report is given up to the abuse of athletics in institutions of learning whose position in the judgment of the civilized world, as the dean of the Graduate School tells us a little later, finds its final test in "the work of advancing knowledge by the original researches and the joint labors of its professors and its students." President Eliot's objections to the present state of athletics might be enlarged, but they could not be better stated. His reasons for excluding freshmen altogether from intercollegiate contests are impregnable. On the scholastic side, these contests "are peculiarly injurious because they tend to lower the standard of college work at the important epoch of transition from school to college, from a régime of study under observation to a régime of large liberty." On the physical and moral side, in the language of Dean Briggs, "a freshman's whole career is hazarded for a single game with Yale." The remedy indicated is so wholesome that, if carried out, the friends of intercollegiate matches affect to believe it would be fatal to them; and their total abolition will be desirable, according to President Eliot, if the remedy fails. What we miss in his discussion is any attempt to weigh the advantages and the evils of these matches, though it is assumed that there is a tolerable equilibrium. We note that the excessive time bestowed upon athletics has naturally led the faculty to raise the minimum standard of the A. B. degree.

—Other topics of general interest are the newly established "censorship over all the examination papers," with a view to dispelling "the notion that our questions are enigmas for specialists," and establishing the examinations in the confidence of the public; the operations of the Schools Examination Board, by whom "it is the school and its teachers that are examined, not the pupils," at a cost of $120 to $250, as was found in the case of nine secondary schools examined last year; the sudden and rapid growth of the Scientific School, which has now more than twenty times as many students as it had seven years ago; the steady growth of the Graduate School, "already larger than Harvard College was fifty years ago"; the inexplicable decline in the numbers of college and scientific-school graduates in the entering classes of the Medical School; and the attraction of certain courses in the Divinity School for college undergraduates (to the extent of no less than 421 elections). As for the Law School, it has felt, on the whole to its detriment, the efforts made of late years to reduce the college term from four years to three—efforts which President Eliot still approves. The trolley and the electric lights have attacked the efficiency of the Observatory, and threaten to reduce it to the mere function of computing the results of observations at Arequipa and publishing the Annals.

—A four-sheet map of Pennsylvania on a scale of six miles to an inch, colored geologically, has recently been prepared by Mr. A. D. W. Smith under the direction of Prof. J. P. Lesley, and published by the Second Geological Survey of that State. It is a noteworthy addition to our geological libraries. The first effective geological map of Pennsylvania was published in 1858, along with the two large quarto reports by Rogers, then State Geologist. This older map was drawn by Lesley, although his name does not appear on it. The stronger topographical features were sketched in by his expressive hand, and these aided greatly in the interpretation of the geological structure. Twenty-four colors were attempted, but several of them were pale and confusingly similar; yet through the middle mountainous belt of the State the structure was

shown with surprising correctness, judging by the small measure of the changes now introduced there. The new map is essentially a compilation of the separate county sheets of the Grand Atlas, issued several years ago; and, to the general student, the compilation adds vastly to the value of the data represented. The map has, unfortunately, no indication whatever of topographic form, so that in this sense it retrogrades somewhat from the older map—probably because it was felt that, under the sharper criticism of these later years, a sketched topography might be hazardous. Yet we greatly regret the necessity of the omission of so essential a basis, and feel that the poverty of Pennsylvania in this respect is as blamable as the similar poverty of New York; and that both are in glaring contrast to the thrifty progress of New Jersey, whose topographic sheets are probably the best of any State maps yet issued. Under the pretext of economy, but with the practice of penny wisdom and pound folly, the Legislatures of New York and Pennsylvania successfully prevent the undertaking of local topographical surveys—a mortifying indication of the character of the legislators.

—The colors of the new map follow the rather gaudy scale that was adopted on the county sheets; the lithographic work being by Bien, as heretofore in the Survey publications. The formations are as a rule easily distinguished; but we are persuaded that it is a mistake to apply pale, inconspicuous colors to those resistant rock members which determine the stronger topographical forms. In the absence of other indications of relief, strength of color might be employed to designate ridge-making formations, while paler colors were reserved for the formations on which valleys are habitually eroded; but the practice on this map is just the reverse. The Mauch Chunk red shale, for example, which always sinks into valleys, quite overpowers the pale colors of the Pocono and Pottsville sandstones on either side, although they rise in dominating ridges. In comparing the old and new maps, the changes introduced within the middle belt of Appalachian ridges are not conspicuous, as has already been said. The map here repeats the always marvellous lessons of the expression of internal structure in surface form, and of the adjustment of streams to structures, nowhere better illustrated in the world yet mapped. But in the plateau to the northwest, and in the high and low lands to the southeast of the ridges, the new map presents a great body of details not indicated in the older one. Where the plateau is deeply dissected by the west branch of the Susquehanna, the scalloping outcrops of successive formations on the hillsides are well shown—an apparently intricate pattern, but really simple in its scheme. Much additional detail is presented concerning the western coal fields and their areal distribution, as might naturally be expected from the great increase in the railroads by which that former wilderness is now so generally traversed. In the southeast, the mapping of the shales and limestones of the great valley, and of the sandstones and traps of the red sandstone belt, is greatly improved; but much remains yet to be done in the South Mountain region, as is indicated by the recent work of Miss Bascom. The limit of the drift area follows the map of ten years ago by Lewis and Wright; no additional details being introduced concerning the extra-morainic drift or the valley gravel-trains, on whose newer interpretation so great a part of glacial history depends.

—A vigorous protest against the methods of literary history now prevailing in Germany under the influence of the all-powerful school of the late Wilhelm Scherer is raised by Prof. Friedrich Braitmaier in his 'Goethekult und Goethe-philologie' (Tübingen and Leipzig: Gustav Fock). Braitmaier is himself a trained philologist; his 'Geschichte der poetischen Theorien von den Diskursen der Maler bis auf Lessing' has given him an honorable place among scientific students of literature; his criticism is, therefore, entitled to a respectful hearing, and the outcries of indignation which his words have called forth from the reigning school are nothing but an additional proof of the essential soundness of his position. At the outset he sketches, with a few telling strokes, the genesis of the present methods: how the historian Gervinus, than whom none has thus far dealt with German literature in a more comprehensive and truly scientific manner, was forced to the wall by the philologists; how Schiller, whose simple and clear-cut mental outlines offer a comparatively limited opportunity for conjectural interpretation, was thrown aside by the schoolmen; how the enigmatic figure of Goethe was seized upon by the hungry swarm of monograph writers as the most fitting subject for hairsplitting text criticism and scholastic problem-hunting. As a final move, "dry Mr. Philology became allied to bright Miss Feuilleton. Wilhelm Scherer took Herman Grimm to wife. Scherer-Grimm begat Erich Schmidt and the numerous host of professional Goethe philologists." There follows a detailed analysis of the tactics of the new school. The falsification of history in Goethe's behalf, the attempt to represent him as a statesman and patriot of the highest order, the slanderous misrepresentation of such men as Merck, Herder, and others with whom he was at loggerheads at one time or another, the effort at lowering our estimate of Friederike, Lilli, and other victims of Goethe's faithlessness, and at raising the most ignoble of his love attachments (that with Christiane Vulpius) to the level of a domestic idyl—in short, nearly all the absurdities and misconceptions of the modern Goethe mythology are brought out with more or less clearness. Next comes a chapter devoted to the demolition of Scherer's æsthetic theories. Here Braitmaier has indeed an easy game; for, of all of Scherer's ephemeral successes, perhaps none will be more ephemeral than the stir which was created some years ago by the appearance of his 'Poetik.' It seems almost incredible that a man of such undoubted critical acumen as he should have based a theory of poetry upon the fundamental axiom that "memory and imagination are essentially the same thing: a capacity for reproducing former impressions"; and Braitmaier's laughing remark that the logical consequence of this system would be to attribute the masterworks of Sophocles, Shakspere, or Goethe to defective memory is entirely in point. The greatest value, however, of this little volume lies in the fact that Braitmaier most forcibly insists on the necessity of looking at literary productions from a larger point of view than that of mere literary technique, and that he sees the task of the literary historian not so much in searching for the thousand and one different elements out of which a given production has grown together—although this, too, is a useful undertaking—as in defining its place in the intellectual, moral, and artistic development of the nation as a whole.

—The *ne plus ultra* of paternalism was perhaps reached in Constantinople under the later Byzantine Empire. A curious revelation of the details of this régime under Leo VI., surnamed "the Wise" (886-912 A. D.), is presented in a manuscript recently discovered and edited by Prof. Jules Nicole of the University of Geneva, Switzerland, under the title 'Le Livre du Préfet' (Geneva: Georg & Co.). The work is a handsome quarto of about 100 pages, containing the Greek text, a Latin translation, and a commentary in French, and offers new and valuable matter to the political economist as well as to the scholar. The Emperor prefaces his edict—as well he might—with a modest and not unjustifiable comparison of his own regulative functions to those of the Governor of the Universe. The purpose of the edict, which is issued for the guidance of the prefect, is to regulate the numerous guilds for trade and commerce which existed in Constantinople, their membership, their transactions, and their fees, to the minutest detail. The list of professions or trades touched on in the twenty-two sections includes notaries, jewellers, bankers, silk-merchants, linen-drapers, perfumers, grocers, etc. A good idea of the system may be obtained from the regulations of the silk-industry, which at that time, it will be remembered, was practically a monopoly of the Greeks, and especially of Constantinople. It was distributed among four guilds or corporations, (1) the dealers in raw silk, (2) the silk-dressers who prepared the raw material, (3) the weavers or manufacturers, (4) and finally, those who sold the manufactured fabrics. The functions of these are sharply distinguished: no corporation must perform the work of another, and no individual is allowed to belong to two corporations. Spinners, for example, if they have more of the raw silk on hand than they need, are not allowed to sell their surplus, as this would trench upon the business of No. 1. All the raw silk which comes to market is purchased in block by the corporation of silk-buyers, and is afterward partitioned among the members pro rata; individual members are forbidden to make private transactions, and the percentage of profits is in certain cases prescribed. Penalties of flogging, shaving the head, or of expulsion from the guild await the violation of these rules. If any one is detected in exporting the imperial purple silk, his hand is cut off.

—Other examples of minute interference abound. The notary or scrivener must keep but one clerk; the money-changer is not permitted to leave his stall in charge of an assistant. The prefect fixes from time to time the size of the baker's loaf. The practice of several trades is especially prohibited. The fishmonger is not allowed to catch the fish he deals in. Workmen, such as carpenters, stonecutters, and painters, are not permitted to change their occupation; if they lack employment, they must give notice to the prefect and receive formal permission from him before accepting another kind of work. Among so many regulations, a few strike one favorably: builders who botch their work are obliged to rebuild at their own expense, if an edifice falls within ten years "except by act of God." Penalties for all offences are slavish in character, such as flogging, shaving the head, mutilation; and these penalties are applied to the highest professions as well as to laborers. On the whole, it is no wonder that, at a later date, when the Turk supervened, his laxness in the supervision of commerce was a welcome and salutary change to the interests involved. Prof. Nicole's editorial work has been pe-

formed with the thoroughness which might be expected from the editor of the Genevan Scholia on the 'Iliad.'

LETTERS OF A PIANIST.

Franz Liszt's Briefe Herausgegeben von La Mara. Leipzig: Breitkopf & Härtel. 2 vols.

FOUR years before his death Franz Liszt wrote to the German editor Otto Lessmann, in reference to a report that he (Liszt) had commenced an autobiography which he "was continuing regularly," that he, for his part, knew of no such manuscript:

"I have been asked repeatedly by publishers to write my memoirs. I declined, with the excuse that it had more than sufficed me to have lived my life, without recording it on paper. Were I married, I might indeed occasionally dictate something to my wife. But, as it is, I gladly abstain from efforts with the pen which continue to be disagreeable to me."

There are half-a-dozen other passages in the letters which La Mara (Marie Lipsius) has here collected, showing that Liszt did not write books and letters as he did his musical compositions, for the mere pleasure of writing. His collected critical and biographic essays fill six volumes, but most of them were written by way of championing neglected contemporary geniuses, not to further any literary ambition of his own. Among his correspondents, Wagner was the most favored, yet in the two volumes of the Wagner-Liszt letters the most numerous and by far the longest are Wagner's, while in the 659 additional letters now (with the exception of about 50) printed for the first time, it is easy to see that few were volunteered, the majority being answers to the notes showered upon him daily, almost hourly, by all sorts and conditions of men and women. In 1881 he wrote that he no longer made excuses for epistolary remissness: "My aversion to letters has become excessive. How is it possible to answer more than 2,000 letters a year without becoming an idiot?" To answer them all, he exclaims, he would have to devote ten hours a day to the task. It was, of course, his own extraordinary life-long amiability that had brought this deluge upon him, and he fully realized this when he wrote, in 1883, "I have a good mind to cry from the housetops some fine morning that I beg the public to consider me one of the most disagreeable, crotchety, and disobliging persons in the world." To appeals for autographs he had learned to become obdurate thirty years before this, and now at last his patience gave way entirely, and he begged Lessmann to announce in his paper that he could not in future allow his work to be interrupted by any more manuscripts sent for examination, or other uncalled-for missives. But he had reached his seventy-fourth year before he could thus make up his mind to curb his unselfish expenditure of time in the interest of others.

"Your life seems to me a grand *symphony of generosities*," he once wrote to the Baroness M. E. Schwartz, adding that the value of these benefits was increased by the discreet manner in which they were conferred, without flourish of trumpets and drums. How well these words describe Liszt's own life is unmistakably brought to light in dozens of his letters. He is constantly acknowledging receipt of manuscripts from ambitious young composers, whom he assists with advice and encouragement, whether they hail from Hungary, Germany, France, Russia, Italy, or America. Among these correspondents are such eminent ones as Franz, Grieg, Saint-Saëns, Rubinstein, Cornelius, even Brahms, and a host of minor names. He is always asking some gifted—and generally impecunious—young musician or other to come and enjoy the musical feasts at Weimar, and to be his guest during his sojourn, sometimes even paying his travelling expenses. This kindness is shown in trifling attentions as well as in services of lifelong value; for instance, when Köhler once forgot his overcoat, Liszt forwarded it after filling the pockets with choice cigars. Of his colossal services to Wagner as helping friend, conductor, essayist, and diplomatist, all the world knows; but few can realize before reading these new volumes of his letters how many other musicians were similarly benefited and popularized by him. The numerous young pianists of both sexes whom he trained at Weimar have made their advantages familiar to all, but it is not generally known that in the later years of his life, when he would have greatly preferred to remain at his quiet retreat near Rome composing, he allowed himself to be persuaded to spend several months every year at Pesth, giving four lessons a week at the National Academy of Music. In answer to inquiries by one of his biographers he wrote: "Since 1847 I have not earned a penny by playing the piano, teaching, and conducting. All these things, on the contrary, have cost me time and money." In other words, during the last forty years of life all his work was done gratuitously for the general benefit of mankind—including his compositions, which were not at that time profitable, thanks to the malicious attitude of the critics.

In the world of artists, where, as Liszt says, "character is rarer even than talent," it is gratifying to meet with a man so utterly free from all the petty vices, vanities, and jealousies of his tribe. He had the virtue, so rare in Christian countries, of generosity even to his enemies. An instance of this is to be found in No. 251, vol. i., where he urges Brendel not to protest against the introduction in a certain programme of a song by Hiller, who had behaved very shabbily towards Liszt: "Although we cannot expect reciprocity in this matter, we are in duty bound to carry out simple justice and fairness consistently, and at the same time to show these gentlemen how persons of honorable disposition and decent manners behave." When Liszt writes, "If it happens once in a while that I win a success, it gives me less pleasure than that of my friends," no one who knows his character doubts for a moment the sincerity of his statement. Even in the creative sphere, where his ambition was greatest, he would keep his own claims in the background if thereby he could benefit a friend. Read, for instance, the facts given in No. 311, vol. ii., regarding Berlioz's famous arrangement of the Rákóczy march. This arrangement was based on an earlier transcription by Liszt, with original harmonies, different from those employed by the Hungarian bands. Berlioz adopted the harmonies of Liszt, who here confesses that delicate sentiments of friendship had induced him to postpone the publication of his own fuller version until after Berlioz's death. Yet there was a limit even to Liszt's amiability. He was chary in bestowing letters of recommendation which young pianists were constantly begging for, doubtless because he felt that in such cases a kindness to one may easily prove an injustice to others. He had probably heard of the doings of some of the young men and women who, after being kindly allowed to attend a few of his free classes at Weimar, went about two continents advertising themselves as "pupils of Liszt." One girl gave concerts as a cousin of Liszt, although he had never heard of such a cousin. He adds:

"Concert-givers in provincial cities often make unwarranted use of our name. In Constantinople a pianist, Herr Listmann, begged my pardon for having omitted the second syllable of his name on his programme. For this he received a costly present from the Sultan Abdul-Medjid."

In one respect the readers of Liszt's letters will be somewhat disappointed. He disliked to write about himself, his private affairs, his personal feelings. When he writes from Wagner's apartments in the Palazzo Vendramin at Venice, a few months before his great friend's death, we naturally expect a few realistic bits of description, but he simply refers to the happy family life, and adds: "But I cannot talk without awkwardness of things that touch me most deeply. Therefore it is better to keep silent." Wagner, who always poured out his heart's deepest feelings to Liszt, repeatedly reproached him for not doing the same to him; and as Liszt is usually reticent even in his correspondence with this dearest friend of his, we can hardly expect him to be more outspoken in his letters to less intimate friends. Indirectly, however, and between the lines, we can discover a touch here and there that helps us to reconstruct Liszt's personality and his habits. If Goethe's *Faust* was troubled by having "two souls, alas, within my breast," Liszt was even worse distraught, for, as a friend once told him, "You are in reality a compound of three individualities running counter to each other: the social man of the world, the virtuoso, and the creative artist and thinker." This appreciation was shrewd and just, and Liszt quotes it approvingly. Doubtless he felt that in the first of these individualities lay the danger to his character, in the second the danger to his artistic worth; and he was fully aware of these two dangers. In 1846 he wrote to a friend: "My sojourn at Pesth might be of serious value, were it not for the fact that the *Byronic* element which you combat in me is asserting itself with more and more prominence." On this Byronic element Liszt's friends do not care to dwell, although they might advance the apology that he shared his moral weakness with most men of artistic genius, whereas his virtues are of a kind that is rare in the world to which he belonged.

In politics Liszt took little interest, although he knew personally most of the crowned heads and minor aristocrats of Europe, and in Nos. 120 and 311, volume ii., he reports two interesting conversations with Napoleon III. and the Czar Nicholas of Russia. He did, however, believe in genuine *active* patriotism, as he proved by his readiness to go to Paris in 1878 to serve as Hungarian member of the international jury, and his unselfish yearly sacrifice of several months of his time at the Pesth Academy; all this in spite of his aversion to travelling, which grew stronger every year. Yet he was condemned to divide his time between Weimar, Pesth, and Rome. His great desire was to spend the last years of his life in Italy, at his writing-desk. During the first part of his Roman sojourn he was the guest of Cardinal Hohenlohe at the Vatican; afterwards the residence was transferred to the Villa d'Este, several hours' distance from Rome. With this villa and its surroundings Liszt was so delighted that he actually more than once indulged in a few lines of description of it—the only instance of the kind in all his correspondence. Yet even here he was not permitted to compose uninterruptedly: his tormentors and visitors followed him even at

this distance, and he complains of necessary "visits, duties of politeness, musical fledglings, extensive and mostly useless correspondence." In Rome itself he had been "excessively annoyed," as he said, by all these interruptions, until he felt inclined to be "positively rude in order to keep these people at bay." In 1882 he wrote from Venice that he had resolved to be very economical as to paying visits: "Wagner makes none, and I shall imitate his example to the best of my ability."

But these social interruptions were not the main reasons why he spoke of himself as "a poor tormented man." What annoyed him more than anything else was the persistence with which people continued to ignore his work as a composer while trying to flatter him with allusions to his "former triumphal tours," his "unrivalled mastery of the piano," etc., "until it became positively nauseous, like stale, tepid champagne." As early as 1837 we find him wondering whether he was to be condemned for ever "à ce métier de baladin et d'amuseur de salons." In a few years this business of amusing mixed audiences became so distasteful to him that he ceased playing in public altogether, except when some monster calamity or occasion of artistic charity induced him to volunteer his services.

Although the piano was not entirely abandoned, we find Liszt in the last forty years of his life busy chiefly in other musical fields: first with his symphonic poems and symphonies, then with his songs, and finally with his sacred compositions. There is also an allusion to an early opera, but that plan was abandoned. In turning to the orchestra he found his thirty years' devotion to the piano a disadvantage at the beginning, and he was compelled to make many changes and improvements after the first performances, whereas Wagner's orchestral instinct, having been trained from his boyhood, became in his later period so infallible that he hardly ever was called upon to make any alteration. In view of this difference, it is surprising that Liszt should have achieved such brilliant results as an orchestrator. He is often strikingly original, especially in the ingenious use of the instruments of percussion, which, it should be added, he defends in an important letter (vol. i., No. 280) against those who assert that such instruments have no legitimate place on the concert stage. It is their abuse that has led to the questioning of their use. Liszt valued them as a means of emphasizing the rhythm, not for their capacity to rival the noise of a Chinese band in a murder scene. This same letter, which cannot be too highly commended to musical students, also contains some luminous remarks on Liszt's conception of musical form.

Occasionally we catch a glimpse of the composer at work on a symphonic poem, an oratorio, or a psalm "written with tears of blood"; unfortunately, they are for the most part glimpses only, where egotistic details would have been most welcome, in place of the altruistic business and shop-talk which takes up too much space in these letters. Liszt was modest —excessively so—in his estimate of his own creative powers; for instance, when Benfey had written a pamphlet entitled 'Beethoven and Liszt,' he wrote that this juxtaposition reminded him of a scene he had witnessed in his youth in the Jardin des Plantes in Paris—a harmless poodle caged as companion to a majestic lion. Still, he knew that he had contributed some immortal works of absolute originality to musical literature, and that the critics did not treat him fairly. To these critics there are many bitter or sarcastic allusions in the correspondence. Some critics, no doubt, were honest and simply Philistine—that is, impervious to new ideas and impressions—but others fully deserved the charges of persistent malice and mendacity which he brings against them. History has shown once more that negative criticism, when opposed to the truth, is impotent. In 1877 Liszt wrote regarding his symphonic poems that, "notwithstanding the abundant censure, ignoring, and abuse which these works have endured during the last twenty years, they have not perhaps been quite killed yet." Almost twenty years more have since elapsed, and these works are more frequently performed than ever, although it is still the critical fashion to abuse them.

Liszt's own criticisms of other composers constitute the most entertaining and valuable part of his letters. His own maxim appears to have been that it was better that five guilty composers should escape with undeserved praise than that one deserving one should languish in neglect. No harm was done by the attention he momentarily attracted or the encouragement he gave to certain mediocrities; but a great deal of good resulted from his championship of modern composers who were in danger of succumbing to the incompetence of conductors, the obtuseness of critics, and the indifference of the public. The term "modern composers," as here used, must be interpreted to include even Schubert, to whose fame and full appreciation Liszt contributed more than any one (except perhaps Schumann), as essayist, conductor, and pianist. In the days when he was giving concerts, most singers were of the "Italian school"—that is, there were few who had sufficient appreciation of the higher emotional elements of their art to be able to do justice to Schubert's songs; consequently an inestimable service was done to them by Liszt's transcriptions and performances of many of them. Some he also arranged for orchestra, and at Weimar he made an effort in behalf of Schubert's operas, which have never had justice done to them on account of their atrocious librettos. In his correspondence we find him especially active in behalf of Schubert's pianoforte works, concerning which he writes to Prof. Lebert: "Our pianists have scarcely the remotest conception of the delightful treasure we possess in Schubert's pianoforte compositions." He selected and edited a collection of them for Lebert's edition, and he calls attention, among other things, to the fact that in Schubert's little waltzes is to be found more originality than in many of the most ambitious works of all times.

These enthusiastic efforts in behalf of Schubert (and of many other composers) show that we must not take Liszt too literally when he writes to Schumann (1838), that his (Schumann's) works and Chopin's are the only ones which have a deep interest for him. The sixth letter of the first volume is an amusing one, written by Liszt and Chopin in alternate sentences. One of Chopin's sentences is: "I wish I could steal from him [Liszt] his way of playing my own études." The letters now before us contain several eloquent passages on Chopin, correcting popular misconceptions. To Lenz he writes: "You exaggerate, also, I think, the influence of the Parisian salons on Chopin. His soul was not affected by them, and his artistic work remains lucid, marvellous, ethereal, and of an incomparable genius—exalted above the errors of schools and the insipidities of the salon."

Liszt's relations to Schumann are fully discussed in No. 172, volume i., in which he regretfully explains how it came about that, after some vain attempts with this composer's pianoforte works, which he admired so intensely, he was led to neglect them for a time. At the same time he recalls his labors at Weimar in behalf of Schumann's choral works and his opera "Genoveva," which he happily calls "the sister of 'Fidelio,' but without *Leonora's* pistol." Of special interest is letter No. 347, volume ii., in which Liszt shows that Berlioz, who called the unappreciative Parisians "gredins," and "crétins," was in reality much more favored officially by his countrymen than Beethoven, Weber, Schubert, and Schumann (he might have added Bach and Mozart) were while alive by their countrymen. Of living composers most frequent mention is here made of St.-Saëns and Rubinstein, with both of whom Liszt corresponded. He favored St.-Saëns with advice and praise as a composer, speaks of him as the greatest of organists, and, two years before his own death, pays him this neat compliment: "When I now write music, I often ask myself in this or that place, 'Will it please St.-Saëns?'" Rubinstein, too, was greatly benefited by Liszt, who sought publishers and performances for his works, though he was aware of the differences in their opinion and ideals. He usually alludes to him as "Van II.," on account of the resemblance in his appearance to Beethoven. It seems that Rubinstein once, when Liszt's guest, mysteriously disappeared in order to avoid hearing a piece by Berlioz. All of Liszt's efforts to convert him to the new school failed. Unfortunately, too, Rubinstein paid no attention to the advice, in 1854, to curb his excessive productivity and compose more carefully. To Brendel Liszt wrote:

"He is a splendid fellow, possesses exceptional talent and character; therefore, no one can be more just to him than I have been for years. I have no desire, however, to preach, and he may wear off his horns as he pleases, and continue to fish in Mendelssohnian waters, or even swim in them, if he can."

An English version of these two volumes of Liszt's Letters was announced some time ago, but has been delayed by the illness of the translator, Miss Bache, sister of the great Liszt champion in London. Breitkopf & Härtel have just issued a supplementary volume of Liszt's letters to "a friend in Brussels" (probably Mme. Tardieu), and have completed Lina Ramann's biography of Liszt in three volumes. It is probable that there will be a fourth volume of letters later on, as the correspondence with his mother and daughter (Frau Cosima Wagner), with the Countess d'Agoult, the Princess von Wittgenstein, Berlioz, Tausig, Prince Lichnowsky, Joseffy, and others is not included in the above collections.

JEBB'S CLASSICAL GREEK POETRY.

The Growth and Influence of Classical Greek Poetry. By R. C. Jebb, Regius Professor of Greek in the University of Cambridge. Boston: Houghton, Mifflin & Co. 1893.

It is a pleasure to reflect that if we cannot claim this admirable volume for one of our own scholars, we can at least take the credit of suggesting and encouraging its production. These lectures were delivered at the Johns Hopkins University, they are dedicated to President Gilman, and are printed by an American firm. They are prefaced by a touching epigram, in which the editor of Sophocles gracefully alludes to that blighted youthful promise which the Trenholm Lectureship was founded to commemorate. This epigram is in

itself a slight but significant token of the many gifts and acquirements which render its author so peculiarly fitted to treat an old subject with the freshness, the sympathy, and the thoroughness of a master.

The introductory chapter has the rare merit of presenting in a clear and precise manner the significance of the appearance of Homeric poetry—the fact that it is, in truth, the beginning of European literature. In all Europe and Asia and Africa, at that period, there was nothing like this mysterious apparition—so marvellous, so transcendent that certain pious littérateurs have explained Homer as a special miracle, who made the 'Iliad' and the 'Odyssey,' so to speak, out of his own Olympian head. And this is only another way of expressing the unique character of this poetic outbreak, as compared with any product of Egyptian or Chaldean or Phœnician intellect. If we take an inventory of the literary stock of the world in the tenth century A. C., we find in Egypt some hymns and religious texts, state records, a few biographies, some fables or folk-tales—the sole product of an immemorial civilization, whose literature had become stereotyped into formulas, and "stricken," to use Mr. Jebb's phrase, "with intellectual barrenness." In Assyria we encounter the bombastic chronicles of a Tiglath-Pileser—the same literary poverty and dryness as in Egypt, with even less imagination and spirituality, save in those early Chaldean fragments of the epics of Ishtar and of Isdubar. Among the Phœnicians, the commercial spirit, with all its enterprise, has issued in nothing but successful imitation and diffusion of their neighbors' arts and acquirements. In contrast with this frozen waste of priestly or official formulas, "swims into our ken" the sunny world of Homeric imagination, a world where human life and affections have free play in the open air, where the beauty of nature and of human intercourse is not only felt keenly, but for the first time adequately expressed. It is a society delivered alike from despots and from priests, free from the fetters of Egyptian sacerdotalism and from the hobgoblins of Assyrian superstition. In it, says Mr. Jebb, "the hieratic spirit has given place to the lay spirit."

If we are to take into account at all in this comparison the Sanskrit epic whose period is so dubious, we find in the 'Mahâbhârata' a vast conglomerate which is to the Homeric epos as a jungle to a landscape of the Aegean. Measure and proportion are gone; some of the episodes are the mere midsummer madness of the dreaming Oriental brain. The best of these with which translators have made us familiar offer interesting pictures of life, and a romantic sentiment that appeals to the modern mind; but, even in these, the original, if we may trust our present texts, shows an incurable tendency to exaggeration, to rhetorical and childish tricks of expression, which contrast strongly with the straightforwardness, the pure taste, and the natural self-restraint of the 'Iliad' and the 'Odyssey.' With all its capacity for verbal *tours de force*, the Sanskrit, with its unwieldy compounds and its inorganic sentence-structure, lacks a refinement, a flexibility, a precision, of which the Homeric poetry first suggested the possibility, and Plato's prose the final triumph of development.

Passing by Mr. Jebb's analysis of Homeric types and styles, in which he rightly discerns "the promise and potency" of all subsequent development in Greek life and character and poetry, we turn to the elaborate chapter he has done well to bestow on Pindar. None of the Greek poets is so remote from us, none needs more the friendly aid and illumination of the antiquarian's magic telescope. Even Fitz Gerald finds him hard to get at, and is evidently rather bored by the imaginative grandiloquence he expends upon the jockeys and the "sluggers." In fact, Pindar shows us a phase of life that is clean gone out of our sight and conception, unless it be shadowed forth dimly by the contests of Matthew Arnold's "barbarians" on the Cam and the Isis and the Thames. Our own sophisticated football captains would smile at the wreath of laurel or of olive, and at the innocence of a people who understood so little how to turn an honest penny out of their sport. Yet the spectacle at Olympia really showed at its height the Greek gift of gilding and ennobling what with other races has usually sunk into vulgar and sordid brutality. Athletics, presided over by grave and reverend judges in purple robes of office, dignified by religious ceremonial and associations, made brilliant by the presence of all that was beautiful in nature and in art, linked by golden chains of poesy with heroic legend and historic memories, and reserving a quiet corner for Lysias or Herodotus—this was perhaps the crowning triumph of Greek taste, the peculiar offering to the Graces, at which Pindar assisted as high priest and *sacer vates*. That inmost shrine is hard for us to penetrate who breathe all day the smoke of Mr. Gradgrind's factories, and gather once a year to see the choicest of our youth earn their "gate-money" and contend in the sympathetic presence of gamblers and of blacklegs. It is a long step from these to the young "sprinter" Asopichus and his choir of comrades chanting Pindar's hymn to the "Queen-graces who bestow on mortals all that is sweet and pleasant—beauty and the poet's skill, and resplendent victory."

The balance and delicacy of Mr. Jebb's judgment are shown conspicuously in his estimate of the complex and puzzling genius of Euripides. "He has the qualities," says Prof. Jebb, "by which he became the first prophet of a cosmopolitan humanity." The romantic coloring of his plays, his understanding of the heart and the lot of women, his sense of the beauty of nature, his poignant feeling of human sorrows and burdens, his moods of doubt, perplexity, and melancholy, are all kindred to the modern mind; "in one phase or another of his reflections he has a kinship with the troubled spirits of every race and century." For these reasons he demands no special interpreter, no historical training and imagination. He appeals alike to the Parthian Orodes, to Ennius and Cicero, to the Christian Clemens of Alexandria. He opens the door upon the new comedy of Menander and of Terence—on the distant vista, beyond the centuries, of Corneille and Racine. He stands, that is to say, upon the threshold of two worlds, the old Hellenic world that was fading out of existence, the new Hellenistic world that was waiting to be born. In all these tendencies he did not merely swim with the current; he is not following the taste of his public so much as prescribing it. "He was not driven to his reform," says our critic, "he imposed it." He replaced, for example, the radiant Jason of Pindar's Pythian ode by the pitiful Jason of the "Medea." He had broken with the heroic ideals and the heroic manner. Yet, in deposing the Homeric heroes from their pedestal, he was taking away the only ideals to which the men of his age looked back and aspired. By his rationalism, his sophistry, his new-fangled notions, he was employing the Dionysiac theatre and festival against the very deity who gave sanction to Comedy as well as Tragedy. Hence it was by an unerring instinct that Aristophanes directed against him the satire of the "Acharnians" and the "Frogs." From his point of view Aristophanes was perfectly right. He could not divine that what to him meant iconoclasm and corruption, was in reality the breaking of the shell, the opening life of a new order of ideas.

We have mentioned the criticism contained in the "Frogs"; and this recalls a peculiar fortune which the best Greek poetry enjoyed—a fortune, as Prof. Jebb remarks, unparalleled in the history of literature. Before the Alexandrian period, indeed, Greek poetry was not literature in our modern sense; whether epic or lyric or dramatic, it appealed directly to hearers rather than to readers—and to what hearers! To the sort of judges who, during half a century of the Periclean age, awarded the first prize a score of times to that severe height of literary art which parallels the perfections of Phidias—that is to say, to the dramas of Sophocles. Compare such recognition with the fortune of Dante, or of Shakspere, or of Milton. Think of the aid and comfort such a public must have afforded to genius; of the wholesome discomfiture it administered to poetasters and pretenders. True, this public made mistakes occasionally, and crowned an inferior dramatist who could command a more costly and magnificent chorus. But in the main the great poet had the privilege which now survives only to the orator or preacher. He could keep directly in touch with his audience—an audience whose sympathy, whose intelligence, whose sanity of taste were unexampled; who could tolerate nothing insincere, nothing frigid and false in sentiment, nothing affected in expression; who, on the other hand, responded with inspiring geniality and enthusiasm to the best and greatest that was offered them. Thus "their great poetry," says Mr. Jebb, "was not merely inspired by life, it was regulated by life." We read a good deal nowadays about the uselessness of the critic, his superfluity, and his naughtiness; but if the function of the critic is to admire with discrimination and condemn with reason, who except the greatest can afford to dispense with the regulative and life-giving influence that flows from a large body of intelligent and responsive minds like those twenty or thirty thousand who sat in the Dionysian theatre at Athens?—a body which was neither an academy, nor a mob, nor an isolated censor, remote and unknown, possibly hostile and unsympathetic. How admirable must have been that action and reaction of wits in keeping a man to his best work, with a comforting sense that he was not throwing his pearls before swine—in keeping him from the wilfulness, the bizarreries, the misspent time of the author who now shuts himself up in his study and his theories, and has no electric communication with an audience of sensible and critical readers. And this reflection leads us naturally to the final trait which Prof. Jebb notes as characteristic of the great period of true Hellenic poetry—its essential moral purity—a purity which runs in the blood of the great line of bards that succeeded the creator of Nausicaa and Penelope, and which is naturally joined with the sanity, the beauty, and the faith that animated their poetry. Compare such a public, taught by such moralists as Æschylus and Sophocles, with the relation that now subsists between our "enterprising" press and its readers—that frowsy Circe who manufactures swine and feeds them daily after their kind.

If any claim in this brief summary seems extravagant, the fault must not be laid at Prof. Jebb's door, for he writes with the moderation of one who has adequately surveyed the wide field of letters, who is fully aware that modern literature exists, and, filling its own needs, can never be squared down to the narrow yet ideal perfections of the period which he treats. His book is popular in that it demands no previous knowledge of the subject, and presents its subject with the charm of a finished man of letters—a charm which is traditionally supposed to be the offspring of the studies he professes; but it is scholarly inasmuch as no sentence is written at random, without due warrant in the researches of a lifetime. No general survey in English presents so clearly the value of Greek poetry in the history of literature, the surprising phenomenon of its first dawning on the world, and its vital relation to the later growths of the centuries.

CABINET GOVERNMENT.—I.

Les Ministres dans les principaux pays d'Europe et d'Amérique. Par L. Dupriez, Professeur à l'Université de Louvain. Paris: J. Rothschild. 1893.

THIS work is preceded by a report made by the Comte de Franqueville, Member of the Institute (whose name alone is a sufficient imprimatur), to the Academy of Moral and Political Science, relating to a competition upon the subject of the book for the Odilon Barrot prize. As the report justly says, there is perhaps no subject in the whole domain of constitutional law more important, or, on the whole, more delicate to treat. In the century's experience of popular government, public attention has been almost wholly absorbed by the representative branch—that is, the Legislature. Whether this should consist of one chamber or two, the number of each, how they are to be elected and by how wide a suffrage; whether minorities should be represented; how the quality and purity of the legislative bodies are to be maintained—these are the chief topics of interest and discussion. But as to the relations of the Executive and the Legislature, the respective functions of each, and in general the constitution of executive power, these are things to which it seems almost impossible to attract public attention in this country. And the reason is very simple. All our constitutions are based upon the principle of the separation of legislative and executive power, but none of them defines the limits of these powers. In practice it is left to the legislatures to fix these limits, which they do by reducing the nominal executive to a cipher or a tool in their hands. The executive officers, having no means of resistance, yield without opposition, and the people, hearing only one side, are not aware of the danger. Hence the value of a work which sets forth the executive side of the question.

After noticing the other essays submitted, the report says:

"It remains for us to speak of one other memoir, which has appeared to us very notably superior to all the others, and to which, by a unanimous vote, the section proposes to you to award the prize of Odilon Barrot. The work is recommended by most important merits—clearness of exposition, exactitude of investigation, profound study of the subject; while the author has the further advantage of treating the question from the point of view of the jurisconsult and not of the politician."

Agreeing thoroughly with this view, we find it difficult to express the degree of our admiration, which can be appreciated only by those who, having long groped about for a particular kind of information, have suddenly found it set forth with almost startling clearness.

The first volume treats of the constitutional monarchies, England, Belgium, Italy, and Prussia, with an added survey of the German empire. The second volume is devoted to the leading republics, the United States of America, Switzerland, and France. All these divisions are classified under corresponding heads—thus, for the monarchies, "The Cabinet and the Constitution," "The Ministers and the King," "The Ministers and the Chambers," "The Ministers and the Administration"—with a separate section, one of the most striking in the book, on the position of the Chancellor in the German empire. For the republics the classification is the same, "The Ministers and the Constitution," "The Ministers and the President" (except in Switzerland), "The Ministers and the Chambers," "The Ministers and the Administration." The mere arrangement shows how interesting the comparison may be made.

The English system of cabinet government is more or less familiar to all Americans who have examined constitutional law at all; and yet that system, which has furnished the basis for all modern parliamentary practice, and is certainly one of the most important political discoveries ever made, grew up silently and almost unperceived during two centuries, and has only within a generation become an object of conscious study and analysis. No doubt it is the result of gradually formed usages; but, as M. Dupriez remarks, that is the case with all constitutions:

"The lawmaker can enumerate in a text the rights of the great political powers, regulate their organization up to a certain point, determine the exterior forms of their action; he is powerless to control the exact position of authority which each shall possess. That is a question which can be decided only by the relative strength of the several powers. Constitutional usages only establish the result of the struggle which inevitably arises between them."

It would be hardly possible to condense more perfectly in one paragraph the political history of the United States.

Belgium, for the last half century, has been among those happy countries which have had no history, though the recent extension from a very narrow to almost universal suffrage would hold out the expectation of interesting developments of her constitutional machinery, if she did not seem in danger of being ground out of existence by the upper and the nether millstones of Europe, which threaten soon to exert their terrible friction. M. Dupriez's clear analysis is ready for the student when it is wanted. For the rest the Belgian approaches more nearly than any other of the parliamentary governments to the English type.

The disastrous condition of Italy is attracting universal attention. That within twenty-five years of the glorious history of her consolidation, and in a time of general peace, she should have landed in bankruptcy, with a forced paper currency at a heavy discount, a serious annual deficit in the budget, and such an exodus of population as seems justified only by pestilence, points to some deep-seated cause. The apparent one is the triple alliance and the heavy burden of military and naval armament, but that is only a part. With well-ordered finances the burden could be borne, but the finances are not well ordered, and finances in disorder mean bad government. The pages of M. Dupriez lay bare the whole anatomy. The first difficulty which he finds with parliamentary government in Italy is in the condition of political parties. At the outset there was a great anti-constitutional party, consisting of the clericals and their allies, who refused to have anything to do with politics at all, while as to the rest the breaking up into political groups prevented the formation of any stable majority. But as the ministry depends upon a majority for its existence, it is driven to all sorts of expedients to form and maintain one. The result is, that the ministry has no power of resistance against the encroachments of the chambers. It is reduced to begging for the support of members by distributing among their constituents Government favors and places. It cannot turn for support to the King, who, as a constitutional monarch, can have no will as against the chambers. It cannot turn to the people, because the people does not elect its executive and has no idea of looking to it as the agent of all, while the people does elect its deputies and naturally supports them. The deputy himself, often elected on special grounds by a coalition of discordant elements, is not a representative of ideas and principles. He is only the organ of local interests; the agent, the solicitor, the patron of those who gave him his place.

"The standing committees have assumed in Italy an exaggerated importance, to the detriment of the ministerial influence. The cabinet, far from finding in the members of these committees and their reporters [that is, those who report their conclusions to the Chamber] devoted partisans, often meet among them uncertain friends, whose ambition and whose personal interests are not held in check by party discipline, or else hidden enemies, always ready to apply a checkmate. Sometimes the Government plans come from their hands wholly transformed; at other times these plans find themselves opposed by counter projects, starting from totally opposite principles. Sometimes the work of the committee is conducted with a calculated slowness, and the Government and the Chamber are powerless before this obstruction."

The results of this state of things are apparent in two departments of deep interest to the people of this country, the finances and the civil service.

(1.) "The Italian ministers do not enjoy an authority stable or strong enough to remain the sole guides of financial policy. It is especially in the discussion of the budgets that their influence is found to be counterbalanced and compromised by the existence of this standing committee which centres in itself the consideration of all plans. Powerful as well by the importance of its work as by the number and the authority of its members, the committee uses its power not only to exercise complete control in the revision of the plans submitted to it, but even to direct the policy of the Government and to thrust its hand into the administration. It is rarely that a ministry can contend openly with the conclusions of the budget commission and its reporter. Often it finds itself forced to accept compromises of which the Treasury almost always pays the cost. Suppose, for instance, that the ministry has proposed an increase of credit which it thought necessary for the public services. The reporter refuses it under pretext of rigorous economy, but yields in the end, provided there is an equal increase of credit for some establishment of interest to his province."

(2.) As to the civil service:

"The minister, absolute master of his subordinates, finds his own master in the deputies who support him. The omnipotence of the cabinet over the Administration is equalled only by its servility towards the parliamentary majority. It has to put its exaggerated authority at the disposal of its partisans upon pain of seeing itself overturned by them. The functionary has not to fear the arbitrary will of a superior, upon whom rests, after all, a certain responsibility; he has to dread besides the caprices of deputies who

have no direct authority over him, and can yet exercise a decisive influence upon his fate, the real instigators of acts of which they throw the responsibility upon others."

If in Italy the executive is too weak and overpowered by the chambers, M. Dupriez sets forth in dramatic contrast the rather thin semblance of parliamentary government in Prussia and the German empire:

"In Prussia the result of the struggle has been very different. Royalty, forced to abandon a part of its powers to the national representation, has known how to defend successfully all the rights which it had reserved for itself, and has even had strength enough to annul virtually more than one restriction upon its liberty of action. . . . The constitutional provisions gave to the King the right of naming and revoking the ministers; this right he has persisted in exercising in perfect freedom without permitting the chambers to limit it by their intervention. The ministers are then fully responsible for all their acts to him alone. They have not been called to power by the Landtag, and, whatever distrust that body may feel towards them, they will remain at their post as long as the royal favor keeps them there.

"Supported by the royal power, the ministers have profited by their strength to restrict as much as possible the rights of the chambers, or at least to destroy their effects. Though not necessarily members, the right of ministers to be heard upon any subject extends to the sessions both of the chambers and of the committees. The 'floor' can never be refused them; they can speak even after closure of the discussion has been voted, and thus reopen debate. While a simple member of the Landtag can speak only once upon the same subject, any minister can demand the floor as often as he pleases, and the president must give it to him as soon as the member who is speaking has finished, in preference to all the members whose names are down before him. If an 'interpellation' is addressed to them, the ministers answer what they please, or refuse all explanation. If the Chamber insists upon discussing it, they show how much they care by abruptly quitting the hall and not coming back before the end of the discussion. If the chambers appoint a committee of investigation, the Government will forbid officials to answer their inquiries, and will openly declare in the Landtag 'that a committee appointed contrary to the wish of the Government cannot expect to enjoy the cooperation of the Government.' In a word, their responsibility to the chambers is always in the condition of a constitutional principle without possible effect."

The best illustration of the result is, that the Government, having carried on the business of the country for four years, 1862–66, without any regular budget, obtained a bill of indemnity after the success of the campaign in Austria. "The conflicts of powers always degenerate into a question of strength," said Prince Bismarck one day, and, sure of his strength, he did not try to cover his conduct with an appearance of legality. Yet in Prussia the tenure of the civil service is permanent during good behavior, as it always is where the executive is strong, because it is for the interest of the executive to make it so. In Great Britain, which has the strongest executive of any really constitutional government, the "spoils system" has been wholly done away with. It is in France, Italy, and the United States, where the executive is completely subject to the legislature, that that system flourishes in full vigor.

The ingenious way in which the constitution of the German empire has bettered that of Prussia is set forth by M. Dupriez in an amusing manner; but we cannot follow him in detail. The institution of a single minister, president of the Federal Council, is wholly original and unlike that of any other State. It may be a matter of surprise that the imperial constitution, in so many respects copied from that of Prussia, did not establish by the side of the Emperor a council of ministers similar to the Prussian ministry of state. The proposal was made under various forms in the Reichstag, when the plan of the constitution was under discussion, but Prince Bismarck opposed it with all his might.

"In fact, the Prussian Government wished above all to prevent, the parliamentary system from taking root in the empire. It rejected the institution of a council of ministers borrowed expressly from this form of government, and, for the rest, asked for with a view to the establishment of this form. The conflict between the King and the Chamber of Deputies in Prussia had just terminated in the victory of the former; but this victory, which might be attributed to contingent causes, did not appear to be definitive, nor even necessarily to have durable effects. New struggles might arise, after the enthusiasm excited by recent triumphs had cooled off. To establish personal government in the empire, it was necessary not to accept an institution like a council of ministers, which would have reminded the Reichstag of parliamentary governments, and might have given the desire of resuming against the Emperor a struggle in which the Landtag had just succumbed.

"Seeking, on the contrary, a model in the national traditions, the Prussian Government revived in the new German Confederation an institution of the old Germanic empire. By the institution of the Chancellor, as it was organized, the Constitution centralized in the highest degree in one powerful hand all the activity of the imperial powers: it placed over all the branches of the administration a single chief, in order to impress upon their action the strictest unity of views: it placed this same chief at the head of the Federal Council, where the autonomist tendencies of the small States were to find expression, in order that he might watch over and repress them; finally, it exposed singly to the attacks of the Reichstag a man who had shown in the Prussian Landtag his power of resistance to the blows of a parliament. 'The chiefs of administration of the Empire,' said Prince Bismarck to the Reichstag in 1881, 'are not responsible for me, it is I who am responsible for them; it is I who have to choose them in such a manner that they are political men, approving of the general direction of the empire, and for whom I assume the responsibility. And from the moment that I no longer receive from them this approbation, it becomes my duty to say to them, We can no longer continue in office together.'"

This explanation throws some light upon the separation between Prince Bismarck and the young Emperor William II. It reads as if we were transported back to the times of Wolsey and Richelieu.

In the Land of Cave and Cliff Dwellers. By Lieut. Frederick Schwatka. Cassell Publishing Co.

THIS volume of 384 pages, 12mo, bears a deceptive title. So far from being, primarily, an account of the uncivilized portion of the Tarahumari, as these cliff-dwelling Indians are called, it is, in great part, taken up with descriptions of a visit to Guaymas, and of an excursion which the author made to certain mining districts in the Sierra Madre Mountains of Chihuahua. Seven of the ten chapters into which the book is divided are, in fact, given up to these trips; and while there is no objection to the way in which the story of Lieut. Schwatka's travels is told, yet, with deference be it said, this is not the feast to which we were invited. What we wanted, and what, from the title of the work, we were led to expect, was a statement of the writer's observations and experiences among these savages, and this we do not get. Unquestionably, during his trip through the mountains, he saw a number of cave and cliff dwellings, and no doubt he caught distant views of some of their occupants, but apparently he did not come into actual contact with any of them, as he did with some of the "civilized" members of the tribe. Consequently, in what he tells of their mode of life, etc., he had to depend upon hearsay, previous report, and an occasional glimpse of some of these people as they flitted among the rocks and trees in their efforts to escape observation. This, of course, was unfortunate, but it does not necessarily cast a doubt upon his statements. Indeed, so far is this from being the case that, in the present instance, it may have been an advantage, for it led our author to give us, in place of his own impressions, the accounts of those whose opportunities for investigation seem to have been better than any he could have enjoyed in the course of a short and relatively hasty journey on mule-back.

Of these accounts, the one by Bandelier (Final Report, part I., pp. 98, 244) is probably as satisfactory as any. He, first among recent explorers, called our attention to the existence of these cliff-dwellers; and though he did not see any of them, yet he vouches for the truth of what he heard about them, and, moreover, he tells us in a few paragraphs what is here spread over several chapters. Summarizing these different accounts, we find that these Indians live in southwestern Chihuahua, and that their number is variously estimated at from fifteen to thirty thousand souls. They are well formed, of swarthy appearance, and are divided into two great "sections or factions," who have "different habits and ways of living, and hold no intercourse with each other, though they occupy the same region." Of these two sections, the civilized portion, or "Christians," live in villages, in log and adobe houses, cultivate corn, do a little trading, and are not unlike their Mexican neighbors in their general manner of life. The other section of the tribe—the uncivilized, or "Gentiles"—live in caves in the sides of the mountains, in holes burrowed under the curving base of some boulder, and in cavities weathered in the face of the cliffs. They, too, cultivate corn in a small way, and tend a few goats, but they depend, for their food, chiefly upon the chase. They are shy, run away on the appearance of a white man, and have Eden-like notions as to their clothing. This is, practically, all that is known about these people, though our author tells a curious story of the deference paid by them to a "mace or sceptre, called God's justice," which reminds us, in a fashion, of the deference paid to the calumet by the Indians of the Mississippi valley. He also relates several instances of the speed and endurance of these Indians, which may be true, though they test our credulity severely.

The volume is illustrated, or said to be, and there are a number of pictures of caves, cliff-houses, and natural scenery. We doubt, however, whether they are of a character to help any one to a better understanding of the text.

The First Stages of the Tariff Policy of the United States. By William Hill, A.M., sometime Henry Lee Memorial Fellow in Harvard University; Tutor in Political Economy in the University of Chicago. Published by the American Economic Association. 8vo, pp. 162. 1893.

NOTHING has been more curious in the tariff history of the United States than the desire, both of the protectionists and of the free-traders, to show that the fathers of the country were really on their side. Snatches from the writings of Washington, Jefferson, Hamilton, and Madison have been quoted for campaign effect by both sides, and the tariff act of 1789 has been cited as an illustration of the beauties

both of protection and of free trade. Under these circumstances a detailed and careful investigation of the truth of the matter is welcome, and such we have in Mr. Hill's monograph, which shows careful use of the sources, and the impartial spirit of science. It is a valuable contribution to the history of our tariff legislation and of the genesis of the national Government, creditable to its author and worthy a place in the publications of the Economic Association.

Mr. Hill traces the course of tariff legislation in the colonies before the Revolution, and finds a pretty general system of duties, imposed almost exclusively for revenue. After the Revolutionary war, the several States at first were enthusiastically in favor of a liberal policy in foreign trade, and imposed duties sparingly and for purposes of revenue only. Massachusetts, in 1782, when compelled to levy import duties by the pressing need of revenue, stated, in so many words, in the preamble to an act imposing duties of 2½ and 5 per cent.: "Whereas, all restrictions upon trade have been found to be highly injurious to those countries which derive a great part of their wealth and strength from commerce, . . . be it enacted that this act shall continue and be enforced until six months after peace, and no longer." But this first burst of liberal feeling was followed within a year or two by an equally strong feeling for restriction and protection. The change was unquestionably due to the selfish and narrow-minded policy of Great Britain, and her application to the States of the extreme mercantile policy. One State after another, by way of retaliation against Great Britain, passed protective tariff acts. Massachusetts, in which the shipping interest was strong, was hit particularly hard by the restrictions which Great Britain imposed on commerce with her colonies, and especially with the West Indies; and in 1786 she passed an act which absolutely prohibited the importation of a great variety of manufactures. Pennsylvania also passed a protective tariff act. Rhode Island and New York moved in the same direction. The whole temper of the community was changed.

All this had a distinct effect on the tariff act of 1789. After the formation of the Union, Congress proceeded at once to the imperative task of providing revenue for the new government, and the tariff act was the first measure passed. Mr. Hill shows conclusively not only that it was designed to secure revenue, but that there were incorporated into it many provisions of the protective legislation of the individual States, notably of Pennsylvania. That the duties were moderate, in comparison with the exactions of our later day, is not essential to the spirit of the act, which was unquestionably protective.

Mr. Hill's investigation does not carry him beyond the act of 1789, and he has no occasion to note the unmistakable decline in the protective feeling which began within a year or two thereafter. That decline, like the previous burst of favor, was due much more to shifting political and industrial conditions than to any new convictions on the general policy of freedom or restriction. At best, the opinions of the fathers justify even less of superstitious reverence on this topic than on others. Economic thought had then barely begun to develop on the lines which we now think worth following, and the utterances of our statesmen are interesting to the student of economics chiefly in the evidence they give of the gradual permeation of the influence of Adam Smith. To the student of political history, their doings and sayings are of signal importance; and for him Mr. Hill brings much fresh and helpful material.

Economic Geology of the United States. With briefer mention of Foreign Mineral Products. By Ralph S. Tarr, B.S., F.G.S.A., Assistant Professor of Geology at Cornell University. Macmillan & Co. 1894. Pp. 509. 2 plates and 27 figures.

THE object of the geological survey of a State or country, as commonly understood by the legislators who are asked to vote public funds for it, is the development of its mineral resources. Not that it is expected that the geologists employed on the survey shall actually conduct mining operations, but that they shall direct their studies of the geological structure and of the composition of the rocks in such a manner as to facilitate the extraction of the useful minerals from the earth by those who are practically engaged in mining industry. This may be accomplished, first, by showing the position and character of the various mineral-bearing formations; then, the rules which govern the occurrence of the useful minerals; and, finally, as far as possible, the origin and manner of formation of the deposits of these minerals—facts which not only will be of use in the region under survey, but may, with the proper modification, be applied to all regions. The necessary preliminary of all this work is the outlining on maps of the distribution of the various rock formations, by means of which the geologist is enabled to work out the geological history of the region. Many of our surveys have not got beyond this preliminary stage, and if the economic application of geological research were to wait until the structural history of our country was entirely worked out, the present generation would reap but little practical result from their work, however fruitful it might be in more abstract theoretical teachings.

A few geologists, possessing the necessary technical training of mining engineers, have recognized the force of the public demand for practical results from geological research, and have applied scientific methods to the study of the ore deposits of individual regions of whose geological history, if not already known, they made a preliminary study themselves. By the efforts of such men attached to the National Geological Survey, an annual quantitative investigation of the mineral resources of the country was instituted as a branch of that work, and exhaustive studies have been made of a few typical mining districts. In this manner a great deal of scientific information has been obtained with regard to our deposits of useful minerals. The vast field, however, is as yet very incompletely studied. The attractive looking little work under consideration might be thought, from its title, to promise an exhaustive treatise on this subject, but an examination of its preface shows that it is the outcome of the necessity felt by a young professor for some text-book on the subject to serve as a basis for his teachings to his students. It must be gauged, therefore, not as a work of original research, but as a compilation showing the existing state of knowledge of the subject. As such, in spite of the incompleteness of the data, it is necessarily a very much condensed statement to be brought within the compass of a volume of its size. As the author has hoped to find a wider field of readers than his immediate students, he has couched it in plain and, for the most part, untechnical language, thereby rendering it more readily understood by the layman. What is less desirable, however, and we trust not a necessary consequence of popularization, he has thereby sometimes sacrificed strict scientific accuracy.

As contrasted with the recent work of Prof. Kemp on the ore deposits of the United States, this is much less exhaustive in its treatment, yet includes not only the metallic but the non-metallic minerals, such as coal, salt, clay, stone, etc. Some preliminary geological conceptions are given in the introductory chapters on mineralogy and physical geography. The brief chapter on the latter subject is admirable as far as it goes. The same cannot be said for that on the origin of ore deposits, in which the author's attempt at an original classification involves some very ill-defined subdivisions, and the giving different names to forms of deposits which are essentially the same. His descriptions of typical occurrences of the various useful minerals, which occupy the greater part of the book, are for the most part admirable (though very short) résumés of the best published accounts, and with each are given tables of statistics of production, which would be more satisfactory if the author mentioned in each case the source from which the figures were derived, as authorities are apt to differ very widely. In a work intended primarily for students it is somewhat surprising to find statements that are not scientifically accurate or consistent, such as, for instance, the distinguishing smelting and metallurgy as being the one a dry, the other a wet, way of reducing ores; and again, calling the Huronian iron-bearing formation of Lake Superior a division of the Archean, when at other places it is recognized as Algonkian. Older geologists could have told Mr. Tarr that beds of graphite are known which once were coal; that fire clays are not confined to the Paleozoic beds; that the oil-bearing horizon of the Rocky Mountain region, where it has been accurately determined, is lower than the Laramie; that the rocks in which magnetic iron ores mostly occur are not undoubted Archean, etc., etc. Such slips are fortunately not numerous, and may possibly be due to haste of preparation. On the whole, his statements have as great scientific accuracy as their extreme brevity will admit of, and are probably, in so far, more useful and acceptable to the general reader, to whom this work is evidently addressed—though we must except the bimetallist, in view of remarks concerning silver, that "coinage has been an important use of the metal, but promises to become more and more unimportant," and that silver "is far too common for use as a standard of coinage, and its continued use for this purpose means a progressively increasing production which will call for a frequent re-establishment of the ratio. The nations which have not yet discovered this fact are liable to suffer for their shortness of vision."

The book is printed on heavy paper and in large type that contrasts favorably with the average scientific publication, in which the author's object generally is to squeeze as many words into a page as possible, regardless of the reader's eyesight.

Manual of Linguistics. By John Clark. Edinburgh: James Thin; New York: Putnams. 1893.

ENGLISH philology has been suddenly awakened to the existence of German linguistic science. The first surprise expresses itself in primers, which follow each other thick and fast, like catechisms in the track of the Re-

formation. They deal out German science, some of them with a spoon, some through rubber. It must be allowed that most of them do it exceedingly well. To those who have communed much with *Beiträge* and their ilk, it will be a refreshment occasionally to sample the products of the German mind in a liquid form. It is amazing how much dilution they will bear. This 'Manual of Linguistics,' by John Clark, second classical master in the High School of Dundee, Scotland, is also a primer, and on the whole is a very good and useful one. It undertakes to give "a concise account of general and English phonology, with supplementary chapters on kindred topics."

The book is based upon a few convenient hand-books. It is always easy to track the author to his sources, and he makes no attempt to deny his dependence upon them. He follows his authorities reverently. There is little or no attempt at criticism or independent judgment. He selects the most important statements of principle and the best illustrations, and presents them in pleasing, readable style. The introductory chapter on "The Aryans, their culture and original home," is a summary of Schrader's 'Sprachvergleichung und Urgeschichte'; that on "Letters, their origin and order," of Taylor's 'Alphabet'; those on "Sound-relations in Indo-European," of Brugmann's 'Grundriss'; that on analogy, of Wheeler's 'Analogy'; that on ablaut and accent, of Brugmann's and Bloomfield's treatment of the subject; those on "Sound-relations in English," of Sweet's 'English Sounds.' Traces of his dependence are often to be found in inconsistent use of terminology, as when the author uses "Aryan" sometimes in the sense of Indo-European (pp. xlv, xlvii, xlix), sometimes in the sense of Indo-Iranian (p. 22), and interchanges freely between "Lithu-Slavonic" (p. xviii), "Letto-Slavonic" (p. xx), and "Letto-Slavic" (p. 13). He gives Schrader's theory of the original home in the Russian steppes as "plausible," though he has seen Hirt's criticism of it, and knows that bears and honey unknown to the steppes were familiar to the Indo-Europeans, that various trees, the birch, willow, fir, and probably the oak, were part of their common environment, that the word for sea was in their vocabulary; and though he might have known that the eel, an Indo-European attaché, is not found in the tributaries of the Euxine. He omits *z* from his list of I. E. "consonant vowels," and states that "some deny a place in the list of vowels to *i* and *u*." The ρα of Greek πατράσι he thinks (p. 14) is "a Greek fashion of writing the Sk. *ṛi*-vowel," and says (p. 15) that the *a* in question is "merely a ghost-vowel," which may or may not be explained by his allusion to the "ghost-word οὔτεκα" (p. 42). On p. 105 in attempting to explain the *u* of Goth. *augō*, eye, vs. Lat. *oculus*, he ignores the patent fact of its being influenced by the word for ear, Goth. *ausō*. In his discussion of accent (pp. 156 ff.), he shows that he has not read Wackernagel (Kuhn's *Zeitschrift*, xxv), and does not recognize his property.

It would be easy to multiply petty criticisms, but it would be entirely wrong to suggest the impression that the book is not a convenient and helpful introduction to modern comparative philology.

Essays on Rural Hygiene. By George Vivian Poore, M.D., F.R.C.P. Longmans, Green & Co. 1893.

THIS book might appropriately bear as its epigraph, "God made the country but man made the town, and made it bad," with the further motto, "And he is trying to spoil the country." As from a private standpoint the health of the community should be second only to the health of the individual, and from a public point of view the health of the community is one of the highest aims, it follows that these essays by an intelligent sanitarian commend themselves to all who choose to think about the conditions under which they live. Even should he prove a revolutionist who would overturn some established doctrines, it is refreshing to find an enthusiast in a good cause, for should our principles and our practice not be assault-proof, it is well that they should be damaged; while if they are impregnable, it is satisfactory to have it shown. Dr. Poore is convinced that many of our modern sanitary arrangements have an unscientific basis, and, therefore, are politically, morally, economically, and hygienically bad; and he does not hesitate to say so. But he does not mistake vehemence of assertion for demonstration. He speaks with emphasis, but with the emphasis of facts, or what he believes to be such. The key of his position is that the greatest and the most lasting source of wealth is the soil; that the soil may be enriched or impoverished by the restoration or the deprivation of organic refuse properly belonging to it; and that the water-carriage of sewage starves the earth just as wanton waste starves the masses. He holds that it pollutes the very water supply upon whose purity health depends; that water-borne epidemic disease is the outcome of the elaborate machinery for fouling the streams of the country; and that water-closets and typhoid go together. Water-carriage is wasteful. Its only good point is that it transports from the original scene refuse which, ordinarily, it is inconvenient and it may be hurtful to retain.

For a long time it has been recognized that nitrates, valuable to growing crops, are formed in the soil, but the exact process was undetermined. It has now been established that nitrification is accomplished by certain bacteria, which, with others, live in the upper layers and work to the decomposition of refuse within their reach. They disintegrate the dead that the living may be nourished. From the enormous number of these minute organisms and from the earth-worms (whose service to man Darwin has explained) and other animal forms, the author is justified in describing the upper mould as the living earth. It is in this living earth, in the superficial layers of the soil, that he would deposit all organic refuse, confident of its speedy dissolution without offence and of its appropriation with advantage. For the water-closet he would substitute the earth-closet, but not in the imperfect form in which most of us know it, and for the water itself the spade and barrow. Instead of washing away into the sea or sterilizing with corrosive chemicals the waste of our habitations and of our surroundings, he would incorporate that waste in the living earth, sure of the prompt and ample return it would make in the harvest. And he points to China on a large scale and to his own garden on a small one for practical results.

He also holds that all deep wells are liable to be contaminated by leaks, often remote, from subterranean sewers, and that, in the presence of cesspools and pipes, surface wells, carefully defended against lateral infection and properly covered, are the safest, even in the midst of ground fertilized with domestic refuse. It is a doubtful doctrine, but he seems to have demonstrated its possibility by one practical example of a five-foot well so arranged. But where one well would be constructed under rigorous inspection on sanitary principles, a thousand would have defects, possibly vital; and it may be questioned whether the system of conservancy that works so admirably under his intelligent supervision would also succeed in the hands of incompetent rustics.

When disease-charged excreta are properly buried (and properly seems to mean superficially), we may believe that the morbific element will be destroyed within the soil. But with typhoid and cholera we must remember that they may not always stay buried in the upper layers. A heavy rainstorm may sweep their germs into the nearest water-course, which may yield a water supply; a hot sun and a fair wind may transform fields into clouds of dust and carry yet living spores broadcast. Those germs seem thus in part to carry out their mission in India, and before complete desiccation they may do the same in other lands. Besides which, it is in evidence that anthrax and scarlet fever at least will survive burial for many years.

These essays are by no means confined to sewers and earth treatment. They touch on many themes, and, although native to English skies, they change their weather but not their meaning in drifting across the sea. They are attractively prepared, and the dwellers by the Passaic and the Bronx may read with interest, and, if they will, rival in practice, the trials and the triumphs in the valleys of the Thames and the Anton.

The South Sea Islanders and the Queensland Labor Trade. A Record of Voyages and Experiences in the Western Pacific, from 1875 to 1891. By William T. Wawn. With illustrations. London: Swan Sonnenschein & Co.; New York: Macmillan. 1893. Pp. xvi, 440, 8vo.

THE bitter controversy over the introduction of Polynesian labor into Queensland practically ceased with its prohibition in 1891. Capt. Wawn's book, therefore, has only an historical interest as showing how the "labor trade" was conducted during the last sixteen years of its existence. He describes with much detail his twenty-three voyages for natives to the islands of the western Pacific, giving incidentally a full account of the methods of recruiting, both legal and illegal, as well as much information relative to the islands, and the life and customs of their inhabitants. The most favorable side of the labor trade is naturally presented, and, though he writes at times with some heat and treats his opponents with sailor-like frankness, it is hard to question his fairness and honesty. The abuses to which the business was peculiarly liable he freely acknowledges, but he shows that it was for the interest of those engaged in it that it should be conducted fairly. The crews of the labor vessels were invariably the first to suffer for the wrongs done to natives. Was an islander kidnapped, his enraged tribesmen would attempt to avenge the injury on the next white man, whether innocent or guilty, who fell into their hands. He denies the assertion, often made, that the labor traffic as carried on since 1875 was the cause of the decrease of population in Polynesia. On the other hand, he asserts that it tended to lessen the frequency of intertribal wars, and to check cannibalism. This certainly seems reasonable, and, considering the testimony to the excellent treatment of the Kanakas by the Queensland sugar-planters, especially, that given by the correspondent of the London

Times, Miss Shaw, it is difficult to see why this three years' training should not have elevated and civilized the savage.

Capt. Wawn had a number of adventures during his voyages, which were always attended with more or less danger from hostile natives as well as from the perils run in navigating comparatively unknown waters. Perhaps the most entertaining chapters in his book are those relating to the cruise of the *Victoria*, which was chartered by the Government to return certain natives, said to have been kidnapped, to their homes in New Guinea. He would have had far more readers, however (for he tells his story very well), if he had confined himself to the noteworthy incidents of his various voyages and omitted the numerous minute details of each one, mere extracts from his "log" and interesting only to sailors. There are five excellent maps of the islands visited which add much to the value of the book, together with some rather crude but suggestive illustrations from sketches by the author.

Abbotsford: The Personal Relics and Antiquarian Treasures of Sir Walter Scott, described by the Hon. Mary Monica Maxwell Scott of Abbotsford, and illustrated by William Gibb. London: Adam & Charles Black; New York: Macmillan. 1893.

Mrs. Maxwell Scott's 'Abbotsford' is a sumptuous monument of filial, or nepotal, piety. It is not, as its title may suggest, a description of Sir Walter Scott's home, but chiefly an account of his personal relics and knick-knacks—"gabions," the author is apt to call them, using a word for which we confess ourselves unable to find, except by guess-work, a meaning that is appropriate here. The interest of the book to the general reader is more in the bits of information and gossip, historic, personal, and anecdotal, which Mrs. Scott gives in a straightforward, agreeable way, than in the elaborate chromo prints whose crudeness of color and effect tend to disguise the facile cleverness of Mr. Gibb's drawing. The illustrations are very catholic, not disdaining to include with the sword of Montrose, the pistols of Napoleon I., or Prince Charlie's quaigh, Scott's old beaver hat and spectacles, or even a crumb of oatcake found in a Highlander's pocket after the famishing battle of Culloden—things whose interest is not enhanced by depicting them. It is rather noticeable how little of positive history attaches to many of these relics, even to some of most imposing claims, and this may be a stumbling-block to the doubting. We may trust, however, that Sir Walter, though he was an ardent antiquary and collector, was too canny to be easily imposed upon by shallow claims.

The book is a handsome quarto, printed on the heaviest of paper, and refulgent with more than two dozen of Mr. Gibb's high-colored drawings. The brief account of the building of Abbotsford would have been made more interesting by the addition of a plan of the house.

Beware of Substitutes and Imitations.

William Lloyd Garrison, 1805-1879.

THE STORY OF HIS LIFE TOLD BY HIS CHILDREN.

Illustrated with over 40 Portraits, Views, etc. 4 volumes, 8vo, gilt top, $8.00 *net.*

MESSRS. HOUGHTON, MIFFLIN AND COMPANY take pleasure in announcing that they have assumed the publication of this elaborate and important work, hitherto published by the CENTURY CO., and have reduced the price from $12.00 to $8.00 *net*, a remarkably low price for what is unquestionably one of the handsomest products of the American press.

From a great body of critical reviews, of one tenor, they select the following:

"A biography of almost world-wide importance; . . . and whatever contributes to a complete understanding of the ways and means by which the greatest event of the century was accomplished, cannot fail to rank high. It will be a standard work of reference."—*Charleston News and Courier.*

"Will be interesting to Southern readers, as well as to Mr. Garrison's followers. In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression: it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . The work is definitive, not only as regards Garrison, but as regards the whole abolition movement "—*Boston Advertiser.*

"His sons have so far suppressed themselves, and written of him with such discretion and moderation, that all must feel they were the best persons to set forth his life."—*Boston Literary World.*

"It is indeed rare to find a memoir, composed by the sons of the subject, written in such an unhesitating spirit. There is no attempt to eulogize Mr. Garrison, nor is there any lack of candor in these filial utterances."—*Philadelphia Ledger.*

"The authors' final chapter is upon the inner traits of their father's character, which of course none knew more perfectly, and few could describe in fairer or more delightful terms."—*Providence Journal.*

"It is a testimony to the vigor and fulness of Mr Garrison's life that, long before these volumes were completed, they did not wither into the driest of dry memorabilia. That they do not is not altogether due to the life to be written, but in a very considerable degree to the biographic skill —we may almost say the biographic genius—of the authors."—*N. Y. Independent.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

"The sons of Garrison are trained masters of editorial ways and methods; . . . they append footnotes with intelligence and clearness; . . . and they attach side-notes, giving names, dates, and references, with unwearied industry and extraordinary care. In some of these matters the volumes are indeed models "—*N. Y. Times.*

"Its index of seventy-seven pages, in fine type, shows the drudgery of indexing raised to a fine art "—*Chicago Dial.*

"The typographical execution of the work may fairly be said to be flawless."—*Boston Journal.*

Office of the H-O (Hornby's Oatmeal) Company,

71 Park Place, New York City.

The following are the By-Laws of the above-named Company regulating the election of Directors and Officers:

ARTICLE I.—DIRECTORS.

Section 1. The number of Directors of this Company shall be five, all of whom shall be elected, by ballot, by the stockholders who shall attend in person or by proxy at the annual meeting of the Company, and each Director shall be elected to serve for the term of one year.

Section 2. Vacancies in the Board of Directors occurring during the year shall be filled by a majority vote of the remaining members of the Board at any regular meeting of the Board or at any special meeting called for the purpose of filling such vacancy.

ARTICLE II.—OFFICERS.

Section 1. The Board of Directors, immediately after each annual meeting, shall elect, by ballot, the officers of the Company for the ensuing year, and a majority vote of the whole number of directors shall be necessary for the election of each of said officers.

Section 4. In the absence or incapacity of the President and Vice-President, the Board of Directors may elect one of their number to act as President *pro tempore*, who, during such absence or incapacity to act, shall have the powers of the President.

Section 7. Vacancies among the officers of the Company during the year may be filled by a majority vote of the directors at any regular meeting of the board, or at any special meeting called for the purpose of filling such vacancy, of which at least five days notice by mail shall be given.

ARTICLE III.—MEETINGS.

Section 1. The annual meeting of the Company for the election of directors shall be held at the office of the company on the first Monday in April of each year, at twelve o'clock, noon, and the Secretary shall send through the post-office, at least ten days before such meeting, a notice thereof, addressed to each stockholder at his last known post-office address. Should said first Monday be a legal holiday, then such meeting shall be held on the next business day at the same hour.

ARTICLE IV.—INSPECTORS OF ELECTION.

Section 1.—Two Inspectors of election shall be chosen at each annual meeting of the Company to serve for one year, and if any inspector shall refuse to serve or shall not be present at the time of election, the meeting may appoint an inspector in his place. For the first year of the Company's business, such inspectors shall be appointed by the Board of Directors.

Dated NEW YORK, February 17th, 1894.

The Columbia Bicycle Catalogue

For 1894

Describes fully the new line of Columbia Wheels, and is by far the handsomest and most comprehensive ever issued by a bicycle establishment. It is artistic in design, and beautifully printed and illustrated. Its pages are alive with interesting matter pertaining to cycling, and should be read by every intending purchaser of a bicycle.

We mail it on receipt of two 2-cent stamps, or it may be obtained free at Columbia Agencies.

Charles Scribner's Sons' Important New Books

SECOND VOLUME NOW READY.

THE PASQUIER MEMOIRS.

Edited by DUC D'AUDIFFRET-PASQUIER.

With Portraits. In 3 vols., 8vo.

Volume II., 1812–1814, now ready, $2.50.

Volume I., 1789–1812, $2.50.

"Its value is great. The author brings before us and illustrates with peculiar clearness the characteristics of an extraordinary time. He gives us vivid and thoughtful sketches of the First Empire."—*From leading article of Edinburgh Review.*

"Memoirs which promise to be among the most valuable ever published concerning the Napoleonic period."—*Atlantic Monthly.*

LIFE AND LETTERS OF DEAN STANLEY.

By R. E. PROTHERO. With the coöperation of Dean BRADLEY. *Second Edition.* With Portraits and Illustrations. 2 vols., 8vo, $8.00.

"Perhaps no similar book since Trevelyan's 'Life of Macaulay' has been prepared with so much care or wisdom. It is a work that will be to many well nigh indispensable."—*Boston Journal.*

"One of the most profound, scholastic, and brilliant biographies ever written."—*Chicago Daily News.*

CIVILIZATION DURING THE MIDDLE AGES.

Especially in Relation to Modern Civilization. By GEORGE B. ADAMS, Professor of History in Yale University. 8vo, $2.50.

"Prof. Adams's work is lucid in plan and style, comprehensive in its survey of the field, has the additional merit of being highly interesting."—Prof. GEORGE P. FISHER.

THE BARBARY COAST.

By Dr. H. M. FIELD. Illustrated. Crown 8vo, $2.00.

"A free and delightful series of chapters concerning Northern Africa. They are fresh and bright portraitures of a life entirely foreign to our own. The natives are pictured in all the lights and shadows of the African climate, and the scenery is described with power and enthusiasm."—*Boston Herald.*

The FLETCHER PRIZE of $500

The Trustees of Dartmouth College offer the above prize, according to the will of the Hon. Richard Fletcher, for the best Essay calculated to counteract the present tendency to a "Fatal Conformity to the World." The following subjects are assigned, with the date at which each essay is to be forwarded:

1. In what ways ought the conception of personal life and duty to be modified? Dec. 31, 1894
2. Should any restrictions, legal or moral, be placed upon the accumulation of wealth? Dec. 31, 1896.
3. How can education be made a greater safeguard against materialism? Dec 31, 1898

These subjects may be treated singly or in course. No essay to exceed 250 pages of 270 words each. Circular containing further particulars forwarded if desired.

WILLIAM JEWETT TUCKER,
President of Dartmouth College.
HANOVER, N. H., Feb. 15, 1894.

MUSEUM OF FINE ARTS,

Copley Square, Boston, Mass.
